</table>

### Reference

TwinCAT.Ads.SumCommand Namespace
6.5.4.1 ResultSumHandles2 Constructor

Initializes a new instance of the ResultSumHandles2 [1214] class.

Namespace: TwinCAT Ads SumCommand [1205]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public ResultSumHandles2(
    AdsErrorCode complete,
    AdsErrorCode[] subErrors,
    uint[] handles,
    string[] instancePaths
)
```

Parameters

- **complete**
  - Type: TwinCAT.Ads.AdsErrorCode [575]
  - The overall ADS error codes.

- **subErrors**
  - Type: TwinCAT.Ads.AdsErrorCode[] [575]
  - The single ADS SubErrors.

- **handles**
  - Type: System.UInt32
  - The registered handles.

- **instancePaths**
  - Type: System.String
  - The instance paths.

Reference

- ResultSumHandles2 Class [1214]
- TwinCAT.Ads.SumCommand Namespace [1205]

6.5.4.2 ResultSumHandles2 Properties

The ResultSumHandles2 [1214] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Handles</td>
<td>The registered Symbol handles. (Inherited from ResultSumHandles [1212].)</td>
</tr>
<tr>
<td>InstancePaths</td>
<td>The symbol-instance paths belonging to the handles and the subErrors.</td>
</tr>
<tr>
<td>SubErrors</td>
<td>Gets the Error codes [575] for the single SumCommands. (Inherited from ResultSumCommand [1210].)</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>
</tr>
</tbody>
</table>
6.5.4.2.1  ResultSumHandles2.InstancePaths Property

The symbol/instance paths belonging to the handles and the subErrors.

**Namespace:** TwinCAT.Ads.SumCommand

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public string[] InstancePaths { get; }
```

**Property Value**

Type: `String`.

Reference

Examples

Usage of Sum commands with handles (CreateHandles, Read, Write, ReleaseHandles)

/// <summary>
/// Defines the entry point of the application.
/// </summary>
static async void Main(string[] args)
{

Console.WriteLine("\n");
Console.WriteLine("Press [Enter] for start:\n");
Console.ReadLine();

// Parse the command-line arguments
AmsAddress address = ArgParser.Parse(args);

CancellationTokenSource cancelSource = new CancellationTokenSource();
CancellationToken cancel = cancelSource.Token;

using (AdsClient client = new AdsClient())
{
// Connect the AdsClient to the device target.
client.Connect(address);

string[] instancePathList = {"GVL.bVar", "GVL.iCount", "TwinCAT_SystemInfoVarList._AppInfo.ProjectName"};
SumCreateHandles createHandlesCommand = new SumCreateHandles(client, instancePathList);

var resultCreateHandles = await createHandlesCommand.CreateHandlesAsync(cancel);
if (resultCreateHandles.Succeeded)
{
    uint[] handles = resultCreateHandles.Handles;
    Type[] valueTypes = new Type[] { typeof(bool), typeof(short), typeof(string) };
    SumHandleRead readCommand = new SumHandleRead(client, handles, valueTypes);
    var resultRead = await readCommand.ReadAsync(cancel);
    if (resultRead.Succeeded)
    {
        object[] readValues = resultRead.Values;
        for (int i = 0; i < instancePathList.Length; i++)
        {
            Console.WriteLine("Symbol: {0} (Value: {1}, Type: {2})", instancePathList[i], readValues[i].ToString(), valueTypes[i].Name);
        }
        // Sum Command Write
        SumHandleWrite writeCommand = new SumHandleWrite(client, handles, valueTypes);
        object[] writeValues = new object[] { true, (short)42, "MyNewProjectName" };
        await writeCommand.WriteAsync(writeValues, cancel);
        SumReleaseHandles releaseCommand = new SumReleaseHandles(client, handles);
        await releaseCommand.ReleaseHandlesAsync(cancel);
    }
}

Console.WriteLine("\n");
Console.WriteLine("Press [Enter] for leave:\n");
Console.ReadLine();

### SumCreateHandles.CreateHandlesAsync Method

Create handles asynchronously.

**Namespace:** TwinCAT.Ads.SumCommand

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
public Task<ResultSumHandles> CreateHandlesAsync(
    CancellationToken cancel
)
```

**Parameters**

- `cancel`  
  Type: `System.Threading.CancellationToken`  
  The cancellation token.
Return Value

Type: Task<ResultSumHandles [1212].
An asynchronous task that represents the 'ReadWriteRaw' operation and returns a ResultSumHandles [1212]. The overall error return code is contained in the ErrorCode [992] property.

</table>
Remarks

This is an ADS Sum Command to access values by handle information. It is always used in combination with `CreateHandles` and related methods. By design (and in contrast to the symbolic access in `SumSymbolRead` and `SumSymbolWrite`), this access method can act only with ADS ANY Type (Primitive) values (disadvantage). The advantage is, that no symbolic information must be loaded before accessing the values, see samples:

Examples

**Usage of Sum commands with handles (CreateHandles, Read, Write, ReleaseHandles)**

```csharp
/// <summary>
/// Defines the entry point of the application.
/// </summary>
/// <param name="args">The arguments.</param>
static async void Main(string[] args)
{
    Console.WriteLine("\n\nPress [Enter] for start:\n");
    Console.ReadLine();

    // Parse the command-line arguments
    AmsAddress address = ArgParser.Parse(args);

    CancellationTokenSource cancelSource = new CancellationTokenSource();
    CancellationToken cancel = cancelSource.Token;

    using (AdsClient client = new AdsClient())
    {
        // Connect the AdsClient to the device target.
        client.Connect(address);

        string[] instancePathList = {"GVL.bVar", "GVL.iCount", "TwinCAT_SystemInfoVarList._AppInfo.ProjectName"};
        SumCreateHandles createHandlesCommand = new SumCreateHandles(client, instancePathList);
        var resultCreateHandles = await createHandlesCommand.CreateHandlesAsync(cancel);
        if (resultCreateHandles.Succeeded)
        {
            uint[] handles = resultCreateHandles.Handles;
            Type[] valueTypes = new Type[] { typeof(bool), typeof(short), typeof(string) };
            SumHandleRead readCommand = new SumHandleRead(client, handles, valueTypes);
            var resultRead = await readCommand.ReadAsync(cancel);
            if (resultRead.Succeeded)
            {
                object[] readValues = resultRead.Values;
                for (int i = 0; i < instancePathList.Length; i++)
                {
                    Console.WriteLine("Symbol: {0} (Value: {1}, Type: {2})", instancePathList[i], readValues[i].ToString(), valueTypes[i].Name);
                }

                // Sum Command Write
                SumHandleWrite writeCommand = new SumHandleWrite(client, handles, valueTypes);
                object[] writeValues = new object[] { true, (short)42, "MyNewProjectName" };
                await writeCommand.WriteAsync(writeValues, cancel);
            }
        }

        SumReleaseHandles releaseCommand = new SumReleaseHandles(client, handles);
        await releaseCommand.ReleaseHandlesAsync(cancel);
    }
}
```

### 6.5.8.1.2 SumHandleRead.ReadAsync Method

Read the values asynchronously.

**Namespace:** `TwinCAT.Ads.SumCommand [1205]`

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

**Syntax**

**C#**

```csharp
public Task<ResultSumValues> ReadAsync(
    CancellationToken cancel
)
```

**Parameters**

- `cancel`  
  Type: `System.Threading.CancellationToken`  
  The cancellation token

**Return Value**

Type: `Task<ResultSumValues> [1220]`.

An asynchronous task that represents the 'ReadSymbols' operation and returns a `ResultSumValues [1220]`. The overall error return code is contained in the `ErrorCode [992]` property.

</table>

Reference

SumHandleWrite Class [1232]
TwinCAT.Ads.SumCommand Namespace [1205]

6.5.9.1.1 SumHandleWrite.TryWrite Method

Tries to write the values.

Namespace: TwinCAT.Ads.SumCommand [1205]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryWrite(
    Object[] values,
    out AdsErrorCode[] returnCodes
)
```

Parameters

values Type: .System.Object.
The values (ANY/Primitive types only).

returnCodes Type: .TwinCAT.Ads.AdsErrorCode [1205].
The return codes.

Return Value

Type: AdsErrorCode [1205]
AdsErrorCode.

### 6.5.9.1.3 SumHandleWrite.WriteAsync Method

Write the values asynchronously.

**Namespace:** TwinCAT.Ads.SumCommand [1205]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultSumCommand> WriteAsync(
    Object[] values,
    CancellationToken cancel
)
```

Parameters

- **values**
  - Type: `System.Object`
  - The values.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

Return Value

- Type: `Task<ResultSumCommand> [1210]`

An asynchronous task that represents the 'ReadWriteRaw' operation and returns a `ResultSumCommand [1210]`. The overall error return code is contained in the `ErrorCode [992]` property.
6.5.10 **SumReleaseHandles Class**

Release Handles SumCommandBase.

</table>
### Remarks

Releases the specified ADS handles. Usually used in conjunction with the `SumCreateHandles` and the `SumHandleRead` / `SumHandleWrite` commands.

### Examples

#### Usage of Sum commands with handles (CreateHandles, Read, Write, ReleaseHandles)

```csharp
/// <summary>
/// Defines the entry point of the application.
/// </summary>
/// <param name="args">The arguments.</param>
static async void Main(string[] args)
{
    Console.WriteLine("\n");
    Console.WriteLine("Press [Enter] for start: ");
    Console.ReadLine();

    // Parse the command-line arguments
    AmsAddress address = ArgParser.Parse(args);
    CancellationTokenSource cancelSource = new CancellationTokenSource();
    CancellationToken cancel = cancelSource.Token;

    using (AdsClient client = new AdsClient())
    {
        // Connect the AdsClient to the device target.
        client.Connect(address);

        string[] instancePathList = { "GVL.bVar", "GVL.iCount", "TwinCAT_SystemInfoVarList._AppName" };
        SumCreateHandles createHandlesCommand = new SumCreateHandles(client, instancePathList);

        var resultCreateHandles = await createHandlesCommand.CreateHandlesAsync(cancel);
        if (resultCreateHandles.Succeeded)
        {
            uint[] handles = resultCreateHandles.Handles;
            Type[] valueTypes = new Type[] { typeof(bool), typeof(short), typeof(string) };
            SumHandleRead readCommand = new SumHandleRead(client, handles, valueTypes);
            var resultRead = await readCommand.ReadAsync(cancel);
            if (resultRead.Succeeded)
            {
                object[] readValues = resultRead.Values;
                for (int i = 0; i < instancePathList.Length; i++)
                {
                    Console.WriteLine("Symbol: \{0\} (Value: \{1\}, Type: \{2\})", instancePathList[i], readValues[i].ToString(), valueTypes[i].Name);
                }

                // Sum Command Write
                SumHandleWrite writeCommand = new SumHandleWrite(client, handles, valueTypes);
                object[] writeValues = new object[] { true, (short)42, "MyNewProjectName" };
                await writeCommand.WriteAsync(writeValues, cancel);

                SumReleaseHandles releaseCommand = new SumReleaseHandles(client, handles);
                await releaseCommand.ReleaseHandlesAsync(cancel);
            }
        }
    }

    Console.WriteLine("\n");
    Console.WriteLine("Press [Enter] for leave: ");
    Console.ReadLine();
}
```

`TwinCAT.Ads.SumCommand Namespace` [1205]

`SumReleaseHandles.ReleaseHandles` [1240]

`SumReleaseHandles.ReleaseHandlesAsync(CancellationToken)` [1240]
**6.5.11 SumSymbolRead Class**

Symbolic ADS Sum read access

**Inheritance Hierarchy**

```
System.Object
    SumCommandWrapper.SumRead.
    SumSymbolCommand.SumRead.
    TwinCAT.Ads.SumCommand.SumSymbolRead
```

**Namespace:** TwinCAT.Ads.SumCommand

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public class SumSymbolRead : SumSymbolCommand<SumRead>
```

The `SumSymbolRead` type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SumSymbolRead</td>
<td>Initializes a new instance of the <code>SumSymbolRead</code> class.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Read</td>
<td>Reads the Values.</td>
</tr>
<tr>
<td>ReadAsync</td>
<td>Reads Symbol values as an asynchronous operation.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>TryRead</td>
<td>Reads the specified symbols.</td>
</tr>
</tbody>
</table>

**Remarks**

The `SumSymbolRead` implements symbolic read access with automatic (dynamic) value marshalling. The advantage of the symbolic access is (in contrast to the handle access classes `SumHandleRead` [1228], `SumHandleWrite` [1232]) that all type information is available when using this ADS Sum Command. The disadvantage is, that the Symbolic information must be loaded beforehand, see examples.
Examples

Usage of SumSymbolRead/SumSymbolWrite with AdsSession

```csharp
/// <summary>
/// Defines the entry point of the application.
/// </summary>
/// <param name="args">The arguments.</param>
static async void Main(string[] args)
{
    Console.WriteLine("\n");
    Console.WriteLine("Press [Enter] for start:";
    Console.ReadLine();

    // Parse the command-line arguments
    AmsAddress address = ArgParser.Parse(args);
    CancellationTokenSource cancelSource = new CancellationTokenSource();
    CancellationToken cancel = cancelSource.Token;

    using (AdsSession session = new AdsSession(address))
    {
        // Connect to the device target.
        AdsConnection connection = (AdsConnection)session.Connect();
        // Load symbolic information
        var resultSymbols = await session.SymbolServer.GetSymbolsAsync(cancel);
        resultSymbols.ThrowOnError();
        ISymbolCollection<ISymbol> symbols = resultSymbols.Symbols;
        ISymbol bVar1 = symbols["GVL.bVar1"]; // You can use the symbol name here.
        ISymbol bVar2 = symbols["GVL.bVar2"]; // You can use the symbol name here.
        ISymbol projectName = symbols["TwinCAT_SystemInfoVarList._AppInfo.ProjectName"]; // You can use the symbol name here.
        SymbolCollection coll = new SymbolCollection() {bVar1, bVar2, projectName};
        // Sum Command Read
        SumSymbolRead readCommand = new SumSymbolRead(connection, coll);
        var resultReadValues = await readCommand.ReadAsync(cancel);
        if (resultReadValues.Succeeded)
        {
            object[] values = resultReadValues.Values;
            for (int i = 0; i < coll.Count; i++)
            {
                Console.WriteLine("Symbol: {0} (Value: {1}, Type: {2})", coll[i].InstancePath, values[i].ToString(), values[i].GetType().Name);
            }
        }
        // Sum Command Write
        SumSymbolWrite writeCommand = new SumSymbolWrite(connection, coll);
        object[] writeValues = new object[] {true, (short)42, "MyNewProjectName"};
        var resultWrite = await writeCommand.WriteAsync(writeValues, cancel);
    }
    Console.WriteLine("\n");
    Console.WriteLine("Press [Enter] for leave:";
    Console.ReadLine();
}
```

Examples

Usage of SumSymbolRead/SumSymbolWrite with AdsClient

```csharp
/// <summary>
/// Defines the entry point of the application.
/// </summary>
/// <param name="args">The arguments.</param>
static async void Main(string[] args)
{
    Console.WriteLine("\n");
    Console.WriteLine("Press [Enter] for start:";
    Console.ReadLine();
```
CancellationTokenSource cancelSource = new CancellationTokenSource();
CancellationToken cancel = cancelSource.Token;

// Parse the command-line arguments
AmsAddress address = ArgParser.Parse(args);

using (AdsClient client = new AdsClient())
{
    // Connect the AdsClient to the device target.
    client.Connect(address);

    // Load symbolic information
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    var resultReadSymbols = await loader.GetSymbolsAsync(cancel);
    resultReadSymbols.ThrowOnError();

    ISymbolCollection<ISymbol> allSymbols = resultReadSymbols.Symbols;
    ISymbol bVar1 = allSymbols["GVL.bVar1"]; // Symbol "GVL.bVar1"
    ISymbol bVar2 = allSymbols["GVL.iCount"]; // Symbol "GVL.iCount"
    ISymbol projectName = allSymbols["TwinCAT_SystemInfoVarList._AppInfo.ProjectName"]; // Symbol "TwinCAT_SystemInfoVarList._AppInfo.ProjectName"

    SymbolCollection symbols = new SymbolCollection() { bVar1, bVar2, projectName };

    // Sum Command Read
    SumSymbolRead readCommand = new SumSymbolRead(client, symbols);
    var resultSumRead = await readCommand.ReadAsync(cancel);
    if (resultSumRead.Succeeded)
    {
        object[] values = resultSumRead.Values;
        for (int i = 0; i < symbols.Count; i++)
        {
            Console.WriteLine("Symbol: {0} (Value: {1}, Type: {2})", symbols[i].InstancePath, values[i].ToString(), values[i].GetType().Name);
        }

        // Sum Command Write
        SumSymbolWrite writeCommand = new SumSymbolWrite(client, symbols);
        object[] writeValues = new object[] { true, (short)42, "MyNewProjectName" };
        var resultSumWrite = await writeCommand.WriteAsync(writeValues, cancel);
    }
}

Console.WriteLine("Press [Enter] for leave: ");
Console.ReadLine();

6.5.11.1 SumSymbolRead Constructor

Initializes a new instance of the SumSymbolRead [1242] class.

Namespace: TwinCAT.Ads.SumCommand [1205]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffddca3e72bc0ea15da1c14
Syntax

C#

public SumSymbolRead(
  IAdsConnection connection,
  IList<ISymbol> symbols)

Parameters

connection Type: TwinCAT.Ads.IAdsConnection [765]
  The ADS Connection.
symbols Type: System.Collections.Generic.IList<ISymbol> [2176]
  The symbols to read

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public Task<ResultSumValues> ReadAsync(
    CancellationToken cancel
)

Parameters

cancel Type: System.Threading.CancellationToken
The cancellation token.
Return Value

Type: Task<ResultSumValues> [1220].
An asynchronous task that represents the 'Read' operation and returns a ResultSumValues [1220]. The overall error return code is contained in the ErrorCode [992] property.

### 6.5.12.2.1 SumSymbolWrite.TryWrite Method

Writes the specified values.
TwinCAT.Ads Namespaces

Namespace: TwinCAT.Ads.SumCommand

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryWrite(
    Object[] values,
    out AdsErrorCode[] returnCodes
)
```

Parameters

values Type: System.Object
The values.

returnCodes Type: TwinCAT.Ads.AdsErrorCode
The return codes.

Return Value

Type: AdsErrorCode
AdsErrorCode.

Remarks

The written values will be marshalled automatically to their appropriate ADS types.

Reference

### 6.5.12.2.3 `SumSymbolWrite.WriteAsync Method`

Reads the symbol values asynchronously.

#### Namespace
- `TwinCAT.Ads.SumCommand` [► 1205]

#### Assembly
- `TwinCAT.Ads (in TwinCAT.Ads.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public Task<ResultSumCommand> WriteAsync(
    Object[] values,
    CancellationToken cancel
)
```

#### Parameters

- **values**
  - Type: `System.Object`
  - The values.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token

#### Return Value

Type: `Task<ResultSumCommand>`

An asynchronous task that represents the 'Write' operation and returns a `ResultSumCommand`. The overall error return code is contained in the `ErrorCode` property.

### 6.6.1 AmsTcpIpRouter Class

ADS Router class
Inheritance Hierarchy

System.Object
  TwinCAT.Ads.TcpRouter.AmsTcpIpRouter

Namespace: TwinCAT.Ads.TcpRouter
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public class AmsTcpIpRouter : IAmsRouter
```

The AmsTcpIpRouter type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AmsTcpIpRouter(Configuration)</td>
<td>Initializes a new instance of the AmsTcpIpRouter class.</td>
</tr>
<tr>
<td>AmsTcpIpRouter(AmsNetId)</td>
<td>Initializes a new instance of the AmsTcpIpRouter class.</td>
</tr>
<tr>
<td>AmsTcpIpRouter(Log, IConfiguration)</td>
<td>Initializes a new instance of the AmsTcpIpRouter class.</td>
</tr>
<tr>
<td>AmsTcpIpRouter(AmsNetId, Int32, IPAddress, Int32, ILogger)</td>
<td>Initializes a new instance of the AmsTcpIpRouter class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsActive</td>
<td>Gets a value indicating whether the IAmsRouter is active (Running or in Starting / Stopping state).</td>
</tr>
<tr>
<td>IsRunning</td>
<td>Gets a value indicating whether the IAmsRouter is running (Start phase completely finished).</td>
</tr>
<tr>
<td>LocalNetld</td>
<td>Gets the local AmsNetld of this router.</td>
</tr>
<tr>
<td>Loopback</td>
<td>Gets the loopback alias</td>
</tr>
<tr>
<td>Netld</td>
<td>The Local AmsNetld of this router.</td>
</tr>
<tr>
<td>RouterStatus</td>
<td>Gets the router status.</td>
</tr>
</tbody>
</table>
### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddRoute</td>
<td>Adds a dynamic Route</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IsRegisteredServer</td>
<td>Determines whether the Address specifies an locally registered AmsServer</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>RemoveRoute(String)</td>
<td>Removes a dynamic Route</td>
</tr>
<tr>
<td>RemoveRoute(AmsNetId)</td>
<td>Removes a dynamic Route</td>
</tr>
<tr>
<td>StartAsync</td>
<td>Starts the AmsTcpIpRouter asynchronously.</td>
</tr>
<tr>
<td>Stop</td>
<td>Stops the AmsTcpIpRouter.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryAddRoute</td>
<td>Adds a dynamic Route</td>
</tr>
</tbody>
</table>

### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RouterStatusChanged</td>
<td>Occurs when the router status changes.</td>
</tr>
</tbody>
</table>

### Fields

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DEFAULT_TCP_PORT</td>
<td>The default TCP port (0xBF02, 48898)</td>
</tr>
<tr>
<td>TCP_TIMEOUT</td>
<td>The TCP timeout</td>
</tr>
</tbody>
</table>

### Remarks

The AmsTcpIpRouter implements a simple ADS/AMS Router for systems, where no TwinCAT Router installation is available. It opens by default an TCP Loopback port (127.0.0.1) Port BF02 (DEFAULT_TCP_PORT) and routes the ADS/AMS communication between AdsServer and AdsClient. If the addressed target server is not on the local system, the AMS Frames are addressed to remote systems, if the route is appropriately assigned on source and target system (on both sides usually via StaticRoutes.xml).
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>The name of the local system.</td>
<td></td>
</tr>
<tr>
<td>NetId</td>
<td>The AmsNetId of the local system.</td>
<td></td>
</tr>
<tr>
<td>RemoteConnections</td>
<td>List of the registered remote Routes.</td>
<td>None/Empty</td>
</tr>
<tr>
<td>TcpPort</td>
<td>The TCP Port to be used for external ADS communication.</td>
<td>0xBF02 (48898)</td>
</tr>
<tr>
<td>LoopbackIP</td>
<td>The LoopbackIP of Device internal communication. This setting should only be changed if ADS Server and Router application should run on different (virtual) devices. On the AdsServer side an appropriate system configuration via RouterEndPoint [1546] is necessary if the loopback ip is changed.</td>
<td>Loopback 127.0.0.1</td>
</tr>
<tr>
<td>LoopbackPort</td>
<td>The Loopback Port of Device internal ADS communication. This setting should only be changed when different TcpPorts are necessary to separate internal and external router communication (e.g. in WSL2 docker containers) where the LoopbackIP 127.0.0.1 isn’t appropriate. On the AdsServer side an appropriate system configuration via RouterEndPoint [1546] is necessary if the loopback port is changed.</td>
<td>0xBF02 (48898)</td>
</tr>
</tbody>
</table>

The router settings can be configured by the .NET Configuration Builder IConfigurationBuilder or simply by calling one of the AmsTcpIpRouter constructor overloads.

**Xml Configuration**

(StaticRoutes.xml) AddStaticRoutesXmlConfiguration(IConfigurationBuilder) [1320]

**Json Configuration**

(appSettings.json) ![Microsoft.Extensions.Configuration.JsonConfigurationExtensions.AddJsonFile(string)]

**Environment variables**

**ConsoleArguments**

**Examples**

The following sample shows how to use the AmsTcpIpRouter class within an own Console application. This console application can also be accessed as binary from the Nuget.org package repository. The ID of the package is ‘Beckhoff.TwinCAT.Ads.AdsRouterConsole’.

**Ads Router WorkerService**

```csharp
class Program
{
/// <summary>
/// Defines the entry point of the application.
/// </summary>
public static void Main(string[] args)
{
    try
    {
        CreateHostBuilder(args).Build().Run();
    }
```
catch (OperationCanceledException /*cex*/)
{
    Console.WriteLine("Router cancelled!");
}
catch (Exception ex)
{
    Console.WriteLine($"Router failed with '{ex.Message}'");
}

/// <summary>
/// Creates the host builder.
/// </summary>
/// <param name="args">The arguments.</param>
/// <returns>IHostBuilder.</returns>
public static IHostBuilder CreateHostBuilder(string[] args) =>
    Host.CreateDefaultBuilder(args)
    .ConfigureServices(hostContext, services) =>
    {
        services.AddHostedService<RouterService>();
    }
    .ConfigureAppConfiguration((hostingContext, config) =>
    {
        // Add further AppConfigurationProvider here.
        //config.Sources.Clear(); // Clear all default config sources
        //config.AddEnvironmentVariables(""); // Use Environment variables
        //config.AddCommandLine(args); // Use Command Line
        //config.AddJsonFile("appSettings.json"); // Use Appsettings
        config.AddStaticRoutesXmlConfiguration(); // Overriding settings with StaticRoutes.Xml
    }
    .ConfigureLogging(logging =>
    {
        //logging.ClearProviders();
        // Adding console logging here.
        //logging.AddConsole();
    });

    /// <summary>
    /// The RouterService instance represents a long running (hosted) service that implements an <see cref="AmsTcpIpRouter"/>.
    /// Implements the <see cref="Microsoft.Extensions.Hosting.BackgroundService" />
    /// </summary>
    /// <remarks>
    /// Long running Background task that runs a <see cref="AmsTcpIpRouter."/>.
    /// The service is stopped via the <see cref="CancellationToken"/> given to the <see cref="RouterService.ExecuteAsync(CancellationToken)"/> method.
    /// </remarks>
    /// <seealso cref="Microsoft.Extensions.Hosting.BackgroundService" />

TwinCAT.Ads.TcpRouter Namespace [1254]

### 6.6.1.1.1 AmsTcpIpRouter Constructor (IConfiguration)

Initializes a new instance of the AmsTcpIpRouter [1254] class.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public AmsTcpIpRouter(IConfiguration configuration)
```

#### Parameters

- **configuration**
  Type: IConfiguration

#### Remarks

The AmsTcpIpRouter [1254] will be connected to the Default port DEFAULT_TCP_PORT [1273].

#### Reference

AmsTcpIpRouter Class [1254]
### AmsTcpIpRouter Constructor (AmsNetId)

Initializes a new instance of the `AmsTcpIpRouter` class.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AmsTcpIpRouter(
    AmsNetId local
)
```

**Parameters**

- `local`  
  Type: `TwinCAT.Ads.AmsNetId`  
  The local.

**Remarks**

The `AmsTcpIpRouter` will be connected to the Default port `DEFAULT_TCP_PORT`.

**Reference**

- AmsTcpIpRouter Class
- AmsTcpIpRouter Overload
- TwinCAT.Ads.TcpRouter Namespace

### AmsTcpIpRouter Constructor (ILogger, IConfiguration)

Initializes a new instance of the `AmsTcpIpRouter` class.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AmsTcpIpRouter(
    ILogger logger,
    IConfiguration configuration
)
```

**Parameters**

- `logger`  
  Type: `ILogger`  
  The logger.

- `configuration`  
  Type: `IConfiguration`  
  The configuration.
Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exception</td>
<td>No IPv4 address for server</td>
</tr>
</tbody>
</table>

Remarks

The `AmsTcpIpRouter` will be connected to the Default port `DEFAULT_TCP_PORT`.

Reference

AmsTcpIpRouter Class [1254]

AmsTcpIpRouter Overload [1260]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.1.4 AmsTcpIpRouter Constructor (AmsNetId, Int32, IPAddress, Int32, ILogger)

Initializes a new instance of the `AmsTcpIpRouter` class.

Namespace: TwinCAT.Ads.TcpRouter [1254]

Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AmsTcpIpRouter(
    AmsNetId local,
    int externalPort,
    IPAddress loopbackIP,
    int loopbackPort,
    ILogger logger
)
```

Parameters

- **local**
  - Type: `TwinCAT.Ads.AmsNetId` [665]
  - The (enforced) local NET Id.

- **externalPort**
  - Type: `System.Int32`
  - The TCP/IP port the `AmsTcpIpRouter` is using.

- **loopbackIP**
  - Type: `System.Net.IPAddress`
  - The loopback ip.

- **loopbackPort**
  - Type: `System.Int32`
  - The loopback port.

- **logger**
  - Type: `ILogger`
  - The logger.

Remarks

This constructor doesn't read the 'StaticRoutes.xml'. Instead, it is expected to force the local `AmsNetId` [665], the TCP/IP port and add the routes as Dynamic routes.

### AmsTcpIpRouter Properties

The `AmsTcpIpRouter` type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsActive</td>
<td>Gets a value indicating whether the <code>IAmsRouter</code> is active (Running or in Starting / Stopping state).</td>
</tr>
<tr>
<td>IsRunning</td>
<td>Gets a value indicating whether the <code>IAmsRouter</code> is running (Start phase completely finished).</td>
</tr>
<tr>
<td>LocalNetId</td>
<td>Gets the local <code>AmsNetId</code> of this router.</td>
</tr>
<tr>
<td>Loopback</td>
<td>Gets the loopback alias</td>
</tr>
<tr>
<td>NetId</td>
<td>The Local <code>AmsNetId</code> of this router.</td>
</tr>
<tr>
<td>RouterStatus</td>
<td>Gets the router status.</td>
</tr>
</tbody>
</table>

### AmsTcpIpRouter.IsActive Property

Gets a value indicating whether the `IAmsRouter` is active (Running or in Starting / Stopping state).

**Namespace:** `TwinCAT.Ads.TcpRouter`

**Assembly:** `TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public bool IsActive { get; }
```

**Property Value**

Type: `Boolean`

true if this the router is active; otherwise, false.

**Implements**

`IAmsRouter.IsActive`
6.6.1.2.2 AmsTcpIpRouter.IsRunning Property

```csharp
public bool IsRunning { get; }
```

**Property Value**

Type: `Boolean`

true if this the router is running; otherwise, false.

**Reference**

AmsTcpIpRouter Class [1254]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.1.2.3 AmsTcpIpRouter.LocalNetId Property

```csharp
public static AmsNetId LocalNetId { get; }
```

**Property Value**

Type: `AmsNetId` [665]

The local net identifier.

**Remarks**

This is initialized during the execution of the AmsTcpIpRouter [1254] constructor.
6.6.1.2.4 AmsTcpIpRouter.Loopback Property

Gets the loopback alias

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddc4e3e72bc0ea15da1c14

**Syntax**

```csharp
public IPAddress Loopback { get; }
```

**Property Value**

Type: IPAddress

The loopback.

**Reference**

AmsTcpIpRouter Class [1254]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.1.2.5 AmsTcpIpRouter.NetId Property

The Local AmsNetId [665] of this router.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddc4e3e72bc0ea15da1c14

**Syntax**

```csharp
public AmsNetId NetId { get; }
```

**Property Value**

Type: AmsNetId [665]

The net identifier.

**Implements**

IAmsRouter.NetId [1276]

**Reference**

AmsTcpIpRouter Class [1254]

TwinCAT.Ads.TcpRouter Namespace [1254]
6.6.1.6  AmsTcpIpRouter.RouterStatus Property

Gets the router status.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public RouterStatus RouterStatus { get; }
```

**Property Value**

**Type:** RouterStatus [1316]

The router status.

**Implements**

IAmsRouter.RouterStatus [1276]

**Reference**

AmsTcpIpRouter Class [1254]

TwinCAT.Ads.TcpRouter Namespace [1254]

AmsTcpIpRouter.RouterStatusChanged [1272]

6.6.1.3  AmsTcpIpRouter Methods

The AmsTcpIpRouter [1254] type exposes the following members.

**Methods**

<table>

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

*C#*

```csharp
public Task StartAsync(
    CancellationToken cancel
)
```

**Parameters**

*cancel* Type: System.Threading.CancellationToken

**Return Value**

Type: Task

**Implements**

IAmsRouter.StartAsync(CancellationToken)

**Remarks**

The asynchronous task runs as long until Stop is called.

**Reference**

AmsTcpIpRouter Class

TwinCAT.Ads.TcpRouter Namespace

6.6.1.3.5 AmsTcpIpRouter.Stop Method

Stops the AmsTcpIpRouter.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

*C#*

```csharp
public void Stop()
```
6.6.1.3.6 AmsTcpIpRouter.TryAddRoute Method

Adds a dynamic Route

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#
```csharp
public bool TryAddRoute(
    Route route
)
```

**Parameters**

- `route` Type: `TwinCAT.Ads.TcpRouter.Route`

**Return Value**

Type: `Boolean`
- true if added, false otherwise.

**Implements**

- `IAmsRouter.TryAddRoute(Route)`

**Reference**

- AmsTcpIpRouter Class
- TwinCAT.Ads.TcpRouter Namespace

6.6.1.4 AmsTcpIpRouter Events

The `AmsTcpIpRouter` type exposes the following members.

**Events**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="1272" alt="RouterStatusChanged" /></td>
<td>Occurs when the router status changes.</td>
</tr>
</tbody>
</table>
6.6.1.4.1 AmsTcpIpRouter.RouterStatusChanged Event

Occurs when the router status changes.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public event EventHandler<RouterStatusChangedEventArgs> RouterStatusChanged
```

**Value**

Type: `System.EventHandler<RouterStatusChangedEventArgs>`

**Implements**

`IAmsRouter.RouterStatusChanged`
6.6.1.5.1  AmsTcpIpRouter.DEFAULT_TCP_PORT Field

The default TCP port (0xBF02, 48898)

Namespace:  TwinCAT.Ads.TcpRouter [1254]
Assembly:  TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  

```csharp
public const int DEFAULT_TCP_PORT = 48898
```

Field Value

Type: Int32

Reference

AmsTcpIpRouter Class [1254]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.1.5.2  AmsTcpIpRouter.TCP_TIMEOUT Field

The TCP timeout

Namespace:  TwinCAT.Ads.TcpRouter [1254]
Assembly:  TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  

```csharp
public static int TCP_TIMEOUT
```

Field Value

Type: Int32

Reference

AmsTcpIpRouter Class [1254]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.2  IAmsRouter Interface

Interface IAmsRouter

Namespace:  TwinCAT.Ads.TcpRouter [1254]
Assembly:  TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

**C#**

```csharp
public interface IAmsRouter
```

The **IAmsRouter** type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsActive</td>
<td>Gets a value indicating whether the IAmsRouter is active (Running or in Starting / Stopping state).</td>
</tr>
<tr>
<td>IsRunning</td>
<td>Gets a value indicating whether the IAmsRouter is running (Start phase completely finished).</td>
</tr>
<tr>
<td>NetId</td>
<td>The Local AmsNetId of the IAmsRouter</td>
</tr>
<tr>
<td>RouterStatus</td>
<td>Gets the router status.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddRoute</td>
<td>Adds a dynamic Route</td>
</tr>
<tr>
<td>RemoveRoute(String)</td>
<td>Removes a dynamic Route</td>
</tr>
<tr>
<td>RemoveRoute(AmsNetId)</td>
<td>Removes a dynamic Route</td>
</tr>
<tr>
<td>StartAsync</td>
<td>Starts the IAmsRouter asynchronously.</td>
</tr>
<tr>
<td>Stop</td>
<td>Stops the IAmsRouter.</td>
</tr>
<tr>
<td>TryAddRoute</td>
<td>Adds a dynamic Route</td>
</tr>
</tbody>
</table>

### Events

<table>
<thead>
<tr>
<th>Name</th>

</table>

Reference

IAmsRouter Interface [1273]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.2.1  IAmsRouter.IsActive Property

Gets a value indicating whether the IAmsRouter [1273] is active (Running or in Starting / Stopping state).

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
bool IsActive { get; }

Property Value

Type: Boolean
true if this the router is active; otherwise, false.

Reference

IAmsRouter Interface [1273]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.2.1.2  IAmsRouter.IsRunning Property

Gets a value indicating whether the IAmsRouter [1273] is running (Start phase completely finished).

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
bool IsRunning { get; }
**6.6.2.1.3 IAmssRouter.NetId Property**

The Local `AmsNetId` of the `IAmsRouter`.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
AmsNetId NetId { get; }
```

**Property Value**

Type: `AmsNetId`

The net identifier.

**Reference**

IAmsRouter Interface

TwinCAT.Ads.TcpRouter Namespace

**6.6.2.1.4 IAmssRouter.RouterStatus Property**

Gets the router status.

**Namespace:** TwinCAT.Ads.TcpRouter

**Syntax**

C#

```csharp
RouterStatus RouterStatus { get; }
```

**Property Value**

Type: `RouterStatus`

The router status.

**Reference**

IAmsRouter Interface

TwinCAT.Ads.TcpRouter Namespace
6.6.2.2 IAmsRouter Methods

The IAmsRouter [1273] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddRoute [1277]</td>
<td>Adds a dynamic Route [1281]</td>
</tr>
<tr>

<td>Removes a dynamic Route [1281]</td>
</tr>
<tr>
<td>RemoveRoute(AmsNetId) [1278]</td>
<td>Removes a dynamic Route [1281]</td>
</tr>
<tr>
<td>StartAsync [1279]</td>
<td>Starts the IAmsRouter [1273] asynchronously.</td>
</tr>
<tr>
<td>Stop [1280]</td>
<td>Stops the IAmsRouter [1273].</td>
</tr>
<tr>
<td>TryAddRoute [1280]</td>
<td>Adds a dynamic Route [1281]</td>
</tr>
</tbody>
</table>

Reference

IAmsRouter Interface [1273]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.2.2.1 IAmsRouter.AddRoute Method

Adds a dynamic Route [1281]

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
void AddRoute(
    Route route
)

Parameters

route Type: TwinCAT.Ads.TcpRouter.Route [1281]
The route.

Reference

IAmsRouter Interface [1273]

TwinCAT.Ads.TcpRouter Namespace [1254]
### 6.6.2.2.2 IAmssRouter.RemoveRoute Method

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

<tbody>
<tr>
<td>RemoveRoute(String)</td>
<td>Removes a dynamic Route [1281]</td>
</tr>
<tr>
<td>RemoveRoute(AmsNetId)</td>
<td>Removes a dynamic Route [1281]</td>
</tr>
</tbody>
</table>

#### Reference

IAmsRouter Interface [1273]

TwinCAT.Ads.TcpRouter Namespace [1254]

#### IAmssRouter.RemoveRoute Method (String)

Removes a dynamic Route [1281]

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdcc3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool RemoveRoute(
    string route
)
```

**Parameters**

- **route**
  - Type: `System.String`
  - The route.

**Return Value**

- Type: `Boolean`
  - `true` if removed, `false` otherwise.

**Reference**

IAmsRouter Interface [1273]

RemoveRoute Overload [1278]

TwinCAT.Ads.TcpRouter Namespace [1254]

#### IAmssRouter.RemoveRoute Method (AmsNetId)

Removes a dynamic Route [1281]
Namespace: TwinCAT.Ads.TcpRouter

Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

bool RemoveRoute(AmsNetId netId)

Parameters

netId Type: TwinCAT.Ads.AmsNetId

The NetId of the route.

Return Value

Type: Boolean

true if removed, false otherwise.

Reference

IAmsRouter Interface

RemoveRoute Overload

TwinCAT.Ads.TcpRouter Namespace

6.6.2.2.3 IAmSRouter.StartAsync Method

Starts the IAmSRouter asynchronously.

Namespace: TwinCAT.Ads.TcpRouter

Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

Task StartAsync(CancellationToken cancel)

Parameters

cancel Type: System.Threading.CancellationToken

Return Value

Type: Task

Task.

Remarks

The asynchronous task runs as long until Stop is called.
6.6.2.2.4   **IAMSRouter.Stop Method**

Stops the *IAMSRouter*. 

**Namespace:** TwinCAT.Ads.TcpRouter 

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
void Stop()
```

6.6.2.2.5   **IAMSRouter.TryAddRoute Method**

Adds a dynamic *Route*. 

**Namespace:** TwinCAT.Ads.TcpRouter 

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
bool TryAddRoute(
    Route route
)
```

**Parameters**

- **route**
  - Type: TwinCAT.Ads.TcpRouter.Route 
  - The route.

**Return Value**

- Type: **Boolean**
  - true if added, false otherwise.
6.6.2.3  IAmRouter Events

The IAmRouter [1273] type exposes the following members.

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RouterStatusChanged [1281]</td>
<td>Occurs when the router status changes.</td>
</tr>
</tbody>
</table>

Reference

IAmRouter Interface [1273]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.2.3.1  IAmRouter.RouterStatusChanged Event

Occurs when the router status changes.

Namespace:  TwinCAT.Ads.TcpRouter [1254]
Assembly:  TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
event EventHandler<RouterStatusChangedEventArgs> RouterStatusChanged
```

Value

Type:  System.EventHandler<RouterStatusChangedEventArgs>[1317].

Reference

IAmRouter Interface [1273]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.3  Route Class

Class Route specifies an AMS/ADS Route object.

Inheritance Hierarchy

System.Object
TwinCAT.Ads.TcpRouter.Route

Namespace:  TwinCAT.Ads.TcpRouter [1254]
Assembly:  TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public class Route
```
The Route type exposes the following members.

### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route(String, AmsNetId, IList.IPAddress.)</td>
<td>Initializes a new instance of the Route class.</td>
</tr>
<tr>
<td>Route(String, AmsNetId, String)</td>
<td>Initializes a new instance of the Route class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Gets the address of the Route.</td>
</tr>
<tr>
<td>HostName</td>
<td>Gets the Host name of the route.</td>
</tr>
<tr>
<td>IPAddresses</td>
<td>Gets the resolved IP Addresses belonging to this Route.</td>
</tr>
<tr>
<td>IsHostNameAddressed</td>
<td>Gets a value indicating whether this instance is an HostName Route.</td>
</tr>
<tr>
<td>IsIPAddressed</td>
<td>Gets a value indicating whether the Route address specifies an IPAddress.</td>
</tr>
<tr>
<td>IsResolved</td>
<td>Gets a value indicating whether the IPAddresses are resolved.</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Route.</td>
</tr>
<tr>
<td>NetId</td>
<td>Gets the AmsNetId of the route.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified Object is equal to this instance. (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Returns a hash code for this instance. (Overrides Object.GetHashCode.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
</tbody>
</table>
Operators

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equality [1291]</td>
<td>Implements the == operator.</td>
</tr>
<tr>
<td>Inequality [1291]</td>
<td>Implements the != operator.</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.Ads.TcpRouter Namespace [1254]

<tr>
<td>Route(String, AmsNetId, String) [1284]</td>
<td>Initializes a new instance of the Route [1281] class.</td>
</tr>
</tbody>
</table>

Reference

Route Class [1281]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.3.1.1 Route Constructor (String, AmsNetId, IList.IPAddress.)

Initializes a new instance of the Route [1281] class.

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Route(
    string name,
    AmsNetId netId,
    IList<IPAddress> ips
)
```

Parameters

name Type: System.String
The name of the route.
netId

Type: TwinCAT.Ads.AmsNetId [665]
The net identifier.

ips

Type: System.Collections.Generic.IList[System.IPAddress].
The ips.

6.6.3.1.2 Route Constructor (String, AmsNetId, String)

Initializes a new instance of the Route [1281] class.

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public Route(
    string name,
    AmsNetId netId,
    string address
)

Parameters

name Type: System.String
The name.

netId Type: TwinCAT.Ads.AmsNetId [665]
The AmsNetId of the route.

address Type: System.String
The address (HostName or IP)

Reference

Route Class [1281]

6.6.3.2 Route Properties

The Route [1281] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [1285]</td>
<td>Gets the address of the Route [1281].</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>HostName [1285]</td>
<td>Gets the Host name of the route.</td>
</tr>
<tr>
<td>IPAddresses [1286]</td>
<td>Gets the resolved IP Addresses belonging to this Route [1281].</td>
</tr>
<tr>
<td>IsHostNameAddressed [1286]</td>
<td>Gets a value indicating whether this instance is an HostName Route [1281].</td>
</tr>
<tr>
<td>IsIPAddressed [1287]</td>
<td>Gets a value indicating whether the Route address specifies an IPAddress.</td>
</tr>
<tr>
<td>IsResolved [1287]</td>
<td>Gets a value indicating whether the IPAddresses are resolved.</td>
</tr>
<tr>
<td>Name [1288]</td>
<td>Gets the name of the Route [1281].</td>
</tr>
<tr>
<td>NetId [1288]</td>
<td>Gets the AmsNetId [665] of the route.</td>
</tr>
</tbody>
</table>

### Reference

**Route Class [1281]**

**TwinCAT.Ads.TcpRouter Namespace [1254]**

#### 6.6.3.2.1 Route.Address Property

Gets the address of the Route [1281].

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public string Address { get; }
```

**Property Value**

*Type:* String

The address.

**Remarks**

The Address can be the IPAddress / or the host name of the target system.

#### 6.6.3.2.2 Route.HostName Property

Gets the Host name of the route.
### Route.HostName Property

The name of the host.

**Type:** String

**Reference**

- [Route Class](#)
- [TwinCAT.Ads.TcpRouter Namespace](#)

### Route.IPAddresses Property

Gets the resolved IP Addresses belonging to this Route.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c14

**Syntax**

```
C#
public IPAddress[] IPAddresses { get; }
```

**Property Value**

- **Type:** IPAddress

**Reference**

- [Route Class](#)
- [TwinCAT.Ads.TcpRouter Namespace](#)

### Route.IsHostNameAddressed Property

Gets a value indicating whether this instance is an HostName Route.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c14

**Syntax**

```
C#
public bool IsHostNameAddressed { get; }
```
Property Value

Type: Boolean
true if this instance is an HostName Addressed route; otherwise, false.

Reference

Route Class [1281]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.3.2.5 Route.IsIPAddressed Property

Gets a value indicating whether the Route address specifies an IPAddress

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsIPAddressed { get; }

Property Value

Type: Boolean
true if the Address is an IPAddress; otherwise when its specified as HostAddress false.

Reference

Route Class [1281]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.3.2.6 Route.IsResolved Property

Gets a value indicating whether the IPAddresses are resolved.

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsResolved { get; }

Property Value

Type: Boolean
true if the IP Addresses are resolved; otherwise, false.

Reference

Route Class [1281]
TwinCAT.Ads.TcpRouter Namespace [1254]
6.6.3.2.7 Route.Name Property

Gets the name of the Route [1281].

**Namespace:** TwinCAT.Ads.TcpRouter [1254]
**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public string Name { get; }
```

**Property Value**

- **Type:** `String`
The name.

**Reference**

- **Route Class [1281]**
- **TwinCAT.Ads.TcpRouter Namespace [1254]**

6.6.3.2.8 Route.NetId Property

Gets the AmsNetId [665] of the route.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]
**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AmsNetId NetId { get; }
```

**Property Value**

- **Type:** `AmsNetId [665]`
The AmsNetId.

**Remarks**

The `AmsNetId [665]` is the unique identifier used for the route.

**Reference**

- **TwinCAT.Ads.TcpRouter Namespace [1254]**

6.6.3.3 Route Methods

The Route [1281] type exposes the following members.
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals ![1289]</td>
<td>Determines whether the specified Object is equal to this instance. (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode ![1289]</td>
<td>Returns a hash code for this instance. (Overrides Object.GetHashCode.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString ![1290]</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
</tbody>
</table>

Reference

Route Class ![1281]

TwinCAT.Ads.TcpRouter Namespace ![1254]

6.6.3.3.1 Route.Equals Method

Determines whether the specified Object is equal to this instance.

Namespace: TwinCAT.Ads.TcpRouter ![1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override bool Equals(
    Object obj
)
```

Parameters

obj Type: System.Object
The object to compare with the current object.

Return Value

Type: Boolean
ture if the specified Object is equal to this instance; otherwise, false.

Reference

Route Class ![1281]

TwinCAT.Ads.TcpRouter Namespace ![1254]

6.6.3.3.2 Route.GetHashCode Method

Returns a hash code for this instance.
### Namespace: TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public override int GetHashCode()
```

#### Return Value

Type: `int`

A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

#### Reference

- [Route Class [1281]](TwinCAT.AdsTcpRouter)
- [TwinCAT.Ads.TcpRouter Namespace [1254]](TwinCAT.Ads.TcpRouter)

### 6.6.3.3 Route.ToString Method

Returns a `String` that represents this instance.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public override string ToString()
```

#### Return Value

Type: `String`

A `String` that represents this instance.

#### Reference

- [Route Class [1281]](TwinCAT.AdsTcpRouter)
- [TwinCAT.Ads.TcpRouter Namespace [1254]](TwinCAT.Ads.TcpRouter)

### 6.6.3.4 Route Operators

The `Route` [1281] type exposes the following members.

<table>
<thead>
<tr>
<th>Operator</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>==</td>
<td>Equality</td>
<td>Implements the <code>==</code> operator.</td>
</tr>
</tbody>
</table>

### Inequality Operator

Implements the \(!=\) operator.

**Reference**

Route Class \[1281\]

TwinCAT.Ads.TcpRouter Namespace \[1254\]

#### 6.6.3.4.1 Route.Equality Operator

Implements the \(==\) operator.

**Namespace:** TwinCAT.Ads.TcpRouter \[1254\]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public static bool operator ==(Route o1, Route o2)
```

**Parameters**

- `o1`: Type: TwinCAT.Ads.TcpRouter.Route \[1281\]
  - The o1.

- `o2`: Type: TwinCAT.Ads.TcpRouter.Route \[1281\]
  - The o2.

**Return Value**

Type: `Boolean`

The result of the operator.

**Reference**

Route Class \[1281\]

TwinCAT.Ads.TcpRouter Namespace \[1254\]

#### 6.6.3.4.2 Route.Inequality Operator

Implements the \(!=\) operator.

**Namespace:** TwinCAT.Ads.TcpRouter \[1254\]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static bool operator !=(
    Route o1,
    Route o2
)
```

Parameters

- **o1**
  - Type: `TwinCAT.Ads.TcpRouter.Route` |
  - The `o1`.

- **o2**
  - Type: `TwinCAT.Ads.TcpRouter.Route` |
  - The `o2`.

Return Value

- Type: `Boolean`
  - The result of the operator.

Reference

- **Route Class [1281]**
- **TwinCAT.Ads.TcpRouter Namespace [1254]**

### 6.6.4 RouteCollection Class

Collection of routes.

Inheritance Hierarchy

- **System.Object**
- **TwinCAT.Ads.TcpRouter.RouteCollection**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>RouteCollection</code></td>
<td>Initializes a new instance of the RouteCollection class.</td>
</tr>
<tr>
<td><code>RouteCollection(IEnumerable&lt;Route&gt;)</code></td>
<td>Initializes a new instance of the RouteCollection class (copy constructor)</td>
</tr>
</tbody>
</table>
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [1295]</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>IsReadOnly [1296]</td>
<td>Gets a value indicating whether the ICollection.T is read-only.</td>
</tr>
<tr>
<td>Item [1296]</td>
<td>Gets or sets the Route [1281] at the specified index.</td>
</tr>
</tbody>
</table>

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [1298]</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>AddRange [1299]</td>
<td>Adds a range of routes.</td>
</tr>
<tr>
<td>Clear [1299]</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Clone [1299]</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>Contains [1300]</td>
<td>Determines whether the ICollection.T contains a specific value.</td>
</tr>
<tr>
<td>CopyTo [1300]</td>
<td>Copies the elements of the ICollection.T to an Array, starting at a particular Array index.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator [1301]</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf [1302]</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert [1302]</td>
<td>Inserts an item to the IList.T at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove(String) [1303]</td>
<td>Removes the specified route from the RouteCollection.</td>
</tr>
<tr>
<td>Remove(AmsNetId) [1304]</td>
<td>Removes the specified AmsNetId [665] from the RouteCollection.</td>
</tr>
<tr>
<td>Remove(Route) [1304]</td>
<td>Removes the first occurrence of a specific object from the ICollection.T.</td>
</tr>
<tr>
<td>RemoveAt [1305]</td>
<td>Removes the IList.T item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryAdd [1306]</td>
<td>Tries to add the route to the RouteCollection.</td>
</tr>
</tbody>
</table>

## Reference

</table>

Reference

RouteCollection Class [1292]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.1.1 RouteCollection Constructor

Initializes a new instance of the RouteCollection class.

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public RouteCollection()
```

Reference

RouteCollection Class [1292]
RouteCollection Overload [1294]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.1.2 RouteCollection Constructor (IEnumerable.Route.)

Initializes a new instance of the RouteCollection class (copy constructor)

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public RouteCollection(
    IEnumerable<Route> routes
)
```
Parameters

routes

Type: System.Collections.Generic.IEnumerable<Route>
The routes.

Reference

RouteCollection Class [1292]
RouteCollection Overload [1294]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.2 RouteCollection Properties

The RouteCollection [1292] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [1295]</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>IsReadOnly [1296]</td>
<td>Gets a value indicating whether the ICollection.T is read-only.</td>
</tr>
<tr>
<td>Item [1296]</td>
<td>Gets or sets the Route [1281] at the specified index.</td>
</tr>
</tbody>
</table>

Reference

RouteCollection Class [1292]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.2.1 RouteCollection.Count Property

Gets the number of elements contained in the ICollection.T.

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int Count { get; }
```

Property Value

Type: Int32
The count.

Implements

ICollection<T>.Count
6.6.4.2.2 RouteCollection.IsReadOnly Property

Gets a value indicating whether the ICollection{T} is read-only.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool IsReadOnly { get; }
```

**Property Value**

Type: Boolean

true if this instance is read only; otherwise, false.

**Implements**

ICollection{T}.IsReadOnly

6.6.4.2.3 RouteCollection.Item Property

Gets or sets the Route[1281] at the specified index.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Route this[ int index ] { get; set; }
```

**Parameters**

index Type: System.Int32

The index.
Return Value

Type: Route

Implements

IList<T>.Item.Int32.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>

6.6.4.3 RouteCollection Methods

The RouteCollection type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>AddRange</td>
<td>Adds a range of routes.</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>Clone</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the ICollection&lt;T&gt; contains a specific value.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the ICollection&lt;T&gt; to an Array, starting at a particular Array index.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>

<td>Inserts an item to the IList&lt;T&gt; at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### RouteCollection.Add Method

Adds an item to the `ICollection<T>`.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>public void Add(</td>
<td></td>
</tr>
<tr>
<td>Route item )</td>
<td></td>
</tr>
</tbody>
</table>

**Parameters**

- **item**
  
  Type: TwinCAT.Ads.TcpRouter.Route

**Implements**

- ICollection<T>.Add(T)

**Exceptions**

**Exception** | **Condition**
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>Cannot add item</td>
</tr>
</tbody>
</table>

**Reference**

RouteCollection Class

TwinCAT.Ads.TcpRouter Namespace
6.6.4.3.2 RouteCollection.AddRange Method

Adds a range of routes.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void AddRange(
    IEnumerable<Route> routes)
```

**Parameters**

routes

Type: System.Collections.Generic.IEnumerable<Route> [1281].
The routes.

**Reference**

RouteCollection Class [1292]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.3.3 RouteCollection.Clear Method

Removes all items from the ICollection<T>.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Clear()
```

**Implements**

ICollection<T>.Clear.

**Reference**

RouteCollection Class [1292]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.3.4 RouteCollection.Clone Method

Clones this instance.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
6.6.4.3.5 **RouteCollection.Contains Method**

Determines whether the ICollection{T} contains a specific value.

**Namespace:** TwinCAT.Ads.TcpRouter

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool Contains(Route item)
```

**Parameters**

- **item**  
  Type: TwinCAT.Ads.TcpRouter.Route

**Return Value**

Type: Boolean

- if item is found in the ICollection{T}; otherwise, ..

**Implements**

ICollection{T}.Contains(T)

**Reference**

RouteCollection Class

TwinCAT.Ads.TcpRouter Namespace

6.6.4.3.6 **RouteCollection.CopyTo Method**

Copies the elements of the ICollection{T} to an Array, starting at a particular Array index.
Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
```csharp
public void CopyTo(
    Route[] array,
    int arrayIndex
)
```

Parameters

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>array</td>
<td>The one-dimensional Array that is the destination of the elements copied from ICollection&lt;T&gt;. The Array must have zero-based indexing.</td>
</tr>
<tr>
<td>arrayIndex</td>
<td>The zero-based index in array at which copying begins.</td>
</tr>
</tbody>
</table>

Implements

ICollection<T>.CopyTo(T, Int32)

Reference

RouteCollection Class [1292]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.3.7 RouteCollection.GetEnumerator Method

Returns an enumerator that iterates through the collection.

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
```csharp
public IEnumerator<Route> GetEnumerator()
```

Return Value

Type: IEnumerable<Route> [1281].
An enumerator that can be used to iterate through the collection.

Implements

IEnumerable<T>.GetEnumerator.

Reference

RouteCollection Class [1292]
6.6.4.3.8 RouteCollection.IndexOf Method

Determines the index of a specific item in the `IList<T>`.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public int IndexOf(
    Route item
)
```

**Parameters**

- `item`: Type: TwinCAT.Ads.TcpRouter.Route [1281]  
  The object to locate in the `IList<T>`.

**Return Value**

- Type: `Int32`  
  The index of item if found in the list; otherwise, -1.

**Implements**

- `IList<T>.IndexOf(T)`

**Reference**

RouteCollection Class [1292]

TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.4.3.9 RouteCollection.Insert Method

Inserts an item to the `IList<T>` at the specified index.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public void Insert(
    int index,
    Route item
)
```
**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>index</td>
<td>System.Int32</td>
<td>The zero-based index at which item should be inserted.</td>
</tr>
<tr>
<td>item</td>
<td>TwinCAT.Ads.TcpRouter.Route</td>
<td>The object to insert into the IList&lt;T&gt;.</td>
</tr>
</tbody>
</table>

**Implements**

IList<T>.Insert(Int32, T)

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>Cannot add item</td>

**RouteCollection.Remove Method (String)**

Removes the specified route from the RouteCollection.

**Namespace:** TwinCAT.Ads.TcpRouter [► 1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool Remove(
    string routeName
)
```
**Parameters**

routeName

Type: `System.String`

Name of the route.

**Return Value**

Type: `Boolean`

true if removed, false otherwise.

**Reference**

RouteCollection Class [1292]

Remove Overload [1303]

TwinCAT.Ads.TcpRouter Namespace [1254]

---

**RouteCollection.Remove Method (AmsNetId)**

Removes the specified `AmsNetId` from the RouteCollection [1292].

Namespace: TwinCAT.Ads.TcpRouter [1254]

Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool Remove(
    AmsNetId netId
)
```

**Parameters**

netId

Type: `TwinCAT.Ads.AmsNetId` [665]

The Ams Net ID.

**Return Value**

Type: `Boolean`

true if removed, false otherwise.

**Reference**

RouteCollection Class [1292]

Remove Overload [1303]

TwinCAT.Ads.TcpRouter Namespace [1254]

---

**RouteCollection.Remove Method (Route)**

Removes the first occurrence of a specific object from the ICollection<T>.

Namespace: TwinCAT.Ads.TcpRouter [1254]

Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool Remove(
    Route item
)
```

Parameters

- `item` Type: TwinCAT.Ads.TcpRouter.Route
  The object to remove from the ICollection.T.

Return Value

Type: Boolean
- if item was successfully removed from the ICollection.T; otherwise, .. This method also returns .. if item is not found in the original ICollection.T.

Implements

ICollection.T.Remove(T)

Reference

RouteCollection Class
Remove Overload
TwinCAT.Ads.TcpRouter Namespace

6.6.4.3.11 RouteCollection.RemoveAt Method

Removes the IList.T. item at the specified index.

Namespace: TwinCAT.Ads.TcpRouter
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void RemoveAt(
    int index
)
```

Parameters

- `index` Type: System.Int32
  The zero-based index of the item to remove.

Implements

IList.T.RemoveAt(Int32)
6.6.4.3.12 RouteCollection.TryAdd Method

Tries to add the route to the RouteCollection.

Namespace: TwinCAT.Ads.TcpRouter
Assembly: TwinCAT.Ads.TcpRouter.dll
Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool TryAdd(Route route)
```

Parameters

route Type: TwinCAT.Ads.TcpRouter.Route

Return Value

Type: Boolean
true if XXXX, false otherwise.

Reference

RouteCollection Class
TwinCAT.Ads.TcpRouter Namespace

6.6.5 RouterException Class

An RouterException is thrown on communication errors in the AmsTcpIpRouter class.

Inheritance Hierarchy

System.Object
System.Exception
TwinCAT.Ads.TcpRouter.RouterException
TwinCAT.Ads.TcpRouter.RouterNotInitializedException
TwinCAT.Ads.TcpRouter.RouterNotStartedException

Namespace: TwinCAT.Ads.TcpRouter
Assembly: TwinCAT.Ads.TcpRouter.dll
Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
[SerializableAttribute]
public class RouterException : Exception
```

Reference

RouteCollection Class
TwinCAT.Ads.TcpRouter Namespace
The RouterException type exposes the following members.

### Constructors

TwinCAT.Ads.TcpRouter Namespace [6.1254]

6.6.5.1 RouterException Constructor

Initializes a new instance of the RouterException [6.1306] class.

Namespace: TwinCAT.Ads.TcpRouter [6.1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected RouterException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)

Parameters

serialInfoInfo  Type: System.Runtime.Serialization.SerializationInfo
    The serialization information.
streamingContext  Type: System.Runtime.Serialization.StreamingContext
    The streaming context.

Reference

### 6.6.5.3.1 RouterException.GetObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context
)
```

Parameters

- **info**
  - Type: `System.Runtime.Serialization.SerializationInfo`
  - The `SerializationInfo` that holds the serialized object data about the exception being thrown.

- **context**
  - Type: `System.Runtime.Serialization.StreamingContext`
  - The `StreamingContext` that contains contextual information about the source or destination.

Implements

- `ISerializable.GetObjectData(SerializationInfo, StreamingContext)`
- `Exception.GetObjectData(SerializationInfo, StreamingContext)`

Exceptions

<table>

### 6.6.9.3 RouterStatusChangedEventArgs Fields

The `RouterStatusChangedEventArgs` type exposes the following members.

#### Fields

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RouterStatus</td>
<td>The router status</td>
</tr>
</tbody>
</table>

**Reference**

RouterStatusChangedEventArgs Class [1317]

TwinCAT.Ads.TcpRouter Namespace [1254]

### 6.6.9.3.1 RouterStatusChangedEventArgs.RouterStatus Field

The router status

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public readonly RouterStatus RouterStatus
```

**Field Value**

Type: `RouterStatus` [1316]

**Reference**

RouterStatusChangedEventArgs Class [1317]

TwinCAT.Ads.TcpRouter Namespace [1254]
6.6.10  **StaticRoutesXmlConfigurationBuilderExtension Class**

Extension class adding StaticRoutes.xml file reading to the IConfigurationBuilder.

**Inheritance Hierarchy**

- System.Object
- TwinCAT.Ads.TcpRouter.StaticRoutesXmlConfigurationBuilderExtension

**Namespace:**  TwinCAT.Ads.TcpRouter

**Assembly:**  TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static class StaticRoutesXmlConfigurationBuilderExtension
```

The StaticRoutesXmlConfigurationBuilderExtension type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="AddStaticRoutesXmlConfiguration" /></td>
<td>Adds the static routes XML configuration.</td>
</tr>
</tbody>
</table>

**Reference**

- TwinCAT.Ads.TcpRouter Namespace [1254]

### 6.6.10.1  **StaticRoutesXmlConfigurationBuilderExtension Methods**

The StaticRoutesXmlConfigurationBuilderExtension [1320] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="AddStaticRoutesXmlConfiguration" /></td>
<td>Adds the static routes XML configuration.</td>
</tr>
</tbody>
</table>

**Reference**

- StaticRoutesXmlConfigurationBuilderExtension Class [1320]
- TwinCAT.Ads.TcpRouter Namespace [1254]

### 6.6.10.1.1  **StaticRoutesXmlConfigurationBuilderExtension.AddStaticRoutesXmlConfiguration Method**

Adds the static routes XML configuration.
**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static IConfigurationBuilder AddStaticRoutesXmlConfiguration(
    this IConfigurationBuilder builder
)
```

**Parameters**

- **builder**  
  Type: `IConfigurationBuilder`  
  The builder.

**Return Value**

Type: `IConfigurationBuilder`  
`IConfigurationBuilder`.

**Usage Note**

In Visual Basic and C#, you can call this method as an instance method on any object of type `IConfigurationBuilder`. When you use instance method syntax to call this method, omit the first parameter. For more information, see [Extension Methods (Visual Basic)] or [Extension Methods (C# Programming Guide)].

- [StaticRoutesXmlConfigurationBuilderExtension Class] [1320]
- [TwinCAT.Ads.TcpRouter Namespace] [1254]

### 6.6.11 StaticRoutesXmlConfigurationProvider Class

Class `StaticRoutesXmlConfigurationProvider`. Implements the `ConfigurationProvider`.

**Inheritance Hierarchy**

- `System.Object`
  - `ConfigurationProvider`
  - TwinCAT.Ads.TcpRouter.StaticRoutesXmlConfigurationProvider

**Namespace:** TwinCAT.Ads.TcpRouter [1254]

**Assembly:** TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public class StaticRoutesXmlConfigurationProvider : ConfigurationProvider
```

The `StaticRoutesXmlConfigurationProvider` type exposes the following members.
Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>StaticRoutesXmlConfigurationProvider</td>
<td>Initializes a new instance of the StaticRoutesXmlConfigurationProvider class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>The configuration key value pairs for this provider. (Inherited from ConfigurationProvider.)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
| GetChildKeys       | Returns the list of keys that this provider has. (Overrides ConfigurationProvider.GetChildKeys(IEnumerable.String., String).
| GetHashCode        | Serves as the default hash function. (Inherited from Object.) |
| GetReloadToken     | Returns a IChangeToken that can be used to listen when this provider is reloaded. (Inherited from ConfigurationProvider.) |
| GetType            | Gets the Type of the current instance. (Inherited from Object.) |
| Load               | Loads (or reloads) the data for this provider. (Overrides ConfigurationProvider.Load.) |
| MemberwiseClone    | Creates a shallow copy of the current Object. (Inherited from Object.) |
| OnReload           | Triggers the reload change token and creates a new one. (Inherited from ConfigurationProvider.) |
| Set                | Sets a value for a given key. (Inherited from ConfigurationProvider.) |
| ToString           | Generates a string representing this provider name and relevant details. (Inherited from ConfigurationProvider.) |
| TryGet             | Attempts to find a value with the given key, returns true if one is found, false otherwise. (Overides ConfigurationProvider.TryGet(String, String.). |

Reference

TwinCAT.Ads.TcpRouter Namespace [1254]

ConfigurationProvider

6.6.11.1 StaticRoutesXmlConfigurationProvider Constructor

Initializes a new instance of the StaticRoutesXmlConfigurationProvider class.

Namespace: TwinCAT.Ads.TcpRouter [1254]

Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

</tr>
</tbody>
</table>

Reference

StaticRoutesXmlConfigurationProvider Class [1321]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.11.3.1 StaticRoutesXmlConfigurationProvider.GetChildKeys Method

Returns the list of keys that this provider has.

Namespace: TwinCAT.Ads.TcpRouter [1254]
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public override IEnumerable<string> GetChildKeys(
    IEnumerable<string> earlierKeys,
    string parentPath
)

Parameters

- earlierKeys Type: System.Collections.Generic.IEnumerable<String>. The earlier keys that other providers contain.
- parentPath Type: System.String. The path for the parent IConfiguration.

Return Value

Type: IEnumerable<String>. The list of keys for this provider.

Implements

IConfigurationProvider.GetChildKeys(IEnumerable<String>, String)

Reference

StaticRoutesXmlConfigurationProvider Class [1321]
TwinCAT.Ads.TcpRouter Namespace [1254]

6.6.11.3.2 StaticRoutesXmlConfigurationProvider.Load Method

Loads (or reloads) the data for this provider.
Syntax

C#

```csharp
public override void Load()
```

Implements

`IConfigurationProvider.Load`.

Reference

`StaticRoutesXmlConfigurationProvider Class [1321]`

`TwinCAT.Ads.TcpRouter Namespace [1254]`

### 6.6.11.3.3 StaticRoutesXmlConfigurationProvider.TryGet Method

Attempts to find a value with the given key, returns true if one is found, false otherwise.

Namespace: `TwinCAT.Ads.TcpRouter [1254]`
Assembly: `TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

Syntax

C#

```csharp
public override bool TryGet(
    string key,
    out string value
)
```

Parameters

- **key**
  - Type: `System.String`
  - The key to lookup.

- **value**
  - Type: `System.String`
  - The value found at key if one is found.

Return Value

- **Type**: `Boolean`
- True if key has a value, false otherwise.

Implements

`IConfigurationProvider.TryGet(String, String.)`

Reference

`StaticRoutesXmlConfigurationProvider Class [1321]`

`TwinCAT.Ads.TcpRouter Namespace [1254]`
6.6.12 StaticRoutesXmlConfigurationSource Class

StaticRoutes Configuration Sources Implements the IConfigurationSource

Inheritance Hierarchy

System.Object
    TwinCAT.Ads.TcpRouter.StaticRoutesXmlConfigurationSource

Namespace: TwinCAT.Ads.TcpRouter
Assembly: TwinCAT.Ads.TcpRouter (in TwinCAT.Ads.TcpRouter.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public class StaticRoutesXmlConfigurationSource : IConfigurationSource

The StaticRoutesXmlConfigurationSource type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>StaticRoutesXmlConfigurationSource</td>
<td></td>

</tbody>
</table>

### 6.7.1  AliasType Class

**Alias DataType**

**Inheritance Hierarchy**

System.Object

<table>
<thead>
<tr>
<th>System.Object</th>
<th>TwinCAT.Ads.TypeSystem.DataType[1349]</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>TwinCAT.Ads.TypeSystem.AliasType</td>
</tr>
</tbody>
</table>

**Namespace:** TwinCAT.Ads.TypeSystem[1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public sealed class AliasType : DataType,
    IAliasType, IDataType, IBitSize
```
The AliasType type exposes the following members.

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the <a href="#">IDataType</a> (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>BaseType</td>
<td>Gets the Base Type</td>
</tr>
<tr>
<td>BaseTypeName</td>
<td>Gets the BaseType name</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <a href="#">DataType</a> in bits. (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the <a href="#">IDataType</a> (Namespace + Name) (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the DataType (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this <a href="#">IDataType</a> is a bit mapping Type (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this <a href="#">IDataType</a> is a container type (Overrides <a href="#">DataType.IsContainer</a>.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this <a href="#">DataType</a> is a pointer type (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this <a href="#">DataType</a> is primitive (Overrides <a href="#">DataType.IsPrimitive</a>.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this <a href="#">DataType</a> is a reference type (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>ManagedType</td>
<td>Gets the corresponding .NET Type if attached. (Overrides <a href="#">DataType.ManagedType</a>.)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the <a href="#">IDataType</a> exists. (Inherited from <a href="#">DataType</a>.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the Size of the <a href="#">DataType</a> in Bytes or bits. (Inherited from <a href="#">DataType</a>.)</td>
</tr>
</tbody>
</table>

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <a href="#.">Object</a></td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <a href="#.">Object</a>)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from <a href="#">Object</a>.)</td>
</tr>
</tbody>
</table>
### AliasType Properties

The AliasType type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from DataType.)</td>
</tr>
<tr>
<td>BaseType</td>
<td>Gets the Base Type</td>
</tr>
<tr>
<td>BaseTypeName</td>
<td>Gets the BaseType name</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the DataType in bits. (Inherited from DataType.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from DataType.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from DataType.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from DataType.)</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType (Namespace + Name) (Inherited from DataType.)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the Data Type (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this IDataType is a bit mapping Type (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this IDataType is a container type (Inherited from DataType.IsContainer.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this IDataType is a pointer type (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this IDataType is primitive (Inherited from DataType.IsPrimitive.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this IDataType is a reference type (Inherited from DataType.)</td>
</tr>
<tr>
<td>ManagedType</td>
<td>Gets the corresponding .NET Type if attached. (Overides DataType.ManagedType.)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from DataType.)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the IDataType exists. (Inherited from DataType.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Size [1361]</td>
<td>Gets the Size of the <strong>DataType [1349]</strong> in Bytes or bits. (Inherited from <strong>DataType [1349]</strong>.)</td>
</tr>
</tbody>
</table>

6.7.1.1.3 AliasType.IsContainer Property

Gets a value indicating whether this IDataType [► 1986] is a container type

Namespace: TwinCAT.Ads.TypeSystem [► 1328]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override bool IsContainer { get; }
```

Property Value

Type: Boolean

true if this instance is container type; otherwise, false.

Implements

IDataType.IsContainer [► 1990]

Remarks

Container Types are all types that contain SubElements like

- Array [► 1649]
- Pointer [► 1649]
- Union [► 1649]
- Struct [► 1649]
- Function [► 1649]
- FunctionBlock [► 1649]
- Program [► 1649]

And the Alias [► 1649] types, if they have a container type as base type.

Reference

AliasType Class [► 1329]

TwinCAT.Ads.TypeSystem Namespace [► 1328]

IDataType.Category [► 1988]
6.7.1.4 AliasType.IsPrimitive Property

Gets a value indicating whether this IDataType is primitive.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public override bool IsPrimitive { get; }
```

**Property Value**

Type: Boolean
true if this instance is primitive; otherwise, false.

**Implements**

IDataType.IsPrimitive

**Reference**

AliasType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.1.5 AliasType.ManagedType Property

Gets the corresponding .NET Type if attached.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public override Type ManagedType { get; }
```

**Property Value**

Type: Type
Dot net type.

**Reference**

AliasType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.1.2 AliasType Methods

The AliasType type exposes the following members.
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a <code>String</code> that represents this instance. (Overrrides <code>DataType.ToString</code>.</td>
</tr>
</tbody>
</table>

Reference

AliasType Class [1329]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.1.2.1 AliasType.ToString Method

Returns a `String` that represents this instance.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  

```csharp
public override string ToString()
```

Return Value

Type: `String`  
A `String` that represents this instance.

Reference

AliasType Class [1329]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.2 ArrayType Class

Represents an Array `DataType`

DataType class

Inheritance Hierarchy

System.Object  
  TwinCAT.Ads.TypeSystem.DataType [1349]  
  TwinCAT.Ads.TypeSystem.ArrayType

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#  
public class ArrayType : DataType, IArrayType,  
IDataType, IBitSize

The ArrayType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes[1352]</td>
<td>Gets the attributes of the [1986] (Inherited from [1349].)</td>
</tr>
<tr>
<td>BitSize[1353]</td>
<td>Gets the size of the [1349] in bits. (Inherited from [1349].)</td>
</tr>
<tr>
<td>ByteSize[1353]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from [1349].)</td>
</tr>
<tr>
<td>Category[1354]</td>
<td>Gets the Data Type category (Inherited from [1349].)</td>
</tr>
<tr>
<td>Comment[1354]</td>
<td>Gets the comment. (Inherited from [1349].)</td>
</tr>
<tr>
<td>DimensionCount[1339]</td>
<td>Gets the dimension count.</td>
</tr>
<tr>
<td>Dimensions[1339]</td>
<td>Gets the dimensions as read only collection.</td>
</tr>
<tr>
<td>ElementCount[1339]</td>
<td>Gets the element count.</td>
</tr>
<tr>
<td>ElementSize[1340]</td>
<td>Gets the byte-size of a single element of the array</td>
</tr>
<tr>
<td>ElementType[1340]</td>
<td>Gets the type of the contained elements.</td>
</tr>
<tr>
<td>ElementTypeName[1341]</td>
<td>Gets the name of the element type.</td>
</tr>
<tr>
<td>FullName[1355]</td>
<td>Gets the full name of the [1986] (Namespace + Name) (Inherited from [1349].)</td>
</tr>
<tr>
<td>Id[1355]</td>
<td>Gets the ID of the DataType (Inherited from [1349].)</td>
</tr>
<tr>
<td>IsBitType[1356]</td>
<td>Gets a value indicating whether this [1986] is a bit mapping Type (Inherited from [1349].)</td>
</tr>
<tr>
<td>IsByteAligned[1356]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from [1349].)</td>
</tr>
<tr>
<td>IsContainer[1357]</td>
<td>Gets a value indicating whether this [1986] is a container type (Inherited from [1349].)</td>
</tr>
<tr>
<td>IsJagged[1341]</td>
<td>Gets a value indicating whether this instance is jagged.</td>
</tr>
<tr>
<td>IsOversampled[1342]</td>
<td>Gets a value indicating whether this array instance describes an oversampling type.</td>
</tr>
<tr>
<td>IsPointer[1357]</td>
<td>Gets a value indicating whether this [1986] is a pointer type (Inherited from [1349].)</td>
</tr>
<tr>
<td>IsPrimitive[1342]</td>
<td>Gets a value indicating whether this [1986] is primitive (Overrides [1349].)</td>
</tr>
<tr>
<td>IsReference[1359]</td>
<td>Gets a value indicating whether this [1986] is a reference type (Inherited from [1349].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>JaggedLevel [1343]</td>
<td>Gets the jagged level (Non-Jagged Array have level 1)</td>
</tr>
<tr>
<td>ManagedType [1343]</td>
<td>Gets the corresponding .NET Type if attached. (Overrides DataType.ManagedType [1359] )</td>
</tr>
<tr>
<td>Name [1360]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from DataType [1349] )</td>
</tr>
<tr>
<td>Namespace [1360]</td>
<td>Gets the namespace string within the IDataType [1986] exists. (Inherited from DataType [1349] )</td>
</tr>
<tr>
<td>Size [1361]</td>
<td>Gets the Size of the DataType [1349] in Bytes or bits. (Inherited from DataType [1349] )</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object )</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object )</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object )</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object )</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object )</td>
</tr>
<tr>
<td>SetDimensions [1344]</td>
<td>Sets the dimensions.</td>
</tr>
<tr>
<td>SetElementType [1345]</td>
<td>Sets the type of the element.</td>
</tr>
<tr>
<td>ToString [1363]</td>
<td>Returns a String that represents this instance. (Inherited from DataType [1349] )</td>
</tr>
</tbody>
</table>

### Reference

<tr>
<td>BitSize [1353]</td>
<td>Gets the size of the DataType [1349] in bits. (Inherited from DataType [1349] )</td>
</tr>
<tr>
<td>ByteSize [1353]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DataType [1349] )</td>
</tr>
<tr>
<td>Category [1354]</td>
<td>Gets the Data Type category (Inherited from DataType [1349] )</td>
</tr>
<tr>
<td>Comment [1354]</td>
<td>Gets the comment. (Inherited from DataType [1349] )</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------</td>
<td>------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>DimensionCount</td>
<td>Gets the dimension count.</td>
</tr>
<tr>
<td>Dimensions</td>
<td>Gets the dimensions as read only collection.</td>
</tr>
<tr>
<td>ElementCount</td>
<td>Gets the element count.</td>
</tr>
<tr>
<td>ElementSize</td>
<td>Gets the byte-size of a single element of the array</td>
</tr>
<tr>
<td>ElementType</td>
<td>Gets the type of the contained elements.</td>
</tr>
<tr>
<td>ElementTypeName</td>
<td>Gets the name of the element type.</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the $\text{IDataType}$ (Namespace + Name) (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the $\text{DataType}$ (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this $\text{IDataType}$ is a bit mapping $\text{Type}$ (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this $\text{IDataType}$ is a container type (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>IsJagged</td>
<td>Gets a value indicating whether this instance is jagged.</td>
</tr>
<tr>
<td>IsOversampled</td>
<td>Gets a value indicating whether this array instance describes an oversampling type.</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this $\text{IDataType}$ is a pointer type (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this $\text{IDataType}$ is primitive (Overrides $\text{DataType}.IsPrimitive$.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this $\text{IDataType}$ is a reference type (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>JaggedLevel</td>
<td>Gets the jagged level (Non-Jagged Array have level 1)</td>
</tr>
<tr>
<td>ManagedType</td>
<td>Gets the corresponding .NET Type if attached. (Overrides $\text{DataType.ManagedType}$.)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the $\text{DataType}$ (without namespace) (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the $\text{IDataType}$ exists. (Inherited from $\text{DataType}$.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the Size of the $\text{DataType}$ in Bytes or bits. (Inherited from $\text{DataType}$.)</td>
</tr>
</tbody>
</table>

- ArrayType Class [1335]
- TwinCAT.Ads.TypeSystem Namespace [1328]
6.7.2.1.1 ArrayType.DimensionCount Property

Gets the dimension count.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public int DimensionCount { get; }

Property Value

Type: Int32
The dimension count.

Reference

ArrayType Class
TwinCAT.Ads.TypeSystem Namespace

6.7.2.1.2 ArrayType.Dimensions Property

Gets the dimensions as read only collection.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IDimensionCollection Dimensions { get; }

Property Value

Type: IDimensionCollection
The dimensions.

Implements

IArrrayType.Dimensions

Reference

ArrayType Class
TwinCAT.Ads.TypeSystem Namespace

6.7.2.1.3 ArrayType.ElementCount Property

Gets the element count.
Namespace: TwinCAT.Ads.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int ElementCount { get; }
```

Property Value

Type: Int32
The element count.

Reference

ArrayType Class
TwinCAT.Ads.TypeSystem Namespace

6.7.2.1.4 ArrayType.ElementSize Property

Gets the byte-size of a single element of the array

Namespace: TwinCAT.Ads.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int ElementSize { get; }
```

Property Value

Type: Int32
The size of the element.

Reference

ArrayType Class
TwinCAT.Ads.TypeSystem Namespace

6.7.2.1.5 ArrayType.ElementType Property

Gets the type of the contained elements.

Namespace: TwinCAT.Ads.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IDataType ElementType { get; }
```
Property Value

Type: IDataType
The type of the element.

Implements

IArrayType.ElementType

Reference

ArrayType Class
TwinCAT.Ads.TypeSystem Namespace

6.7.2.1.6 ArrayType.ElementTypeName Property

Gets the name of the element type.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public string ElementTypeName { get; }

Property Value

Type: String
The name of the element type.

Implements

IArrayType.ElementTypeName

Reference

ArrayType Class
TwinCAT.Ads.TypeSystem Namespace

6.7.2.1.7 ArrayType.IsJagged Property

Gets a value indicating whether this instance is jagged.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsJagged { get; }
TwinCAT.Ads Namespaces

Property Value
Type: Boolean
true if this instance is jagged; otherwise, false.

Implements
IArrayType.IsJagged [1975]

Reference
ArrayType Class [1335]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.2.1.8   ArrayType.IsOversampled Property

Gets a value indicating whether this array instance describes an oversampling type.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public bool IsOversampled { get; }

Property Value
Type: Boolean
true if this instance is oversampling; otherwise, false.

Reference
ArrayType Class [1335]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.2.1.9   ArrayType.IsPrimitive Property

Gets a value indicating whether this [IDataType [1986]] is primitive

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public override bool IsPrimitive { get; }

Property Value
Type: Boolean
true if this instance is primitive; otherwise, false.
6.7.2.1.10 ArrayType.JaggedLevel Property

Gets the jagged level (Non-Jagged Array have level 1)

**Namespace:** TwinCAT.Ads.TypeSystem

**Reference**

ArrayType Class

TwinCAT.Ads.TypeSystem Namespace

**Syntax**

**C#**

```csharp
public int JaggedLevel { get; }
```

**Property Value**

Type: Int32

The jagged level.

**Implements**

IArrayType.JaggedLevel

**Reference**

ArrayType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.2.1.11 ArrayType.ManagedType Property

Gets the corresponding .NET Type if attached.

**Namespace:** TwinCAT.Ads.TypeSystem

**Reference**

ArrayType Class

TwinCAT.Ads.TypeSystem Namespace

**Syntax**

**C#**

```csharp
public override Type ManagedType { get; }
```
Property Value

Type: Type
Dot net type.

ArrayType Class [1335]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.2.2.1 ArrayType.SetDimensions Method

Sets the dimensions.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected void SetDimensions(
  DimensionCollection dims
)

Reference

ArrayType Class [1335]
TwinCAT.Ads.TypeSystem Namespace [1328]
Parameters
dims Type: TwinCAT.TypeSystem.DimensionCollection [1671]
The dims.

Reference
ArrayType Class [1335]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.2.2 ArrayType.SetElementType Method
Sets the type of the element.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected void SetElementType(
    DataType elementType
)

Parameters
elementType Type: TwinCAT.Ads.TypeSystem.DataType [1349]
Type of the element.

Reference
ArrayType Class [1335]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.3 BitMappingType Class
Helper Data Type to implement Bit mapping types.

Inheritance Hierarchy
System.Object
    TwinCAT.Ads.TypeSystem.DataType [1349]
    TwinCAT.Ads.TypeSystem.BitMappingType
Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public sealed class BitMappingType : DataType

The BitMappingType type exposes the following members.
## Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BitMappingType</td>
<td>Initializes a new instance of the BitMappingType class.</td>
</tr>
</tbody>
</table>

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the <code>IDataType</code> (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>DataType</code> in bits. (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the <code>IDataType</code> (Namespace + Name) (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the <code>DataType</code> (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this <code>IDataType</code> is a bit mapping Type (Inherited from <code>DataType</code>.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <code>DataType</code>.)</td>
</tr>

#### 6.7.3.1 BitMappingType Constructor

Initializes a new instance of the BitMappingType [1345] class.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public BitMappingType(
    string name,
    int bitSize,
    Type dotnetType
)
```

**Parameters**

- **name**  
  Type: System.String  
  The name.
- **bitSize**  
  Type: System.Int32  
  The size of the type in bits.
- **dotnetType**  
  Type: System.Type  
  Type of the dotnet.

**Reference**

BitMappingType Class [1345]  
TwinCAT.Ads.TypeSystem Namespace [1328]

#### 6.7.3.2 BitMappingType Properties

The BitMappingType [1345] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the DataType [1349] in bits. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from DataType [1349].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comment [1354]</td>

#### 6.7.3.3 BitMappingType Methods

The `BitMappingType [1345]` type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a <code>String</code> that represents this instance. (Inherited from <code>DataType [1349]</code>.)</td>
</tr>
</tbody>
</table>

6.7.4.1  **DataType Constructor**

Initializes a new instance of the `DataType` class (copy Constructor)

**Namespace:**  TwinCAT.Ads.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
protected DataType(
    DataType copy
)
```

**Parameters**

`copy`  
Type: `TwinCAT.Ads.TypeSystem.DataType`  
The copy.

**Reference**

DataType Class [1349]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.4.2  **DataType Properties**

The `DataType` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
</table>
| Attributes [1352] | Gets the attributes of the `IDataType`[
| BitSize [1353]  | Gets the size of the `DataType` in bits.                                   |
| ByteSize [1353] | Gets the (aligned) size of of the Type/Instance in Bytes                   |
| Category [1354] | Gets the Data Type category                                                 |
| Comment [1354]  | Gets the comment.                                                           |
| FullName [1355] | Gets the full name of the `IDataType` (Namespace + Name)                    |
| Id [1355]       | Gets the ID of the Data Type                                                |
| IsBitType [1356] | Gets a value indicating whether this `IDataType` is a bit mapping Type       |
| IsByteAligned [1356] | Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) |
| IsContainer [1357] | Gets a value indicating whether this `IDataType` is a container type        |
| IsPointer [1357] | Gets a value indicating whether this `IDataType` is a pointer type          |
| IsPrimitive [1358] | Gets a value indicating whether this `IDataType` is primitive               |

6.7.4.2.2  DataType.BitSize Property

Gets the size of the `DataType` in bits.

**Namespace:**  TwinCAT.Ads.TypeSystem
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```c#
public int BitSize { get; }
```

**Property Value**

Type: `Int32`
The size of the bit.

**Implements**

`IBitSize.BitSize`

**Reference**

`DataType Class`
`TwinCAT.Ads.TypeSystem Namespace`

6.7.4.2.3  DataType.ByteSize Property

Gets the (aligned) size of the Type/Instance in Bytes

**Namespace:**  TwinCAT.Ads.TypeSystem
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```c#
public int ByteSize { get; }
```

**Property Value**

Type: `Int32`
The size of the byte.

**Implements**

`IBitSize.ByteSize`

**Reference**

`DataType Class`
`TwinCAT.Ads.TypeSystem Namespace`
6.7.4.2.4  **DataType.Category Property**

Gets the Data Type category

**Namespace:**  TwinCAT.Ads.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public DataTypeCategory Category { get; protected set; }
```

**Property Value**

Type:  **DataTypeCategory**

The category.

**Implements**

IDataType.Category

**Reference**

DataType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.4.2.5  **DataType.Comment Property**

Gets the comment.

**Namespace:**  TwinCAT.Ads.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public string Comment { get; }
```

**Property Value**

Type:  **String**

The comment.

**Implements**

IDataType.Comment

**Reference**

DataType Class

TwinCAT.Ads.TypeSystem Namespace
6.7.4.2.6  **DataType.FullName Property**

Gets the full name of the [IDataType](#1986) (Namespace + Name)

**Namespace:** TwinCAT.Ads.TypeSystem [1328]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```
public string FullName { get; }
```

**Property Value**

Type: **String**
The full name.

**Implements**

[IDataType.FullName](#1986)

**Reference**

DataType Class [1349]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.4.2.7  **DataType.Id Property**

Gets the ID of the DataType

**Namespace:** TwinCAT.Ads.TypeSystem [1328]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```
public int Id { get; }
```

**Property Value**

Type: **Int32**
The id.

**Implements**

[IDataType.Id](#1989)

**Reference**

DataType Class [1349]

TwinCAT.Ads.TypeSystem Namespace [1328]
**6.7.4.2.8 **DataType.IsBitType Property

Gets a value indicating whether this IDataType is a bit mapping Type

**Namespace**: TwinCAT.Ads.TypeSystem

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsType { get; }
```

**Property Value**

Type: Boolean
true if this instance is bit mapping subtype; otherwise, false.

**Implements**

IBitSize.IsBitType

**Reference**

DataType Class
TwinCAT.Ads.TypeSystem Namespace

---

**6.7.4.2.9 **DataType.IsByteAligned Property

Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)

**Namespace**: TwinCAT.Ads.TypeSystem

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsByteAligned { get; }
```

**Property Value**

Type: Boolean
true if this instance is byte aligned; otherwise, false.

**Implements**

IBitSize.IsByteAligned

**Reference**

DataType Class
TwinCAT.Ads.TypeSystem Namespace
6.7.4.2.10  **DataType.IsContainer Property**

Gets a value indicating whether this `IDataType` [p. 1986] is a container type

**Namespace:**  TwinCAT.Ads.TypeSystem [p. 1328]  
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public virtual bool IsContainer { get; }
```

**Property Value**

Type:  `Boolean`
true if this instance is container type; otherwise, false.

**Implements**

`IDataType.IsContainer` [p. 1990]

**Remarks**

Container Types are all types that contain SubElements like

- `Array` [p. 1649]
- `Pointer` [p. 1649]
- `Union` [p. 1649]
- `Struct` [p. 1649]
- `Function` [p. 1649]
- `FunctionBlock` [p. 1649]
- `Program` [p. 1649]

and the `Alias` [p. 1649] and `Reference` [p. 1649] types, if they have a container type as base type.

**Reference**

`DataType Class` [p. 1349]  
TwinCAT.Ads.TypeSystem Namespace [p. 1328]  
`IDataType.Category` [p. 1988]

---

6.7.4.2.11  **DataType.IsPointer Property**

Gets a value indicating whether this `IDataType` [p. 1986] is a pointer type

**Namespace:**  TwinCAT.Ads.TypeSystem [p. 1328]  
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public virtual bool IsPointer { get; }
```

Property Value

Type: Boolean
true if this instance is pointer type; otherwise, false.

Implements

IDataType.IsPointer

Remarks

Pointer types can be dereferenced with the '^' operator.

Reference

DataType Class
TwinCAT.Ads.TypeSystem Namespace
IDataType.Category

6.7.4.2.12   DataType.IsPrimitive Property

Gets a value indicating whether this IDataType is primitive

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual bool IsPrimitive { get; }
```

Property Value

Type: Boolean
true if this instance is primitive; otherwise, false.

Implements

IDataType.IsPrimitive

Reference

DataType Class
TwinCAT.Ads.TypeSystem Namespace
6.7.4.2.13  **DataType.IsReference Property**

Gets a value indicating whether this [IDataType](#1986) is a reference type

**Namespace:**  TwinCAT.Ads.TypeSystem [1328]

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public virtual bool IsReference { get; }
```

**Property Value**

Type:  Boolean

true if this instance is container type; otherwise, false.

**Implements**

IDataType.IsReference [1991]

**Remarks**

Reference types can be dereferenced.

**Reference**

DataType Class [1349]

TwinCAT.Ads.TypeSystem Namespace [1328]

IDataType.Category [1988]

---

6.7.4.2.14  **DataType.ManagedType Property**

Gets the corresponding .NET Type if attached.

**Namespace:**  TwinCAT.Ads.TypeSystem [1328]

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public virtual Type ManagedType { get; protected set; }
```

**Property Value**

Type:  Type

Dot net type.

**Reference**

DataType Class [1349]

TwinCAT.Ads.TypeSystem Namespace [1328]
6.7.4.2.15  **DataType.Name Property**

Gets the name of the Data Type (without namespace)

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public string Name { get; protected set; }
```

**Property Value**

Type: **String**

The name.

**Implements**

[IDataType.Name] [1992]

**Reference**

DataType Class [1349]  
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.4.2.16  **DataType.Namespace Property**

Gets the namespace string within the [IDataType [1986] exists.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public string Namespace { get; }
```

**Property Value**

Type: **String**

The namespace.

**Implements**

[IDataType.Namespace] [1992]

**Reference**

DataType Class [1349]  
TwinCAT.Ads.TypeSystem Namespace [1328]
6.7.4.2.17 **DataType.Size Property**

Gets the Size of the DataType in Bytes or bits.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int Size { get; protected set; }
```

**Property Value**

Type: Int32

The size.

**Implements**

IBitSize.Size

**Reference**

DataType Class

TwinCAT.Ads.TypeSystem Namespace

### 6.7.4.3 **DataType Methods**

The **DataType** type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IsPointerType</td>
<td>Determines whether the specified category is a pointer type.</td>
</tr>
<tr>
<td></td>
<td>[1362]</td>
</tr>
<tr>
<td>IsReferenceType</td>
<td>Determines whether the specified category is a reference type.</td>
</tr>
<tr>
<td></td>
<td>[1362]</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
</tbody>
</table>
6.7.4.3.1  DataType.IsPointerType Method

Determines whether the specified category is a pointer type.

Namespace:  TwinCAT.Ads.TypeSystem
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public static bool IsPointerType(
    DataTypeCategory cat
)

Parameters

cat  Type: TwinCAT.TypeSystem.DataTypeCategory

Return Value

Type:  Boolean
true if [is pointer type] [the specified cat]; otherwise, false.

6.7.4.3.2  DataType.IsReferenceType Method

Determines whether the specified category is a reference type.

Namespace:  TwinCAT.Ads.TypeSystem
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public static bool IsReferenceType(
    DataTypeCategory cat
)

Parameters

cat  Type: TwinCAT.TypeSystem.DataTypeCategory

The data type category.
Return Value

Type: Boolean
true if [is reference type] [the specified cat]; otherwise, false.

Reference

DataType Class [1349]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.4.3.3  DataType.ToString Method

Returns a String that represents this instance.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public override string ToString()

Return Value

Type: String
A String that represents this instance.

Reference

DataType Class [1349]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.5  EnumType.T. Class

Enum DataType [1349].

Inheritance Hierarchy

System.Object
  TwinCAT.Ads.TypeSystem.DataType [1349]
  TwinCAT.Ads.TypeSystem.EnumType.T.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public sealed class EnumType<T> : DataType,
  IEnumType<T>, IAliasType, IDataType, IBitSize, IEnumType
where T : IConvertible
Type Parameters

T

The EnumType.T. type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1352]</td>
<td>Gets the attributes of the IDatatype [1986] (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>BaseType [1366]</td>
<td>Gets the Base Type</td>
</tr>
<tr>
<td>BaseType Name [1367]</td>
<td>Gets the BaseType name</td>
</tr>
<tr>
<td>BitSize [1353]</td>
<td>Gets the size of the DataType [1349] in bits. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>ByteSize [1353]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Category [1354]</td>
<td>Gets the Data Type category (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Comment [1354]</td>
<td>Gets the comment. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>EnumValues [1367]</td>
<td>Enumeration specification (if enum)</td>
</tr>
<tr>
<td>FullName [1355]</td>
<td>Gets the full name of the IDatatype [1986] (Namespace + Name) (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Id [1355]</td>
<td>Gets the ID of the Data Type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsBitType [1356]</td>
<td>Gets a value indicating whether this IDatatype [1986] is a bit mapping Type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsByteAligned [1356]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsContainer [1357]</td>
<td>Gets a value indicating whether this IDatatype [1986] is a container type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsPointer [1357]</td>
<td>Gets a value indicating whether this IDatatype [1986] is a pointer type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsPrimitive [1358]</td>
<td>Gets a value indicating whether this IDatatype [1986] is primitive (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsReference [1359]</td>
<td>Gets a value indicating whether this IDatatype [1986] is a reference type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>ManagedType [1359]</td>
<td>Gets the corresponding .NET Type if attached. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Name [1360]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Namespace [1360]</td>
<td>Gets the namespace string within the IDatatype [1986] exists. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Size [1361]</td>
<td>Gets the Size of the DataType [1349] in Bytes or bits. (Inherited from DataType [1349].)</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains[1368]</td>
<td>Determines whether the enum values contains the specified name</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetNames[1369]</td>
<td>Gets the filed names of the IEnumType.T. [2021]</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetValues[1370]</td>
<td>Gets the values of the IEnumType.T. [2021]</td>
</tr>
<tr>
<td>Parse[1370]</td>
<td>Parses a name of the IEnumType.T. [2021] and returns the value (as base type)</td>
</tr>
<tr>
<td>ToString[1363]</td>
<td>Returns a String that represents this instance. (Inherited from DataType [1349])</td>
</tr>
<tr>
<td>ToString(IConvertible)[1371]</td>
<td>Returns a String that represents this instance.</td>
</tr>
<tr>
<td>ToString(T)[1372]</td>
<td>Returns a String that represents this instance.</td>
</tr>
<tr>
<td>TryParse(String, IEnumValue)[1373]</td>
<td>Tries to parse the Enum Value</td>
</tr>
<tr>
<td>TryParse(String, T)[1374]</td>
<td>Tries to parse the Enum Value</td>
</tr>

Reference

EnumType.T. Class [1363]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.5.1.1 EnumType.T..BaseType Property

Gets the Base Type

**Namespace**: TwinCAT.Ads.TypeSystem [1328]

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IDataType BaseType { get; }
```

**Property Value**

Type: [IDataType [1986]

The type of the base.
Implements
IAliasType.BaseType

Reference
EnumType.T.Class
TwinCAT.Ads.TypeSystem Namespace

6.7.5.1.2 EnumType.T..BaseTypeName Property

Gets the BaseType name

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public string BaseTypeName { get; }

Property Value

Type: String
The name of the base type.

Implements
IAliasType.BaseTypeName

Reference
EnumType.T.Class
TwinCAT.Ads.TypeSystem Namespace

6.7.5.1.3 EnumType.T..EnumValues Property

Enumeration specification (if enum)

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IEnumValueCollection EnumValues { get; }

Property Value

Type: IEnumValueCollection
The enum specification.
**TwinCAT.Ads Namespaces**

**Implements**

IEnumType.T..EnumValues [2024]

**Reference**

EnumType.T. Class [1363]

### 6.7.5.2 EnumType.T. Methods

The EnumType.T. [1363] generic type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains [1368]</td>
<td>Determines whether the enum values contains the specified name</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetNames [1369]</td>
<td>Gets the filed names of the IEnumType.T. [2021]</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetValues [1370]</td>
<td>Gets the values of the IEnumType.T. [2021]</td>
</tr>
<tr>
<td>Parse [1370]</td>
<td>Parses a name of the IEnumType.T. [2021] and returns the value (as base type)</td>
</tr>
<tr>
<td>ToString [1363]</td>
<td>Returns a String that represents this instance. (Inherited from DataType [1349])</td>
</tr>
<tr>
<td>ToString(IConvertible) [1371]</td>
<td>Returns a String that represents this instance.</td>
</tr>
<tr>
<td>ToString(T) [1372]</td>
<td>Returns a String that represents this instance.</td>
</tr>
<tr>
<td>TryParse(String, IEnumValue) [1373]</td>
<td>Tries to parse the Enum Value</td>
</tr>
<tr>
<td>TryParse(String, T) [1374]</td>
<td>Tries to parse the Enum Value</td>
</tr>
</tbody>
</table>

EnumType.T. Class [1363]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.5.2.1 EnumType.T..Contains Method

Determines whether the enum values contains the specified name

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdcac3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool Contains(
    string name
)
```

Parameters

- **name**
  - Type: `System.String`
  - The name.

Return Value

- Type: `Boolean`
  - true if contains the value, otherwise, false.

Implements

- `IEnumerable<T>.Contains(String)`
- `IEnumerable.Contains(String)`

Reference

- `EnumType.T. Class` [1363]
- `TwinCAT.Ads.TypeSystem Namespace` [1328]

---

**6.7.5.2.2 EnumType.T.Contains Method**

Gets the filed names of the `IEnumerable<T>`.

Namespace: `TwinCAT.Ads.TypeSystem` [1328]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public string[] GetNames()
```

Return Value

- Type: `String[]`
  - System.String[].

Implements

- `IEnumerable<T>.GetNames` [2025]
- `IEnumerable.GetNames` [2018]

Reference

- `EnumType.T. Class` [1363]
- `TwinCAT.Ads.TypeSystem Namespace` [1328]
6.7.5.2.3 EnumType.T..GetValues Method

Gets the values of the EnumType.T. 

Namespace: TwinCAT.Ads.TypeSystem 
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72b0ea15da1c14

Syntax

C#
public T[] GetValues();

Return Value

Type: T[].
T[].

Implements

IEnumType.T..GetValues.

Reference

EnumType.T. Class
TwinCAT.Ads.TypeSystem Namespace

6.7.5.2.4 EnumType.T..Parse Method

Parses a name of the EnumType.T. 
and returns the value (as base type)

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72b0ea15da1c14

Syntax

C#
public T Parse(
    string strValue
    );

Parameters

strValue Type: System.String
Enum Value as string.

Return Value

Type: T[].
T[.]

Implements

IEnumType.T..Parse(String)

2021
1328
1363
2026
1363
1328
2026
2026
6.7.5.2.5 EnumType.T..ToString Method

**Overload List**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ToString</td>
<td>Returns a <code>String</code> that represents this instance. (Inherited from <code>DataType</code>)</td>
</tr>
<tr>
<td>ToString(IConvertible)</td>
<td>Returns a <code>String</code> that represents this instance.</td>
</tr>
<tr>
<td>ToString(T)</td>
<td>Returns a <code>String</code> that represents this instance.</td>
</tr>
</tbody>
</table>

**Enumeration**

EnumType.T..ToString Method (IConvertible)

Returns a `String` that represents this instance.

**NameSpace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public string ToString(IConvertible val)
```

**Parameters**

- `val` Type: System.IConvertible
  The value.

**Return Value**

Type: `String`  
A `String` that represents this instance.

**Implements**

- EnumType.ToString(IConvertible)
**EnumType.T..ToString Method (T)**

Returns a **String** that represents this instance.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public string ToString(T val)
```

**Parameters**

- **val**
  - **Type:** **T**
  - The value.

**Return Value**

- **Type:** **String**
  - A **String** that represents this instance.

**Implements**

- IEnumType.T..ToString(T)  

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>val</td>
</tr>
</tbody>
</table>

</table>

Reference

EnumType.T. Class [1363]

TwinCAT.Ads.TypeSystem Namespace [1328]

EnumType.T..TryParse Method (String, IEnumValue.)

Tries to parse the Enum Value

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool TryParse(
    string strValue,
    out IEnumValue value
)
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>strValue</td>
<td>System.String</td>
<td>Enum value (in string representation).</td>
</tr>
<tr>
<td>value</td>
<td>TwinCAT.TypeSystem.IEnumValue [2028]</td>
<td>The value.</td>
</tr>
</tbody>
</table>

Return Value

Type: Boolean
true if XXXX, false otherwise.

Implements

IEnumType.TryParse(String, IEnumValue.) [2021]

Reference

EnumType.T. Class [1363]
TryParse Overload [1373]
TwinCAT.Ads.TypeSystem Namespace [1328]
EnumType.T..TryParse Method (String, T.)

Tries to parse the Enum Value

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```
public bool TryParse(
    string strValue,
    out T value
)
```

**Parameters**

- **strValue**
  - Type: System.String
  - Enum value (in string representation).

- **value**
  - Type: T [1363]
  - The value.

**Return Value**

Type: Boolean
true if XXXX, false otherwise.

**Implements**

IEnumeratorType.T..TryParse(String, T.) [2027]

**Reference**

### 6.7.6 Field Class

Represents a field of an Struct/Alias/Union

**Inheritance Hierarchy**

- System.Object
  - TwinCAT.Ads.TypeSystem.Instance [1388]
  - TwinCAT.Ads.TypeSystem.Field
    - TwinCAT.Ads.TypeSystem.Member [1406]

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public class Field : Instance, IField,
IAttributedInstance, IInstance, IBitSize
```

The Field type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from Instance)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of this Instance in bits. (Inherited from Instance)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from Instance)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the DataTypeCategory of the Instance. (Inherited from Instance)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from Instance)</td>
</tr>
<tr>
<td>ContextMask</td>
<td>Gets the context mask of this instance. (Inherited from Instance)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the Instance. (Inherited from Instance)</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has a value. (Inherited from Instance)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from Instance)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Inherited from Instance)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from Instance)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from Instance)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Indicates that this instance is persistent. (Inherited from Instance)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from Instance)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance is static. (Inherited from Instance)</td>
</tr>
<tr>
<td>IsTcComInterfacePointer</td>
<td>Indicates that this instance is a TcComInterfacePointer. (Inherited from Instance)</td>
</tr>
<tr>
<td>IsTypeGuid</td>
<td>Indicates that this instance has set TypeGuid flag. (Inherited from Instance)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace name. (Inherited from Instance)</td>
</tr>
</tbody>
</table>
### Field Properties

The `Field` type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from <code>Instance</code>)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of this <code>Instance</code> in bits. (Inherited from <code>Instance</code>)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <code>Instance</code>)</td>
</tr>
</tbody>
</table>

---

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>OnGetSize</td>
<td>Handler function getting the size of the <code>Instance</code> (Inherited from <code>Instance</code>)</td>
</tr>
<tr>
<td>OnSetInstanceName</td>
<td>Sets a new InstanceName InstancePath (Inherited from <code>Instance</code>)</td>
</tr>
<tr>
<td>SetAttributes</td>
<td>Sets the type attributes (Inherited from <code>Instance</code>)</td>
</tr>
<tr>
<td>SetContextMask</td>
<td>Sets the context mask. (Inherited from <code>Instance</code>)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a <code>String</code> that represents this instance. (Inherited from <code>Instance</code>)</td>
</tr>
</tbody>
</table>

---

<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsTcComInterfacePointer</td>
<td>Indicates that this instance is a TcComInterfacePointer. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsTypeGuid</td>
<td>Indicates that this instance has set TypeGuid flag. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace name. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ParentType</td>
<td>Gets the Parent of this IField [2040].</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the IDataType [1986] in bytes or Bits dependant on IsBitType [1396] (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding of this Field [1374]</td>
</tr>
</tbody>
</table>

Field Class [1374]

TwinCAT.Ads.TypeSystem Namespace [1328]
### 6.7.6.1.1 Field.ParentType Property

Gets the Parent of this `Field`.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd0c3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public IDataType ParentType { get; }
```

**Property Value**

Type: `IDataType`

The type of the parent (Alias, Union, Struct)

**Implements**

`IField.ParentType`

**Reference**

Field Class

TwinCAT.Ads.TypeSystem Namespace

### 6.7.6.1.2 Field.ValueEncoding Property

Gets the value encoding of this `Field`.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd0c3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public virtual Encoding ValueEncoding { get; }
```

**Property Value**

Type: `Encoding`

The value encoding.

**Implements**

`IAtributedInstance.ValueEncoding`

**Reference**

Field Class

TwinCAT.Ads.TypeSystem Namespace
6.7.6.2 Field Methods

The Field [1374] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>OnGetSize</td>
<td>Handler function getting the size of the Instance (Inherited from Instance.)</td>
</tr>
<tr>
<td>OnSetInstanceName</td>
<td>Sets a new InstanceName InstancePath (Inherited from Instance.)</td>
</tr>
<tr>
<td>SetAttributes</td>
<td>Sets the type attributes (Inherited from Instance.)</td>
</tr>
<tr>
<td>SetContextMask</td>
<td>Sets the context mask. (Inherited from Instance.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from Instance.)</td>
</tr>
</tbody>
</table>

Reference

Field Class [1374]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.7 IAdsSymbol Interface

Interface IAdsSymbol

Namespace: TwinCAT.Ads.TypeSystem [1328]

Assembly: TwinCAT.Ads.Abistractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IAdsSymbol : ISymbol,
    IAttributedInstance, IInstance, IBitSize, IProcessImageAddress, IContextMaskProvider
```

The IAdsSymbol type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the Instance [2052] (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>ContextMask [1388]</td>
<td>Gets the ContextMask of the symbol, indicating the task the variable belongs to. If ContextMask is not zero use CyclicInContext [639] or OnChangeInContext [639] to add notifications. (Inherited from IContextMaskProvider [1387].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataTypeld [1382]</td>
<td>DataType identifier of the Symbol AdsDataTypeld [574]</td>
</tr>
<tr>
<td>ImageBaseAddress [1383]</td>
<td>Gets the AmsAddress [648] of the Process Image</td>
</tr>
<tr>
<td>IndexGroup [2093]</td>
<td>Gets the index group of the Symbol (Inherited from IProcessImageAddress [2092].)</td>
</tr>
<tr>
<td>IndexOffset [2093]</td>
<td>Gets the index offset of the Symbol (Inherited from IProcessImageAddress [2092].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is acontainer type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsVirtual [2094]</td>
<td>Gets a value indicating whether this instance is virtual. (Inherited from IProcessImageAddress [2092].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Parent [▶ 2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [▶ 2176].)</td>
</tr>
<tr>
<td>Size [▶ 1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsDataType [▶ 1986] (Inherited from IBitSize [▶ 1982].)</td>
</tr>
<tr>
<td>SubSymbols [▶ 2182]</td>
<td>Gets the SubSymbols of the ISymbol [▶ 2176] (Inherited from ISymbol [▶ 2176].)</td>
</tr>
<tr>
<td>TypeName [▶ 2056]</td>
<td>Gets the name of the DataType [▶ 1986] that is used for this Instance [▶ 2052]. (Inherited from IInstance [▶ 2052].)</td>
</tr>
<tr>
<td>ValueEncoding [▶ 1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [▶ 1980].)</td>
</tr>
</tbody>
</table>

Reference

IAdsSymbol Interface [1379]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.7.1.1 IAdsSymbol.DataTypeId Property

DataType identifier of the Symbol AdsDataTypeId [574]

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
AdsDataTypeId DataTypeId { get; }
```

Property Value

Type: `AdsDataTypeId` [574]
Data type of the symbol.

Reference

IAdsSymbol Interface [1379]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.7.1.2 IAdsSymbol.ImageBaseAddress Property

Gets the `AmsAddress` [648] of the Process Image

**Namespace**: TwinCAT.Ads.TypeSystem [1328]
**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
AmsAddress ImageBaseAddress { get; }
```

Property Value

Type: `AmsAddress` [648]
The address.

Reference

<tr>
<td>DataTypes [2206]</td>
<td>Gets the data types (Inherited from ISymbolServer [2205].)</td>
</tr>
<tr>
<td>DefaultNotificationSettings [1385]</td>
<td>Gets/Sets the default notification settings for this SymbolLoader</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>DefaultValueEncoding</td>
<td>Gets the default value encoding. (Inherited from ISymbolServer.)</td>
</tr>
<tr>
<td>ImageBaseAddress</td>
<td>Gets the image base address.</td>
</tr>
<tr>
<td>PlatformPointerSize</td>
<td>Gets the (byte) size of Pointers on the attached platform system.</td>
</tr>
<tr>
<td>RootNamespaceName</td>
<td>Gets the name of the root namespace (Inherited from ISymbolProvider.)</td>
</tr>
<tr>
<td>Settings</td>
<td>Gets or sets the access Method (Inherited from ISymbolLoader.)</td>
</tr>
<tr>
<td>Symbols</td>
<td>Gets the symbols. (Inherited from ISymbolServer.)</td>
</tr>
</tbody>
</table>

**Reference**

IAdsSymbolLoader Interface [1383]
TwinCAT.Ads.TypeSystem Namespace [1328]

**6.7.8.1.1 IAdsSymbolLoader.DefaultNotificationSettings Property**

Gets/Sets the default notification settings for this SymbolLoader

**Namespace:** TwinCAT.Ads.TypeSystem [1328]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
INotificationSettings DefaultNotificationSettings { get; set; }
```

**Property Value**

Type: INotificationSettings [972]
The default notification settings.

**Remarks**

The Default notification Settings can be set on the SymbolLoader and is used as default on the different Symbols. On the symbol itself the NotificationSettings [979] can be overridden.

**Examples**

Setting the DefaultNotificationSettings on the IAdsSymbolLoader [1383] object:

**Set DefaultNotificationSettings**

```csharp
// Create AdsClient object
using (AdsClient client = new AdsClient())
{
    // No automatic Synchronization (necessary for Console applications without message loop)
    // client.Synchronize = false;
    // Connect to client
    client.Connect(address);
```
// Usage of 'dynamic' type/symbol loader
SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.DynamicTree, ValueAccessMode.IndexGroupOffsetPreferred);
IAdsSymbolLoader dynLoader = (IAdsSymbolLoader)SymbolLoaderFactory.Create(client, settings);

// Set the DefaultNotification Properties
dynLoader.DefaultNotificationSettings = new NotificationSettings(AdsTransMode.ClientOnChange, 200, 200);

// Determine the symbols
dynamic dynamicSymbols = ((IDynamicSymbolLoader)dynLoader).SymbolsDynamic;

// Task 1 Symbol (build in symbol)
dynamic task1Symbol = dynamicSymbols._TaskInfo[1];

// CycleCount Symbol
dynamic cycleCountSymbol = task1Symbol.CycleCount;

// Override Notification Setting for Cycle Count Symbol
cycleCountSymbol.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 250, 0);

// Register Dynamic Value Changed event.
cycleCountSymbol.ValueChanged += new EventHandler<ValueChangedEventArgs>(cycleCount_ValueChanged);

Reference

IAdsSymbolLoader Interface [1383]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.8.1.2 IAdsSymbolLoader.ImageBaseAddress Property

Gets the image base address.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

AmsAddress ImageBaseAddress { get; }

Property Value

Type: AmsAddress [648]
The image base address.

Reference

IAdsSymbolLoader Interface [1383]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.8.1.3 IAdsSymbolLoader.PlatformPointerSize Property

Gets the (byte) size of Pointers on the attached platform system.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
int PlatformPointerSize { get; }
```

Property Value

Type: Int32
The size of the platform pointer.

Reference

IAdsSymbolLoader Interface [1383]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.8.2 IAdsSymbolLoader Methods

The IAdsSymbolLoader [1383] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetDataTypesAsync</td>
<td>Gets the data types asynchronously. (Inherited from ISymbolServer [2205].)</td>

**Syntax**

C#

```csharp
public class Instance : IInstance, IBitSize
```

The `Instance` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1391]</td>
<td>Gets the Type Attributes.</td>
</tr>
<tr>
<td>BitSize [1392]</td>
<td>Gets the size of this Instance in bits.</td>
</tr>
<tr>
<td>ByteSize [1392]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes</td>
</tr>
<tr>
<td>Category [1393]</td>
<td>Gets the the <code>DataTypeCategory [1649]</code> of the Instance.</td>
</tr>
<tr>
<td>Comment [1393]</td>
<td>Gets the comment.</td>
</tr>
<tr>
<td>ContextMask [1394]</td>
<td>Gets the context mask of this instance.</td>
</tr>
<tr>
<td>DataType [1394]</td>
<td>Gets the <code>IDataType [1986]</code> of the <code>IInstance [2052]</code>.</td>
</tr>
<tr>
<td>HasValue [1395]</td>
<td>Gets a value indicating whether this instance has a value.</td>
</tr>
<tr>
<td>InstanceName [1395]</td>
<td>Gets the name of the instance (without periods (.))</td>
</tr>
<tr>
<td>InstancePath [1396]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.))</td>
</tr>
<tr>
<td>IsBitType [1396]</td>
<td>Gets a value indicating whether this instance is not basing on a full</td>
</tr>
<tr>
<td></td>
<td><code>DataType but instead of some sort of bit mapping</code>.</td>
</tr>
<tr>
<td>IsByteAligned [1397]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td>IsPersistent [1397]</td>
<td>Indicates that this instance is persistent.</td>
</tr>
<tr>
<td>IsPointer [1398]</td>
<td>Gets a value indicating whether this instance is reference.</td>
</tr>
<tr>
<td>IsReadOnly [1398]</td>
<td>Indicates that this instance is read only.</td>
</tr>
<tr>
<td>IsReference [1399]</td>
<td>Gets a value indicating whether this instance is reference.</td>
</tr>
<tr>
<td>IsStatic [1399]</td>
<td>Gets a value indicating whether this <code>IInstance [2052]</code> is static.</td>
</tr>
<tr>
<td>IsTcComInterfacePointer [1400]</td>
<td>Indicates that this instance is a TcComInterfacePointer.</td>
</tr>
<tr>
<td>IsTypeGuid [1400]</td>
<td>Indicates that this instance has set TypeGuid flag.</td>
</tr>
<tr>
<td>Namespace [1401]</td>
<td>Gets the namespace name.</td>
</tr>
<tr>
<td>Size [1401]</td>
<td>Gets the size of the <code>IDataType [1986]</code> in bytes or Bits dependant on</td>
</tr>
<tr>
<td></td>
<td><code>IsBitType [1396]</code></td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this Instance.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AlignTypeName</td>
<td>Aligns the type name</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>OnGetSize</td>
<td>Handler function getting the size of the Instance</td>
</tr>
<tr>
<td>OnSetInstanceName</td>
<td>Sets a new InstanceName InstancePath</td>
</tr>
<tr>
<td>SetAttributes</td>
<td>Sets the type attributes</td>
</tr>
<tr>
<td>SetContextMask</td>
<td>Sets the context mask.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
</tbody>
</table>

### 6.7.10.1 Instance Properties

The Instance type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes.</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of this Instance in bits.</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the the DataTypeCategory of the Instance.</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment.</td>
</tr>
<tr>
<td>ContextMask</td>
<td>Gets the context mask of this instance.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>[1394]</strong></td>
<td>Gets the <code>IDataType</code> of the <code>IInstance</code>.</td>
</tr>
<tr>
<td><strong>[1395]</strong></td>
<td>Gets a value indicating whether this instance has a value.</td>
</tr>
<tr>
<td><strong>[1396]</strong></td>
<td>Gets the name of the instance (without periods (.)).</td>
</tr>
<tr>
<td><strong>[1396]</strong></td>
<td>Gets the relative / absolute access path to the instance (with periods (.)).</td>
</tr>
<tr>
<td><strong>[1396]</strong></td>
<td>Gets a value indicating whether this instance is not basing on a full</td>
</tr>
<tr>
<td></td>
<td><code>DataType</code> but instead of some sort of bit mapping.</td>
</tr>
<tr>
<td><strong>[1396]</strong></td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0).</td>
</tr>
<tr>
<td><strong>[1397]</strong></td>
<td>Indicates that this instance is persistent.</td>

<tr>
<td><strong>[1401]</strong></td>
<td>Gets the namespace name.</td>
</tr>
<tr>
<td><strong>[1401]</strong></td>
<td>Gets the size of the <code>IDataType</code> in bytes or Bits dependant on <code>IsBitType</code>.</td>
</tr>
<tr>
<td><strong>[1402]</strong></td>
<td>Gets the name of the <code>DataType</code> that is used for this <code>IInstance</code>.</td>
</tr>
</tbody>
</table>

**Reference**

**Instance Class** [1388]

**TwinCAT.Ads.TypeSystem Namespace** [1328]

### 6.7.10.1.1 Instance.Attributes Property

Gets the Type Attributes.

**Namespace**: TwinCAT.Ads.TypeSystem [1328]

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: S.0.294+Branch.releases-S.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public ITypeAttributeCollection Attributes { get; }
```
6.7.10.1.2 Instance.BitSize Property

Gets the size of this Instance in bits.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public virtual int BitSize { get; }
```

**Property Value**

Type: Int32
The size of the bit.

**Implements**

IBitSize.BitSize

**Reference**

Instance Class
TwinCAT.Ads.TypeSystem Namespace

6.7.10.1.3 Instance.ByteSize Property

Gets the (aligned) size of of the Type/Instance in Bytes.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public int ByteSize { get; }
```

**Property Value**

Type: Int32
The size of the byte.
**Implements**

IBitSize.ByteSize [1984]

**Reference**

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.10.1.4 Instance.Category Property

Gets the the **DataTypeCategory** [1649] of the Instance.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public DataTypeCategory Category { get; protected set; }
```

**Property Value**

**Type:** DataTypeCategory [1649]

The category.

**Remarks**

Corresponds to the **Category** [1988]

**Reference**

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.10.1.5 Instance.Comment Property

Gets the comment.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public string Comment { get; }
```

**Property Value**

**Type:** String

The comment.
Implements

IInstance.Comment [2053]

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.6 Instance.ContextMask Property

Gets the context mask of this instance.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public byte ContextMask { get; }

Property Value

Type: Byte

Remarks

The Size of the internal data is 4-Bit

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.7 Instance.DataType Property

Gets the IDataType [1986] of the IInstance [2052].

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IDataType DataType { get; protected set; }

Property Value

Type: IDataType [1986]
The type of the data.
6.7.10.1.8 Instance.HasValue Property

Gets a value indicating whether this instance has a value.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# 

```csharp
public virtual bool HasValue { get; }
```

**Property Value**

Type: Boolean

true if this instance has value; otherwise, false.

**Remarks**

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.9 Instance.InstanceName Property

Gets the name of the instance (without periods (.)

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# 

```csharp
public string InstanceName { get; protected set; }
```

**Property Value**

Type: String

The name of the instance.
6.7.10.1.10 Instance.InstancePath Property

Gets the relative / absolute access path to the instance (with periods (.)

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public virtual string InstancePath { get; }
```

**Property Value**

Type: **String**
The instance path.

**Implements**

IInstance.InstancePath [2055]

**Remarks**

If this path is relative or absolute depends on the context. IMember [2065] are using relative paths, ISymbol [2176]s are using absolute ones.

**Reference**

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]
Syntax

C#

```csharp
public bool IsBitType { get; }
```

Property Value

Type: Boolean
true if this instance is bit mapping; otherwise, false.

Implements

IBitSize.IsBitType [1984]

Reference

Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.12 Instance.IsByteAligned Property

Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool IsByteAligned { get; }
```

Property Value

Type: Boolean
true if this instance is byte aligned; otherwise, false.

Implements

IBitSize.IsByteAligned [1985]

Reference

Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.13 Instance.IsPersistent Property

Indicates that this instance is persistent.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
## 6.7.10.1.14 Instance.IsPointer Property

Gets a value indicating whether this instance is reference.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public bool IsPointer { get; }
```

### Property Value

Type: Boolean

true if this instance is reference; otherwise, false.

**Implements**

IInstance.IsPointer

### Reference

- **Instance Class** [1388]
- **TwinCAT.Ads.TypeSystem Namespace** [1328]

## 6.7.10.1.15 Instance.IsReadOnly Property

Indicates that this instance is read only.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public bool IsReadOnly { get; }
```

### Property Value

Type: Boolean

true if this instance is read only; otherwise, false.

**Reference**

- **Instance Class** [1388]
- **TwinCAT.Ads.TypeSystem Namespace** [1328]
Property Value

Type: Boolean

Remarks

Actually, this Flag is restricted to TcCOM-Objects readonly Parameters. Within the PLC this is used for the ApplicationName and ProjectName of PLC instances. Write-Access on these Modules will create an DeviceAccessDenied [575] error.

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.16  Instance.IsReference Property

Gets a value indicating whether this instance is reference.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsReference { get; }

Property Value

Type: Boolean
true if this instance is reference; otherwise, false.

Implements

IInstance.IsReference [2056]

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.17  Instance.IsStatic Property

Gets a value indicating whether this IInstance [2052] is static.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsStatic { get; protected set; }
Property Value

Type: Boolean
true if this instance is static; otherwise, false.

Implements

IInstance.IsStatic [2056]

Reference

Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.18 Instance.IsTcComInterfacePointer Property

Indicates that this instance is a TcComInterfacePointer.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool IsTcComInterfacePointer { get; }

Property Value

Type: Boolean

Reference

Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.19 Instance.IsTypeGuid Property

Indicates that this instance has set TypeGuid flag.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool IsTypeGuid { get; }

Property Value

Type: Boolean
6.7.10.1.20 Instance.Namespace Property

Gets the namespace name.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# public string Namespace { get; } 

**Property Value**

Type: String

The namespace.

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.1.21 Instance.Size Property

Gets the size of the `IDataType` in bytes or Bits dependant on `IsBitType`.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# public int Size { get; protected set; } 

**Property Value**

Type: Int32

The size of the bit.

**Implements**

IBitSize.Size [1985]

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]
6.7.10.1.22 Instance.TypeName Property

Gets the name of the DataType [1986] that is used for this IInstance [2052].

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public string TypeName { get; protected set; }

Property Value

Type: String
The name of the type.

Implements

IInstance.TypeName [2056]

Reference

Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.2 Instance Methods

The Instance [1388] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AlignTypeName</td>
<td>Aligns the type name</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>OnGetSize</td>
<td>Handler function getting the size of the Instance.</td>
</tr>
<tr>
<td>OnSetInstanceName</td>
<td>Sets a new InstanceName InstancePath</td>
</tr>
<tr>
<td>SetAttributes</td>
<td>Sets the type attributes</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>SetContextMask</td>
<td>[1405] Sets the context mask.</td>
</tr>
<tr>
<td>ToString</td>
<td>[1405] Returns a String that represents this instance. (Overrrides Object.ToString.)</td>
</tr>
</tbody>
</table>

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.2.1 Instance.AlignTypeName Method

Aligns the type name

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected static string AlignTypeName(
    string typeName
)
```

**Parameters**

- **typeName**
  Type: System.String
  Name of the type.

**Return Value**

Type: String
System.String.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>Type name not valid!</td>
</tr>
</tbody>
</table>

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.2.2 Instance.OnGetSize Method

Handler function getting the size of the Instance [1388]

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#
protected virtual int OnGetSize()

Return Value
Type: Int32
System.Int32.

Reference
Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.2.3 Instance.OnSetInstanceName Method
Sets a new InstanceName InstancePath

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected virtual void OnSetInstanceName(
    string instanceName
)

Parameters
instanceName Type: System.String
Instance name.

Reference
Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.10.2.4 Instance.SetAttributes Method
Sets the type attributes

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected void SetAttributes(
    TypeAttributeCollection coll
)
Parameters

coll  
Type: TwinCAT.TypeSystem.TypeAttributeCollection [2418]
The attributes.

Reference

Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.10.2.5 Instance.SetContextMask Method

Sets the context mask.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected void SetContextMask(
    byte contextMask
)
```

**Parameters**

- **contextMask**  
  Type: System.Byte  
  The context mask.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentOutOfRangeException</td>
<td>contextMask</td>
</tr>
</tbody>
</table>

Reference

Instance Class [1388]
TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.10.2.6 Instance.ToString Method

Returns a `String` that represents this instance.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public override string ToString()
```
Return Value

Type: String
A String that represents this instance.

Reference

Instance Class [1388]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.11 Member Class

Represents a member of an StructType [1457]

Inheritance Hierarchy

System.Object
   TwinCAT.Ads.TypeSystem.Instance [1388]
      TwinCAT.Ads.TypeSystem.Field [1374]
         TwinCAT.Ads.TypeSystem.Member

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public sealed class Member : Field,
   IMember, IField, IAttributedInstance, IInstance, IBitSize

The Member type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1391]</td>
<td>Gets the Type Attributes. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>BitOffset [1409]</td>
<td>Gets the bit offset.</td>
</tr>
<tr>
<td>BitSize [1392]</td>
<td>Gets the size of this Instance [1388] in bits. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ByteOffset [1409]</td>
<td>Gets the byte offset.</td>
</tr>
<tr>
<td>ByteSize [1392]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Category [1393]</td>
<td>Gets the the DataTypeCategory [1649] of the Instance. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Comment [1393]</td>
<td>Gets the comment. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ContextMask [1394]</td>
<td>Gets the context mask of this instance. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>DataType [1394]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>HasValue [1395]</td>
<td>Gets a value indicating whether this instance has a value. (Inherited from Instance [1388].)</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance.</td>
</tr>
</tbody>
</table>

### Reference

### 6.7.11.1 Member Properties

The Member [1406] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1391]</td>
<td>Gets the Type Attributes. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>BitOffset [1409]</td>
<td>Gets the bit offset.</td>
</tr>
<tr>
<td>BitSize [1392]</td>
<td>Gets the size of this Instance [1388] in bits. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ByteOffset [1409]</td>
<td>Gets the byte offset.</td>
</tr>
<tr>
<td>ByteSize [1392]</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Category [1393]</td>
<td>Gets the the DataTypeCategory [1649] of the Instance. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Comment [1393]</td>
<td>Gets the comment. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ContextMask [1394]</td>
<td>Gets the context mask of this instance. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>DataType [1394]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>HasValue [1395]</td>
<td>Gets a value indicating whether this instance has a value. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>InstanceName [1395]</td>
<td>Gets the name of the instance (without periods (.) (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>InstancePath [1396]</td>
<td>Gets the relative / absolute access path to the instance (with periods ( . ) (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsBitType [1396]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsByteAligned [1397]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsPersistent [1397]</td>
<td>Indicates that this instance is persistent. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsPointer [1398]</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsReadOnly [1398]</td>
<td>Indicates that this instance is read only. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsReference [1399]</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsStatic [1399]</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsTcComInterfacePointer [1400]</td>
<td>Indicates that this instance is a TcComInterfacePointer. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsTypeGuid [1400]</td>
<td>Indicates that this instance has set TypeGuid flag. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Namespace [1401]</td>
<td>Gets the namespace name. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Offset [1410]</td>
<td>Gets the offset of the Member [1406] within the parent StructType [1457] in bits or bytes dependent on IsBitType [1396].</td>
</tr>
<tr>
<td>ParentType [1378]</td>
<td>Gets the Parent of this IField [2040]. (Inherited from Field [1374].)</td>
</tr>
<tr>
<td>Size [1401]</td>
<td>Gets the size of the IDataType [1986] in bytes or Bits dependant on IsBitType [1396] (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>TypeName [1402]</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ValueEncoding [1378]</td>
<td>Gets the value encoding of this Field [1374] (Inherited from Field [1374].)</td>
</tr>
</tbody>
</table>

**Reference**

Member Class [1406]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.11.1.1 Member.BitOffset Property

Gets the bit offset.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int BitOffset { get; }
```

**Property Value**

Type: Int32

The bit offset.

**Implements**

IMember.BitOffset [2067]

**Reference**

Member Class [1406]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.11.1.2 Member.ByteOffset Property

Gets the byte offset.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### TwinCAT.Ads Namespaces

#### Syntax

**C#**

```csharp
public int ByteOffset { get; }
```

**Property Value**

Type: `Int32`
The byte offset.

**Implements**

`IMember.ByteOffset` [2067]

**Reference**

- **Member Class** [1406]
- **TwinCAT.Ads.TypeSystem Namespace** [1328]

#### 6.7.11.1.3 Member.Offset Property

Gets the offset of the `Member` [1406] within the parent `StructType` [1457] in bits or bytes dependent on `IsBitType` [1396]

**Namespace:** TwinCAT.Ads.TypeSystem [1328]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int Offset { get; }
```

**Property Value**

Type: `Int32`
The offset.

**Implements**

`IMember.Offset` [2068]

**Reference**

- **Member Class** [1406]
- **TwinCAT.Ads.TypeSystem Namespace** [1328]

#### 6.7.11.2 Member Methods

The `Member` [1406] type exposes the following members.
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a <code>String</code> that represents this instance. (Inherited from <code>Instance</code>)</td>
</tr>
</tbody>
</table>

Member Class [ ในไทย]

`TwinCAT.Ads.TypeSystem Namespace` [ ในไทย]

### 6.7.12 PCCHType Class

Class PCCHType. This class cannot be inherited. Implements the `PointerType` [ ในไทย]

Inheritance Hierarchy

- `System.Object`
  - `TwinCAT.Ads.TypeSystem.DataType` [ ในไทย]
    - `TwinCAT.Ads.TypeSystem.PointerType` [ ในไทย]
      - `TwinCAT.Ads.TypeSystem.PCCHType`

Namespace: `TwinCAT.Ads.TypeSystem` [ ในไทย]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

**C#**

```csharp
public sealed class PCCHType : PointerType
```

The PCCHType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the <code>IDataType</code> [ ในไทย] (Inherited from <code>DataType</code> [ ในไทย])</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>DataType</code> [ ในไทย] in bits. (Inherited from <code>DataType</code> [ ในไทย])</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <code>DataType</code> [ ในไทย])</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from <code>DataType</code> [ ในไทย])</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from <code>DataType</code> [ ในไทย])</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the <code>IDataType</code> [ จากภาษาไทย] (Namespace + Name)</td>
</tr>
<tr>
<td></td>
<td>(Inherited from <code>DataType</code> [ ในไทย])</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the DataType (Inherited from <code>DataType</code> [ ในไทย])</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsBitType [1356]</td>
<td>Gets a value indicating whether this [DataType [1986] is a bit mapping Type (Inherited from DataType [1349]).)</td>

#### 6.7.12.1 PCCHType Properties

The PCCHType [1411] type exposes the following members.
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1352]</td>
<td>Gets the attributes of the [IDataType] [1986] (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>BitSize [1353]</td>
<td>Gets the size of the [DataType] [1349] in bits. (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>ByteSize [1353]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>Category [1354]</td>
<td>Gets the Data Type category (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>Comment [1354]</td>
<td>Gets the comment. (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>FullName [1355]</td>
<td>Gets the full name of the [IDataType] [1986] (Namespace + Name) (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>Id [1355]</td>
<td>Gets the ID of the DataType (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>IsBitType [1356]</td>
<td>Gets a value indicating whether this [IDataType] [1986] is a bit mapping Type (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>IsByteAligned [1356]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>IsContainer [1357]</td>
<td>Gets a value indicating whether this [IDataType] [1986] is a container type (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>IsPointer [1357]</td>
<td>Gets a value indicating whether this [IDataType] [1986] is a pointer type (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>IsPrimitive [1358]</td>
<td>Gets a value indicating whether this [IDataType] [1986] is primitive (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>IsReference [1359]</td>
<td>Gets a value indicating whether this [IDataType] [1986] is a reference type (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>ManagedType [1417]</td>
<td>Gets the corresponding .NET Type if attached. (Inherited from [PointerType] [1414].)</td>
</tr>
<tr>
<td>Name [1360]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>Namespace [1360]</td>
<td>Gets the namespace string within the [IDataType] [1986] exists. (Inherited from [DataType] [1349].)</td>
</tr>
<tr>
<td>ReferencedType [1417]</td>
<td>Gets the the referenced type. (Inherited from [PointerType] [1414].)</td>
</tr>
<tr>
<td>ReferenceTypeName [1417]</td>
<td>Gets the name of the referenced datatype (Inherited from [PointerType] [1414].)</td>
</tr>
<tr>
<td>Size [1361]</td>
<td>Gets the Size of the [DataType] [1349] in Bytes or bits. (Inherited from [DataType] [1349].)</td>
</tr>
</tbody>
</table>

### 6.7.13 PointerType Class

Represents a pointer type.

#### Inheritance Hierarchy

```
System.Object
    TwinCAT.Ads.TypeSystem.DataType [1349]
    TwinCAT.Ads.TypeSystem.PointerType
    TwinCAT.Ads.TypeSystem.PCCHType [1411]
    TwinCAT.Ads.TypeSystem.PVoidType [1422]
```

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public class PointerType : DataType,
    IPointerType, IDataType, IBitSize
```

The PointerType type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the DataType [1349] in bits. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name)</td>
</tr>
</tbody>
</table>
```

Gets the the referenced type.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IDataType ReferencedType { get; }
```

**Property Value**

Type: `IDataType`
The type of the referenced.

**Implements**

[PointerType.ReferencedType](#)

**Reference**

**PointerType Class**

**TwinCAT.Ads.TypeSystem Namespace**

---

6.7.13.1.3 **PointerType.ReferencedTypeName Property**

Gets the name of the referenced datatype
6.7.13.2 PointerType Methods

The `PointerType` type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td><code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a <code>String</code> that represents this instance. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>

# TwinCAT.Ads Namespaces

## Name | Description
--- | ---
ByteSize | Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DataType.)
Category | Gets the Data Type category (Inherited from DataType.)
Comment | Gets the comment. (Inherited from DataType.)
FullName | Gets the full name of the IDatatype (Namespace + Name) (Inherited from DataType.)
Id | Gets the ID of the Data Type (Inherited from DataType.)
IsBitType | Gets a value indicating whether this IDatatype is a bit mapping Type (Inherited from DataType.)
IsByteAligned | Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DataType.)
IsContainer | Gets a value indicating whether this IDatatype is a container type (Overrides DataType.IsContainer.)
IsPointer | Gets a value indicating whether this IDatatype is a pointer type (Inherited from DataType.)
IsPrimitive | Gets a value indicating whether this IDatatype is primitive (Overrides DataType.IsPrimitive.)
IsReference | Gets a value indicating whether this IDatatype is a reference type (Inherited from DataType.)
ManagedType | Gets the corresponding .NET Type if attached. (Overrides DataType.ManagedType.)
Name | Gets the name of the Data Type (without namespace) (Inherited from DataType.)
Namespace | Gets the namespace string within the IDatatype (Inherited from DataType.)
ReferencedType | Gets the the referenced type.
ReferencedTypeName | Gets the name of the referenced type.
ResolvedByteSize | Gets the size of the resolved byte.
ResolvedCategory | Gets the resolved category.
ResolvedType | Gets the type of the resolved.
Size | Gets the Size of the DataType in Bytes or bits. (Inherited from DataType.)

## Methods

| Name | Description |
--- | --- |
Equals | Determines whether the specified object is equal to the current object. (Inherited from Object.)

</tbody>
</table>
### ReferenceType.IsContainer Property

Gets a value indicating whether this `IDataType` is a container type.

#### Syntax

**C#**

```csharp
public override bool IsContainer { get; }
```

#### Property Value

Type: Boolean

true if this instance is container type; otherwise, false.

#### Remarks

Container Types are all types that contain SubElements like

- `Array`
- `Pointer`
- `Union`
- `Struct`
- `Function`
- `FunctionBlock`
- `Program`
and the Alias [1649] and Reference [1649] types, if they have a container type as base type.

Reference

ReferenceType Class [1425]

6.7.16.1.3 ReferenceType.ManagedType Property

Gets the corresponding .NET Type if attached.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public override Type ManagedType { get; }

Property Value

Type: Type
Dot net type.
6.7.16.1.4 ReferenceType.ReferencedType Property

Gets the referenced type.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public IDataType ReferencedType { get; }

Property Value

Type: IDataType
The type of the referenced.

Implements

IReferenceType.ReferencedType

6.7.16.1.5 ReferenceType.ReferencedTypeName Property

Gets the name of the referenced type.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public string ReferencedTypeName { get; }

Property Value

Type: String
The name of the referenced type.

Implements

IReferenceType.ReferencedTypeName
6.7.16.1.6  ReferenceType.ResolvedByteSize Property

Gets the size of the resolved byte.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public int ResolvedByteSize { get; }
```

**Property Value**

- **Type:** Int32
  - The size of the resolved byte.

**Implements**

IReferenceType.ResolvedByteSize

6.7.16.1.7  ReferenceType.ResolvedCategory Property

Gets the resolved category.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public DataTypeCategory ResolvedCategory { get; }
```

**Property Value**

- **Type:** DataTypeCategory
  - The resolved category.

**Implements**

IReferenceType.ResolvedCategory
6.7.16.1.8  ReferenceType.ResolvedType Property

Gets the type of the resolved.

**Namespace:**  TwinCAT.Ads.TypeSystem [1328]

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public IDataType ResolvedType { get; }
```

**Property Value**

Type:  `IDataType` [1986]

The type of the resolved.

**Implements**

`IReferenceType.ResolvedType` [2103]

### ReferenceType Methods

The `ReferenceType` [1425] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Equals</code></td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>GetHashCode</code></td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>GetType</code></td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>ToString</code></td>
<td>Returns a <code>String</code> that represents this instance. (Inherited from <code>DataType</code> [1349].)</td>
</tr>
</tbody>
</table>

**Reference**

**ReferenceType Class [1425]**

**TwinCAT_Ads_TypeSystem Namespace [1328]**
6.7.17   **RpcMethod Class**

**RPC Method Description**

**Inheritance Hierarchy**

*System.Object*
  *TwinCAT.Ads.TypeSystem.RpcMethod*

**Namespace:** TwinCAT.Ads.TypeSystem [► 1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public class RpcMethod : IRpcMethod
```

The `RpcMethod` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comment [► 1434]</td>
<td>Gets the Method comment.</td>
</tr>
<tr>
<td>InParameters [► 1435]</td>
<td>Gets the In-Parameters of the IRpcMethod [► 2123]</td>
</tr>
<tr>
<td>IsVoid [► 1435]</td>
<td>Gets a value indicating whether this IRpcMethod [► 2123] has no return parameter</td>
</tr>
<tr>
<td>Name [► 1436]</td>
<td>Gets the name of the method</td>
</tr>
<tr>
<td>OutParameters [► 1436]</td>
<td>Gets the Out-Parameters of the IRpcMethod [► 2123]</td>
</tr>
<tr>
<td>Parameters [► 1437]</td>
<td>Gets all parameters (In, Out and ref parameters) of the _ [► 2123]</td>
</tr>
<tr>
<td>ReturnAlignSize [► 1437]</td>
<td>Gets the size of the biggest element in bytes for Alignment</td>
</tr>
<tr>
<td>ReturnType [► 1438]</td>
<td>Gets the return type.</td>
</tr>
<tr>
<td>ReturnTypeSize [► 1438]</td>
<td>Gets the Byte size of the return type.</td>
</tr>
<tr>
<td>VTableIndex [► 1439]</td>
<td>Gets the V-table index of the method.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>
6.7.17.1  RpcMethod Properties

The RpcMethod type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comment</td>
<td>Gets the Method comment.</td>
</tr>
<tr>
<td>InParameters</td>
<td>Gets the In-Parameters of the IRpcMethod.</td>

<tr>
<td>VTableIndex</td>
<td>Gets the V-table index of the method.</td>
</tr>
</tbody>
</table>

Reference

RpcMethod Class [1433]

TwinCAT.Ads.TypeSystem Namespace [1328]
Property Value

Type: String
The comment.

Implements

IRpcMethod.Comment [2124]

Reference

RpcMethod Class [1433]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.17.1.2 RpcMethod.InParameters Property

Gets the In-Parameters of the IRpcMethod [2123]

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IRpcMethodParameterCollection InParameters { get; }

Property Value

Type: IRpcMethodParameterCollection [2137]
The In- and Ref-Parameters

Implements

IRpcMethod.InParameters [2124]

Reference

RpcMethod Class [1433]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.17.1.3 RpcMethod.IsVoid Property

Gets a value indicating whether this IRpcMethod [2123] has no return parameter

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsVoid { get; }
Property Value

Type: Boolean
true if this instance is void; otherwise, false.

Implements

IRpcMethod.IsVoid [2125]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

6.7.17.1.4 RpcMethod.Name Property

Gets the name of the method

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public string Name { get; }
```

Property Value

Type: String
The name.

Implements

IRpcMethod.Name [2125]

Reference

RpcMethod Class [1433]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.17.1.5 RpcMethod.OutParameters Property

Gets the Out-Parameters of the IRpcMethod [2123]
**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

### Syntax

**C#**
```
public IRpcMethodParameterCollection OutParameters { get; }
```

### Property Value

**Type:** IRpcMethodParameterCollection [2137]

The In- and Ref-Parameters

**Implements**

IRpcMethod.OutParameters [2126]

### Reference

RpcMethod Class [1433]

TwinCAT.Ads.TypeSystem Namespace [1328]

### Reference

 RpcMethodParameter Class [1440]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.18.1.1 RpcMethodParameter.AlignSize Property

Gets the size of biggest element for alignment

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int AlignSize { get; }
```

**Property Value**

Type: Int32

The size of the align.

**Reference**

RpcMethodParameter Class [1440]

TwinCAT.Ads.TypeSystem Namespace [1328]
6.7.18.1.2  RpcMethodParameter.Comment Property

Gets the Parameter Comment.

**Namespace:**  TwinCAT.Ads.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public string Comment { get; }
```

**Property Value**

**Type:**  String

The comment.

**Reference**

RpcMethodParameter Class

TwinCAT.Ads.TypeSystem Namespace

6.7.18.1.3  RpcMethodParameter.HasLengthIsParameter Property

Gets a value indicating whether this instance has a related LengthIs Parameter.

**Namespace:**  TwinCAT.Ads.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool HasLengthIsParameter { get; }
```

**Property Value**

**Type:**  Boolean

true if this instance has a LengthIs parameter; otherwise, false.

**Implements**

IRpcMethodParameter.HasLengthIsParameter

**Reference**

RpcMethodParameter Class

TwinCAT.Ads.TypeSystem Namespace

6.7.18.1.4  RpcMethodParameter.LengthIsParameterIndex Property

Gets the index of the LengthIs parameter (within the MethodParameter List)
**TwinCAT.Ads Namespaces**

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int LengthIsParameterIndex { get; }
```

**Property Value**

Type: `Int32`
The index of the length is parameter.

**Implements**

IRpcMethodParameter.LengthIsParameterIndex

**Remarks**

This field references to the Parameter that defines the length for this generic one. Equally to the marshalling attributes of COM (sizeof, length) this enables to transport parameter of type (PVOID)

**Reference**

---

6.7.18.1.5 **RpcMethodParameter.Name Property**

Gets the Parameter Name

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public string Name { get; }
```

**Property Value**

Type: `String`
The name.

**Implements**

IRpcMethodParameter.Name

**Reference**

RpcMethodParameter Class
TwinCAT.Ads.TypeSystem Namespace
6.7.18.1.6   RpcMethodParameter.ParameterFlags Property

Gets the parameter flags.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public MethodParamFlags ParameterFlags { get; }
```

**Property Value**

Type: MethodParamFlags

The parameter flags.

**Implements**

IRpcMethodParameter.ParameterFlags

**Reference**

RpcMethodParameter Class

TwinCAT.Ads.TypeSystem Namespace

6.7.18.1.7   RpcMethodParameter.Size Property

Gets the size of the RpcMethodParameter.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public int Size { get; }
```

**Property Value**

Type: Int32

The size.

**Implements**

IRpcMethodParameter.Size

**Reference**

RpcMethodParameter Class

TwinCAT.Ads.TypeSystem Namespace
6.7.18.1.8 RpcMethodParameter.TypeGuid Property

Gets the Unique identifier of the parameters data type.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Guid TypeGuid { get; }
```

**Property Value**

Type: `Guid`
The type unique identifier.

**Reference**

RpcMethodParameter Class

TwinCAT.Ads.TypeSystem Namespace

6.7.18.1.9 RpcMethodParameter.TypeName Property

Gets the Data type of the Parameter

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public string TypeName { get; }
```

**Property Value**

Type: `String`
The type.

**Implements**

IRpcMethodParameter.TypeName

**Reference**

RpcMethodParameter Class

TwinCAT.Ads.TypeSystem Namespace

6.7.18.2 RpcMethodParameter Methods

The RpcMethodParameter type exposes the following members.
### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

### Reference

RpcStructType Class

TwinCAT.Ads.TypeSystem Namespace

### 6.7.19.1.1 RpcStructType.HasRpcMethods Property

Gets a value indicating whether this instance has RPC Methods.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public override bool HasRpcMethods { get; }
```

**Property Value**

Type: Boolean

ture if this instance has methods; otherwise, false.

**Implements**

IStructType.HasRpcMethods

**Remarks**

The DataType (Structure) must be marked with the PlcAttribute ‘TcRpcEnable’ to enable RpcMethods, otherwise RpcMethods are not passed through to the ADS symbolic information.

RpcStructType Class

TwinCAT.Ads.TypeSystem Namespace
6.7.19.1.2  RpcStructType.RpcMethods Property

Gets the Method descriptions for the IRpcCallableType

Namespace:  TwinCAT.Ads.TypeSystem
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdadca3e72bc0ea15da1c14

Syntax

C#
public IRpcMethodCollection RpcMethods { get; }

Property Value

Type:  IRpcMethodCollection
The methods.

Implements

IRpcCallableType.RpcMethods

Remarks

The DataType (Structure) must be marked with the PlcAttribute 'TcRpcEnable' to enable RpcMethods, otherwise RpcMethods are not passed through to the ADS symbolic information.

Reference

**StringType Class** [1452]

TwinCAT.Ads.TypeSystem Namespace [1328]

#### 6.7.20.1.1 StringType.Encoding Property

Gets the encoding of the String (Encoding.Default (Ansi Codepage, STRING) or Encoding.UNICODE (WSTRING))

**Namespace:** TwinCAT.Ads.TypeSystem [1328]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Encoding Encoding { get; }
```

**Property Value**

Type: Encoding  
The encoding.

**Implements**

[2157]
6.7.20.1.2 StringType.IsFixedLength Property

Gets a value indicating whether the string is of fixed length.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool IsFixedLength { get; }
```

**Property Value**

Type: Boolean

true if this instance is fixed length; otherwise, false.

**Implements**

IStringType.IsFixedLength

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>

6.7.20.2 StringType Methods

The StringType [1452] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Overrides DataType.ToString.)</td>
</tr>
</tbody>
</table>

Reference

StringType Class [1452]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.20.2.1 StringType.ToString Method

Returns a String that represents this instance.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public override string ToString()

Return Value

Type: String
A String that represents this instance.
6.7.21 StructType Class

Represents a struct type

Inheritance Hierarchy

System.Object
   TwinCAT.Ads.TypeSystem.DataType
      TwinCAT.Ads.TypeSystem.StructType
         TwinCAT.Ads.TypeSystem.RpcStructType

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b609f934fddca3e72bc0ea15da1c14

Syntax

C#
public class StructType : DataType, IStructType, IDataType, IBitSize

The StructType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllMembers [1460]</td>
<td>Gets all members (down the derivation hierarchy)</td>
</tr>
<tr>
<td>Attributes [1352]</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>BaseType [1460]</td>
<td>Gets the structs Base Type (Null if not derived).</td>
</tr>
<tr>
<td>BaseTypeName [1461]</td>
<td>Gets the the Name of the Base class (if derived)</td>
</tr>
<tr>
<td>BitSize [1353]</td>
<td>Gets the size of the DataType [1349] in bits. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>ByteSize [1353]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Category [1354]</td>
<td>Gets the Data Type category (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Comment [1354]</td>
<td>Gets the comment. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>FullName [1355]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>HasRpcMethods [1461]</td>
<td>Gets a value indicating whether this StructType has RPC Methods.</td>
</tr>
<tr>
<td>Id [1355]</td>
<td>Gets the ID of the DataType (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsBitType [1356]</td>
<td>Gets a value indicating whether this IDataType [1986] is a bit mapping Type (Inherited from DataType [1349].)</td>
</tr>
</tbody>
</table>
### StructType Properties

The `StructType` type exposes the following members.
### Properties

<table>

<td>Size</td>
<td>Gets the Size of the DataType in Bytes or bits. (Inherited from DataType)</td>
</tr>
</tbody>
</table>
6.7.21.1.1 StructType.AllMembers Property

Gets all members (down the derivation hierarchy)

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IMemberCollection AllMembers { get; }
```

Property Value

Type: IMemberCollection

All members.

Implements

I structType.AllMembers

Reference

StructType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.21.1.2 StructType.BaseType Property

Gets the structs Base Type (Null if not derived).

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IDataType BaseType { get; }
```

Property Value

Type: IDataType

Implements

I structType.BaseType

Reference

StructType Class

TwinCAT.Ads.TypeSystem Namespace
6.7.21.1.3 **StructType.BaseTypeName Property**

Gets the the Name of the Base class (if derived)

**Namespace:**  TwinCAT.Ads.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
public string BaseTypeName { get; }
```

**Property Value**

Type:  **String**

Empty if not derived.

**Implements**

**IStructType.BaseTypeName**

**Reference**

**StructType Class**

**TwinCAT.Ads.TypeSystem Namespace**

6.7.21.1.4 **StructType.HasRpcMethods Property**

Gets a value indicating whether this **StructType** has RPC Methods.

**Namespace:**  TwinCAT.Ads.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
public virtual bool HasRpcMethods { get; }
```

**Property Value**

Type:  **Boolean**

true if this type has methods; otherwise, false.

**Implements**

**IStructType.HasRpcMethods**
Remarks
The DataType (Structure) must be marked with the PlcAttribute 'TcRpcEnable' to enable RpcMethods, otherwise RpcMethods are not passed through to the ADS symbolic information.

Reference
StructType Class [1457]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.21.1.5 StructType.IsDerived Property
Gets a value indicating whether this instance is derived.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsDerived { get; }  

Property Value
Type: Boolean
true if this instance is derived; otherwise, false.

Reference
StructType Class [1457]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.21.1.6 StructType.Members Property
Gets a read only collection of the Members [2065] of the IStructType [2162].

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IMemberCollection Members { get; }  

Property Value
Type: IMemberCollection [2068]
The members as read only collection.

Implements
IStructType.Members [2166]
Remarks

If the IStructType is derived, only the extended members are returned. To get all supported members down the inheritance chain, use the AllMembers property.

StructType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.21.2 StructType Methods

The StructType type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from DataType)</td>
</tr>
</tbody>
</table>

Reference

StructType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.22 SubRangeType.T Class

Represents a SubRangeType

Inheritance Hierarchy

System.Object
  TwinCAT.Ads.TypeSystem.DataType
  TwinCAT.Ads.TypeSystem.SubRangeType.T.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public sealed class SubRangeType<T> : DataType,
    ISubRangeType<T>, ISubRangeType, IDataType, IBitSize
where T : struct, new()
```
Type Parameters

T

The SubRangeType.T. type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from DataType.</td>
</tr>
<tr>
<td>BaseType</td>
<td>Gets the base type.</td>
</tr>
<tr>
<td>BaseTypeName</td>
<td>Gets the name of the base type.</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the DataType in bits. (Inherited from DataType.</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from DataType.</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from DataType.</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType (Namespace + Name) (Inherited from</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the Data Type (Inherited from DataType.</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this IDataType is a bit mapping Type</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this IDataType is a container type</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this IDataType is a pointer type</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this IDataType is primitive</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this IDataType is a reference type</td>
</tr>
<tr>
<td>LowerBound</td>
<td>Gets the lower bound.</td>
</tr>
<tr>
<td>ManagedType</td>
<td>Gets the corresponding .NET Type if attached. (Overrides DataType.ManagedType.</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the IDataType exists. (Inherited from</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the Size of the DataType in Bytes or bits. (Inherited from</td>
</tr>
<tr>
<td>UpperBound</td>
<td>Gets the upper bound.</td>
</tr>
</tbody>
</table>
## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>

### 6.7.22.1 SubRangeType.T. Properties

The SubRangeType.T.[1463] generic type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>BaseType</td>
<td>Gets the base type.</td>
</tr>
<tr>
<td>BaseTypeName</td>
<td>Gets the name of the base type.</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the DataType [1349] in bits. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the DataType (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this IDataType [1986] is a bit mapping Type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>LowerBound [1467]</td>
<td>Gets the lower bound.</td>
</tr>
<tr>
<td>ManagedType [1467]</td>
<td>Gets the corresponding .NET Type if attached. (Overrides DataType.ManagedType [1359].)</td>
</tr>
<tr>
<td>Name [1360]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Namespace [1360]</td>
<td>Gets the namespace string within the IDataType [1986] exists. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>Size [1361]</td>
<td>Gets the Size of the DataType [1349] in Bytes or bits. (Inherited from DataType [1349].)</td>
</tr>
<tr>
<td>UpperBound [1468]</td>
<td>Gets the upper bound.</td>
</tr>
</tbody>
</table>

Reference

SubRangeType.T. Class [1463]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.22.1.1 SubRangeType.T..BaseType Property

Gets the the base type.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IDataType BaseType { get; }
```

**Property Value**

Type: IDataType [1986]

The type of the referenced.

**Implements**

ISubRangeType.BaseType [2172]

Reference

SubRangeType.T. Class [1463]

TwinCAT.Ads.TypeSystem Namespace [1328]

### 6.7.22.1.2 SubRangeType.T..BaseTypeName Property

Gets the name of the base type.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
public string BaseTypeName { get; }

Property Value

Type: String
The name of the base type.

Implements

ISubRangeType.BaseTypeName [2173]

Reference

SubRangeType.T. Class [1463]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.22.1.3 SubRangeType.T..LowerBound Property

Gets the lower bound.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public T LowerBound { get; }

Property Value

Type: T [1463]
The lower bound.

Implements

ISubRangeType.T..LowerBound [2176]

Reference

SubRangeType.T. Class [1463]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.22.1.4 SubRangeType.T..ManagedType Property

Gets the corresponding .NET Type if attached.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### SubRangeType.T..UpperBound Property

Gets the upper bound.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public T UpperBound { get; }
```

**Property Value**

Type: `T`

The upper bound.

**Implements**

`ISubRangeType.T..UpperBound`

**Reference**

SubRangeType.T. Class

TwinCAT.Ads.TypeSystem Namespace

### SubRangeType.T. Methods

The `SubRangeType.T.` generic type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>

| equals         | Determines whether the specified object is equal to the current object.     |
| GetHashCode    | Serves as the default hash function. (Inherited from `Object`.)             |
### Symbol Class

Symbol class

#### Inheritance Hierarchy

```
System.Object
  TwinCAT.Ads.TypeSystem.Instance [1388]
  TwinCAT.Ads.TypeSystem.Symbol
```

#### Syntax

**C#**

```csharp
public class Symbol : Instance, IValueSymbol,
                    IValueRawSymbol, IHierarchicalSymbol, ISymbol, IAttributedInstance, IInstance,
                    IBitSize, IValueAnySymbol, IValueAccessorProvider, ISymbolFactoryServicesProvider, IAdsSymbol,
                    IProcessImageAddress, IContextMaskProvider
```

The Symbol type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AccessRights</td>
<td>Gets the access rights.</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of this Instance [1388] in bits. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the the DataTypeCategory [1649] of the Instance. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection that produces values for this IValueSymbol [2254]</td>
</tr>
<tr>
<td>ContextMask</td>
<td>Gets the context mask of this instance. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>---------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has a value. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ImageBaseAddress</td>
<td>Gets the AmsAddress [648] of the Process Image</td>
</tr>
<tr>
<td>IndexGroup</td>
<td>Gets the index group of the Symbol</td>
</tr>
<tr>
<td>IndexOffset</td>
<td>Gets the index offset of the Symbol</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Overrides Instance.InstancePath [1396].)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether the Symbols datatype is a Container type.</td>
</tr>
<tr>
<td>IsDereferencedPointer</td>
<td>Gets or sets a value indicating whether an ancestor is a dereferenced Pointer.</td>
</tr>
<tr>
<td>IsDereferencedReference</td>
<td>Gets or sets a value indicating whether an ancestor is a dereferenced Reference.</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Indicates that this instance is persistent. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is primitive.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive.</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsTcComInterfacePointer</td>
<td>Indicates that this instance is a TcComInterfacePointer. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsTypeGuid</td>
<td>Indicates that this instance has set TypeGuid flag. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>IsVirtual</td>
<td>Gets a value indicating whether this instance is virtual.</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace name. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>NotificationSettings</td>
<td>Gets or sets the notification settings.</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Size [1401]</td>
<td>Gets the size of the IDataType [1986] in bytes or Bits dependant on IsBitType [1396] (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>SubSymbolCount [1484]</td>
<td>Gets the number of SubSymbols</td>
</tr>
<tr>
<td>SubSymbols [1484]</td>
<td>Gets the SubSymbols of the ISymbol [2176]</td>
</tr>
<tr>
<td>TypeName [1402]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td>ValueEncoding [1485]</td>
<td>Gets the value encoding.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EnsureRights [1488]</td>
<td>Ensures that the AccessRights are matched.</td>
</tr>
<tr>
<td>Equals [1489]</td>
<td>Equals (Overrides Object.Equals(Object).)</td>

<td>OnWriteValueAsync</td>
<td>Handler function for writing the dynamic value</td>
</tr>
<tr>
<td>ReadAnyValue(Type)</td>
<td>Reads the value of this Value into a new created instance of the managed type</td>
</tr>
<tr>
<td>ReadAnyValue(Type, Int32)</td>
<td>Reads the value of this Value into a new created instance of the managed type</td>
</tr>
<tr>
<td>ReadAnyValueAsync</td>
<td>Reads the (AnyType) value asynchronously.</td>
</tr>
<tr>
<td>ReadRawValue</td>
<td>Reads the raw value of the IValueSymbol (Ads Read / Write)</td>
</tr>
<tr>
<td>ReadRawValue(Int32)</td>
<td>Reads the raw value of the IValueSymbol (Ads Read / Write)</td>
</tr>
<tr>
<td>ReadRawValueAsync</td>
<td>Reads the raw value of the IValueSymbol asynchronously.</td>
</tr>
<tr>
<td>ReadValue</td>
<td>Reads the Value of the IValueSymbol</td>
</tr>
<tr>
<td>ReadValue(Int32)</td>
<td>Reads the Value of the IValueSymbol</td>
</tr>
<tr>
<td>ReadValueAsync</td>
<td>Reads the Value of the IValueSymbol asynchronously.</td>
</tr>
<tr>
<td>SetAttributes</td>
<td>Sets the type attributes (Inherited from Instance.)</td>
</tr>
<tr>
<td>SetContextMask</td>
<td>Sets the context mask. (Inherited from Instance.)</td>
</tr>
<tr>
<td>SetParent</td>
<td>Sets the parent symbol.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Overrides Instance.ToString.)</td>
</tr>
<tr>
<td>TryReadValue</td>
<td>Reads the Value of the IValueSymbol</td>
</tr>
<tr>
<td>TryWriteValue</td>
<td>Writes the Value of the IValueSymbol</td>
</tr>
<tr>
<td>UpdateAnyValue(Object)</td>
<td>Reads the value of this Value into the specified managed value.</td>
</tr>
<tr>
<td>UpdateAnyValue(Object, Int32)</td>
<td>Reads the value of this Value into the specified managed value.</td>

<tr>
<td>WriteRawValue(Byte)</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write)</td>
</tr>
<tr>
<td>WriteRawValue(Byte, Int32)</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write)</td>
</tr>
<tr>
<td>WriteRawValueAsync</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write)</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

### Name | Description
--- | ---
| WriteValue(Object) | Writes the Value of the IValueSymbol [2254] |
| WriteValue(Object, Int32) | Writes the Value of the IValueSymbol [2254] |
| WriteValueAsync | Writes the Value of the IValueSymbol [2254] |

### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RawValueChanged</td>
<td>Occurs when the RawValue of the IValueSymbol [2254] has changed.</td>
</tr>
<tr>
<td>ValueChanged</td>
<td>Occurs when the (Primitive) value of the IValueSymbol [2254] has changed.</td>
</tr>
</tbody>
</table>

### Operators

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equality</td>
<td>Operator==</td>
</tr>
<tr>
<td>Inequality</td>
<td>Implements the != operator.</td>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>syncObject</td>
<td>Synchronization object</td>
</tr>
</tbody>
</table>

### Extension Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PollValuesAnnotate dojo(Observable.Unit.)</td>
<td>Overloaded. Polls the values as ValueChangedEventArgs [2439] sequence annotated value on trigger sequence (Defined by ValueSymbolExtensions [1106].)</td>
</tr>
<tr>
<td>PollValuesAnnotate d(TimeSpan)</td>
<td>Overloaded. Polls the values as ValueChangedEventArgs [2439] sequence with a specified period time. (Defined by ValueSymbolExtensions [1106].)</td>
</tr>
<tr>
<td>WhenValueChanged</td>
<td>Gets an observable sequence when the value of the IValueSymbol [2254] has changed. (Defined by ValueSymbolExtensions [1106].)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Observable.Object.)</td>
<td>Overloaded. Subscribes the IValueSymbol [2254] to an observable sequence of values and writes them to the IValueSymbol [2254]. (Defined by ValueSymbolExtensions [1106].)</td>
</tr>
</tbody>
</table>

<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from Instance.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the the DataTypeCategory of the Instance. (Inherited from Instance.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from Instance.)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection that produces values for this IValueSymbol. (Inherited from Instance.)</td>
</tr>
<tr>
<td>ContextMask</td>
<td>Gets the context mask of this instance. (Inherited from Instance.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the IInstance. (Inherited from Instance.)</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has a value. (Inherited from Instance.)</td>
</tr>
<tr>
<td>ImageBaseAddress</td>
<td>Gets the AmsAddress of the Process Image</td>
</tr>
<tr>
<td>IndexGroup</td>
<td>Gets the index group of the Symbol</td>
</tr>
<tr>
<td>IndexOffset</td>
<td>Gets the index offset of the Symbol</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from Instance.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Overrides Instance. InstancePath.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether the Symbols datatype is a Container type.</td>
</tr>
<tr>
<td>IsDereferencedPointer</td>
<td>Gets or sets a value indicating whether an ancestor is a dereferenced Pointer</td>
</tr>
<tr>
<td>IsDereferencedReference</td>
<td>Gets or sets a value indicating whether an ancestor is a dereferenced Reference</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Indicates that this instance is persistent. (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is primitive.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this instance is reference. (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance is static. (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsTcComInterfacePointer</td>
<td>Indicates that this instance is a TcComInterfacePointer. (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsTypeGuid</td>
<td>Indicates that this instance has set TypeGuid flag. (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsVirtual</td>
<td>Gets a value indicating whether this instance is virtual.</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace name. (Inherited from Instance.)</td>
</tr>
<tr>
<td>NotificationSettings</td>
<td>Gets or sets the notification settings.</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the IDataType in bytes or Bits dependant on IsBitType (Inherited from Instance.)</td>
</tr>
<tr>
<td>SubSymbolCount</td>
<td>Gets the number of SubSymbols</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the ISymbol</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this Instance. (Inherited from Instance.)</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding.</td>
</tr>
</tbody>
</table>

Reference
Symbol Class | TwinCAT.Ads.TypeSystem Namespace

6.7.23.1.1 Symbol.AccessRights Property

Gets the access rights.

Namespace: TwinCAT.Ads.TypeSystem Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public SymbolAccessRights AccessRights { get; }

Property Value

Type: SymbolAccessRights
The access rights.
Implements

IValueSymbol.AccessRights [2259]

Reference

Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.1.2 Symbol.Connection Property

Gets the connection that produces values for this IValueSymbol [2254]

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IConnection Connection { get; }

Property Value

Type: IConnection [74]
The connection object.

Implements

IValueSymbol.Connection [2260]

Reference

Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.1.3 Symbol.ImageBaseAddress Property

Gets the AmsAddress [648] of the Process Image

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public AmsAddress ImageBaseAddress { get; }

Property Value

Type: AmsAddress [648]
The address.
Implements

IAdsSymbol.ImageBaseAddress [1383]

Reference

Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.1.4 Symbol.IndexGroup Property

Gets the index group of the Symbol

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint IndexGroup { get; }
```

Property Value

Type: UInt32
The index group.

Implements

IProcessImageAddress.IndexGroup [2093]

Reference

Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.1.5 Symbol.IndexOffset Property

Gets the index offset of the Symbol

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint IndexOffset { get; }
```

Property Value

Type: UInt32
The index offset.
Implements
IProcessImageAddress.IndexOffset [2093]

Reference
Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.1.6 Symbol.InstancePath Property

Gets the relative / absolute access path to the instance (with periods (.)

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public override string InstancePath { get; }

Property Value

Type: String
The instance path.

Implements
IInstance.InstancePath [2055]

Remarks

If this path is relative or absolute depends on the context. IMember [2065] are using relative paths, ISymbol [2176]s are using absolute ones.

Reference
Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.1.7 Symbol.IsContainerType Property

Gets a value indicating whether the Symbols datatype is a Container type.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
## Syntax

### C#

```csharp
public virtual bool IsContainerType { get; }
```

## Property Value

Type: Boolean
true if this instance is container type; otherwise, false.

## Implements

`ISymbol.IsContainerType` [2179]

## Remarks

Container Types are all types that contain SubElements like

- Array [1649]
- Pointer [1649]
- Union [1649]
- Struct [1649]
- Function [1649]
- FunctionBlock [1649]
- Program [1649]

and the Alias [1649] and Reference [1649] types, if they have a container type as base type.

## Reference

- Symbol Class [1469]
- TwinCAT.Ads.TypeSystem Namespace [1328]
- `IDataType.Category` [1988]

### 6.7.23.1.8 Symbol.IsDereferencedPointer Property

Gets or sets a value indicating whether an ancestor is a dereferenced Pointer

#### Namespace

TwinCAT.Ads.TypeSystem [1328]

#### Assembly

TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

```csharp
public bool IsDereferencedPointer { get; }
```

## Property Value

Type: Boolean
true if this instance is ancestor is pointer; otherwise, false.
**6.7.23.1.9 Symbol.IsDereferencedReference Property**

Gets or sets a value indicating whether an ancestor is a dereferenced Reference

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsDereferencedReference { get; }
```

**Property Value**

Type: Boolean  
true if this instance is ancestor is reference; otherwise, false.

---

**6.7.23.1.10 Symbol.IsPrimitiveType Property**

Gets a value indicating whether this instance is primitive.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public virtual bool IsPrimitiveType { get; }
```

**Property Value**

Type: Boolean  
true if this instance is primitive; otherwise, false.

**Implements**

ISymbol.IsPrimitiveType [2180]
6.7.23.1.11 Symbol.IsRecursive Property

Gets a value indicating whether this instance is recursive.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsRecursive { get; }
```

**Property Value**

Type: Boolean
true if this instance is recursive; otherwise, false.

**Implements**

ISymbol.IsRecursive

**Reference**

Symbol Class

TwinCAT.Ads.TypeSystem Namespace

6.7.23.1.12 Symbol.IsVirtual Property

Gets a value indicating whether this instance is virtual.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsVirtual { get; }
```

**Property Value**

Type: Boolean
true if this instance is virtual; otherwise, false.

**Implements**

IProcessImageAddress.IsVirtual

**Remarks**

Virtual symbols are are only organizational elements within the Symbols Hierarchy and cannot be accessed seperately by IndexGroup/IndexOffset, Value Read/Writes, notifications or handles.
6.7.23.1.13  Symbol.NotificationSettings Property

Gets or sets the notification settings.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```
C#
public INotificationSettings NotificationSettings { get; set; }
```

**Property Value**

Type: INotificationSettings

The notification settings.

**Implements**

IValueSymbol.NotificationSettings

**Remarks**

The NotificationSettings will be inherited from Parent if the setting is not overwritten. If the Root Symbol also doesn't contain the settings, then the DefaultNotificationSettings will be returned.

**Reference**

Symbol Class  
TwinCAT.Ads.TypeSystem Namespace

6.7.23.1.14  Symbol.Parent Property

Gets the parent Symbol

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```
C#
public ISymbol Parent { get; }
```

**Property Value**

Type: ISymbol

The parent.
6.7.23.1.15 Symbol.SubSymbolCount Property

Gets the number of SubSymbols

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public int SubSymbolCount { get; }
```

**Property Value**

Type: Int32  
The Number of SubSymbols.

**Remarks**

If the SubSymbols collection is not generated yet (WeakReference), then this method is less memory and cpu consuming to use for just determining the the number of child symbols (instead of using SubSymbols.Count)/>

Reference

Symbol Class [1469]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.1.16 Symbol.SubSymbols Property

Gets the SubSymbols of the [Symbol] [2176]

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public ISymbolCollection<ISymbol> SubSymbols { get; }
```

**Property Value**

Type: ISymbolCollection [2185] [Symbol] [2176].
### 6.7.23.1.17 Symbol.ValueEncoding Property

Gets the value encoding.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public virtual Encoding ValueEncoding { get; }
```

#### Property Value

**Type:** Encoding

The value encoding.

**Implements**

IAttributedInstance.ValueEncoding

### 6.7.23.2 Symbol Methods

The **Symbol** type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EnsureRights</td>
<td>Ensures that the AccessRights are matched.</td>
</tr>
<tr>
<td>Equals</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Overrides Object.GetHashCode.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>OnGetSize</td>
<td>Handler function getting the size of the Instance (Inherited from Instance.)</td>
</tr>
<tr>
<td>OnReadRawValue</td>
<td>Handler function for reading the raw value</td>
</tr>
<tr>
<td>OnReadRawValueAsync</td>
<td>Handler function for reading the raw value</td>
</tr>
<tr>
<td>OnReadValue</td>
<td>Handler function for reading the dynamic value.</td>
</tr>
<tr>
<td>OnReadValueAsync</td>
<td>Handler function for reading the dynamic value.</td>
</tr>
<tr>
<td>OnSetInstanceName</td>
<td>Sets a new InstanceName InstancePath (Overides Instance.OnSetInstanceName(String))</td>
</tr>
<tr>
<td>OnTryReadValue</td>
<td>Handler function for reading the dynamic value.</td>
</tr>
<tr>
<td>OnTryWriteValue</td>
<td>Handler function for writing the dynamic value.</td>
</tr>
<tr>
<td>OnWriteRawValue</td>
<td>Handler function for writing the dynamic value.</td>
</tr>
<tr>
<td>OnWriteRawValueAsync</td>
<td>Handler function for writing the dynamic value.</td>
</tr>
<tr>
<td>ReadAnyValue(Type)</td>
<td>Reads the value of this Value into a new created instance of the managed type</td>
</tr>
<tr>
<td>ReadAnyValue(Type, Int32)</td>
<td>Reads the value of this Value into a new created instance of the managed type</td>
</tr>
<tr>
<td>ReadAnyValueAsync</td>
<td>Reads the (AnyType) value asynchronously.</td>
</tr>
<tr>
<td>ReadRawValue</td>
<td>Reads the raw value of the IValueSymbol (Ads Read / Write)</td>
</tr>
<tr>
<td>ReadRawValue(Int32)</td>
<td>Reads the raw value of the IValueSymbol (Ads Read / Write)</td>
</tr>
<tr>
<td>ReadRawValueAsyc</td>
<td>Reads the raw value of the IValueSymbol (Ads Read / Write) asynchronously.</td>
</tr>
<tr>
<td>ReadValue</td>
<td>Reads the Value of the IValueSymbol</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ReadValue(Int32)</strong> [1502]</td>
<td>Reads the Value of the IValueSymbol [2254]</td>
</tr>
<tr>
<td><strong>ReadValueAsync</strong> [1503]</td>
<td>Reads the Value of the IValueSymbol [2254] asynchronously.</td>
</tr>
<tr>
<td><strong>SetAttributes</strong> [1404]</td>
<td>Sets the type attributes (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td><strong>SetContextMask</strong> [1405]</td>
<td>Sets the context mask. (Inherited from Instance [1388].)</td>
</tr>
<tr>
<td><strong>SetParent</strong> [1504]</td>
<td>Sets the parent symbol.</td>
</tr>
<tr>
<td><strong>ToString</strong> [1505]</td>
<td>Returns a String that represents this instance. (Overrids Instance.ToString [1405].)</td>
</tr>
<tr>
<td><strong>TryReadValue</strong> [1505]</td>
<td>Reads the Value of the IValueSymbol [2254]</td>
</tr>
<tr>
<td><strong>TryWriteValue</strong> [1506]</td>
<td>Writes the Value of the IValueSymbol [2254]</td>
</tr>
<tr>
<td><strong>UpdateAnyValue(Object)</strong> [1507]</td>
<td>Reads the value of this Value [2254] into the specified managed value.</td>
</tr>
<tr>
<td><strong>UpdateAnyValue(Object, Int32)</strong> [1508]</td>
<td>Reads the value of this Value [2254] into the specified managed value.</td>
</tr>
<tr>
<td><strong>WriteRawValue(Byte)</strong> [1509]</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write)</td>
</tr>
<tr>
<td><strong>WriteRawValue(Byte, Int32)</strong> [1509]</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write)</td>
</tr>
<tr>
<td><strong>WriteRawValueAsync</strong> [1510]</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write)</td>
</tr>
<tr>
<td><strong>WriteValue(Object)</strong> [1511]</td>
<td>Writes the Value of the IValueSymbol [2254]</td>
</tr>
<tr>
<td><strong>WriteValue(Object, Int32)</strong> [1512]</td>
<td>Writes the Value of the IValueSymbol [2254]</td>
</tr>
<tr>
<td><strong>WriteValueAsync</strong> [1513]</td>
<td>Writes the Value of the IValueSymbol [2254]</td>
</tr>
</tbody>
</table>

### Extension Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PollValuesAnnotated(IObservable.Unit.) [1111]</td>
<td>Overloaded. Polls the values as ValueChangedEventArgs [2439] sequence annotated value on trigger sequence (Defined by ValueSymbolExtensions [1106].)</td>
</tr>
<tr>
<td>PollValuesAnnotated(TimeSpan) [1112]</td>
<td>Overloaded. Polls the values as ValueChangedEventArgs [2439] sequence with a specified period time. (Defined by ValueSymbolExtensions [1106].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>WhenValueChanged</td>
<td>Gets an observable sequence when the value of the IValueSymbol has changed. (Defined by ValueSymbolExtensions.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object.)</td>
<td>Overloaded. Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol. (Defined by ValueSymbolExtensions.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object, Action.Exception.)</td>
<td>Overloaded. Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol. (Defined by ValueSymbolExtensions.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object, CancellationToken)</td>
<td>Overloaded. Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol. (Defined by ValueSymbolExtensions.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object, Action.Exception, CancellationToken)</td>
<td>Overloaded. Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol. (Defined by ValueSymbolExtensions.)</td>
</tr>
</tbody>
</table>

### 6.7.23.2.1 Symbol.EnsureRights Method

Ensures that the AccessRights are matched.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected void EnsureRights(
    SymbolAccessRights requested
)
```

**Parameters**

requested Type: TwinCAT.TypeSystem.SymbolAccessRights [2396]
The requested rights.
### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>InsufficientAccessRightsException</td>
<td>[2076]</td>

### 6.7.23.2.2 Symbol.Equals Method

**Equals**

**Namespace**: TwinCAT.Ads.TypeSystem [1328]

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public override bool Equals(
    Object obj
)
```

**Parameters**

- **obj**
  - **Type**: System.Object
  - The object to compare with the current object.

**Return Value**

- **Type**: Boolean
  - true if the specified Object is equal to this instance; otherwise, false.

### Reference

- **Symbol Class**: [1469]
- **TwinCAT.Ads.TypeSystem Namespace**: [1328]

### 6.7.23.2.3 Symbol.GetHashCode Method

**Gets the HashCode of the Address**

**Namespace**: TwinCAT.Ads.TypeSystem [1328]

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public override int GetHashCode()
```
Return Value
Type: Int32
A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

Reference
Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.2.4 Symbol.OnReadRawValue Method
Handler function for reading the raw value
Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
protected virtual byte[] OnReadRawValue(
    int timeout
)

Parameters
timeout Type: System.Int32

Return Value
Type: Byte[]. System.Byte[].

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsErrorException [583]</td>
<td></td>

6.7.23.2.5 Symbol.OnReadRawValueAsync Method
Handler function for reading the raw value
Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
protected virtual Task<ResultReadRawAccess> OnReadRawValueAsync(
    CancellationToken cancel
)
```

Parameters

cancel Type: System.Threading.CancellationToken

Return Value

Type: Task<ResultReadRawAccess> [2564].

System.Byte[].

Exceptions

6.7.23.2.6 Symbol.OnReadValue Method

Handler function for reading the dynamic value.

Namespace: TwinCAT.Ads.TypeSystem [1328]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected virtual Object OnReadValue(
    int timeout
)
```

Parameters

timeout Type: System.Int32

Return Value

Type: Object

The Value

Reference

Symbol Class [1469]
6.7.23.2.7 Symbol.OnReadValueAsync Method

Handler function for reading the dynamic value.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# protected virtual Task<ResultReadValueAccess> OnReadValueAsync( CancellationToken cancel )

**Parameters**

cancel Type: System.Threading.CancellationToken

**Return Value**

Type: Task.ResultReadValueAccess

The Value

**Reference**

Symbol Class
TwinCAT.Ads.TypeSystem Namespace

6.7.23.2.8 Symbol.OnSetInstanceName Method

Sets a new InstanceName InstancePath

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# protected override void OnSetInstanceName( string instanceName )

**Parameters**

instanceName Type: System.String

Instance name.

**Reference**

Symbol Class
TwinCAT.Ads.TypeSystem Namespace
6.7.23.2.9 Symbol.OnTryReadValue Method

Handler function for reading the dynamic value.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected virtual int OnTryReadValue(
    int timeout,
    out Object value
)
```

**Parameters**

- **timeout**
  - Type: System.Int32

- **value**
  - Type: System.Object

**Return Value**

- Type: Int32
  - The Value

**Reference**

- Symbol Class [1469]

6.7.23.2.10 Symbol.OnTryWriteValue Method

Handler function for writing the dynamic value

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected virtual int OnTryWriteValue(
    Object value,
    int timeout
)
```

**Parameters**

- **value**
  - Type: System.Object
  - The value.

- **timeout**
  - Type: System.Int32
  - The timeout.
Return Value

Type: Int32
System.Int32.

**Syntax**

**C#**

```csharp
public Object ReadAnyValue(
    Type managedType,
    int timeout
)
```

**Parameters**

managedType

Type: System.Type

The tp.

timeout

Type: System.Int32

The timeout in ms.

**Return Value**

Type: Object

Read value (System.Object).

**Implements**

IValueAnySymbol.ReadAnyValue(Type, Int32)

**Reference**

Symbol Class

ReadAnyValue Overload

TwinCAT.Ads.TypeSystem Namespace

IValueAnySymbol.WriteAnyValue(Object)

IValueAnySymbol.UpdateAnyValue(Object.)

**6.7.23.2.16 Symbol.ReadAnyValueAsync Method**

Reads the (AnyType) value asynchronously.

**Namespace:** TwinCAT.Ads.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultReadValueAccess> ReadAnyValueAsync(
    Type managedType,
    CancellationToken cancel
)
```
Parameters

managedType  Type:  System.Type
Managed type of the value to read.
cancel     Type:  System.Threading.CancellationToken
The cancellation token.

Return Value

Type:  Task<ResultReadValueAccess>  
A task object that is representing the asynchronous 'ReadAnyValue' operation. The result will be returned in a ResultReadValueAccess, which contains the Value and the ErrorCode.

Implements

IValueAnySymbol.ReadAnyValueAsync(Type, CancellationToken)  

Reference

Symbol Class  
TwinCAT.Ads.TypeSystem Namespace

Symbol.ReadRawValue Method

Reads the raw value of the IValueSymbol (Ads Read / Write)

Namespace:  TwinCAT.Ads.TypeSystem  
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public byte[] ReadRawValue()
Field Value

Type: .Byte
The raw value.

Return Value

Type: .Byte
System.Byte[].

Implements

IValueRawSymbol.ReadRawValue

Reference

Symbol Class [1469]
ReadRawValue Overload [1499]
TwinCAT.Ads.TypeSystem Namespace [1328]

Symbol.ReadRawValue Method (Int32)

Reads the raw value of the IValueSymbol (Ads Read / Write)

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdca3e72bc0ea15da1c14

Syntax

C#

public byte[] ReadRawValue(
    int timeout
)

Parameters

timeout Type: System.Int32

Field Value

Type: .Byte
The raw value.

Return Value

Type: .Byte
System.Byte[].

Implements

IValueRawSymbol.ReadRawValue(Int32) [2250]
6.7.23.2.18 Symbol.ReadRawValueAsync Method

Reads the raw value of the [IValueSymbol](#2254) (Ads Read / Write) asynchronously.

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public Task<ResultReadRawAccess> ReadRawValueAsync(
    CancellationToken cancel)
```

**Parameters**

- `cancel` Type: `System.Threading.CancellationToken`
  The cancellation token.

**Field Value**

Type: `Task<ResultReadRawAccess>` [2564].
The raw value.

**Return Value**

Type: `Task<ResultReadRawAccess>` [2564].
`System.Byte[]`.

**Implements**

`IValueRawSymbol.ReadRawValueAsync(CancellationToken)` [2251]

Reference

**Symbol Class** [1469]

**TwinCAT.Ads.TypeSystem Namespace** [1328]

6.7.23.2.19 Symbol.ReadValue Method

**Overload List**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ReadValue()</code> [1502]</td>
<td>Reads the Value of the <a href="#2254">IValueSymbol</a></td>

</tr>
</tbody>
</table>
TwinCAT.Ads Namespaces

Reference
Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

Symbol.ReadValue Method

Reads the Value of the IValueSymbol [2254]

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public Object ReadValue()'

Field Value

Type: Object
The value.

Return Value

Type: Object
System.Object.

Implements

IValueSymbol.ReadValue [2263]

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader [2200] settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly.

Reference
Symbol Class [1469]
ReadValue Overload [1501]
TwinCAT.Ads.TypeSystem Namespace [1328]

Symbol.ReadValue Method (Int32)

Reads the Value of the IValueSymbol [2254]

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public Object ReadValue(
    int timeout
)
```

Parameters

timeout Type: System.Int32
The timeout in ms.

Field Value

Type: Object
The value.

Return Value

Type: Object
System.Object.

Implements

IValueSymbol.ReadValue(Int32) [2263]

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Reference

Symbol Class [1469]
ReadValue Overload [1501]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.2.20 Symbol.ReadValueAsync Method

Reads the Value of the IValueSymbol [2254] asynchronously.

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultReadValueAccess> ReadValueAsync(
    CancellationToken cancel
)
```
Parameters

cancel

Type: `System.Threading.CancellationToken`
The cancellation token.

Return Value

Type: `Task<ReadValueAccess>`
A task that represents the asynchronous 'ReadValue' operation. The read result is stored in the `ReadValueAccess` return value and contains the `Value` and the `ErrorCode`.

Implements

`IValueSymbol.ReadValueAsync(CancellationToken)`

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the `ISymbolLoader` settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly.

Reference

Syntax

C#

```csharp
public override string ToString()
```

Return Value

Type: String
A String that represents this instance.

Reference

Symbol Class
TwinCAT.Ads.TypeSystem

6.7.23.2.23 Symbol.TryReadValue Method

Reads the Value of the IValueSymbol

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads.dll Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int TryReadValue(
    int timeout,
    out Object value
)
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
</table>
| timeout   | System.Int32
            The timeout in ms.|
| value     | System.Object
            The read value.|

Return Value

Type: Int32
The error Code.

Implements

IValueSymbol.TryReadValue(Int32, Object)
Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Reference

Symbol Class [1469]
TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.23.2.24 Symbol.TryWriteValue Method

Writes the Value of the IValueSymbol [2254]

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sh.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int TryWriteValue(
    Object value,
    int timeout
)
```

Parameters

- value: Type: System.Object
  The value.
- timeout: Type: System.Int32
  The timeout in ms.

Return Value

Type: Int32
The error code.

Implements

IValueSymbol.TryWriteValue(Object, Int32) [2265]

Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the SymbolLoader settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Writes the raw value of the `IValueSymbol` (Ads Read / Write)

**Namespace:** TwinCAT.Ads.TypeSystem [1328]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultWriteAccess> WriteRawValueAsync(
    byte[] rawValue,
    CancellationToken cancel
)
```

**Parameters**

Return Value

Type: Task.ResultWriteAccess
A task that represents the asynchronous read operation. The ResultRead parameter contains the total number of bytes read into the buffer (ReadBytes) and the ErrorCode after execution.

Implements

IValueRawSymbol.WriteRawValueAsync(Byte, CancellationToken)

Reference

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>WriteValue(Object)</td>
<td>Writes the Value of the IValueSymbol</td>
</tr>
<tr>
<td>WriteValue(Object, int32)</td>
<td>Writes the Value of the IValueSymbol</td>
</tr>
</tbody>
</table>

Reference

Symbol Class
TwinCAT.Ads.TypeSystem Namespace

Symbol.WriteValue Method (Object)

Writes the Value of the IValueSymbol

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public void WriteValue(
    Object value
)
```

Parameters

value          Type: System.Object
The value.
Implements

IValueSymbol.WriteValue(Object) [» 2266]

Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the ISymbolLoader [» 2200] settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also.

Reference

Symbol Class [» 1469]

WriteValue Overload [» 1511]

TwinCAT.Ads.TypeSystem Namespace [» 1328]

Symbol.WriteValue Method (Object, Int32)

Writes the Value of the IValueSymbol [» 2254]

Namespace: TwinCAT.Ads.TypeSystem [» 1328]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public void WriteValue(
    Object value,
    int timeout
)

Parameters

value Type: System.Object
The value.

timeout Type: System.Int32
The timeout in ms.

Implements

IValueSymbol.WriteValue(Object, Int32) [» 2267]

Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the ISymbolLoader [» 2200] settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

6.7.23.2.29 Symbol.WriteValueAsync Method

Writes the Value of the IValueSymbol

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd5ca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultWriteAccess> WriteValueAsync(
    Object value,
    CancellationToken cancel)
```

Parameters

- **value**
  - Type: System.Object
  - The value.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

Return Value

- **Type**: Task<ResultWriteAccess>

A task that represents the asynchronous 'ReadValue' operation. The read result is stored in the ResultWriteAccess return value and contains the ErrorCode.

Implements

IValueSymbol.WriteValueAsync(Object, CancellationToken)

Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the ISymbolLoader settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also.

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Gets the enumerator that enumerates through a collection (Inherited from SymbolIterator.T.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

### Remarks

This iterator class can be used to iterate over collections of symbol trees (root symbols + sub symbols). By constructor the user can choose if the iterator works recursively within the symbol tree and optionally a filter function to select only specific symbols (predicate).

### Examples

The following example shows how to determine, browse and filter symbols.
Browsing and filtering Symbols

```csharp
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    ResultSymbols resultSymbols = await loader.GetSymbolsAsync(cancel);
    if (resultSymbols.Succeeded)
    {
        Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];
        // Works for ALL Primitive 'ANY TYPES' Symbols
        ResultWriteAccess resultWrite = await symbol.WriteValueAsync(valueToWrite, cancel);
        ResultReadValueAccess resultRead = await symbol.ReadValueAsync(cancel);
        if (resultRead.Succeeded)
        {
            valueToRead = (uint)resultRead.Value;
        }
    }
}
```

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.25 SymbolLoaderFactory Class

The class SymbolLoaderFactory is used to create a new instance of the AdsSymbolLoader initialized to the parametrized mode (SymbolBrowser V2, new Version)

Inheritance Hierarchy

System.Object
   TwinCAT.Ads.TypeSystem.SymbolLoaderFactory

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public static class SymbolLoaderFactory

The SymbolLoaderFactory type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create</td>
<td>Creates the specified connection.</td>
</tr>
</tbody>
</table>

TC1000 Version: 1.1 1523
Remarks

The Symbol Loader (V2) supports the following modes. The flat mode organizes the Symbols in a flat list. This mode is available in all .NET versions. The virtual tree mode organizes the Symbols hierarchically with parent-child relationships. This mode is available in all .NET Versions. The Dynamic tree mode organizes the Symbols hierarchically and creates struct members, array elements and enum fields on the fly. This feature is only available on platforms that support the Dynamic Language Runtime (DLR), actually all .NET Framework Version larger than 4.0. Virtual instances means, that all Symbols are ordered within a tree structure. For that symbol nodes that are not located on a fixed address, a Virtual Symbol will be created. Setting the virtualInstance parameter to 'false' means, that the located symbols will be returned in a flattened list.

TwinCAT.SymbolLoaderSettings

6.7.25.1 SymbolLoaderFactory Methods

The SymbolLoaderFactory type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create</td>
<td>Creates the specified connection.</td>
</tr>
</tbody>
</table>

Reference

SymbolLoaderFactory Class

TwinCAT.Ads.TypeSystem Namespace

6.7.25.1.1 SymbolLoaderFactory.Create Method

Creates the specified connection.

Namespace: TwinCAT.Ads.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static ISymbolLoader Create(
    IConnection connection,
    ISymbolLoaderSettings settings
)
```

Parameters

connection Type: TwinCAT.IConnection

The connection.
settings  

Type: TwinCAT.ISymbolLoaderSettings [99]

The settings.

Return Value

Type: ISymbolLoader [2200]

ISymbolLoader.

Examples

The following sample shows how to create a dynamic version of the SymbolLoader V2. The dynamic symbol loader makes use of the Dynamic Language Runtime (DLR) of the .NET Framework. That means Structures, Arrays and Enumeration types and instances are generated 'on-the-fly' during symbol Browsing. These created dynamic objects are a one to one representation of the Symbol Server target objects (e.g the IEC61131 types on the PLC). Dynamic language features are only available from .NET4 upwards.

Dynamic Tree Mode

string projectNameValue = vAppInfo.ProjectName;

// Reading the CycleCount Value
resultRead = await symTaskInfo1.CycleCount.ReadValueAsyncAsync(cancel); // Taking a Value Snap
pshot
int cycleCountValue = (int)resultRead.Value;
#endif

// Registering for dynamic "ValueChanged" events for the Values
// Using Default Notification settings
symCycleCount.ValueChanged += new EventHandler<ValueChangedEventArgs>(cycleCount_ValueChanged);

// Override default notification settings
symTaskInfo1NotificationSettings = new NotificationSettings(AdsTransMode.Cyclic, 500, 0);

// Register forValueChanged event.
symTaskInfo1ValueChanged += new EventHandler<ValueChangedEventArgs>(taskInfo1ValueChanged); // Struct Type

Thread.Sleep(10000); // Sleep main thread for 10 Seconds
}
Console.WriteLine("CycleCount Changed events received: {0}", _cycleCountEvents);
Console.WriteLine("taskInfo1 Changed events received: {0}", _taskInfo1Events);
Console.WriteLine("Press [Enter] for leave:");
Console.ReadLine();

static object _notificationSynchronizer = new object();
static int _cycleCountEvents = 0;

/// <summary>
/// Handler function for the CycleCount ValueChanged event.
/// </summary>
/// <param name="sender">The sender.</param>
/// <param name="e">The e.</param>
static void cycleCount_ValueChanged(object sender, ValueChangedEventArgs e)
{
lock(_notificationSynchronizer)
{
Interlocked.Increment(ref _cycleCountEvents);
// val is a type safe value of int!
dynamic val = e.Value;
uint intVal = val;

DateTimeOffset changedTime = e.DateTime.ToLocalTime(); // Convert UTC to local time
Console.WriteLine("CycleCount changed to: {0}, TimeStamp: {1}", intVal, changedTime.ToString
("HH:mm:ss:fff"));
}
The following sample shows how to create a static (non dynamic) version of the SymbolLoader V2. The static symbol loader in version 2 is a nearly code compatible version of the Dynamic Loader, only the dynamic creation of objects is not available. The reason for supporting this mode is that .NET Framework Versions lower than Version 4.0 (CLR2) doesn’t support the Dynamic Language Runtime (DLR). The SymbolLoader V2 static object is supported from .NET 2.0 on.

**Virtual Tree Mode**

```csharp
using System;
using System.Threading;
using System.Diagnostics;
using TwinCAT;
using TwinCAT.Ads;
using TwinCAT.TypeSystem;
using TwinCAT.TypeSystem.Generic;
using TwinCAT.Ads.ValueAccess;
using TwinCAT.Ads.TypeSystem;
namespace Sample
{
    class SymbolBrowserProgramV2VirtualTree
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static void Main(string[] args)
        {
            ConsoleLogger logger = new ConsoleLogger();
            Console.WriteLine("\n");
            Console.WriteLine("Press [Enter] for start:\n");
            Console.ReadLine();
            //logger.Active = false;
            Stopwatch stopper = new Stopwatch();
            // Parse the command-line arguments
            AmsAddress address = ArgParser.Parse(args);
            stopper.Start();
            using (AdsClient client = new AdsClient())
            {
                //client.Synchronize = false;
                // Connect the AdsClient to the device target.
            }
        }
    }
}
```
// Creates the Symbol Objects as hierarchical tree
SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree, ValueAccessMode.IndexGroupOffsetPreferred);
ISymbolLoader symbolLoader = SymbolLoaderFactory.Create(client, settings);

// Dump Datatypes from Target Device
Console.WriteLine($"Dumping '{symbolLoader.DataTypes.Count}' DataTypes:");
foreach (IDataType type in symbolLoader.DataTypes)
{
    logger.DumpType(type);
}
Console.WriteLine("\n");

// Dump Symbols from target device
Console.WriteLine($"Dumping '{symbolLoader.Symbols.Count}' Symbols:");
foreach (ISymbol symbol in symbolLoader.Symbols)
{
    logger.DumpSymbol(symbol, 0);
}
stopper.Stop();
TimeSpan elapsed = stopper.Elapsed;

Console.WriteLine("\n")
Console.WriteLine($"Browsing complete tree: {elapsed},

{{1} DataTypes, {2} Symbols}, elapsed, logger.DataTypesCount, logger.DataTypesCount};

Console.ReadLine();

Examples

Argument Parser

public static class ArgParser
{
    /// <summary>
    /// Parses the arguments.
    /// </summary>
    /// <param name="args">The arguments.</param>
    /// <returns>AmsAddress.</returns>
    public static AmsAddress Parse(string[] args)
    {
        AmsNetId netId = AmsNetId.Local;
        int port = 851;
        if (args != null)
        {
            if (args.Length > 0 && args[0] != null)
                netId = AmsNetId.Parse(args[0]);
            if (args.Length > 1 && args[1] != null)
                port = int.Parse(args[1]);
        }
        return new AmsAddress(netId, port);
    }
}

Dumping Symbols

/// <summary>
/// Console logger
/// </summary>
/// <summary>
public class ConsoleLogger
{
    public ConsoleLogger()
    {
    }
    bool _active = true;

    /// <summary>
    /// Gets or sets a value indicating whether this ConsoleLogger is active.
    /// </summary>
    /// <value><c>true</c> if active; otherwise, <c>false</c>.</value>
    public bool Active
```csharp
int _dataTypes = 0;

/// <summary>
/// Gets the number of dumped dataTypes.
/// </summary>
/// <value>The data types count.</value>
public int DataTypesCount

Syntax

C#

public sealed class UnionType : DataType,
    IUnionType, IDataType, IBitSize

The UnionType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from DataType.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the DataType in bits. (Inherited from DataType.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DataType.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from DataType.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from DataType.)</td>
</tr>
<tr>
<td>Fields</td>
<td>Gets a read only collection of the Fields of the IUnionType.</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType (Namespace + Name) (Inherited from DataType.)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the DataType (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this IDataType is a bit mapping Type (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this IDataType is a container type (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this IDataType is a pointer type (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this IDataType is primitive (Inherited from DataType.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this IDataType is a reference type (Inherited from DataType.)</td>
</tr>
<tr>
<td>ManagedType</td>
<td>Gets the corresponding .NET Type if attached. (Inherited from DataType.)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from DataType.)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the IDataType exists. (Inherited from DataType.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the Size of the DataType in Bytes or bits. (Inherited from DataType.)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

### 6.7.26.1 UnionType Properties

The `UnionType` type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the <code>IDataType</code> (Inherited from <code>DataType</code>).</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>DataType</code> in bits. (Inherited from <code>DataType</code>).</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes. (Inherited from <code>DataType</code>).</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from <code>DataType</code>).</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment. (Inherited from <code>DataType</code>).</td>
</tr>
<tr>
<td>Fields</td>
<td>Gets a read only collection of the Fields of the <code>IUnionType</code>.</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the Data Type (Namespace + Name)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the Data Type (Inherited from <code>DataType</code>).</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this <code>IDataType</code> is a bit mapping Type.</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0).</td>

WStringType Class [1537]

TwinCAT.Ads.TypeSystem Namespace [1328]

6.7.27.1.1 WStringType.Encoding Property

Gets the encoding of the String (Encoding.Default (STRING) or Encoding.UNICODE (WSTRING))

Namespace: TwinCAT.Ads.TypeSystem [1328]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Encoding Encoding { get; }
```

Property Value

Type: Encoding
The encoding.
6.7.27.1.2  **WStringType.IsFixedLength Property**

Gets a value indicating whether the string is of fixed length.

**Namespace:**  TwinCAT.Ads.TypeSystem  
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) 
Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsFixedLength { get; }
```

**Property Value**

Type:  Boolean  
true if this instance is fixed length; otherwise, false.

**Implements**

IStringType.IsFixedLength  
[2157]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>

</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString(...)</td>
<td>Returns a String that represents this instance. (Overrides DataType.ToString.)</td>
</tr>
</tbody>
</table>

Reference

WStringType Class

TwinCAT.Ads.TypeSystem Namespace

6.7.27.2.1 WStringType.ToString Method

Returns a String that represents this instance.

Namespace: TwinCAT.Ads.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override string ToString()
```
Return Value

Type: String
A String that represents this instance.

</table>
## TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IndexGroupOffset</td>
<td>Communicates over IndexGroup/IndexOffset only. This is the most direct/efficient access into the Process image. The advantage is that, the symbol access is done via 1 ADS round trip. Disadvantages are that not all Symbols can be accessed via IG/IO (e.g. References) and IndexOffsets could be invalid after online changes / PlcProgram downloads. Detection of these events and following invalidation of all changed symbols need to be done within the user application.</td>
</tr>
<tr>
<td>Symbolic</td>
<td>The Symbolic-only mode is the most safe mode to use but needs more time than the IndexGroupOffset. It could need up to 3 ADS round trips (create handle, access value, close handle) but is not influenced by online changes or/PlcProgram downloads.</td>
</tr>
<tr>
<td>IndexGroupOffsetPreferred</td>
<td>This is a mixed access mode. For symbols, where it is possible it uses the IndexGroup/IndexOffset. For others it chooses the Symbolic access.</td>
</tr>
<tr>
<td>Default</td>
<td>The Default-Mode setting if no other ValueAccessMode is specified. This is set to Symbolic.</td>
</tr>
</tbody>
</table>

## 6.9 TwinCAT.Ams Namespace

### Classes

<table>
<thead>
<tr>
<th>Class</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AmsConfiguration</td>
<td>Static configuration of the Ams Router system.</td>
</tr>
<tr>
<td>AmsServerException</td>
<td>Ams Server Exception class Implements the Exception</td>
</tr>
</tbody>
</table>

### Enumerations

<table>
<thead>
<tr>
<th>Enumeration</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AmsServerErrorCode</td>
<td>Ams Server Error Codes.</td>
</tr>
</tbody>
</table>

### 6.9.1 AmsConfiguration Class

Static configuration of the Ams Router system.

**Inheritance Hierarchy**

- System.Object
- TwinCAT.Ams.AmsConfiguration

**Namespace:** TwinCAT.Ams [1543]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static class AmsConfiguration
```

The `AmsConfiguration` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DefaultRouterEndPoint</td>
<td>Gets the default router end point (IPAddress.Loopback, Port 0xBF02)</td>
</tr>
<tr>
<td>RouterAddress</td>
<td>Gets the actually configured router address.</td>
</tr>
<tr>
<td>RouterEndPoint</td>
<td>Gets or sets the default router <code>IPEndPoint</code>.</td>
</tr>
<tr>
<td>RouterPort</td>
<td>Gets actually configured router port.</td>
</tr>
</tbody>
</table>

### Fields

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DEFAULT_TCP_PORT</td>
<td>The default TCP port (0xBF02, 48898)</td>
</tr>
</tbody>
</table>

### Remarks

If the router is intended to run separately of the (virtual) system that instantiates the `AdsClient` or `AdsServer` (e.g. in UnitTests), some global static settings must be adopted to enable different network scenerios. In the default case the `AdsServers` and `AdsClients` uses the `Loopback` TCP port `0xBF02` to communicate internally. If the systems of `AdsServer/AdsClient` is split from the router (e.g. running the router isolated in a virtual machine), the Router Endpoint must be set via `RouterEndPoint` setter.

### Reference

[TwinCAT.Ams Namespace](#)
<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RouterAddress</td>
<td>Gets the actually configured router address.</td>
</tr>
<tr>
<td>RouterEndPoint</td>
<td>Gets or sets the default router IPEndPoint.</td>
</tr>
<tr>
<td>RouterPort</td>
<td>Gets actually configured router port.</td>
</tr>
</tbody>
</table>

### 6.9.1.1.1 AmsConfiguration.DefaultRouterEndPoint Property

Gets the default router end point (IPAddress.Loopback, Port 0xBF02)

**Namespace:** TwinCAT.Ams

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#
```csharp
public static IPEndPoint DefaultRouterEndPoint { get; }
```

**Property Value**

Type: `IPEndPoint`

The default router end point.

### Reference

AmsConfiguration Class [1543]

TwinCAT.Ams Namespace [1543]

### 6.9.1.1.2 AmsConfiguration.RouterAddress Property

Gets the actually configured router address.

**Namespace:** TwinCAT.Ams

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#
```csharp
public static IPAddress RouterAddress { get; }
```
**Property Value**

Type: IPAddress
The router address.

**Reference**

AmsConfiguration Class [1543]
AmsConfiguration.RouterEndPoint [1546]

---

### 6.9.1.1.3 AmsConfiguration.RouterEndPoint Property

Gets or sets the default router IPEndPoint.

**Namespace:** TwinCAT.Ams [1543]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static IPEndPoint RouterEndPoint { get; set; }
```

**Property Value**

Type: IPEndPoint
The IPEndPoint used by Ams Clients/Servers.

**Remarks**

This setting allows to change the Router Endpoint - which listens by default on IPAddress 127.0.0.1, Port 0xBF02. An application for this could be to move the router to a different (virtual) system, separated from the system running the AdsServer or AdsClient. This endpoint can only be changed process wide and should be done before the first access to the Router occurs (e.g. getting the local NetId).

**ATTENTION:** Bending this Endpoint is not possible with the standard TwinCAT Router. As security feature the TwinCAT Router only accepts Loopback connections to 127.0.0.1, connection requests from the outside will be closed immediately.

The simplistic .NET Core Router implementation in class ‘TwinCAT.Ads.AdsRouter.AmsTcpIpRouter’ from nuget package ‘Beckhoff.TwinCAT.Ads.TcpRouter’ or the ‘Beckhoff.TwinCAT.Ads.AdsRouterConsole’ doesn’t have that restriction and can be used more flexible for use with virtual environments like VirtualMachines or Docker. flexible.

The following sample demonstrates how to configure the (internal) RouterEndPoint to IPAddress 1.2.3.4:42. This must be done before AdsServer or AdsClient are instantiated.

**C#**

```csharp
AmsConfiguration.RouterEndPoint = new IPEndPoint(IPAddress.Parse("1.2.3.4"),42);
```

**Reference**

AmsConfiguration Class [1543]
AmsConfiguration.RouterEndPoint [1546]
6.9.1.4 AmsConfiguration.RouterPort Property

Gets actually configured router port.

**Namespace:** TwinCAT.Ams

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```
public static int RouterPort { get; }
```

**Property Value**

Type: `Int32`

The router port.

</table>
6.9.3.1 AmsServerException Constructor

Initializes a new instance of the AmsServerException class.

**Namespace**: TwinCAT.Ams

**Assembly**: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# protected AmsServerException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)

**Parameters**

- `serializationInfo` Type: System.Runtime.Serialization.SerializationInfo
  The serialization information.
  The streaming context.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

6.10.1 DATE Class

PlcOpen DATE class (32-bit)

Inheritance Hierarchy

System.Object
TwinCAT.PlcOpen.DateBase [1559]
TwinCAT.PlcOpen.DATE
**Namespace**: TwinCAT.PlcOpen

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdcd3e72bc0ea15da1c14

**Syntax**

```csharp
public sealed class DATE : DateBase
```

The DATE type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DATE</td>
<td>Initializes a new instance of the DATE class.</td>
</tr>
<tr>
<td>DATE(DateTimeOffset)</td>
<td>Initializes a new instance of the DATE class.</td>
</tr>
<tr>
<td>DATE(Int64)</td>
<td>Initializes a new instance of the DATE class.</td>
</tr>
<tr>
<td>DATE(UInt32)</td>
<td>Initializes a new instance of the DATE class.</td>
</tr>
<tr>
<td>DATE(Int32, Int32, Int32)</td>
<td>Initializes a new instance of the DATE class.</td>
</tr>
</tbody>
</table>

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date</td>
<td>Gets or sets the date value. (Inherited from DateBase.)</td>
</tr>
<tr>
<td>Ticks</td>
<td>Returns the number of ticks that represent the value of this DateBase. (Inherited from DateBase.)</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified Object is equal to this instance. (Inherited from DateBase.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Inherited from DateBase.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse</td>
<td>Parses the specified string to a DATE object.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse</td>
<td>Tries to parse the specified string to a DATE object.</td>
</tr>
</tbody>
</table>

6.10.1.1.4 DATE Constructor (UInt32)

Initializes a new instance of the DATE [1552] class.

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public DATE(
    uint dateValue
)
```

Parameters

dateValue Type: System.UInt32
The date value in PlcOpen Ticks.

Reference

DATE Class [1552]
DATE Overload [1554]
TwinCAT.PlcOpen Namespace [1552]

6.10.1.1.5 DATE Constructor (Int32, Int32, Int32)

Initializes a new instance of the DATE [1552] class.

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public DATE(
    int year,
    int month,
    int day
)
```

Parameters

year Type: System.Int32
The year.

month Type: System.Int32
The month.

day Type: System.Int32
The day.

<td>TryParse</td>
<td>Tries to parse the specified string to a DATE object.</td>
</tr>
</tbody>
</table>

Reference

DATE Class

TwinCAT.PlcOpen Namespace

6.10.1.3.1 DATE.Parse Method

Parses the specified string to a DATE object.

Namespace: TwinCAT.PlcOpen
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static DATE Parse(
    string s
)
```
Parameters

s
Type: System.String
The s.

Return Value

Type: DATE

DATE.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

DATE Class

TwinCAT.PlcOpen Namespace

6.10.1.3.2 DATE.ToString Method

Returns a String that represents this instance.

Namespace: TwinCAT.PlcOpen

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override string ToString()
```

Return Value

Type: String
A String that represents this instance.

Reference

DATE Class

TwinCAT.PlcOpen Namespace

6.10.1.3.3 DATE.TryParse Method

Tries to parse the specified string to a DATE object.

Namespace: TwinCAT.PlcOpen

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static bool TryParse(
    string s,
    out DATE date
)
```

Parameters

- **s**
  - Type: `System.String`
  - The `s`.

- **date**
  - Type: `TwinCAT.PlcOpen.DATE` [1552]
  - The `date`.

Return Value

- Type: `Boolean`
  - true if XXXX, false otherwise.

Reference

- **DATE Class** [1552]

**Syntax**

C#  

```csharp
public static DateTimeOffset ValueToDate(
    long dateValue
)
```

**Parameters**

dateValue  
Type: System.Int64  
The date value.

**Return Value**

Type: DateTimeOffset

**Reference**

- **DataBase Class** [1559]
- **ValueToDate Overload** [1568]
- **TwinCAT.PlcOpen Namespace** [1552]

**DataBase.ValueToDate Method (UInt32)**

Converts the specified PlcOpen dateValue in ticks to a DateTime Object

**Namespace:** TwinCAT.PlcOpen [1552]
**Namespace:** TwinCAT.PlcOpen

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```
public static DateTimeOffset ValueToDate(
    uint dateValue
)
```

**Parameters**

- **dateValue**
  - Type: System.UInt32
  - The date value.

**Return Value**

Type: DateTimeOffset

**Reference**

- DateBase Class [1559]
- ValueToDate Overload [1568]
- TwinCAT.PlcOpen Namespace [1552]

### 6.10.2.4 DateBase Fields

The **DateBase** [1559] type exposes the following members.

**Fields**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>plcTimeSeconds</td>
<td>PlcTime Seconds (Ticks)</td>
</tr>
</tbody>
</table>

**Reference**

- DateBase Class [1559]
- TwinCAT.PlcOpen Namespace [1552]

### 6.10.2.4.1 DateBase.plcTimeSeconds Field

PlcTime Seconds (Ticks)

**Namespace:** TwinCAT.PlcOpen

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```
protected uint plcTimeSeconds
```
Field Value
Type: UInt32

Remarks
Seconds from 1/1/1970 in Local Time Zone (different from UnixTimeSeconds which is UTC!). The is exactly the same value and layout, like it is stored in PlcControl for the DATE and DT type!

Reference
DateBase Class [1559]
TwinCAT.PlcOpen Namespace [1552]

6.10.3 DT Class
PlcOpen DT (DATE_AND_TIME) datatype.

Inheritance Hierarchy
System.Object
    TwinCAT.PlcOpen.DateBase [1559]
    TwinCAT.PlcOpen.DT

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public sealed class DT : DateBase

The DT type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DT</td>
<td>Initializes a new instance of the DT class.</td>
</tr>
<tr>
<td>DT(DateTimeOffset)</td>
<td>Initializes a new instance of the DT class.</td>
</tr>
<tr>
<td>DT(Int64)</td>
<td>Initializes a new instance of the DT class.</td>
</tr>
<tr>
<td>DT(UInt32)</td>
<td>Initializes a new instance of the DT class.</td>
</tr>
<tr>
<td>DT(Int32, Int32, Int32, Int32, Int32)</td>
<td>Initializes a new instance of the DT class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date</td>
<td>Gets or sets the date value. (Inherited from DateBase.)</td>
</tr>
<tr>
<td>Ticks</td>
<td>Returns the number of ticks that represent the value of this DateBase.</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1566]</td>
<td>Determines whether the specified Object is equal to this instance. (Inherited from Database [1559].)</td>
</tr>
<tr>
<td>GetHashCode [1566]</td>
<td>Gets the HashCode of the Address (Inherited from Database [1559].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse [1575]</td>
<td>Parses the specified string to the DT object.</td>
</tr>
<tr>
<td>ToString [1576]</td>
<td>Returns a String that represents this instance. (Overides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse [1576]</td>
<td>Tries to parse the specified string to a DT object.</td>
</tr>
</tbody>
</table>

</table>

Reference

DT Class [1570]

TwinCAT.PlcOpen Namespace [1552]
6.10.3.1.2 DT Constructor (DateTimeOffset)

Initializes a new instance of the DT class.

**Namespace:** TwinCAT.PlcOpen

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public DT()
```

**Parameters**

- `date` Type: System.DateTimeOffset
  The date.

**Reference**

DT Class
DT Overload
TwinCAT.PlcOpen Namespace

6.10.3.1.3 DT Constructor (Int64)

Initializes a new instance of the DT class.

**Namespace:** TwinCAT.PlcOpen

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public DT(
    long dateValue
)
```
Parameters

dateValue  Type: System.Int64
  The date value in PlcOpen Ticks.

Reference

DT Class [1570]

DT Overload [1571]

TwinCAT.PlcOpen Namespace [1552]

6.10.3.1.4  DT Constructor (UInt32)

Initializes a new instance of the DT [1570] class.

Namespace:  TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public DT(
    uint dateValue
)
```

Parameters

dateValue  Type: System.UInt32
  The date value in PlcOpen Ticks.

Reference

</tbody>
</table>

### Reference

DT Class [1570]

TwinCAT.PlcOpen Namespace [1552]

### 6.10.3.3.1 DT.Parse Method

Parses the specified string to the DT[1570] object.

**Namespace:** TwinCAT.PlcOpen [1552]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static DT Parse(
    string s)
```

**Parameters**

- **s** Type: System.String
  The s.

**Return Value**

Type: DT[1570]

DT.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>FormatException</td>
<td>Cannot parse DT object!</td>

TwinCAT.PlcOpen Namespace [1552]
6.10.3.3.2 DT.ToString Method

Returns a `String` that represents this instance.

**Namespace:** TwinCAT.PlcOpen [1552]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public override string ToString()
```

**Return Value**

Type: `String`  
A `String` that represents this instance.

**Reference**

DT Class [1570]  
TwinCAT.PlcOpen Namespace [1552]

6.10.3.3.3 DT.TryParse Method

Tries to parse the specified string to a `DT` object.

**Namespace:** TwinCAT.PlcOpen [1552]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public static bool TryParse(
    string s,
    out DT dt
)
```

**Parameters**

- `s`  
  Type: `System.String`  
The s.

- `dt`  
  Type: TwinCAT.PlcOpen.DT [1570].  
The dt.

**Return Value**

Type: `Boolean`  
true if XXXX, false otherwise.

**Reference**

DT Class [1570]

6.10.6.1.6 LTIME Constructor (Int32, Int32, Int32, Int32)

Initializes a new instance of the LTIME [1581] class.

**Namespace:** TwinCAT.PlcOpen [1552]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public LTIME(
    int seconds,
    int milliseconds,
    int microseconds,
    int nanoseconds
)
```

**Parameters**

- **seconds**  
  Type: System.Int32  
  The seconds.
- **milliseconds**  
  Type: System.Int32  
  The milliseconds.
**microseconds**  
Type: System.Int32  
The microseconds.

**nanoseconds**  
Type: System.Int32  
The nanoseconds.

### 6.10.6.1.7 LTIME Constructor (Int32, Int32, Int32, Int32, Int32, Int32, Int32)

Initializes a new instance of the LTIME [1581] class.

**Namespace:** TwinCAT.PlcOpen [1552]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public LTIME(
    int days,
    int hours,
    int minutes,
    int seconds,
    int milliseconds,
    int microseconds,
    int nanoseconds
)
```

**Parameters**

**days**  
Type: System.Int32  
The days.

**hours**  
Type: System.Int32  
The hours.

**minutes**  
Type: System.Int32  
The minutes.

**seconds**  
Type: System.Int32  
The seconds.

**milliseconds**  
Type: System.Int32  
The milliseconds.

**microseconds**  
Type: System.Int32  
The microseconds.

**nanoseconds**  
Type: System.Int32  
The nanoseconds.

### 6.10.6.2 LTIME Properties

The LTIME[1581] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ticks[1593]</td>
<td>Returns the number of ticks that represent the value of this LTimeBase[1589]. (Inherited from LTimeBase[1589].)</td>
</tr>
<tr>
<td>Time[1593]</td>
<td>Gets or the time value. (Inherited from LTimeBase[1589].)</td>
</tr>
</tbody>
</table>

#### Reference

LTIME Class[1581]

TwinCAT.PlcOpen Namespace[1552]

### 6.10.6.3 LTIME Methods

The LTIME[1581] type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals[1594]</td>
<td>Determines whether the specified Object is equal to this instance. (Inherited from LTimeBase[1589].)</td>
</tr>
<tr>
<td>GetHashCode[1595]</td>
<td>Gets the HashCode of the Address (Inherited from LTimeBase[1589].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse[1587]</td>
<td>Parses the specified string to a LTIME[1581] object.</td>
</tr>
<tr>
<td>ToString[1588]</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse[1588]</td>
<td>Tries to parse the string to a LTIME[1581] object.</td>
</tr>
</tbody>
</table>

#### Reference

LTIME Class[1581]

TwinCAT.PlcOpen Namespace[1552]

### 6.10.6.3.1 LTIME.Parse Method

Parses the specified string to a LTIME[1581] object.

**Namespace:** TwinCAT.PlcOpen[1552]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static LTIME Parse(
    string str
)
```

Parameters

<table>
<thead>
<tr>
<th>str</th>
<th>Type: System.String</th>
</tr>
</thead>
<tbody>
<tr>
<td>The string.</td>
<td></td>
</tr>
</tbody>
</table>

Return Value

Type: LTIME

LTIME.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>FormatException</td>
<td>Cannot create TIME DataType!</td>
</tr>
</tbody>
</table>

Reference

Syntax

C#

public static bool TryParse(
    string str,
    out LTIME ret
)

Parameters

str  Type: System.String
     The string.
ret  Type: TwinCAT.PlcOpen.LTIME  [1581].
     The ret.

Return Value

Type: Boolean
true if XXXX, false otherwise.

Syntax

C#

public abstract class LTimeBase : IPlcOpenTimeBase<Timespan, ulong>, IPlcOpenTimeBase

The LTimeBase type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
</table>
**Name** | **Description**
--- | ---
LTimeBase(UInt64) | Initializes a new instance of the TimeBase [1605] class.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MarshalSize [1592]</td>
<td>Gets the marshal size in bytes.</td>
</tr>
<tr>
<td>Ticks [1593]</td>
<td>Returns the number of ticks that represent the value of this LTimeBase.</td>
</tr>
<tr>
<td>Time [1593]</td>
<td>Gets or the time value.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1594]</td>
<td>Determines whether the specified Object is equal to this instance. (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TimeToValue [1595]</td>
<td>Converts the Timespan to PlcOpen ticks.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ValueToTime(Int64) [1596]</td>

### 6.10.7.3.1  LTimeBase.Equals Method

Determines whether the specified Object is equal to this instance.

**Namespace:** TwinCAT.PlcOpen [1552]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public override bool Equals(
    Object obj
)
```

**Parameters**

- **obj**
  - Type: System.Object
  - The object to compare with the current object.
Return Value

Type: Boolean
true if the specified Object is equal to this instance; otherwise, false.

Initializes a new instance of the TIME class.

Namespace: TwinCAT.PlcOpen
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public TIME(int seconds, int milliseconds)

Parameters

seconds Type: System.Int32
The seconds.
milliseconds Type: System.Int32
The milliseconds.

Reference

TIME Class
TIME Overload
TwinCAT.PlcOpen Namespace

6.10.8.1.6 TIME Constructor (Int32, Int32, Int32, Int32, Int32)
Initializes a new instance of the TIME class.

Namespace: TwinCAT.PlcOpen
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public TIME(int days, int hours, int minutes, int seconds, int milliseconds)

Parameters

days Type: System.Int32
The days.
hours Type: System.Int32
The hours.
minutes Type: System.Int32
The minutes.
seconds Type: System.Int32
The seconds.
milliseconds Type: System.Int32
The milliseconds.

Reference
TIME Class [1598]
TIME Overload [1599]
TwinCAT.PlcOpen Namespace [1552]

6.10.8.2 TIME Properties

The TIME [1598] type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InternalTimeValue</td>
<td>Gets the internal time value. (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>Ticks [1610]</td>
<td>Returns the number of ticks that represent the value of this TimeBase [1605] (uint32 or uint64). (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>Time [1611]</td>
<td>Gets the time value. (Inherited from TimeBase [1605].)</td>
</tr>
</tbody>
</table>

Reference
TIME Class [1598]
TwinCAT.PlcOpen Namespace [1552]

6.10.8.3 TIME Methods

The TIME [1598] type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1612]</td>
<td>Determines whether the specified Object is equal to this instance. (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>GetHashCode [1612]</td>
<td>Gets the HashCode of the Address (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse [1604]</td>
<td>Parses the specified string to a TIME [1598] object.</td>
</tr>
<tr>
<td>ToString [1604]</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse [1605]</td>
<td>Tries to parse the TIME [1598] object from string.</td>
</tr>
</tbody>
</table>
6.10.8.3.1 TIME.Parse Method

Parses the specified string to a TIME object.

Namespace: TwinCAT.PlcOpen
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#

```csharp
public static TIME Parse(
    string str
)
```

Parameters

- `str` Type: `System.String`
The string.

Return Value

Type: TIME
TIME.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>FormatException</td>
<td>Cannot create TIME DataType!</td>
</tr>
</tbody>
</table>

Reference

6.10.8.3.2 TIME.ToString Method

Returns a String that represents this instance.

Namespace: TwinCAT.PlcOpen
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#

```csharp
public override string ToString()
```
Return Value

Type: String
A String that represents this instance.

Reference

TIME Class [1598]
TwinCAT.PlcOpen Namespace [1552]

6.10.8.3.3 TIME.TryParse Method

Tries to parse the TIME [1598] object from string.

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```c#
public static bool TryParse(
    string str,
    out TIME ret
)
```

Parameters

str Type: System.String
The string.

ret Type: TwinCAT.PlcOpen.TIME [1598].
The ret.

Return Value

Type: Boolean
true if XXXX, false otherwise.

Reference

TIME Class [1598]

### 6.10.9.1.1 TimeBase Constructor

Initializes a new instance of the TimeBase class.

**Namespace**: TwinCAT.PlcOpen [1552]

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected TimeBase()
```

**Reference**

TimeBase Class [1605]

TimeBase Overload [1607]
6.10.9.1.2 TimeBase Constructor (Int64)

Initializes a new instance of the TimeBase class.

**Namespace:** TwinCAT.PlcOpen

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected TimeBase(
    long timeValue
)
```

**Parameters**

- **timeValue**
  - **Type:** System.Int64
  - The time value.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td></td>

6.10.9.1.3 TimeBase Constructor (UInt32)

Initializes a new instance of the TimeBase class.

**Namespace:** TwinCAT.PlcOpen

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected TimeBase(
    uint timeValue
)
```

**Parameters**

- **timeValue**
  - **Type:** System.UInt32
  - The time value.
Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentOutOfRangeException</td>
<td></td>
</tr>
</tbody>
</table>

### 6.10.9.2 TimeBase Properties

The **TimeBase [1605]** type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>InternalTimeValue</code></td>
<td>Gets the internal time value.</td>
</tr>
<tr>
<td><code>MarshalSize</code></td>
<td>Gets the marshal size in bytes.</td>
</tr>
<tr>
<td><code>Ticks</code></td>
<td>Returns the number of ticks that represent the value of this TimeBase (uint32 or uint64).</td>
</tr>
<tr>
<td><code>Time</code></td>
<td>Gets the time value.</td>
</tr>
</tbody>
</table>

Reference

**TimeBase Class [1605]**
**TwinCAT.PlcOpen Namespace [1552]**

### 6.10.9.2.1 TimeBase.InternalTimeValue Property

Gets the internal time value.

**Namespace:** TwinCAT.PlcOpen [1552]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public uint InternalTimeValue { get; }
```

**Property Value**

Type: UInt32
The internal time value.
6.10.9.2.2  **TimeBase.MarshalSize Property**

Gets the marshal size in bytes.

**Namespace:**  TwinCAT.PlcOpen

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static int MarshalSize { get; }
```

**Property Value**

Type:  Int32
Marshalling size in bytes.

**Reference**

TimeBase Class [》1605]

TwinCAT.PlcOpen Namespace [》1552]

6.10.9.2.3  **TimeBase.Ticks Property**

Returns the number of ticks that represent the value of this **TimeBase** (uint32 or uint64).

**Namespace:**  TwinCAT.PlcOpen

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public uint Ticks { get; }
```

**Property Value**

Type:  UInt32
The ticks (in 100ns).

**Implements**

IPlcOpenTimeBase.T1, T2..Ticks [》1580]

**Reference**

TimeBase Class [》1605]

TwinCAT.PlcOpen Namespace [》1552]
6.10.9.2.4 TimeBase.Time Property

Gets the time value.

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual TimeSpan Time { get; }
```

Property Value

Type: TimeSpan
The time.

Reference

TimeBase Class [1605]
TwinCAT.PlcOpen Namespace [1552]

6.10.9.3 TimeBase Methods

The TimeBase [1605] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1612]</td>
<td>Determines whether the specified Object is equal to this instance.</td>
</tr>
<tr>
<td></td>
<td>(Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TimeToValue [1613]</td>
<td>Converts the TimeSpan to PlcOpen ticks.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.</td>
</tr>
<tr>
<td>ValueToTime(Int64)</td>
<td>Converts the timeValue (PlcOpen ticks) to TimeSpan</td>
</tr>
<tr>
<td></td>
<td>[1614]</td>
</tr>
<tr>
<td>ValueToTime(UInt32)</td>
<td>Converts the timeValue (PlcOpen ticks) to TimeSpan</td>
</tr>
<tr>
<td></td>
<td>[1614]</td>
</tr>
</tbody>
</table>
6.10.9.3.1 **TimeBase.Equals Method**

Determines whether the specified `Object` is equal to this instance.

**Namespace:**  TwinCAT.PlcOpen

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public override bool Equals(
    Object obj
)
```

**Parameters**

- **obj**  
  - Type:  `System.Object`
  - The object to compare with the current object.

**Return Value**

- Type:  `Boolean`
  - true if the specified `Object` is equal to this instance; otherwise, false.

---

6.10.9.3.2 **TimeBase.GetHashCode Method**

Gets the HashCode of the Address

**Namespace:**  TwinCAT.PlcOpen

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public override int GetHashCode()
```

**Return Value**

- Type:  `Int32`
6.10.9.3.3  TimeBase.TimeToValue Method

Converts the TimeSpan to PlcOpen ticks.

Namespace:  TwinCAT.PlcOpen
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public static long TimeToValue(
    TimeSpan time
)

Parameters

- time  Type: System.TimeSpan
  The time.

Return Value

Type: Int64

Reference

)
```

**Parameters**

- `timeValue`  
  Type: `System.UInt32`  
  The time value.

**Return Value**

- Type: `TimeSpan`
6.10.9.4 TimeBase Fields

The `TimeBase` type exposes the following members.

### Fields

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>internalTimeValue</code></td>
<td>The internal time value</td>
</tr>
</tbody>
</table>

6.10.9.4.1 TimeBase.internalTimeValue Field

The internal time value

**Namespace:** TwinCAT.PlcOpen

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected uint internalTimeValue
```

**Field Value**

Type: `UInt32`

6.10.10 TOD Class

PLCOpen TimeOfDay class (32-Bit)

**Inheritance Hierarchy**

- System.Object
  - TwinCAT.PlcOpen.TimeBase
    - TwinCAT.PlcOpen.TOD
TwinCAT.Ads Namespaces

Namespace:  TwinCAT.PlcOpen [1552]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public sealed class TOD : TimeBase
```

The TOD type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

### 6.10.10.1.4 TOD Constructor (UInt32)

Initializes a new instance of the TOD class.

**Namespace:** TwinCAT.PlcOpen [1552]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```c#
public TOD(
    uint time
)
```

Parameters

time Type: System.UInt32
The time.

Reference

TOD Class [1615]
TOD Overload [1617]
TwinCAT.PlcOpen Namespace [1552]

6.10.10.1.5 TOD Constructor (Int32, Int32, Int32, Int32, Int32)

Initializes a new instance of the TOD [1615] class.

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90b9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```c#
public TOD(
    int days,
    int hours,
    int minutes,
    int seconds,
    int milliseconds
)
```

Parameters

days Type: System.Int32
The days.

hours Type: System.Int32
The hours.

minutes Type: System.Int32
The minutes.

seconds Type: System.Int32
The seconds.

milliseconds Type: System.Int32
The milliseconds.

Reference

TOD Class [1615]
TOD Overload [1617]
TwinCAT.PlcOpen Namespace [1552]
6.10.10.2  TOD Properties

The TOD [1615] type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InternalTimeValue</td>
<td>Gets the internal time value. (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>Ticks [1610]</td>
<td>Returns the number of ticks that represent the value of this TimeBase [1605] (uint32 or uint64). (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>Time [1611]</td>
<td>Gets the time value. (Inherited from TimeBase [1605].)</td>
</tr>
</tbody>
</table>

### Reference

TOD Class [1615]

TwinCAT.PlcOpen Namespace [1552]

6.10.10.3  TOD Methods

The TOD [1615] type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1612]</td>
<td>Determines whether the specified Object is equal to this instance. (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>GetHashCode [1612]</td>
<td>Gets the HashCode of the Address (Inherited from TimeBase [1605].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse [1620]</td>
<td>Parses the specified string to a TOD [1615] object.</td>
</tr>
<tr>
<td>ToString [1621]</td>
<td>Returns a string that represents the current object. (Overrides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse [1621]</td>
<td>Tries to parse the string to a TOD [1615] object.</td>
</tr>
</tbody>
</table>

### Reference

TOD Class [1615]

TwinCAT.PlcOpen Namespace [1552]

6.10.10.3.1  TOD.Parse Method

Parses the specified string to a TOD [1615] object.

**Namespace:** TwinCAT.PlcOpen [1552]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static TOD Parse(
    string str
)
```

Parameters

str Type: System.String
The string.

Return Value

Type: TOD[1615]
TOD.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>FormatException</td>
<td>Cannot parse TOD object!</td>
</tr>
</tbody>
</table>

Reference

TOD Class [1615]
TwinCAT.PlcOpen Namespace [1552]

6.10.10.3.2 TOD.ToString Method

Returns a string that represents the current object.

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override string ToString()
```

Return Value

Type: String
A string that represents the current object.

Reference

TOD Class [1615]
TwinCAT.PlcOpen Namespace [1552]

6.10.10.3.3 TOD.TryParse Method

Tries to parse the string to a TOD[1615] object.
TwinCAT.Ads Namespaces

Namespace: TwinCAT.PlcOpen [1552]
Assembly: TwinCAT.Ads.Abstractsions (in TwinCAT.Ads.Abstractsions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static bool TryParse(
    string str,
    out TOD ret
)
```

Parameters

- `str`: Type: System.String
  The string.
- `ret`: Type: TwinCAT.PlcOpen.TOD [1615]
  The ret.

Return Value

Type: Boolean
true if XXXX, false otherwise.

Reference

TOD Class [1615]
TwinCAT.PlcOpen Namespace [1552]

6.11 TwinCAT.TypeSystem Namespace

Namespace for the common (non ADS dependent) type system.

### 6.11.1 AnySymbolSpecifier Class

Class AnySymbolSpecifier.
Inheritance Hierarchy

System.Object
   TwinCAT.TypeSystem.AnySymbolSpecifier

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public class AnySymbolSpecifier

The AnySymbolSpecifier type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AnySymbolSpecifier</td>
<td>Initializes a new instance of the AnySymbolSpecifier class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstancePath</td>
<td>Gets the instance path.</td>
</tr>
<tr>
<td>TypeSpecifier</td>
<td>Gets the type specifier.</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

Remarks

Specifies an Symbol path together with an AnyTypeSpecifier [1633] to address a symbol for an Read/Write operation

Reference

TwinCAT.TypeSystem Namespace [1622]
6.11.1.1 AnySymbolSpecifier Constructor

Initializes a new instance of the AnySymbolSpecifier class.

**Namespace:** TwinCAT.TypeSystem

`TwinCAT.TypeSystem Namespace` [1622]

### 6.11.2.1.1 `AnyTypeSpecifier` Constructor (Object)

Initializes a new instance of the `AnyTypeSpecifier` class from the specified prototype.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public AnyTypeSpecifier(
    Object prototype
)
```

**Parameters**

- `prototype`  
  *Type:* `System.Object`  
  *The prototype.*

Reference

CannotResolveDataTypeException Class [1644]
TwinCAT.TypeSystem Namespace [1622]

6.11.4.1.1 CannotResolveDataTypeException Constructor (String)

Initializes a new instance of the CannotResolveDataTypeException class.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public CannotResolveDataTypeException(
    string typeName
)

Parameters

typeName Type: System.String
Name of the type.

Reference

CannotResolveDataTypeException Class [1644]
6.11.4.1.2 CannotResolveDataTypeException Constructor (IInstance)

Initializes a new instance of the CannotResolveDataTypeException [1644] class.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public CannotResolveDataTypeException(
    IInstance symbol
)

Parameters

symbol Type: TwinCAT.TypeSystem.IInstance [2052]
The symbol.

Reference

CannotResolveDataTypeException Class [1644]
CannotResolveDataTypeException Overload [1646]
TwinCAT.TypeSystem Namespace [1622]

6.11.4.1.3 CannotResolveDataTypeException Constructor (SerializationInfo, StreamingContext)

Initializes a new instance of the CannotResolveDataTypeException [1644] class.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected CannotResolveDataTypeException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)

Parameters

serializationInfo Type: System.Runtime.Serialization.SerializationInfo
The serialization information.
streamingContext Type: System.Runtime.Serialization.StreamingContext
The streaming context.
6.11.4.2 CannotResolveDataTypeException Properties

The CannotResolveDataTypeException type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

TwinCAT.TypeSystem Namespace [1622]

6.11.6 DataDictionary Class

Collection of DataTypes [1986]

Inheritance Hierarchy

System.Object
  TwinCAT.TypeSystem.Generic.DataTypeCollection [2442], IDataType [1986].
  TwinCAT.TypeSystem.DataTypeCollection

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public class DataTypeCollection : DataTypeCollection<IDataType>,
  IDataTypeCollection, IDataTypeCollection<IDataType>, ICollection<IDataType>,
  IEnumerable<IDataType>, IEnumerable
```

The DataTypeCollection type exposes the following members.

 Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(DataTypeCollection.</td>
<td>Initializes a new instance of the DataTypeCollection class.</td>
</tr>
<tr>
<td>[1652])</td>
<td></td>
</tr>
<tr>
<td>(DataTypeCollection(IEnumerable&lt;IDataType&gt;)</td>
<td>Initializes a new instance of the DataTypeCollection class (Copy</td>
</tr>
<tr>
<td>[1653])</td>
<td>constructor).</td>
</tr>
</tbody>
</table>
### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the count of contained</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether this instance is read only. (Inherited from DataTypeCollection.)</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds the specified item to the collection. (Inherited from DataTypeCollection.)</td>
</tr>
<tr>
<td>AddRange</td>
<td>Adds a range of types (Inherited from DataTypeCollection.)</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Returns A ReadOnly-Version of the DataTypeCollection.</td>
</tr>
<tr>
<td>Clear</td>
<td>Clears the collection. (Inherited from DataTypeCollection.)</td>
</tr>
<tr>
<td>Clone</td>
<td>Clones this DataTypeCollection (Shallow Copy)</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether this DataTypeCollection contains the specified</td>
</tr>
<tr>
<td>ContainsType</td>
<td>Determines whether the container contains the specified</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the data types to the specified array, starting at the array index. (Inherited from DataTypeCollection.)</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Gets the enumerator. (Inherited from DataTypeCollection.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the Index of the specified</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an</td>
</tr>
<tr>
<td>LookupType</td>
<td>Determines the specified</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>

### 6.11.6.2 **DataTypeCollection Properties**

The `DataTypeCollection` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the count of contained IDataType s. (Inherited from DataTypeCollection.T.)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether this instance is read only. (Inherited from DataTypeCollection.T.)</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the IDataType at the specified index. (Inherited from DataTypeCollection.T.)</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the IDataType with the specified name. (Inherited from DataTypeCollection.T.)</td>
</tr>
</tbody>
</table>

**Reference**

- **DataTypeCollection Class**
- **TwinCAT.TypeSystem Namespace**

### 6.11.6.3 **DataTypeCollection Methods**

The `DataTypeCollection` type exposes the following members.
## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [2449]</td>
<td>Adds the specified item to the collection. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>AddRange [2450]</td>
<td>Adds a range of types (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>AsReadOnly [1654]</td>
<td>Returns A ReadOnly-Version of the DataTypeCollection [1650].</td>
</tr>
<tr>
<td>Clear [2451]</td>
<td>Clears the collection. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>Clone [1655]</td>
<td>Clones this DataTypeCollection [1650] (Shallow Copy)</td>
</tr>
<tr>
<td>Contains [2451]</td>
<td>Determines whether this DataTypeCollection [1650] contains the specified IDataType [1986]. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>ContainsType [2452]</td>
<td>Determines whether the container contains the specified IDataType [1986]. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>CopyTo [2453]</td>
<td>Copies the data types to the specified array, starting at the array index. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator [2453]</td>
<td>Gets the enumerator. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf [2454]</td>
<td>Determines the Index of the specified IDataType [1986]. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>Insert [2454]</td>
<td>Inserts an IDataType [1986] into the DataTypeCollection [1650]. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>LookupType [2455]</td>
<td>Determines the specified IDataType [1986] (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove [2456]</td>
<td>Removes the specified IDataType [1986]. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>RemoveAt [2456]</td>
<td>Removes the IDataType [1986] object at the specified index. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryGetType [2457]</td>
<td>Tries to get the specified IDataType [1986] from the IDataTypeCollection.T. [1995]. (Inherited from DataTypeCollection.T. [2442].)</td>
</tr>
</tbody>
</table>

Initializes a new instance of the `DataTypeException` class.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public DataTypeException(
    string message,
    IDataType type
)
```

**Parameters**

- `message` Type: `System.String`
The message.
- `type` Type: `TwinCAT.TypeSystem.IDataType`
The type.

**Reference**

- [DataTypeException Class](#)
- [DataTypeException Overload](#)
- [TwinCAT.TypeSystem Namespace](#)

6.11.8.2 **DataTypeException Properties**

The `DataTypeException` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>DataType</code></td>
<td>Gets the type of the data.</td>
</tr>
<tr>
<td><code>HelpLink</code></td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>HResult</code></td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>InnerException</code></td>
<td>Gets the <code>Exception</code> instance that caused the current exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>Message</code></td>
<td>Gets a message that describes the current exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>Source</code></td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>StackTrace</code></td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>TargetSite</code></td>
<td>Gets the method that throws the current exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------</td>
<td>--------------------------------------</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the type.</td>
</tr>
</tbody>
</table>

**Reference**

*DataTypeException Class [1658]*

*TwinCAT.TypeSystem Namespace [1622]*

### 6.11.8.2.1 `DataTypeException.DataType` Property

Gets the type of the data.

**Namespace:** `TwinCAT.TypeSystem [1622]`

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```
public IDataType DataType { get; }
```

**Property Value**

Type: `IDataType [1986]`
The type of the data.

**Reference**

*DataTypeException Class [1658]*

*TwinCAT.TypeSystem Namespace [1622]*

### 6.11.8.2.2 `DataTypeException.TypeName` Property

Gets the name of the type.

**Namespace:** `TwinCAT.TypeSystem [1622]`

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```
public string TypeName { get; }
```

**Property Value**

Type: `String`
The name of the type.

**Reference**

*DataTypeException Class [1658]*

*TwinCAT.TypeSystem Namespace [1622]*
### 6.11.8.3  DataTypeException Methods

The `DataTypeException` type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Equals</code></td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>Finalize</code></td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>GetBaseException</code></td>
<td>When overridden in a derived class, returns the <code>Exception</code> that is the root cause of one or more subsequent exceptions. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>GetHashCode</code></td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>GetObjectData</code></td>
<td>When overridden in a derived class, sets the <code>SerializationInfo</code> with information about the exception. (Overrides <code>Exception.GetObjectData(SerializationInfo, StreamingContext)</code>.)</td>
</tr>
<tr>
<td><code>GetType</code></td>
<td>Gets the runtime type of the current instance. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><code>MemberwiseClone</code></td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>ToString</code></td>
<td>Creates and returns a string representation of the current exception. (Inherited from <code>Exception</code>.)</td>
</tr>
</tbody>
</table>

#### Reference

- **DataTypeException Class**: [1658]
- **TwinCAT.TypeSystem Namespace**: [1622]

### 6.11.8.3.1  DataTypeException.GetObjectData Method

When overridden in a derived class, sets the `SerializationInfo` with information about the exception.

**Namespace**: TwinCAT.TypeSystem [1622]

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch/releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context
)
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>info</code></td>
<td><code>System.Runtime.Serialization.SerializationInfo</code></td>
<td>The <code>SerializationInfo</code> that holds the serialized object data about the exception being thrown.</td>
</tr>
</tbody>
</table>
6.11.8.4  

**DataException Events**

The **DataException** type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SerializeObjectState</td>
<td>Occurs when an exception is serialized to create an exception state object</td>
</tr>
<tr>
<td></td>
<td>that contains serialized data about the exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

6.11.9  

**DataypeNameEventArgs Class**

Class `DataypeNameEventArgs`.

Inheritance Hierarchy

- `System.Object`
  - `System.EventArgs`
    - `TwinCAT.TypeSystem.DataTypeNameEventArgs`

**Namespace:** TwinCAT.TypeSystem  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public class DataypeNameEventArgs : EventArgs
```

The `DataypeNameEventArgs` type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DataypeNameEventArgs</td>
<td>Initializes a new instance of the <code>DataypeNameEventArgs</code> class.</td>
</tr>
</tbody>
</table>
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TypeName</td>
<td>The type name</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.TypeSystem Namespace [1622]
System.EventArgs

6.11.9.1  DataTypeNameEventArgs Constructor

Initializes a new instance of the DataTypeNameEventArgs [1665] class.

Namespace:  TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public DataTypeNameEventArgs(
    string typeName
)
```

Parameters

typeName  Type: System.String  
Name of the type.

Reference

DataTypeNameEventArgs Class [1665]
TwinCAT.TypeSystem Namespace [1622]

6.11.9.2  DataTypeNameEventArgs Properties

The DataTypeNameEventArgs [1665] type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TypeName [1667]</td>
<td>The type name</td>
</tr>
</tbody>
</table>

Reference

DataTypeNameEventArgs Class [1665]
TwinCAT.TypeSystem Namespace [1622]

6.11.9.2.1  DataTypeNameEventArgs.TypeName Property

The type name

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public string TypeName { get; }  

Property Value

Type: String

Reference

DataTypeNameEventArgs Class [1665]
TwinCAT.TypeSystem Namespace [1622]

6.11.9.3  DataTypeNameEventArgs Methods

The DataTypeNameEventArgs [1665] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>(Inherited from Object.)</td>
<td></td>
</tr>

<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
6.11.10 Dimension Class

Represents a single dimension of an IArrayType.

Inheritance Hierarchy

System.Object
  TwinCAT.TypeSystem.Dimension

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public class Dimension : IDimension
```

The Dimension type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ElementCount</td>
<td>Gets the number of elements within that IDimension.</td>
</tr>
<tr>
<td>LowerBound</td>
<td>Gets the lower bound of elements within that Dimension.</td>
</tr>
<tr>
<td>UpperBound</td>
<td>Gets the upper bound of elements within this Dimension.</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object.</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.TypeSystem Namespace
6.11.10.1  Dimension Properties

The Dimension[1668] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ElementCount</td>
<td>Gets the number of elements within that Dimension[1998].</td>
</tr>
<tr>
<td>LowerBound</td>
<td>Gets the lower bound of elements within that Dimension[1998].</td>
</tr>
<tr>
<td>UpperBound</td>
<td>Gets the upper bound of elements within this Dimension[1668].</td>
</tr>
</tbody>
</table>

Reference

Dimension Class[1668]

TwinCAT.TypeSystem Namespace[1622]

6.11.10.1.1  Dimension.ElementCount Property

Gets the number of elements within that Dimension[1998].

Namespace: TwinCAT.TypeSystem[1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int ElementCount { get; }
```

Property Value

Type: Int32

The element count.

Implements

IDimension.ElementCount[1999]

Reference

Dimension Class[1668]

TwinCAT.TypeSystem Namespace[1622]

6.11.10.1.2  Dimension.LowerBound Property

Gets the lower bound of elements within that Dimension[1998].

Namespace: TwinCAT.TypeSystem[1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public int LowerBound { get; }
```

**Property Value**

Type: Int32
The lower bound.

**Implements**

[IDimension.LowerBound [1999]]

**Reference**

Dimension Class [1668]
TwinCAT.TypeSystem Namespace [1622]

### 6.11.10.1.3 Dimension.UpperBound Property

Gets the upper bound of elements within this Dimension [1668]

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int UpperBound { get; }
```

**Property Value**

Type: Int32
The upper bound.

**Reference**

Dimension Class [1668]
TwinCAT.TypeSystem Namespace [1622]

### 6.11.10.2 Dimension Methods

The Dimension [1668] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

**Reference**

Dimension Class [1668]

### 6.11.11 DimensionCollection Class

Collection class for Array Dimensions

**Inheritance Hierarchy**

System Object

TwinCAT.TypeSystem.DimensionCollection

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public class DimensionCollection : IDimensionCollection,
    IList<IDimension>, ICollection<IDimension>, IEnumerable<IDimension>,
    IEnumerable
```

The DimensionCollection type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DimensionCollection</td>
<td>Initializes a new instance of the DimensionCollection class.</td>
</tr>
<tr>
<td>DimensionCollection(Int32)</td>
<td>Initializes a new instance of an 1-Dimensional representing DimensionCollection class.</td>
</tr>
<tr>
<td>DimensionCollection(Int32)</td>
<td>Initializes a new instance of the DimensionCollection class.</td>
</tr>
<tr>
<td>DimensionCollection(Int32)</td>
<td>Initializes a new instance of the DimensionCollection class.</td>
</tr>
<tr>
<td>DimensionCollection(IEnumerable.IDimension)</td>
<td>Initializes a new instance of the DimensionCollection class.</td>
</tr>
</tbody>
</table>
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [1675]</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>ElementCount [1676]</td>
<td>Gets the Number of elements in all Dimensions</td>
</tr>
<tr>
<td>IsReadOnly [1677]</td>
<td>Gets a value indicating whether the ICollection.T. is read-only.</td>
</tr>
<tr>
<td>Item [1677]</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>LowerBounds [1678]</td>
<td>Gets the lower bounds.</td>
</tr>
<tr>
<td>UpperBounds [1678]</td>
<td>Gets the upper bounds.</td>
</tr>
</tbody>
</table>

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [1680]</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>AsReadOnly [1680]</td>
<td>Returns a read only version of this DimensionCollection.</td>
</tr>
<tr>
<td>Clear [1681]</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains [1682]</td>
<td>Determines whether the ICollection.T. contains a specific value.</td>
</tr>
<tr>
<td>CopyTo [1682]</td>
<td>Copies to.</td>
</tr>
<tr>
<td>Empty [1683]</td>
<td>Gets an empty DimensionCollection</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>Object.)</td>
</tr>
<tr>
<td>GetDimensionLengths</td>
<td>Gets an array the specifies the Lengths of each Array Dimension</td>
</tr>
<tr>
<td>GetEnumerator [1684]</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf [1685]</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert [1685]</td>
<td>Inserts an item to the IList.T at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove [1686]</td>
<td>Removes the first occurrence of a specific object from the ICollection.T.</td>
</tr>
<tr>
<td>RemoveAt [1687]</td>
<td>Removes the IList.T. item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### 6.11.11.1 DimensionCollection Constructor

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DimensionCollection()</td>
<td>Initializes a new instance of the DimensionCollection class.</td>
</tr>
<tr>
<td>DimensionCollection(Int32)</td>
<td>Initializes a new instance of an 1-Dimensional representing DimensionCollection class.</td>
</tr>
<tr>
<td>DimensionCollection(Int32)</td>
<td>Initializes a new instance of the DimensionCollection class.</td>
</tr>
<tr>
<td>DimensionCollection(IEnumerable.IDimension)</td>
<td>Initializes a new instance of the DimensionCollection class.</td>
</tr>
</tbody>
</table>

Reference

DimensionCollection Class [1671]

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public int ElementCount { get; }
```

**Property Value**

Type: `Int32`
The count.

**Implements**

`IDimensionCollection.ElementCount`

**Reference**

DimensionCollection Class
### DimensionCollection.IsReadOnly Property

Gets a value indicating whether the ICollection is read-only.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool IsReadOnly { get; }
```

**Property Value**

_Type:_ Boolean

_true if this instance is read only; otherwise, false._

**Implements**

ICollection<T>.IsReadOnly

---

### DimensionCollection.Item Property

Gets or sets the element at the specified index.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public IDimension this[int index] { get; set; }
```

**Parameters**

_index_  
_Type:_ System.Int32

_The index._

**Return Value**

_Type:_ IDimension

_IDimension._
**Implements**

[IList<T>.Item.Int32.](#)

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

**Remarks**

Index = 0 is the lowest dimension.

**Reference**

TwinCAT.TypeSystem Namespace [» 1622]

### 6.11.11.2.5 DimensionCollection.LowerBounds Property

Gets the lower bounds.

**Namespace:** TwinCAT.TypeSystem [» 1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int[] LowerBounds { get; }
```

**Property Value**

Type: `Int32`.

The lower bounds.

**Implements**

[IDimensionCollection.LowerBounds](#)

**Reference**

DimensionCollection Class [» 1671]

TwinCAT.TypeSystem Namespace [» 1622]

### 6.11.11.2.6 DimensionCollection.UpperBounds Property

Gets the upper bounds.

**Namespace:** TwinCAT.TypeSystem [» 1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

public int[] UpperBounds { get; }

Property Value

Type: Int32.
The upper bounds.

Implements

IDimensionCollection.UpperBounds [› 2002]

Reference

DimensionCollection Class [› 1671]

TwinCAT.TypeSystem Namespace [› 1622]

6.11.11.3 DimensionCollection Methods

The DimensionCollection [› 1671] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Returns a read only version of this DimensionCollection [› 1671].</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the ICollection.T contains a specific value.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies to.</td>
</tr>
<tr>
<td>Empty</td>
<td>Gets an empty DimensionCollection [› 1671]</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>Object.)</td>
</tr>
<tr>
<td>GetDimensionLengths</td>
<td>Gets an array the specifies the Lengths of each Array Dimension</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T. at the specified index.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove [1686]</td>
<td>Removes the first occurrence of a specific object from the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>RemoveAt [1687]</td>
<td>Removes the IList&lt;T&gt; item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

### 6.11.11.3.1 DimensionCollection.Add Method

Adds an item to the ICollection<T>.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Add(
    IDimension item
)
```

**Parameters**

- **item**
  - Type: TwinCAT.TypeSystem.IDimension [1998]
  - The object to add to the ICollection<T>.

**Implements**

ICollection<T>.Add(T)

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

### 6.11.11.3.2 DimensionCollection.AsReadOnly Method

Returns a read only version of this DimensionCollection [1671].
**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public ReadOnlyDimensionCollection AsReadOnly()
```

### Field Value

**Type:** ReadOnlyDimensionCollection [2295]

As read only.

### Return Value

**Type:** ReadOnlyDimensionCollection [2295]

ReadOnlyDimensionCollection.

### Reference

DimensionCollection Class [1671]

TwinCAT.TypeSystem Namespace [1622]

---

### DimensionCollection.Clear Method

Removes all items from the ICollection<T>.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public void Clear()
```

#### Implements

ICollection<T>.Clear.

#### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

#### Reference

DimensionCollection Class [1671]

TwinCAT.TypeSystem Namespace [1622]
6.11.11.3.4 DimensionCollection.Contains Method

Determines whether the ICollection{T} contains a specific value.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# 

```csharp
public bool Contains(
    IDimension item
)
```

**Parameters**

- **item**
  - Type: TwinCAT.TypeSystem.IDimension [1998]
  - The object to locate in the ICollection{T}.

**Return Value**

- Type: Boolean
  - true if item is found in the ICollection{T}; otherwise, false.

**Implements**

- ICollection{T}.Contains(T)

**Exceptions**

- NotImplementedException

**Reference**

- DimensionCollection Class [1671]
- TwinCAT.TypeSystem Namespace [1622]

6.11.11.3.5 DimensionCollection.CopyTo Method

Copies to.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# 

```csharp
public void CopyTo(
    IDimension[] array,
    int arrayIndex
)
```
TwinCAT.Ads Namespaces

Parameters

array Type: TwinCAT.TypeSystem.IDimension
The array.
arrayIndex Type: System.Int32
Index of the array.

Implements

ICollection.T.CopyTo(T, Int32)

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

DimensionCollection Class [1671]

6.11.11.3.6 DimensionCollection.Empty Method

Gets an empty DimensionCollection [1671]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public static DimensionCollection Empty()

Field Value

Type: DimensionCollection [1671]
The Empty collection.

Reference

DimensionCollection Class [1671]
TwinCAT.TypeSystem Namespace [1622]

6.11.11.3.7 DimensionCollection.GetDimensionLengths Method

Gets an array the specifies the Lengths of each Array Dimension

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int[] GetDimensionLengths()
```

Return Value

Type: .Int32,
System.Int32[].

Implements

[IDimensionCollection.GetDimensionLengths. [2004]

Reference

DimensionCollection Class [1671]

TwinCAT.TypeSystem Namespace [1622]

6.11.11.3.8 DimensionCollection.GetEnumerator Method

Returns an enumerator that iterates through the collection.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IEnumerator<IDimension> GetEnumerator()
```

Return Value

Type: IEnumerator.IDimension
A IEnumerator.T. that can be used to iterate through the collection.

Implements

IEnumerator.T.GetEnumerator.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

DimensionCollection Class [1671]

TwinCAT.TypeSystem Namespace [1622]
6.11.3.9 DimensionCollection.IndexOf Method

Determines the index of a specific item in the IList<T>.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int IndexOf(
    IDimension item
)
```

**Parameters**

- **item**  
  Type: TwinCAT.TypeSystem.IDimension  
  The object to locate in the IList<T>.

**Return Value**

- **Type:** Int32  
  The index of item if found in the list; otherwise, -1.

**Implements**

IList<T>.IndexOf(T)

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

**Reference**

- DimensionCollection Class
- TwinCAT.TypeSystem Namespace

6.11.13.10 DimensionCollection.Insert Method

Inserts an item to the IList<T> at the specified index.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void Insert(
    int index,
    IDimension item
)
```
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>index</td>
<td>System.Int32</td>
<td>The zero-based index at which item should be inserted.</td>
</tr>
<tr>
<td>item</td>
<td>TwinCAT.TypeSystem.IDimension</td>
<td>The object to insert into the <code>IList&lt;T&gt;</code></td>
</tr>
</tbody>
</table>

Implements

- `IList<T>.Insert(Int32, T)`

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

- DimensionCollection Class [1671]

6.11.11.3.11 DimensionCollection.Remove Method

Removes the first occurrence of a specific object from the `ICollection<T>`.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool Remove(
    IDimension item
)
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>item</td>
<td>TwinCAT.TypeSystem.IDimension</td>
<td>The object to remove from the <code>ICollection&lt;T&gt;</code></td>
</tr>
</tbody>
</table>

Return Value

Type: `Boolean`
true if item was successfully removed from the `ICollection<T>`; otherwise, false. This method also returns false if item is not found in the original `ICollection<T>`.

Implements

- `ICollection<T>.Remove(T)`
6.11.11.3.12 DimensionCollection.RemoveAt Method

Removes the IList<T> item at the specified index.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public void RemoveAt(
    int index
)

Parameters

index Type: System.Int32
The zero-based index of the item to remove.

Implements

IList<T>.RemoveAt(Int32)

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

DimensionCollection Class [1671]
TwinCAT.TypeSystem Namespace [1622]

6.11.12 DynamicAliasInstance Class

Class DynamicAliasInstance. This class cannot be inherited.
Inheritance Hierarchy

```csharp
System.Dynamic.DynamicObject
    TwinCAT.TypeSystem.DynamicSymbol
        TwinCAT.TypeSystem.DynamicAliasInstance
```

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public sealed class DynamicAliasInstance : DynamicSymbol, IAliasInstance, ISymbol, IAttributedInstance, IInstance, IBitSize
```

The `DynamicAliasInstance` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>_InnerSymbol</td>
<td>Gets the inner symbol of this <code>DynamicSymbol</code> (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>IDataType</code> in bits. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the category. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <code>Instance</code> (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection bound to this <code>DynamicSymbol</code> (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <code>IDataType</code> of the <code>Instance</code> (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.) (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this <code>ISymbol</code> is persistent. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO)</td>
</tr>
<tr>
<td></td>
<td>(Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited</td>
</tr>
<tr>
<td></td>
<td>from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol</td>
</tr>
<tr>
<td></td>
<td>[1791].)</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE</td>
</tr>
<tr>
<td></td>
<td>TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NormalizedName [1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access</td>
</tr>
<tr>
<td></td>
<td>that doesn't contain invalid characters), (Inherited from DynamicSymbol</td>
</tr>
<tr>
<td></td>
<td>[1791].)</td>
</tr>
<tr>
<td>NotificationSettings [1810]</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Parent [1811]</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Size [1811]</td>
<td>Gets the size of the Instance [2052] in bytes. (Inherited from DynamicSymbol</td>
</tr>
<tr>
<td></td>
<td>[1791].)</td>
</tr>
<tr>
<td>SubSymbols [1812]</td>
<td>Gets the SubSymbols of the Symbol [2176] (Inherited from DynamicSymbol [1791]</td>
</tr>
<tr>
<td>TypeName [1812]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052].</td>
</tr>
<tr>
<td></td>
<td>(Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ValueEncoding [1813]</td>
<td>Gets the value encoding. (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

<tr>
<td>ReadValueAsync</td>
<td>Reads the Value of the IValueSymbol asynchronously. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>TryGetIndex</td>
<td>Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.</td>
</tr>
<tr>
<td>TryGetMember</td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Overrides DynamicSymbol.TryGetMember(GetMemberBinder, Object.).)</td>
</tr>
<tr>
<td>TryReadValue</td>
<td>Reads the Value of the IValueSymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>TrySetIndex</td>
<td>Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.</td>
</tr>
<tr>
<td>TrySetMember</td>
<td>Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.</td>
</tr>
<tr>
<td>TryWriteValue</td>
<td>Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>UpdateAnyValue</td>
<td>Reads the value of this Value into the specified managed value. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteAnyValue</td>
<td>Writes the value represented by the managed value to this Value (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteRawValue(Byte)</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteRawValue(Byte, Int32)</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteRawValueAsync</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteValue(Object)</td>
<td>Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteValue(Object, Int32)</td>
<td>Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteValueAsync</td>
<td>Writes the Value of the IValueSymbol (Inherited from DynamicSymbol.)</td>
</tr>
</tbody>
</table>
## Events

### 6.11.12.1 DynamicAliasInstance Properties

The DynamicAliasInstance ![1687] type exposes the following members.

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>_InnerSymbol ![1798]</td>
<td>Gets the inner symbol of this DynamicSymbol ![1791] (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>AccessRights ![1799]</td>
<td>Gets the access rights. (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>Attributes ![1799]</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>BitSize ![1800]</td>
<td>Gets the size of the IDDataType ![1986] in bits. (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>ByteSize ![1800]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>Category ![1801]</td>
<td>Gets the category. (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>Comment ![1801]</td>
<td>Gets the comment of the IInstance ![2052] (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>Connection ![1802]</td>
<td>Gets the connection bound to this DynamicSymbol ![1791] (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>DataType ![1802]</td>
<td>Gets the IDDataType ![1986] of the IInstance ![2052]. (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>HasValue ![1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>InstanceName ![1803]</td>
<td>Gets the name of the instance (without periods .) (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>InstancePath ![1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>IsBitType ![1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>IsByteAligned ![1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol ![1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NormalizedName [1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NotificationSettings [1810]</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Parent [1811]</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Size [1811]</td>
<td>Gets the size of the IInstance [2052] in bytes. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>SubSymbols [1812]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TypeName [1812]</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ValueEncoding [1813]</td>
<td>Gets the value encoding. (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>

6.11.12.2 DynamicAliasInstance Methods

The DynamicAliasInstance [1687] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1816]</td>
<td>Equals (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>GetDynamicMemberNames [1694]</td>
<td>Returns the enumeration of all dynamic member names. (Overrides DynamicSymbol.GetDynamicMemberNames [1816].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>ReadAnyValue</td>
<td>Reads the value of this Value into a new created instance of the managed type (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ReadRawValue</td>
<td>Reads the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ReadRawValue(Int32)</td>
<td>Reads the Symbols raw value (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ReadRawValueAsync</td>
<td>Read raw value as an asynchronous operation. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ReadValue</td>
<td>Reads the value of this DynamicSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ReadValue(Int32)</td>
<td>Reads the value of this DynamicSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ReadValueAsync</td>
<td>Reads the Value of the IValueSymbol asynchronously. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>TryGetIndex</td>
<td>Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.</td>
</tr>
<tr>
<td>TryGetMember</td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Overrider DynamicSymbol.TryGetMember(GetMemberBinder, Object.)</td>
</tr>
<tr>
<td>TryReadValue</td>
<td>Reads the Value of the IValueSymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>TrySetIndex</td>
<td>Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.</td>
</tr>
<tr>
<td>TrySetMember</td>
<td>Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.</td>
</tr>
<tr>
<td>TryWriteValue</td>
<td>Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>UpdateAnyValue</td>
<td>Reads the value of this Value into the specified managed value. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteAnyValue</td>
<td>Writes the value represented by the managed value to this Value (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteRawValue(Byte)</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>
</tr>
</tbody>
</table>

#### Reference

- DynamicAliasInstance Class
- TwinCAT.TypeSystem Namespace

### 6.11.12.2.1 DynamicAliasInstance.GetDynamicMemberNames Method

Returns the enumeration of all dynamic member names.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```c#  
public override IEnumerable<string> GetDynamicMemberNames()  
```

**Return Value**

Type: `IEnumerable<String>`

A sequence that contains dynamic member names.

**Reference**

- DynamicAliasInstance Class
- TwinCAT.TypeSystem Namespace

### 6.11.12.2.2 DynamicAliasInstance.TryGetIndex Method

Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
## TwinCAT.Ads Namespaces

### 6.11.12.2.3 DynamicAliasInstance.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

#### C#

```csharp
public override bool TryGetMember(
    GetMemberBinder binder,
    out Object result
)
```

### Parameters

- **binder**
  - Type: `System.Dynamic.GetIndexBinder`
  - Provides information about the operation.

- **indexes**
  - Type: `System.Object`
  - The indexes that are used in the operation. For example, for the sampleObject[3] operation in C# (sampleObject(3) in Visual Basic), where sampleObject is derived from the DynamicObject class, indexes[0] is equal to 3.

- **result**
  - Type: `System.Object`
  - The result of the index operation.

### Return Value

**Type:** `Boolean`

true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

### Reference

- DynamicAliasInstance Class [1687]
- TwinCAT.TypeSystem Namespace [1622]
Parameters

binder Type: System.Dynamic.GetMemberBinder
Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the Console.WriteLine(sampleObject.SampleProperty) statement, where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

result Type: System.Object
The result of the get operation. For example, if the method is called for a property, you can assign the property value to result.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

DynamicAliasInstance Class [1687]
TwinCAT.TypeSystem Namespace [1622]

6.11.12.2.4 DynamicAliasInstance.TrySetIndex Method

Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public virtual bool TrySetIndex(
    SetIndexBinder binder,
    Object[] indexes,
    Object value
)

Parameters

binder Type: System.Dynamic.SetIndexBinder
Provides information about the operation.

indexes Type: System.Object
The indexes that are used in the operation. For example, for the sampleObject[3] = 10 operation in C# (sampleObject(3) = 10 in Visual Basic), where sampleObject is derived from the DynamicObject class, indexes[0] is equal to 3.

value Type: System.Object
The value to set to the object that has the specified index. For example, for the sampleObject[3] = 10 operation in C# (sampleObject(3) = 10 in Visual Basic), where sampleObject is derived from the DynamicObject class, value is equal to 10.
**Return Value**

Type: Boolean  
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

**Reference**

DynamicAliasInstance Class [1687]  
TwinCAT.TypeSystem Namespace [1622]

### 6.11.12.2.5 DynamicAliasInstance.TrySetMember Method

Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public virtual bool TrySetMember(
    SetMemberBinder binder,
    Object value
)
```

**Parameters**

**binder**  
Type: System.Dynamic.SetMemberBinder  
Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member to which the value is being assigned. For example, for the statement sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

**value**  
Type: System.Object  
The value to set to the member. For example, for sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, the value is "Test".

**Return Value**

Type: Boolean  
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

Syntax

C#

public class DynamicArrayInstance : DynamicSymbol,
  IArrayInstance, ISymbol, IAttributedInstance, IInstance, IBitSize

The DynamicArrayInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InnerSymbol</td>
<td>Gets the inner symbol of this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>AllowGIOLAccess</td>
<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Category [1801]</td>
<td>Gets the category. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Comment [1801]</td>
<td>Gets the comment of the IInstance [2052] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Connection [1802]</td>
<td>Gets the connection bound to this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>DataType [1802]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Dimensions [1704]</td>
<td>Gets the dimensions as read only collection.</td>
</tr>
<tr>
<td>Elements [1704]</td>
<td>Gets the contained Array Elements as read only collection.</td>
</tr>
<tr>
<td>ElementType [1705]</td>
<td>Gets the type of the contained elements.</td>
</tr>
<tr>
<td>HasValue [1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstanceName [1803]</td>
<td>Gets the name of the instance (without periods .) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstancePath [1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsBitType [1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsByteAligned [1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Item [1705]</td>
<td>Gets the ISymbol [2176] with the specified indices.</td>
</tr>
<tr>
<td>NormalizedName [1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters). (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NotificationSettings [1810]</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Parent [1811]</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Size [ Morse 1811 ]</td>
<td>Gets the size of the Instance [ Morse 2052 ] in bytes. (Inherited from DynamicSymbol [ Morse 1791 ].)</td>
</tr>
<tr>
<td>SubSymbols [ Morse 1812 ]</td>
<td>Gets the SubSymbols of the ISymbol [ Morse 2176 ] (Inherited from DynamicSymbol [ Morse 1791 ].)</td>
</tr>
<tr>
<td>TypeName [ Morse 1812 ]</td>
<td>Gets the name of the DataType [ Morse 1986 ] that is used for this Instance [ Morse 2052 ]. (Inherited from DynamicSymbol [ Morse 1791 ].)</td>
</tr>
<tr>
<td>ValueEncoding [ Morse 1813 ]</td>
<td>Gets the value encoding. (Inherited from DynamicSymbol [ Morse 1791 ].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>

<tr>
<td>OnWriteValueAsync [ Morse 1824 ]</td>
<td>Handler Function for writing value. (Inherited from DynamicSymbol [ Morse 1791 ].)</td>
</tr>
<tr>
<td>ReadAnyValue [ Morse 1825 ]</td>
<td>Reads the value of this Value [ Morse 2254 ] into a new created instance of the managed type (Inherited from DynamicSymbol [ Morse 1791 ].)</td>
</tr>
<tr>
<td>ReadRawValue [ Morse 1826 ]</td>
<td>Reads the raw value of the IValueSymbol [ Morse 2254 ] (Ads Read / Write) (Inherited from DynamicSymbol [ Morse 1791 ].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ReadRawValue(Int32)</td>
<td>Reads the Symbols raw value (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadRawValueAsyc</td>
<td>Read raw value as an asynchronous operation. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValue()</td>
<td>Reads the value of this DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValue(Int32)</td>
<td>Reads the value of this DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValueAsync</td>
<td>Reads the Value of the IValueSymbol [2254] asynchronously. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TryGetElement(IList, Int32, ISymbol.)</td>
<td>Tries to get the array element with the specified indices (jagged array support).</td>
</tr>
<tr>
<td>TryGetElement(IList, Int32, ISymbol.)</td>
<td>Tries to get the array element</td>
</tr>
<tr>
<td>TryGetIndex</td>
<td>Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.</td>
</tr>
<tr>
<td>TryGetMember</td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TryReadValue</td>
<td>Reads the Value of the IValueSymbol [2254] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TrySetIndex</td>
<td>Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.</td>
</tr>
<tr>
<td>TryWriteValue</td>
<td>Writes the specified value to the DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>UpdateAnyValue</td>
<td>Reads the value of this Value [2254] into the specified managed value. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteAnyValue</td>
<td>Writes the value represented by the managed value to this Value [2254] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteRawValue(Byte)</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>

### TwinCAT.Ads Namespaces

#### TwinCAT.Ads DynamicArrayInstance Properties

The `DynamicArrayInstance` type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>_InnerSymbol</code></td>
<td>Gets the inner symbol of this DynamicSymbol (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>AccessRights</code></td>
<td>Gets the access rights. (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>AllowGIOAccess</code></td>
<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol) (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>Attributes</code></td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>BitSize</code></td>
<td>Gets the size of the <code>IDataType</code> in bits. (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>ByteSize</code></td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>Category</code></td>
<td>Gets the category. (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>Comment</code></td>
<td>Gets the comment of the <code>Instance</code> (Inherited from DynamicSymbol).</td>
</tr>
<tr>
<td><code>Connection</code></td>
<td>Gets the connection bound to this DynamicSymbol.</td>
</tr>
</tbody>
</table>

### 6.11.13.1.1 DynamicArrayInstance.Dimensions Property

Gets the dimensions as read only collection.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public IDimensionCollection Dimensions { get; }
```

**Property Value**

**Type:** IDimensionCollection [2000]

The dimensions.

**Implements**

IArrayInstance.Dimensions [1967]

Reference

DynamicArrayInstance Class [1698]
TwinCAT.TypeSystem Namespace [1622]

### 6.11.13.1.2 DynamicArrayInstance.Elements Property

Gets the contained Array Elements as read only collection.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public ISymbolCollection<ISymbol> Elements { get; }
```

**Property Value**

**Type:** ISymbolCollection [2185] ISymbol [2176].

The elements.
Implements

IArrayInstance.Elements [1968]

Reference

DynamicArrayInstance Class [1698]

TwinCAT.TypeSystem Namespace [1622]

6.11.13.1.3 DynamicArrayInstance.ElementType Property

Gets the type of the contained elements.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public IDataType ElementType { get; }

Property Value

Type: IDataType [1986]
The type of the element.

Implements

IArrayInstance.ElementType [1968]

Reference

DynamicArrayInstance Class [1698]

TwinCAT.TypeSystem Namespace [1622]

6.11.13.1.4 DynamicArrayInstance.Item Property

Gets the ISymbol with the specified indices.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public ISymbol this[int[] indices] { get; }
TwinCAT.Ads Namespaces

Parameters

indices

Type: System.Int32
The indices.

Return Value

Type: ISymbol [2176]
ISymbol.

Implements

IArrayInstance.Item.Int32.. [1969]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentOutOfRangeException</td>

6.11.13.2 DynamicArrayInstance Methods

The DynamicArrayInstance [1698] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1816]</td>
<td>Equals (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>GetDynamicMemberNames [1816]</td>
<td>Returns the enumeration of all dynamic member names. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>GetHashCode [1817]</td>
<td>Gets the HashCode of the Address (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnReadAnyValue [1817]</td>
<td>Handler function for reading ADS 'Any' Values. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnReadRawValue [1818]</td>
<td>Handler function for reading Raw symbol value. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnReadRawValueAsync [1818]</td>
<td>Handler function reading the raw value of the DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnReadValue [1819]</td>
<td>Handler function for the (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnReadValueAsync [1820]</td>
<td>Handler function reading the DynamicSymbols [1791] value asynchronously. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnSetInstanceName [1820]</td>
<td>Sets a new InstanceName InstancePath (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>OnTryReadValue</strong></td>
<td>Handler function for the (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>OnTryWriteValue</strong></td>
<td>Handler function for reading symbols raw value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>OnWriteRawValue</strong></td>
<td>Handler function for writing the raw DynamicSymbol[1791] value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>OnWriteRawValueAsync</strong></td>
<td>Handler function for reading the raw DynamicSymbol[1791] value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>OnWriteValue</strong></td>
<td>Handler function for writing value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>OnWriteValueAsync</strong></td>
<td>Handler function for writing value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>ReadAnyValue</strong></td>
<td>Reads the value of this Value[2254] into a new created instance of the managed type (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>ReadRawValue</strong></td>
<td>Reads the raw value of the IValueSymbol[2254] (Ads Read / Write) (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>ReadRawValue(Int32)</strong></td>
<td>Reads the Symbols raw value (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>ReadRawValueAsync</strong></td>
<td>Read raw value as an asynchronous operation. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>ReadValue(Int32)</strong></td>
<td>Reads the value of this DynamicSymbol[1791]. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>ReadValueAsync</strong></td>
<td>Reads the Value of the IValueSymbol[2254] asynchronously. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>ToString</strong></td>
<td>Returns a String that represents this instance. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>TryGetElement(IList..Int32.., ISymbol.)</strong></td>
<td>Tries to get the array element with the specified indices (jagged array support).</td>
</tr>
<tr>
<td><strong>TryGetElement(Int32., ISymbol.)</strong></td>
<td>Tries to get the array element</td>
</tr>
<tr>
<td><strong>TryGetIndex</strong></td>
<td>Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.</td>
</tr>
<tr>
<td><strong>TryGetMember</strong></td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td><strong>TryReadValue</strong></td>
<td>Reads the Value of the IValueSymbol[2254] (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>TrySetIndex [1711]</td>
<td>Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.</td>
</tr>
<tr>
<td>TryWriteValue [1834]</td>
<td>Writes the specified value to the DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>UpdateAnyValue [1837]</td>
<td>Reads the value of this Value [2254] into the specified managed value. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteAnyValue [1838]</td>
<td>Writes the value represented by the managed value to this Value [2254] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteRawValue( byte ) [1839]</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteRawValue( byte, Int32 ) [1839]</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>

Reference

DynamicArrayInstance Class [1698]

TwinCAT.TypeSystem Namespace [1622]
DynamicArrayInstance.TryGetElement Method (IList..Int32.., ISymbol.)

Tries to get the array element with the specified indices (jagged array support).

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public bool TryGetElement(
    IList<int[]> jaggedIndices,
    out ISymbol symbol
)
```

### Parameters

- **jaggedIndices**  
  - Type: `System.Collections.Generic.IList<int[]>`  
  - The jagged indices list.

- **symbol**  
  - Type: `TwinCAT.TypeSystem.ISymbol`  
  - The symbol.

### Return Value

- **Type:** `Boolean`  
  - `true` if found, `false` if the jagged indices specifiers is out-of-range.

### Implements

- `IArrayInstance.TryGetElement(IList..Int32.., ISymbol.)`

### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>jaggedIndices</td>
</tr>
<tr>
<td>ArgumentOutOfRangeException</td>
<td>jaggedIndices</td>
</tr>
</tbody>
</table>

---

**DynamicArrayInstance.TryGetElement Method (.Int32., ISymbol.)**

Tries to get the array element

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool TryGetElement(
    int[] indices,
    out ISymbol symbol
)
```

Parameters

- `symbol`: Type: TwinCAT.TypeSystem.ISymbol. The found Array element symbol (out-parameter).

Return Value

Type: Boolean
true if found, false if the indices specifiers is out-of-range.

Implements

IArrayInstance.TryGetElement(Int32., ISymbol.)

Reference

DynamicArrayInstance Class
TryGetElement Overload
TwinCAT.TypeSystem Namespace

6.11.13.2.2 DynamicArrayInstance.TryGetIndex Method

Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual bool TryGetIndex(
    GetIndexBinder binder,
    Object[] indexes,
    out Object result
)
```

Parameters

- `indexes`: Type: System.Object. The indexes that are used in the operation. For example, for the sampleObject[3] operation in C# (sampleObject(3) in Visual Basic), where sampleObject is derived from the DynamicObject class, indexes[0] is equal to 3.
TwinCAT.Ads Namespaces

result

Type: System.Object
The result of the index operation.

Return Value

Type: Boolean
ture if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

Reference

DynamicArrayInstance Class [1698]
TwinCAT.TypeSystem Namespace [1622]

6.11.13.2.3 DynamicArrayInstance.TrySetIndex Method

Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public virtual bool TrySetIndex(
    SetIndexBinder binder,
    Object[] indexes,
    Object value)

Parameters

binder
Type: System.Dynamic.SetIndexBinder
Provides information about the operation.

indexes
Type: System.Object
The indexes that are used in the operation. For example, for the sampleObject[3] = 10 operation in C# (sampleObject(3) = 10 in Visual Basic), where sampleObject is derived from the DynamicObject class, indexes[[ ]] is equal to 3.

value
Type: System.Object
The value to set to the object that has the specified index. For example, for the sampleObject[3] = 10 operation in C# (sampleObject(3) = 10 in Visual Basic), where sampleObject is derived from the DynamicObject class, value is equal to 10.

Return Value

Type: Boolean
ture if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

6.11.14.1 DynamicOversamplingArrayInstance Properties

The DynamicOversamplingArrayInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InnerSymbol</td>
<td>Gets the inner symbol of this DynamicSymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the category. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection bound to this DynamicSymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the Instance (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Dimensions</td>
<td>Gets the dimensions as read only collection. (Inherited from DynamicArrayInstance.)</td>
</tr>
<tr>
<td>Elements</td>
<td>Gets the contained Array Elements as read only collection. (Inherited from DynamicArrayInstance.)</td>
</tr>
<tr>
<td>ElementType</td>
<td>Gets the type of the contained elements. (Inherited from DynamicArrayInstance.)</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has value (Inherited from DynamicArrayInstance.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsByteAligned [1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Item [1705]</td>
<td>Gets the ISymbol [2176] with the specified indices. (Inherited from DynamicArrayInstance [1698].)</td>
</tr>
<tr>
<td>NormalizedName [1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NotificationSettings [1810]</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OversamplingElement [1717]</td>
<td>Gets the oversampling element.</td>
</tr>
<tr>
<td>Parent [1811]</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol [1791].)</td>
</tr>

DynamicOversamplingArrayInstance Class [1712]
TwinCAT.TypeSystem Namespace [1622]

6.11.14.1.1 DynamicOversamplingArrayInstance.OversamplingElement Property

Gets the oversampling element.
TwinCAT.Ads Namespaces

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public ISymbol OversamplingElement { get; }
```

Property Value

Type: ISymbol [2176]
The oversampling element.

Implements

I OversamplingArrayInstance.OversamplingElement [2082]

### 6.11.15.1.1 DynamicPointerInstance.Reference Property

Gets the resolved reference of Pointer / Reference

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public ISymbol Reference { get; }
```

**Property Value**

Type: ISymbol [2176]  
The reference symbol or NULL if PVOID Pointer.

**Implements**

IPointerInstance.Reference [2086]

### Reference

**DynamicPointerInstance Class [1720]**

**TwinCAT.TypeSystem Namespace [1622]**

### 6.11.15.2 DynamicPointerInstance Methods

The DynamicPointerInstance [1720] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1816]</td>
<td>Equals (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>GetDynamicMemberNames</td>
<td>Returns the enumeration of all dynamic member names. (Overrides DynamicSymbol.GetDynamicMemberNames. [1816].)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadAnyValue</td>
<td>Reads the value of this Value [2254] into a new created instance of the managed type (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadRawValue</td>
<td>Reads the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadRawValue(Int32)</td>
<td>Reads the Symbols raw value (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadRawValueAsync</td>
<td>Read raw value as an asynchronous operation. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValue</td>
<td>Reads the value of this DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValue(Int32)</td>
<td>Reads the value of this DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValueAsync</td>
<td>Reads the Value of the IValueSymbol [2254] asynchronously. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TryGetMember</td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Overrids DynamicSymbol.TryGetMember(GetMemberBinder, Object.) [1833].)</td>
</tr>
<tr>
<td>TryReadValue</td>
<td>Reads the Value of the IValueSymbol [2254] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TryWriteValue</td>
<td>Writes the specified value to the DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>UpdateAnyValue</td>
<td>Reads the value of this Value [2254] into the specified managed value. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteAnyValue</td>
<td>Writes the value represented by the managed value to this Value [2254] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteRawValue(Byte)</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteRawValue(Byte, Int32)</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteRawValueAsync</td>
<td>Writes the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>WriteValue(Object)</td>
<td>Writes the specified value to the DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>WriteValue(Object, Int32)</td>
<td>Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteValueAsync</td>
<td>Writes the Value of the IValueSymbol. (Inherited from DynamicSymbol.)</td>
</tr>
</tbody>
</table>

**Reference**

DynamicPointerInstance Class [1720]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.15.2.1 DynamicPointerInstance.GetDynamicMemberNames Method

Returns the enumeration of all dynamic member names.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public override IEnumerable<string> GetDynamicMemberNames()
```

**Return Value**

Type: IEnumerable<String>

A sequence that contains dynamic member names.

**Reference**

DynamicPointerInstance Class [1720]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.15.2.2 DynamicPointerInstance.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public override bool TryGetMember(GetMemberBinder binder, out Object result)
```
Parameters

binder
Type: System.Dynamic.GetMemberBinder
Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the Console.WriteLine(sampleObject.SampleProperty) statement, where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

result
Type: System.Object
The result of the get operation. For example, if the method is called for a property, you can assign the property value to result.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

Reference

DynamicPointerInstance Class [1720]
TwinCAT.TypeSystem Namespace [1622]

6.11.15.3 DynamicPointerInstance Events

The DynamicPointerInstance [1720] type exposes the following members.

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RawValueChanged</td>
<td>Occurs when the RawValue of the IValueSymbol [2254] has changed. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ValueChanged</td>
<td>Occurs when the (Primitive) value of the IValueSymbol [2254] has changed. (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>

Reference

6.11.16 DynamicPointerValue Class

Class DynamicPointerValue.

Inheritance Hierarchy

System.Dynamic.DynamicObject
   TwinCAT.TypeSystem.DynamicValue [1869]
   TwinCAT.TypeSystem.DynamicPointerValue

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ddca3e72bc0ea15da1c14
The DynamicPointerValue type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age</td>
<td>Gets the age of the value (last successful read of the value) (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>CachedRaw</td>
<td>Gets the cached Raw internal Data. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the data type bound to this Value (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this Value is a primitive value. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>ResolvedType</td>
<td>Gets the resolved type. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>Symbol</td>
<td>Gets the symbol that is bound to this value. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>TimeStamp</td>
<td>Gets the Time stamp of the last successful read of the Value. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>UpdateMode</td>
<td>Gets / Sets the update mode (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>ValueFactory</td>
<td>The value factory (Inherited from DynamicValue.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetDynamicMemberNames</td>
<td>Returns the enumeration of all dynamic member names. (Overrides DynamicValue.GetDynamicMemberNames.)</td>
</tr>
<tr>
<td>Read</td>
<td>Reads the value (via ADS) (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>ReadAsync</td>
<td>read as an asynchronous operation. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>ReadMember</td>
<td>Reads the specified member element. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>ResolveValue</td>
<td>Resolves the Value object to its primitive value. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>TryConvert</td>
<td>Provides implementation for type conversion operations. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that convert an object from one type to another. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>TryGetArrayElementValues</td>
<td>Returns Array Element values. (Inherited from DynamicValue.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>TryGetIndex <img src="1883" alt="1883" /></td>
<td>Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TryGetIndexValue <img src="1884" alt="1884" /></td>
<td>Reads the specified array element. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TryGetMember <img src="1886" alt="1886" /></td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TryGetMemberValue <img src="1733" alt="1733" /></td>
<td>Tries the get member value. (Overides DynamicValue.TryGetMemberValue(String, Object.) <img src="1887" alt="1887" />.)</td>
</tr>
<tr>
<td>TryInvoke <img src="1887" alt="1887" /></td>
<td>Provides the implementation for operations that invoke an object. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as invoking an object or a delegate. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TryInvokeMember <img src="1888" alt="1888" /></td>
<td>Provides the implementation for operations that invoke a member. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as calling a method. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TryResolveValue <img src="1889" alt="1889" /></td>
<td>Tries to resolves the Value object to its primitive value. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TrySetIndex <img src="1890" alt="1890" /></td>
<td>Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TrySetIndexValue <img src="1890" alt="1890" /></td>
<td>Tries to set the indexed value on Arrays (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TrySetMember <img src="1891" alt="1891" /></td>
<td>Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>TrySetMemberValue <img src="1892" alt="1892" /></td>
<td>Tries to Set a Member/Property Value (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>Write <img src="1893" alt="1893" /></td>
<td>Writes the value (via ADS) (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>WriteAsync <img src="1893" alt="1893" /></td>
<td>write as an asynchronous operation. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
<tr>
<td>WriteMember <img src="1894" alt="1894" /></td>
<td>Writes the specified member element. (Inherited from DynamicValue <img src="1869" alt="1869" />.)</td>
</tr>
</tbody>
</table>

DynamicPointerValue Class [1728]

TwinCAT.TypeSystem Namespace [1622]

#### 6.11.16.2.1 DynamicPointerValue.GetDynamicMemberNames Method

Returns the enumeration of all dynamic member names.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public override IEnumerable<string> GetDynamicMemberNames()
```

**Return Value**

Type: `IEnumerable<String>`

A sequence that contains dynamic member names.

**Reference**

DynamicPointerValue Class [1728]

TwinCAT.TypeSystem Namespace [1622]

#### 6.11.16.2.2 DynamicPointerValue.TryGetMemberValue Method

Tries the get member value.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public override bool TryGetMemberValue(string name, out object result)
```

**Parameters**

- `name`  
  Type: `System.String`  
  The name.

- `result`  
  Type: `System.Object`  
  The result.
Return Value
Type: Boolean
true if XXXX, false otherwise.

Implements
[IStructValue.TryGetMemberValue(String, Object)]

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public class DynamicReferenceInstance : DynamicSymbol, IReferenceInstance, ISymbol, IAttributedInstance, IInstance, IBitSize

The DynamicReferenceInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InnerSymbol</td>
<td>Gets the inner symbol of this DynamicSymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>AllowIGIOAccess</td>
<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>ByteSize [¶ 1800]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>Category [¶ 1801]</td>
<td>Gets the category. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>Comment [¶ 1801]</td>
<td>Gets the comment of the [Instance [¶ 2052] (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>Connection [¶ 1802]</td>
<td>Gets the connection bound to this DynamicSymbol [¶ 1791] (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>DataType [¶ 1802]</td>
<td>Gets the IDirectType [¶ 1986] of the IInstance [¶ 2052]. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>HasValue [¶ 1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>InstanceName [¶ 1803]</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>InstancePath [¶ 1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsBitType [¶ 1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsByteAligned [¶ 1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsContainerType [¶ 1806]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsPersistent [¶ 1806]</td>
<td>Gets a value indicating whether this I[Symbol [¶ 2176] is persistent. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsPointer [¶ 1807]</td>
<td>Indicates that the IInstance [¶ 2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [¶ 1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsReadOnly [¶ 1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsRecursive [¶ 1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsReference [¶ 1809]</td>
<td>Indicates that the IInstance [¶ 2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>IsStatic [¶ 1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>NormalizedName [¶ 1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>NotificationSettings [¶ 1810]</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>Parent [¶ 1811]</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol [¶ 1791].)</td>
</tr>
<tr>
<td>ReferencedType [¶ 1740]</td>
<td>Gets the referenced type of the IReferenceInstance [¶ 2094]</td>
</tr>
<tr>
<td>ResolvedByteSize [¶ 1740]</td>
<td>Gets the resolved byte size of the IReferenceInstance [¶ 2094].</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

### Name | Description
--- | ---
ResolvedCategory [1741] | Gets the Category of the Referenced Symbol.
ResolvedType [1741] | Gets the resolved type of the IReferenceInstance [2094].
Size [1811] | Gets the size of the IInstance [2052] in bytes. (Inherited from DynamicSymbol [1791].)
SubSymbols [1812] | Gets the SubSymbols of the ISymbol [2176] (Inherited from DynamicSymbol [1791].)
TypeName [1812] | Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from DynamicSymbol [1791].)
ValueEncoding [1813] | Gets the value encoding. (Inherited from DynamicSymbol [1791].)

### Methods

<table>

#### 6.11.17.1 DynamicReferenceInstance Properties

The DynamicReferenceInstance [1734] type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>_InnerSymbol</td>
<td>Gets the inner symbol of this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>AllowIGIOAccess</td>
<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the category. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance [2052] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Connection [1802]</td>
<td>Gets the connection bound to this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>DataType [1802]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>HasValue [1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstanceName [1803]</td>
<td>Gets the name of the instance (without periods .) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstancePath [1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods .)) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsBitType [1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsByteAligned [1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NormalizedName [1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NotificationSettings [1810]</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Parent [1811]</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReferencedType [1740]</td>
<td>Gets the referenced type of the IReferenceInstance [2094]</td>
</tr>
<tr>
<td>ResolvedByteSize [1740]</td>
<td>Gets the resolved byte size of the IReferenceInstance [2094].</td>
</tr>
<tr>
<td>ResolvedCategory [1741]</td>
<td>Gets the Category of the Referenced Symbol.</td>
</tr>
<tr>
<td>ResolvedType [1741]</td>
<td>Gets the resolved type of the IReferenceInstance [2094].</td>
</tr>
<tr>
<td>Size [1811]</td>
<td>Gets the size of the IInstance [2052] in bytes. (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>
### DynamicReferenceInstance.ReferencedType Property

Gets the referenced type of the IReferenceInstance.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public IDataType ReferencedType { get; }
```

**Property Value**

Type: IDataType

The referenced type

**Implements**

IReferenceInstance.ReferencedType

**Reference**

DynamicReferenceInstance Class

### DynamicReferenceInstance.ResolvedByteSize Property

Gets the resolved byte size of the IReferenceInstance.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public int ResolvedByteSize { get; }
```

**Property Value**

Type: `Int32`
The resolved byte size.

**Implements**

`IReferenceInstance.ResolvedByteSize` [2098]

**Reference**

`DynamicReferenceInstance Class` [1734]

`TwinCAT.TypeSystem Namespace` [1622]

### 6.11.17.1.3 DynamicReferenceInstance.ResolvedCategory Property

Gets the Category of the Referenced Symbol.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```
public DataTypeCategory ResolvedCategory { get; }
```

**Property Value**

Type: `DataTypeCategory` [1649]
The resolved category.

**Implements**

`IReferenceInstance.ResolvedCategory` [2098]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>NotImplementedException</code></td>
<td></td>
</tr>
</tbody>
</table>

**Reference**

`DynamicReferenceInstance Class` [1734]

`TwinCAT.TypeSystem Namespace` [1622]

### 6.11.17.1.4 DynamicReferenceInstance.ResolvedType Property

Gets the resolved type of the `IReferenceInstance` [2094].
TwinCAT.Ads Namespaces

**Namespace:** TwinCAT.TypeSystem [► 1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

*C#*

```csharp
public IDataType ResolvedType { get; }
```

**Property Value**

Type: [IDataType ► 1986]
The resolved type.

**Implements**

IRelativeReferenceInstance.ResolvedType [► 2099]

**Reference**

DynamicReferenceInstance Class [► 1734]

TwinCAT.TypeSystem Namespace [► 1622]

### 6.11.17.2 DynamicReferenceInstance Methods

The `DynamicReferenceInstance [► 1734]` type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
</table>
| ≔ Equals [► 1816] | Equals (Inherited from `DynamicSymbol [► 1791].`)
| ≔ GetDynamicMemberNames [► 1816] | Returns the enumeration of all dynamic member names. (Inherited from `DynamicSymbol [► 1791].`)
| ≔ OnReadAnyValue [► 1817] | Handler function for reading ADS 'Any' Values. (Inherited from `DynamicSymbol [► 1791].`)
| ≔ OnReadRawValue [► 1818] | Handler function for reading Raw symbol value. (Inherited from `DynamicSymbol [► 1791].`)
| ≔ OnReadValue [► 1819] | Handler function for the (Inherited from `DynamicSymbol [► 1791].`)
| ≔ OnSetInstanceName [► 1820] | Sets a new InstanceName InstancePath (Inherited from `DynamicSymbol [► 1791].`)
| ≔ OnTryReadValue [► 1821] | Handler function for the (Inherited from `DynamicSymbol [► 1791].`)

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OnTryWriteValue</td>
<td>Handler Function for writing value. (Inherited from DynamicSymbol [1791])</td>
</tr>
<tr>
<td>OnWriteRawValue</td>
<td>Handler function for reading symbols raw value. (Inherited from DynamicSymbol [1791])</td>
</tr>
<tr>
<td>OnWriteRawValueAsync</td>
<td>Handler function for writing the raw DynamicSymbol [1791] value. (Inherited from DynamicSymbol [1791])</td>

### Reference

DynamicReferenceInstance Class [1734]
TwinCAT.TypeSystem Namespace [1622]

#### 6.11.17.2.1 DynamicReferenceInstance.TryGetIndex Method

Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public virtual bool TryGetIndex(
    GetIndexBinder binder,
    Object[] indexes,
    out Object result
)
```

**Parameters**

- **binder**
  - Type: System.Dynamic.GetIndexBinder
  - Provides information about the operation.

- **indexes**
  - Type: System.Object
  - The indexes that are used in the operation. For example, for the sampleObject[3] operation in C# (sampleObject(3) in Visual Basic), where sampleObject is derived from the DynamicObject class, indexes[0] is equal to 3.

- **result**
  - Type: System.Object
  - The result of the index operation.
Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

Reference

DynamicReferenceInstance Class [1734]
TwinCAT.TypeSystem Namespace [1622]

6.11.17.2.2 DynamicReferenceInstance.TrySetIndex Method

Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c14

Syntax

C#

public virtual bool TrySetIndex(
    SetIndexBinder binder,
    Object[] indexes,
    Object value
)

Parameters

binder
Type: System.Dynamic.SetIndexBinder
Provides information about the operation.

indexes
Type: System.Object
The indexes that are used in the operation. For example, for the sampleObject[3] = 10 operation in C# (sampleObject(3) = 10 in Visual Basic), where sampleObject is derived from the DynamicObject class, indexes[0] is equal to 3.

value
Type: System.Object
The value to set to the object that has the specified index. For example, for the sampleObject[3] = 10 operation in C# (sampleObject(3) = 10 in Visual Basic), where sampleObject is derived from the DynamicObject class, value is equal to 10.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

## TwinCAT.Ads Namespaces

### Name | Description
--- | ---
DataType | Gets the data type bound to this IValue (Inherited from DynamicValue)
IsPrimitive | Gets a value indicating whether this IValue is a primitive value. (Inherited from DynamicValue)
ResolvedType | Gets the resolved type. (Inherited from DynamicValue)
Symbol | Gets the symbol that is bound to this value. (Inherited from DynamicValue)
TimeStamp | Gets the Time stamp of the last successful read of the Value. (Inherited from DynamicValue)
UpdateMode | Gets / Sets the update mode (Inherited from DynamicValue)
ValueFactory | The value factory (Inherited from DynamicValue)

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>

### 6.11.18.1 DynamicReferenceValue Properties

The DynamicReferenceValue[1747] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age[1872]</td>
<td>Gets the age of the value (last successful read of the value) (Inherited from DynamicValue[1869].)</td>
</tr>
<tr>
<td>CachedRaw[1873]</td>
<td>Gets the cached Raw internal Data. (Inherited from DynamicValue[1869].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>DataType [1874]</td>
<td>Gets the data type bound to this IValue [2226] (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>IsPrimitive [1874]</td>
<td>Gets a value indicating whether this IValue [2226] is a primitive value. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>ResolvedType [1875]</td>
<td>Gets the resolved type. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>Symbol [1875]</td>
<td>Gets the symbol that is bound to this value. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TimeStamp [1876]</td>
<td>Gets the Time stamp of the last successful read of the Value. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>UpdateMode [1876]</td>
<td>Gets / Sets the update mode (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>ValueFactory [1877]</td>
<td>The value factory (Inherited from DynamicValue [1869].)</td>
</tr>
</tbody>
</table>

### 6.11.18.2 DynamicReferenceValue Methods

The DynamicReferenceValue [1747] type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetDynamicMemberNames [1879]</td>
<td>Returns the enumeration of all dynamic member names. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>Read [1879]</td>
<td>Reads the value (via ADS) (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>ReadAsync [1880]</td>
<td>read as an asynchronous operation. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>ReadMember [1751]</td>
<td>Reads the specified member element. (Overrdes DynamicValue.ReadMember(ISymbol) [1880].)</td>
</tr>
<tr>
<td>ResolveValue [1881]</td>
<td>Resolves the Value object to its primitive value. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>ToString [1882]</td>
<td>Returns a String that represents this instance. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryConvert [1882]</td>
<td>Provides implementation for type conversion operations. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that convert an object from one type to another. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryGetArrayElementValues [1883]</td>
<td>Returns Array Element values. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryGetIndex [1883]</td>
<td>Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>TryGetIndexValue(Int32, Object) [1884]</td>
<td>Reads the specified array element. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryGetIndexValue(Object, Object) [1885]</td>
<td>Tries the get index value. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryGetMember [1886]</td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryGetMemberValue [1887]</td>
<td>Tries the get member value. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryInvoke [1887]</td>
<td>Provides the implementation for operations that invoke an object. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as invoking an object or a delegate. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryInvokeMember [1888]</td>
<td>Provides the implementation for operations that invoke a member. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as calling a method. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TryResolveValue [1889]</td>
<td>Tries to resolves the Value object to its primitive value. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TrySetIndex [1890]</td>
<td>Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TrySetIndexValue [1890]</td>
<td>Tries to set the indexed value on Arrays (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TrySetMember [1891]</td>
<td>Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>TrySetMemberValue [1892]</td>
<td>Tries to Set a Member/Property Value (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>Write [1893]</td>
<td>Writes the value (via ADS) (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>WriteAsync [1893]</td>
<td>write as an asynchronous operation. (Inherited from DynamicValue [1869].)</td>
</tr>
<tr>
<td>WriteMember [1894]</td>
<td>Writes the specified member element. (Inherited from DynamicValue [1869].)</td>
</tr>
</tbody>
</table>

**Reference**

DynamicReferenceValue Class [1747]

TwinCAT.TypeSystem Namespace [1622]

**6.11.18.2.1 DynamicReferenceValue.ReadMember Method**

Reads the specified member element.
Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected override Object ReadMember(
  ISymbol memberInstance
)

Parameters

memberInstance Type: TwinCAT.TypeSystem.ISymbol

The member instance.

Return Value

Type: Object

Reference

DynamicReferenceValue Class
TwinCAT.TypeSystem Namespace

6.11.19 DynamicRpcStructInstance Class

Dynamic struct instance with RPC Methods.

Inheritance Hierarchy

System.Dynamic.DynamicObject
  TwinCAT.TypeSystem.DynamicSymbol
    TwinCAT.TypeSystem.DynamicStructInstance
      TwinCAT.TypeSystem.DynamicRpcStructInstance

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public sealed class DynamicRpcStructInstance : DynamicStructInstance,
  IRpcStructInstance, IStructInstance, IAttributedInstance, IInstance,
  IBitSize, IRpcCallableInstance

The DynamicRpcStructInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>_InnerSymbol</td>
<td>Gets the inner symbol of this DynamicSymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Attributes [1799]</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>BitSize [1800]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ByteSize [1800]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Category [1801]</td>
<td>Gets the category. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Comment [1801]</td>
<td>Gets the comment of the Instance [2052] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Connection [1802]</td>
<td>Gets the connection bound to this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>DataType [1802]</td>
<td>Gets the IDataType [1986] of the Instance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>HasRpcMethods [1785]</td>
<td>Gets a value indicating whether this instance has RPC methods (Inherited from DynamicStructInstance [1779].)</td>
</tr>
<tr>
<td>HasValue [1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstanceName [1803]</td>
<td>Gets the name of the instance (without periods (.) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstancePath [1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsBitType [1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsByteAligned [1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is acontainer type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this Symbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>MemberInstances [1786]</td>
<td>Gets the member instances of the Struct Instance [2158]. (Inherited from DynamicStructInstance [1779].)</td>
</tr>
<tr>
<td>NormalizedName [1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>

<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the category. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection bound to this DynamicSymbol (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the Instance. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>HasRpcMethods</td>
<td>Gets a value indicating whether this instance has RPC methods (Inherited from DynamicStructInstance)</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has value (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this Symbol is persistent. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the Instance represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the Instance represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol)</td>
</tr>
</tbody>
</table>

Reference

DynamicRpcStructInstance Class [1752]
TwinCAT.TypeSystem Namespace [1622]

6.11.19.2.1 DynamicRpcStructInstance.GetDynamicMemberNames Method

Gets the dynamic member names.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public override IEnumerable<string> GetDynamicMemberNames()
```

**Return Value**

Type: `IEnumerable<string>

**Reference**

DynamicRpcStructInstance Class [1752]
TwinCAT.TypeSystem Namespace [1622]

6.11.19.2.2 DynamicRpcStructInstance.InvokeRpcMethod Method

**Overload List**

<table>

<tbody>
<tr>
<td>InvokeRpcMethod(String, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
</tbody>
</table>
## DynamicRpcStructInstance.InvokeRpcMethod Method (String, .Object.)

Invokes the specified RPC Method

### Reference

**DynamicRpcStructInstance Class** [1752]

**TwinCAT.TypeSystem Namespace** [1622]

### Syntax

**C#**

```csharp
public Object InvokeRpcMethod(
    string methodName,
    Object[] inParameters
)
```

### Parameters

- **methodName**
  - Type: `System.String`
  - The method name.

- **inParameters**
  - Type: `System.Object`
  - The input parameters or NULL

### Return Value

- **Type:** `Object`
  - The return value of the Method (as object).

### Implements

- `IRpcCallableInstance.InvokeRpcMethod(String, .Object.)` [2107]

### Remarks

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.
Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoaderMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* (attribute 'TcRpcEnable')
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
            i1 : INT := 0;
            i2 : INT := 0;
            END_VAR
            */
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            // Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}

Reference

DynamicRpcStructInstance Class [1752]
InvokeRpcMethod Overload [1761]
TwinCAT.TypeSystem Namespace [1622]

DynamicRpcStructInstance.InvokeRpcMethod Method (String, .Object., .Object..)
Invokes the specified RPC Method
Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Object InvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    out Object[] outParameters
)
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>methodName</td>
<td>System.String</td>
<td>The method name.</td>
</tr>
<tr>
<td>inParameters</td>
<td>System.Object</td>
<td>The input parameters or NULL</td>
</tr>
<tr>
<td>outParameters</td>
<td>System.Object</td>
<td>The output parameters.</td>
</tr>
</tbody>
</table>

Return Value

Type: Object
The return value of the Method (as object).

Implements

IRpcCallableInstance.InvokeRpcMethod(String, Object, Object) [1633]

Remarks

Because this overload doesn't provide any AnyTypeSpecifier specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

    // Call a Method that has the following signature (within MAIN Program)
    /* (attribute 'TcRpcEnable')*/
    METHOD PUBLIC M_Add: INT
    VAR_INPUT
    i1: INT := 0;
    i2: INT := 0;
    END_VAR
    */

    short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});

    // Call a Method that has no parameter and returns VOID
    main.InvokeRpcMethod("M_Method1", new object[]{});

    // Browsing RpcMethods
    foreach (IRpcMethod method in main.RpcMethods)
    {
        string methodName = method.Name;
        foreach (IRpcMethodParameter parameter in method.Parameters)
        {
            string parameterName = parameter.Name;
            string parameterType = parameter.TypeName;
        }
    }

Reference

DynamicRpcStructInstance Class [¶ 1752]

InvokeRpcMethod Overload [¶ 1761]

TwinCAT.TypeSystem Namespace [¶ 1622]
TwinCAT.Ads Namespaces

outSpecifiers
Type: TwinCAT.TypeSystem.AnyTypeSpecifier
The out specifiers (specifying the out types) or NULL.

retSpecifier
Type: TwinCAT.TypeSystem.AnyTypeSpecifier
The ret specifier (specifying the return value) or NULL.

outParameters
Type: System.Object
The out parameters.

Return Value
Type: Object
The return value of the Method (as object).

Implements
IRpcCallableInstance.InvokeRpcMethod(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object)

Remarks
The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the
parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In
case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not
necessary and should not be set.

Examples
The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode
class RpcCall1VirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);

Reference

DynamicRpcStructInstance Class [¶ 1752]

TwinCAT.TypeSystem Namespace [¶ 1622]

DynamicRpcStructInstance.InvokeRpcMethodAsync Method (String, .Object, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: TwinCAT.TypeSystem [¶ 1622]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### Syntax

**C#**

```csharp
public Task<ResultRpcMethodAccess> InvokeRpcMethodAsync(
    string methodName,
    Object[] inParameters,
    CancellationToken cancel
)
```

### Parameters

- **methodName**
  - Type: System.String
  - The method name.

- **inParameters**
  - Type: System.Object
  - The parameters.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token

### Return Value

- **Type:** Task<ResultRpcMethodAccess>
- A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethodAccess results contain the return value (ReturnValue) together with the output parameters. The succeeded communication is indicated by the ErrorCode property (ErrorCode) after the communication.

### Implements

- IRpcCallableInstance.InvokeRpcMethodAsync(String, Object, CancellationToken)

### Remarks

Because this overload doesn't provide any AnyTypeSpecifier specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

### Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

#### Dynamic Tree Mode

```csharp
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
        }
    }
}
```
// Call a Method that has the following signature (within MAIN Program)
/* (attribute 'TcRpcEnable')*/
METHOD PUBLIC M_Add : INT
  VAR_INPUT
  i1 : INT := 0;
  i2 : INT := 0;
  END_VAR
*/
short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short) 3, (short) 4});

// Call a Method that has no parameter and returns VOID
main.InvokeRpcMethod("M_Method1", new object[]{});

// Browsing RpcMethods
foreach(IRpcMethod method in main.RpcMethods)
{
  string methodName = method.Name;
  foreach(IRpcMethodParameter parameter in method.Parameters)
  {
    string parameterName = parameter.Name;
    string parameterType = parameter.TypeName;
  }
}

Reference

DynamicRpcStructInstance Class [1752]
InvokeRpcMethodAsync Overload [1767]
TwinCAT.TypeSystem Namespace [1622]

DynamicRpcStructInstance.InvokeRpcMethodAsync Method
(String, .Object, .AnyTypeSpecifier, .AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public Task<ResultRpcMethodAccess> InvokeRpcMethodAsync(
  string methodName,
  Object[] inParameters,
  AnyTypeSpecifier[] outSpecifiers,
  AnyTypeSpecifier retSpecifier,
  CancellationToken cancel)

Parameters

methodName Type: System.String
  The method name.

inParameters Type: System.Object
  The parameters.

outSpecifiers Type: TwinCAT.TypeSystem.AnyTypeSpecifier [1633]
  The out specifiers (specifying the out types) or NULL.
retSpecifier  
Type: TwinCAT.TypeSystem.AnyTypeSpecifier
The ret specifier (specifying the return value) or NULL.

cancel  
Type: System.Threading.CancellationToken
The cancellation token

Return Value
Type: Task.ResultRpcMethodAccess
A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethodAccess results contains the return value (ReturnValue) together with the output parameters. The succeeded communication is indicated by the ErrorCode property after the communication.

Implements
IRpcCallableInstance.InvokeRpcMethodAsync(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)

Remarks
The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples
The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode
class RpcCallVirtualProgram
{
    /// <summary>

            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /*{attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */
            short result = (short)main.InvokeRpcMethod("M_Add", new object() { (short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
        }
    }
}
main.InvokeRpcMethod("M_Method1", new object[]{})

//Browsing RpcMethods
foreach(IRpcMethod method in main.RpcMethods)
{
    string methodName = method.Name;

    foreach(IRpcMethodParameter parameter in method.Parameters)
    {
        string parameterName = parameter.Name;
        string parameterType = parameter.TypeName;
    }
}

Reference

DynamicRpcStructInstance Class [1752]
InvokeRpcMethodAsync Overload [1767]
TwinCAT.TypeSystem Namespace [1622]

6.11.19.2.4 DynamicRpcStructInstance.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public override bool TryGetMember(
    GetMemberBinder binder,
    out Object result)

Parameters

binder

Type: System.Dynamic.GetMemberBinder
Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the Console.WriteLine(sampleObject.SampleProperty) statement, where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

result

Type: System.Object
The result of the get operation. For example, if the method is called for a property, you can assign the property value to result.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)
6.11.19.2.5 DynamicRpcStructInstance.TryInvokeMember Method

Provides the implementation for operations that invoke a member. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as calling a method.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual bool TryInvokeMember(
    InvokeMemberBinder binder,
    Object[] args,
    out Object result
)
```

Parameters

- **binder**
  Type: System.Dynamic.InvokeMemberBinder
  Provides information about the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the statement sampleObject.SampleMethod(100), where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleMethod". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

- **args**
  Type: System.Object
  The arguments that are passed to the object member during the invoke operation. For example, for the statement sampleObject.SampleMethod(100), where sampleObject is derived from the DynamicObject class, args][] is equal to 100.

- **result**
  Type: System.Object
  The result of the member invocation.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

Reference

DynamicRpcStructInstance Class [1752]
TwinCAT.TypeSystem Namespace [1622]

DynamicRpcStructInstance.TryInvokeRpcMethod Method (String, .Object., Object.)

Invokes the specified RPC Method

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int TryInvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    out Object retValue
)
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>methodName</td>
<td>System.String</td>
<td>The method name.</td>
</tr>
<tr>
<td>inParameters</td>
<td>System.Object</td>
<td>The parameters.</td>
</tr>
<tr>
<td>retValue</td>
<td>System.Object</td>
<td>The return value of the RPC method as object.</td>
</tr>
</tbody>
</table>
Return Value

Type: Int32
The return value of the Method (as object).

Implements

IRpcCallableInstance.TryInvokeRpcMethod(String, Object, Object) [2116]

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
            
            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
               METHOD PUBLIC M_Add : INT
               VAR_INPUT
               l1 : INT := 0;
               l2 : INT := 0;
               END_VAR
            */
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});
            
            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});
            
            // Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
**DynamicRpcStructInstance.TryInvokeRpcMethod Method (String, .Object., .Object.., Object.)**

Invokes the specified RPC Method

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# ```
public int TryInvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    out Object[] outParameters,
    out Object retValue
)
```

**Parameters**

| methodName | Type: System.String |
| inParameters | Type: System.Object |
| outParameters | Type: System.Object |
| retValue | Type: System.Object |

**Return Value**

Type: Int32

The ADS Error Code.

**Implements**

IRpcCallableInstance.TryInvokeRpcMethod(String, .Object., .Object.., Object.) [2118]

**Remarks**

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

**Examples**

The following sample shows how to call (Remote Procedures / Methods) within the PLC.
Dynamic Tree Mode

class RpcCallVirtualProgram
{

                foreach (IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter TypeName;
                }
            }
        }
    }
}

Reference

DynamicRpcStructInstance Class [1752]
TryInvokeRpcMethod Overload [1773]
TwinCAT.TypeSystem Namespace [1622]

Invokes the the specified RpcMethod of the IRpcCallableInstance [2104].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int TryInvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters,
    out Object retValue)
```

Parameters

- **methodName**
  - Type: `System.String`
  - Name of the method.

- **inParameters**
  - Type: `System.Object`
  - The parameters.

- **outSpecifiers**
  - Type: `TwinCAT.TypeSystem.AnyTypeSpecifier[]`
  - The out specifiers (specifying the out types) or NULL.

- **retSpecifier**
  - Type: `TwinCAT.TypeSystem.AnyTypeSpecifier[]`
  - The ret specifier (specifying the return value) or NULL.

- **outParameters**
  - Type: `System.Object`
  - The out parameters.

- **retValue**
  - Type: `System.Object`
  - The return value of the RPC method.

Return Value

- Type: `Int32
  - AdsErrorCode.

Implements

`IRpcCallableInstance.TryInvokeRpcMethod(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object) [2120]`

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters `inParameters`, `outParameters`, `outSpecifiers`, `retSpecifier` are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

**Dynamic Tree Mode**

```csharp
class RpcCall1VirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AdsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            // ...
        }
    }
}
```
{  
    //client.Synchronize = false;
    // Connect to the target device
    client.Connect(address);
    SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
    // Get the Symbols (Dynamic Symbols)
    IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
    // Call a Method that has the following signature (within MAIN Program)
    /*  
        {attribute 'TcRpcEnable'}
        METHOD PUBLIC M_Add : INT
          VAR_INPUT
            i1 : INT := 0;
            i2 : INT := 0;
          END_VAR
        */
    short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});
    // Call a Method that has no parameter and returns VOID
    main.InvokeRpcMethod("M_Method1", new object[] {});
    // Browsing RpcMethods
    foreach(IRpcMethod method in main.RpcMethods)
    {
        string methodName = method.Name;
        foreach(IRpcMethodParameter parameter in method.Parameters)
        {
            string parameterName = parameter.Name;
            string parameterType = parameter.TypeName;
        }
    }
}

Reference
DynamicRpcStructInstance Class [▶1752]
TryInvokeRpcMethod Overload [▶1773]
TwinCAT.TypeSystem Namespace [▶1622]

6.11.19.2.7 DynamicRpcStructInstance.TrySetMember Method

Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.

Namespace: TwinCAT.TypeSystem [▶1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public override bool TrySetMember(
    SetMemberBinder binder,
    Object value
)
Parameters

binder

Type: System.Dynamic.SetMemberBinder
Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member to which the value is being assigned. For example, for the statement sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

value

Type: System.Object
The value to set to the member. For example, for sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, the value is "Test".

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

The DynamicStructInstance type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InnerSymbol [1798]</td>
<td>Gets the inner symbol of this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>AccessRights [1798]</td>
<td>Gets the access rights. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>AllowIGPIOAccess [1799]</td>
<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Attributes [1799]</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>BitSize [1800]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ByteSize [1800]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Category [1801]</td>
<td>Gets the category. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Comment [1801]</td>
<td>Gets the comment of the IInstance [2052] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Connection [1802]</td>
<td>Gets the connection bound to this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>DataType [1802]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>HasRpcMethods [1785]</td>
<td>Gets a value indicating whether this instance has RPC methods</td>
</tr>
<tr>
<td>HasValue [1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstanceName [1803]</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstancePath [1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsBitType [1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsByteAligned [1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is acontainer type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsPointer</td>
<td>Indicates that the Instance represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the Instance represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>MemberInstances</td>
<td>Gets the member instances of the Struct Instance.</td>
</tr>
<tr>
<td>NormalizedDict</td>
<td>Dictionary of normalized Instance Names</td>
</tr>
<tr>
<td>NormalizedName</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>NotificationSettings</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the Instance in bytes. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the Symbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this Instance. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from DynamicSymbol.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Equals (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>GetDynamicMemberNames</td>
<td>Returns the enumeration of all dynamic member names. (Overrides DynamicSymbol.GetDynamicMemberNames.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>OnReadAnyValue</td>
<td>Handler function for reading ADS 'Any' Values. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>OnReadRawValue</td>
<td>Handler function for reading Raw symbol value. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>

<td>OnReadValueAsync</td>
<td>Handler function reading the DynamicSymbols [1791] value asynchronously. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnSetInstanceName</td>
<td>Sets a new InstanceName InstancePath (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnTryReadValue</td>
<td>Handler function for the (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td>OnTryWriteValue</td>
<td>Handler Function for writing value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td>OnWriteRawValue</td>
<td>Handler function for reading symbols raw value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td>OnWriteRawValueAsync</td>
<td>Handler function for writing the raw DynamicSymbol [1791] value. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>OnWriteValue</td>
<td>Handler Function for writing value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td>OnWriteValueAsync</td>
<td>Handler Function for writing value. (Inherited from DynamicSymbol[1791].)</td>
</tr>
<tr>
<td>ReadAnyValue</td>
<td>Reads the value of this Value [2254] into a new created instance of the managed type (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadRawValue</td>
<td>Reads the raw value of the IValueSymbol [2254] (Ads Read / Write) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadRawValue(Int32)</td>
<td>Reads the Symbols raw value (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadRawValueAsync</td>
<td>Read raw value as an asynchronous operation. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValue</td>
<td>Reads the value of this DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValue(Int32)</td>
<td>Reads the value of this DynamicSymbol [1791]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ReadValueAsync</td>
<td>Reads the Value of the IValueSymbol [2254] asynchronously. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TryGetMember</td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Overides DynamicSymbol.TryGetMember(GetMemberBinder, Object.) [1833].)</td>
</tr>
<tr>
<td>TryReadValue</td>
<td>Reads the Value of the IValueSymbol [2254] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TrySetMember</td>
<td>Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>TryWriteValue</td>
<td>Writes the specified value to the DynamicSymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>UpdateAnyValue</td>
<td>Reads the value of this Value into the specified managed value. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteAnyValue</td>
<td>Writes the value represented by the managed value to this Value (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteRawValue( Byte )</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteRawValue( Byte, Int32 )</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>WriteRawValue Async</td>
<td>Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)</td>

<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Attributes [1799]</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>BitSize [1800]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ByteSize [1800]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Category [1801]</td>
<td>Gets the category. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Comment [1801]</td>
<td>Gets the comment of the Instance [2052] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Connection [1802]</td>
<td>Gets the connection bound to this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>DataType [1802]</td>
<td>Gets the IDataType [1986] of the Instance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>HasRpcMethods [1785]</td>
<td>Gets a value indicating whether this instance has RPC methods</td>
</tr>
<tr>
<td>HasValue [1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstanceName [1803]</td>
<td>Gets the name of the instance (without periods (.) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstancePath [1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsBitType [1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsByteAligned [1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this Symbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>MemberInstances [1786]</td>
<td>Gets the member instances of the Struct Instance [2158].</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>NormalizedDict</td>
<td>Dictionary of normalized Instance Names</td>
</tr>
<tr>
<td>NormalizedName</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>NotificationSettings</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the IInstance in bytes. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the ISymbol (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this IInstance.</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from DynamicSymbol.)</td>
</tr>
</tbody>
</table>

Reference

DynamicStructInstance Class

TwinCAT.TypeSystem Namespace

6.11.20.1.1 DynamicStructInstance.HasRpcMethods Property

Gets a value indicating whether this instance has RPC methods

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool HasRpcMethods { get; }
```

Property Value

Type: Boolean
ture if this instance has RPC methods; otherwise, false.

Implements

IStructInstance.HasRpcMethods

Remarks

If the struct instance supports RPC Methods, then the instance class is also supporting IRpcStructInstance.
Reference
DynamicStructInstance Class [1779]
TwinCAT.TypeSystem Namespace [1622]
TwinCAT.TypeSystem.IRpcStructInstance [2140]
TwinCAT.TypeSystem.IRpcMethod [2123]
TwinCAT.TypeSystem.IRpcMethodParameter [2133]

6.11.20.1.2 DynamicStructInstance.MemberInstances Property

Gets the member instances of the Struct Instance [2158].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public ISymbolCollection<ISymbol> MemberInstances { get; }

Property Value

Type: ISymbolCollection [2185], ISymbol [2176].
The member instances.

Implements

IStructInstance.MemberInstances [2162]

Reference
DynamicStructInstance Class [1779]
TwinCAT.TypeSystem Namespace [1622]

6.11.20.1.3 DynamicStructInstance.NormalizedDict Property

Dictionary of normalized Instance Names

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected IDictionary<string, ISymbol> NormalizedDict { get; }

Property Value

Type: IDictionary<String, ISymbol> [2176].
# DynamicStructInstance Methods

The `DynamicStructInstance` type exposes the following members.

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Equals</code></td>
<td>Equals (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>GetDynamicMemberNames</code></td>
<td>Returns the enumeration of all dynamic member names. (Overrides <code>DynamicSymbol.GetDynamicMemberNames</code>.)</td>
</tr>
<tr>
<td><code>GetHashCode</code></td>
<td>Gets the HashCode of the Address (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnReadAnyValue</code></td>
<td>Handler function for reading ADS 'Any' Values. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnReadRawValue</code></td>
<td>Handler function for reading Raw symbol value. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnReadRawValueAsync</code></td>
<td>Handler function reading the raw value of the <code>DynamicSymbol</code>. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnReadValue</code></td>
<td>Handler function for the (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnReadValueAsync</code></td>
<td>Handler function reading the <code>DynamicSymbols</code> value asynchronously. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnSetInstanceName</code></td>
<td>Sets a new InstanceName InstancePath (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnTryReadValue</code></td>
<td>Handler function for the (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnTryWriteValue</code></td>
<td>Handler Function for writing value. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnWriteRawValue</code></td>
<td>Handler function for reading symbols raw value. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnWriteRawValueAsync</code></td>
<td>Handler function for writing the raw <code>DynamicSymbol</code> value. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnWriteValue</code></td>
<td>Handler Function for writing value. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>OnWriteValueAsync</code></td>
<td>Handler Function for writing value. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>
<td><code>ReadAnyValue</code></td>
<td>Reads the value of this <code>Value</code> into a new created instance of the managed type (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
<tr>

<tr>
<td><strong>WriteValueAsync</strong> [1847]</td>
<td>Writes the Value of the IValueSymbol [2254] (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>
6.11.20.2.1 DynamicStructInstance.GetDynamicMemberNames Method

Returns the enumeration of all dynamic member names.

**Namespace:** TwinCAT.TypeSystem [⇒ 1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public override IEnumerable<string> GetDynamicMemberNames()
```

**Return Value**

Type: `IEnumerable<String>`

A sequence that contains dynamic member names.

Reference

DynamicStructInstance Class [⇒ 1779]

TwinCAT.TypeSystem Namespace [⇒ 1622]

6.11.20.2.2 DynamicStructInstance.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the `DynamicObject` class can override this method to specify dynamic behavior for operations such as getting a value for a property.

**Namespace:** TwinCAT.TypeSystem [⇒ 1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public override bool TryGetMember(
    GetMemberBinder binder,
    out Object result
)
```

**Parameters**

`binder`

Type: `System.Dynamic.GetMemberBinder`

Provides information about the object that called the dynamic operation. The `binder.Name` property provides the name of the member on which the dynamic operation is performed. For example, for the `Console.WriteLine(sampleObject.SampleProperty)` statement, where `sampleObject` is an instance of the class derived from the `DynamicObject` class, `binder.Name` returns "SampleProperty". The `binder.IgnoreCase` property specifies whether the member name is case-sensitive.
result

Type: System.Object

The result of the get operation. For example, if the method is called for a property, you can assign the property value to result.

Return Value

Type: Boolean

true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

TwinCAT.TypeSystem Namespace [› 1622]

6.11.20.2.3 DynamicStructInstance.TrySetMember Method

Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.

Namespace: TwinCAT.TypeSystem [› 1622]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual bool TrySetMember(
    SetMemberBinder binder,
    Object value
)
```

Parameters

binder

Type: System.Dynamic.SetMemberBinder

Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member to which the value is being assigned. For example, for the statement sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

value

Type: System.Object

The value to set to the member. For example, for sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, the value is "Test".

Return Value

Type: Boolean

true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

## TwinCAT.Ads Namespaces

### Syntax

**C#**

```csharp
public class DynamicSymbol : DynamicObject,
    IDynamicSymbol, ISymbol, IAttributedInstance, IInstance, IBitSize,
    ISymbolFactoryServicesProvider, IValueSymbol, IValueRawSymbol, IHierarchicalSymbol, IValueAccessProvider,
    IContextMaskProvider
```

The `DynamicSymbol` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>_InnerSymbol</code></td>
<td>Gets the inner symbol of this DynamicSymbol</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights.</td>
</tr>
<tr>
<td>AllowIGIOAccess</td>
<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>IDataType</code> in bits.</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the category.</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <code>IInstance</code></td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection bound to this DynamicSymbol</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <code>IDataType</code> of the <code>IInstance</code>.</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations).</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.))</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type.</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this <code>ISymbol</code> is persistent.</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the <code>IInstance</code> represents a Pointer type (Pointer TO)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only.</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive.</td>
</tr>
</tbody>

</table>

**Remarks**

The DynamicSymbol adds dynamic run time behaviour to the [ISymbol](#2176)/[IValueSymbol](#2254). That means e.g. for StructSymbols that .NET Properties are defined and dispatched at runtime to the structs fields like they are defined in TwinCAT / ADS Types. Indexed access to Array Symbols is another example where the dynamic runtime support takes place.

**Examples**

Sample for the dynamic resolution of Symbols:

**Dynamic Symbol access**

```csharp
/// <summary>
/// Defines the entry point of the application.
/// </summary>
/// <param name="args">The arguments.</param>
static async void Main(string[] args) {
    // Get the AdsAddress from command-line arguments
    AmsAddress address = ArgParser.Parse(args);
    CancellationTokenSource cancelSource = new CancellationTokenSource();
    CancellationToken cancel = cancelSource.Token;
    using (AdsClient client = new AdsClient())
    {
        // Connect to the target device
        client.Connect(address);

        // Usage of "dynamic" Type and Symbols (>= .NET4 only)
        SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.DynamicTree);
        IAdsSymbolLoader dynLoader = (IAdsSymbolLoader)SymbolLoaderFactory.Create(client, settings);
    }
}
```

6.11.21.1 DynamicSymbol Properties

The `DynamicSymbol` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>_InnerSymbol [1798]</td>
<td>Gets the inner symbol of this <code>DynamicSymbol</code> [1791]</td>
</tr>
<tr>
<td>AccessRights [1798]</td>
<td>Gets the access rights.</td>
</tr>
<tr>
<td>AllowIGIOAccess [1799]</td>
<td>Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol)</td>
</tr>
<tr>
<td>Attributes [1799]</td>
<td>Gets the Symbol Attributes</td>
</tr>
<tr>
<td>BitSize [1800]</td>
<td>Gets the size of the <code>IDataType</code> [1986] in bits.</td>
</tr>
<tr>
<td>ByteSize [1800]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes</td>
</tr>
<tr>
<td>Category [1801]</td>
<td>Gets the category.</td>
</tr>
<tr>
<td>Comment [1801]</td>
<td>Gets the comment of the <code>IInstance</code> [2052]</td>
</tr>
<tr>
<td>Connection [1802]</td>
<td>Gets the connection bound to this <code>DynamicSymbol</code> [1791]</td>
</tr>
<tr>
<td>DataType [1802]</td>
<td>Gets the <code>IDataType</code> [1986] of the <code>IInstance</code> [2052].</td>
</tr>
<tr>
<td>HasValue [1803]</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations).</td>
</tr>
<tr>
<td>InstanceName [1803]</td>
<td>Gets the name of the instance (without periods (.))</td>
</tr>
<tr>
<td>InstancePath [1804]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.))</td>
</tr>
<tr>
<td>IsBitType [1805]</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping</td>
</tr>
<tr>
<td>IsByteAligned [1805]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td>IsContainerType [1806]</td>
<td>Gets a value indicating whether this Symbol is a container type.</td>
</tr>
<tr>
<td>IsPersistent [1806]</td>
<td>Gets a value indicating whether this <code>Symbol</code> [2176] is persistent.</td>
</tr>
<tr>
<td>IsPointer [1807]</td>
<td>Indicates that the <code>IInstance</code> [2052] represents a Pointer type (Pointer TO)</td>
</tr>
<tr>
<td>IsPrimitiveType [1807]</td>
<td>Gets a value indicating whether this instance is a primitive type.</td>
</tr>
<tr>
<td>IsReadOnly [1808]</td>
<td>Indicates that this instance is read only.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsRecursive [1808]</td>
<td>Gets a value indicating whether this instance is recursive.</td>
</tr>
<tr>
<td>IsReference [1809]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO)</td>
</tr>
<tr>
<td>IsStatic [1809]</td>
<td>Gets a value indicating whether this instance is static.</td>
</tr>
<tr>
<td>NormalizedName [1810]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters),</td>
</tr>
<tr>
<td>NotificationSettings [1810]</td>
<td>Gets the notification settings.</td>
</tr>
<tr>
<td>Parent [1811]</td>
<td>Gets the parent Symbol</td>
</tr>
<tr>
<td>SubSymbols [1812]</td>
<td>Gets the SubSymbols of the Symbol [2176]</td>
</tr>
<tr>
<td>TypeName [1812]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052].</td>
</tr>
<tr>
<td>ValueEncoding [1813]</td>
<td>Gets the value encoding.</td>
</tr>
</tbody>
</table>

DynamicSymbol Class [1791]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.21.1.1 DynamicSymbol._InnerSymbol Property

Gets the inner symbol of this DynamicSymbol [1791]

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```
public IValueSymbol _InnerSymbol { get; }
```

**Property Value**

Type: IValueSymbol [2254]  
The inner symbol.

**Reference**

DynamicSymbol Class [1791]  
TwinCAT.TypeSystem Namespace [1622]

### 6.11.21.1.2 DynamicSymbol.AccessRights Property

Gets the access rights.

**Reference**

DynamicSymbol Class [1791]  
TwinCAT.TypeSystem Namespace [1622]
**TwinCAT.Ads Namespaces**

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**
```csharp
public SymbolAccessRights AccessRights { get; }
```

**Property Value**

Type: SymbolAccessRights

The access rights.

**Implements**

IValueSymbol.AccessRights

**Reference**

DynamicSymbol Class

TwinCAT.TypeSystem Namespace

---

**6.11.21.1.3 DynamicSymbol.AllowIGIOAccess Property**

Indicates, that the aggregates symbols is an IProcessImageAddress (and most probably IAdsSymbol)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**
```csharp
protected bool AllowIGIOAccess { get; }
```

**Property Value**

Type: Boolean

**Reference**

DynamicSymbol Class

TwinCAT.TypeSystem Namespace

---

**6.11.21.1.4 DynamicSymbol.Attributes Property**

Gets the Symbol Attributes

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
```csharp
public ITypeAttributeCollection Attributes { get; }
```

Property Value

Type: ITypeAttributeCollection
The attributes.

Implements

|AttributedInstance.Attributes

Reference

DynamicSymbol Class
TwinCAT.TypeSystem Namespace

6.11.21.1.5 DynamicSymbol.BitSize Property

Gets the size of the IDatatype in bits.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
```csharp
public int BitSize { get; }
```

Property Value

Type: Int32
The size of the bit.

Implements

IBitSize.BitSize

Reference

DynamicSymbol Class
TwinCAT.TypeSystem Namespace

6.11.21.1.6 DynamicSymbol.ByteSize Property

Gets the (aligned) size of of the Type/Instance in Bytes

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### TwinCAT.Ads Namespaces

#### Syntax

**C#**

```csharp
public int ByteSize { get; }
```

#### Property Value

- **Type:** `Int32`
The size of the byte.

#### Implements

- `IBitSize.ByteSize`  [1984]

#### Reference

- `DynamicSymbol Class`  [1791]
- `TwinCAT.TypeSystem Namespace`  [1622]

---

#### 6.11.21.1.7 DynamicSymbol.Category Property

Gets the category.

**Namespace:** `TwinCAT.TypeSystem`  [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public DataTypeCategory Category { get; }
```

#### Property Value

- **Type:** `DataTypeCategory`  [1649]
The category.

#### Implements

- `ISymbol.Category`  [2179]

#### Reference

- `DynamicSymbol Class`  [1791]
- `TwinCAT.TypeSystem Namespace`  [1622]

---

#### 6.11.21.1.8 DynamicSymbol.Comment Property

Gets the comment of the `IInstance`  [2052]

**Namespace:** `TwinCAT.TypeSystem`  [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
6.11.21.1.9 **DynamicSymbol.Connection Property**

Gets the connection bound to this DynamicSymbol. 

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public IConnection Connection { get; }
```

### Property Value

**Type:** IConnection

The connection.

**Implements**

IValueSymbol.Connection

### Reference

DynamicSymbol Class

TwinCAT.TypeSystem Namespace

6.11.21.1.10 **DynamicSymbol.DataType Property**

Gets the IDataType of the IInstance.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public IDataType DataType { get; }
```

### Property Value

**Type:** IDataType

The data type.

**Implements**

IValueSymbol.DataType

### Reference

DynamicSymbol Class

TwinCAT.TypeSystem Namespace
Syntax

C#

```csharp
public IDataType DataType { get; }
```

**Property Value**

Type: `IDataType` [1986]
The type of the data.

**Implements**

`IInstance.DataType` [2054]

**Reference**

`DynamicSymbol Class` [1791]
`TwinCAT.TypeSystem Namespace` [1622]

6.11.21.1.11 DynamicSymbol.HasValue Property

Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations).

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool HasValue { get; }
```

**Property Value**

Type: `Boolean`
true if this instance has value; otherwise, false.

**Implements**

`IValueRawSymbol.HasValue` [2248]

**Reference**

`DynamicSymbol Class` [1791]
`TwinCAT.TypeSystem Namespace` [1622]

6.11.21.1.12 DynamicSymbol.InstanceName Property

Gets the name of the instance (without periods (.)

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public string InstanceName { get; }
```

Property Value

Type: String
The name of the instance.

Implements

IInstance.InstanceName [2054]

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.1.13 DynamicSymbol.InstancePath Property

Gets the relative / absolute access path to the instance (with periods ( . ))

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public string InstancePath { get; }
```

Property Value

Type: String
The instance path.

Implements

IInstance.InstancePath [2055]

Remarks

If this path is relative or absolute depends on the context. IMember [2065] are using relative paths, ISymbol [2176]s are using absolute ones.

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]
6.11.21.1.14 DynamicSymbol.IsBitType Property

Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```
public bool IsBitType { get; }
```

**Property Value**

Type: Boolean  
true if this instance is bit mapping; otherwise, false.

**Implements**

IBitSize.IsBitType

**Reference**

DynamicSymbol Class  
TwinCAT.TypeSystem Namespace

6.11.21.1.15 DynamicSymbol.IsByteAligned Property

Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```
public bool IsByteAligned { get; }
```

**Property Value**

Type: Boolean  
true if this instance is byte aligned; otherwise, false.

**Implements**

IBitSize.IsByteAligned

**Reference**

DynamicSymbol Class  
TwinCAT.TypeSystem Namespace
6.11.21.1.16 DynamicSymbol.IsContainerType Property

Gets a value indicating whether this Symbol is a container type.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsContainerType { get; }
```

**Property Value**

Type: `Boolean`
true if this instance is container type; otherwise, false.

**Implements**

`ISymbol.IsContainerType`

**Reference**

DynamicSymbol Class

TwinCAT.TypeSystem Namespace

6.11.21.1.17 DynamicSymbol.IsPersistent Property

Gets a value indicating whether this `ISymbol` is persistent.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsPersistent { get; }
```

**Property Value**

Type: `Boolean`
true if this instance is persistent; otherwise, false.

**Implements**

`ISymbol.IsPersistent`

**Reference**

DynamicSymbol Class

TwinCAT.TypeSystem Namespace
6.11.21.1.18 DynamicSymbol.IsPointer Property

Indicates that the Instance[2052] represents a Pointer type (Pointer TO)

Namespace: TwinCAT.TypeSystem[1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsPointer { get; }

Property Value

Type: Boolean
true if is ReferenceTo, otherwise false.

Implements

IInstance.IsPointer[2055]

Reference

DynamicSymbol Class[1791]
TwinCAT.TypeSystem Namespace[1622]

6.11.21.1.19 DynamicSymbol.IsPrimitiveType Property

Gets a value indicating whether this instance is a primitive type.

Namespace: TwinCAT.TypeSystem[1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsPrimitiveType { get; }

Property Value

Type: Boolean
true if this instance is primitive type; otherwise, false.

Implements

ISymbol.IsPrimitiveType[2180]

Reference

DynamicSymbol Class[1791]
TwinCAT.TypeSystem Namespace[1622]
6.11.21.1.20 DynamicSymbol.IsReadOnly Property

Indicates that this instance is read only.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsReadOnly { get; }
```

**Property Value**

Type: Boolean

**Implements**

ISymbol.IsReadOnly

**Remarks**

Actually, this Flag is restricted to TcCOM-Objects readonly Parameters. Within the PLC this is used for the ApplicationName and ProjectName of PLC instances. Write-Access on these Modules will create an DeviceAccessDenied error.

**Reference**

DynamicSymbol Class

TwinCAT.TypeSystem Namespace

6.11.21.1.21 DynamicSymbol.IsRecursive Property

Gets a value indicating whether this instance is recursive.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsRecursive { get; }
```

**Property Value**

Type: Boolean

true if this instance is recursive; otherwise, false.

**Implements**

ISymbol.IsRecursive
6.11.21.1.22 DynamicSymbol.IsReference Property

Indicates that the IInstance represents a Reference type (REFERENCE TO)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsReference { get; }
```

**Property Value**

Type: Boolean

true if is ReferenceTo, otherwise false.

**Implements**

IInstance.IsReference

6.11.21.1.23 DynamicSymbol.IsStatic Property

Gets a value indicating whether this instance is static.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsStatic { get; }
```

**Property Value**

Type: Boolean

true if this instance is static; otherwise, false.

**Implements**

IInstance.IsStatic
6.11.21.1.24 DynamicSymbol.NormalizedName Property

Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters),

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public string NormalizedName { get; }

Property Value

Type: String
The normalized instance name (can be the same like InstanceName [2054])

Implements

IDynamicSymbol.NormalizedName [2007]

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.1.25 DynamicSymbol.NotificationSettings Property

Gets the notification settings.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public INotificationSettings NotificationSettings { get; set; }

Property Value

Type: INotificationSettings [972]
The notification settings.
**Implements**

IValueSymbol.NotificationSettings [2260]

**Reference**

DynamicSymbol Class [1791]

TwinCAT.TypeSystem Namespace [1622]

---

### 6.11.21.1.26 DynamicSymbol.Parent Property

Gets the parent Symbol

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ISymbol Parent { get; }
```

**Property Value**

Type: ISymbol [2176]

The parent.

**Implements**

ISymbol.Parent [2182]

---

**Reference**

DynamicSymbol Class [1791]

TwinCAT.TypeSystem Namespace [1622]

---

### 6.11.21.1.27 DynamicSymbol.Size Property

Gets the size of the IInstance [2052] in bytes.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int Size { get; }
```

**Property Value**

Type: Int32

The size of the IInstance [2052] in bytes.
6.11.21.1.28 DynamicSymbol.SubSymbols Property

Gets the SubSymbols of the ISymbol.[2176]

Namespace: TwinCAT.TypeSystem.[1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public ISymbolCollection<ISymbol> SubSymbols { get; }

Property Value

Type: ISymbolCollection.[2185] ISymbol.[2176].

Implements

ISymbol.SubSymbols.[2182]

Remarks

Only used for Array and Struct instances. Otherwise empty

Reference

DynamicSymbol Class.[1791]
TwinCAT.TypeSystem Namespace.[1622]

6.11.21.1.29 DynamicSymbol.TypeName Property

Gets the name of the DataType.[1986] that is used for this IInstance.[2052].

Namespace: TwinCAT.TypeSystem.[1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public string TypeName { get; }
Property Value

Type: String
The name of the type.

Implements

IInstance.TypeName [2056]

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.30 DynamicSymbol.ValueEncoding Property

Gets the value encoding.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public Encoding ValueEncoding { get; }

Property Value

Type: Encoding
The value encoding.

Implements

IAtributedInstance.ValueEncoding [1982]

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2 DynamicSymbol Methods

The DynamicSymbol [1791] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>equals</td>
<td>Returns the enumeration of all dynamic member names.</td>
</tr>
<tr>
<td>equals</td>
<td>Returns the enumeration of all dynamic member names.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Name</th>

DynamicSymbol Class [1791]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.21.2.1 DynamicSymbol.Equals Method

Equals

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public virtual bool Equals(
    Object obj
)
```

**Parameters**

- **obj**
  
  Type: System.Object
  
  The object to compare with the current object.

**Return Value**

Type: Boolean

true if the specified Object is equal to this instance; otherwise, false.

**Reference**

DynamicSymbol Class [1791]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.21.2.2 DynamicSymbol.GetDynamicMemberNames Method

Returns the enumeration of all dynamic member names.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
6.11.21.2.3 DynamicSymbol.GetHashCode Method

Gets the HashCode of the Address

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#
```
public virtual int GetHashCode()
```

**Return Value**

Type: Int32
A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

**Reference**

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.4 DynamicSymbol.OnReadAnyValue Method

Handler function for reading ADS 'Any' Values.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#
```
protected virtual Object OnReadAnyValue(
    Type managedType)
```
Parameters
managedType

Type: System.Type
Managed type to read.

Return Value

Type: Object
System.Object.

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.5 DynamicSymbol.OnReadRawValue Method

Handler function for reading Raw symbol value.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

protected virtual byte[] OnReadRawValue(
    int timeout
)

Parameters

timeout

Type: System.Int32
The timeout.

Return Value

Type: Byte
System.Byte[].

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.6 DynamicSymbol.OnReadRawValueAsync Method

Handler function reading the raw value of the DynamicSymbol [1791].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
protected virtual Task<ResultReadRawAccess> OnReadRawValueAsync(
    CancellationToken cancel
)
```

**Parameters**

- **cancel**  
  Type: `System.Threading.CancellationToken`  
  The cancellation token.

**Return Value**

Type: `Task<ResultReadRawAccess>`

**Reference**

- DynamicSymbol Class [1791]
- TwinCAT.TypeSystem Namespace [1622]

### 6.11.21.2.7 DynamicSymbol.OnReadValue Method

Handler function for the

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected virtual Object OnReadValue(
    int timeout
)
```

**Parameters**

- **timeout**  
  Type: `System.Int32`  
  The timeout.

**Return Value**

Type: `Object`  
System.Object.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

### 6.11.21.2.8 DynamicSymbol.OnReadValueAsync Method

Handler function reading the DynamicSymbols [1791] value asynchronously.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```
protected virtual Task<ResultReadValueAccess> OnReadValueAsync(
    CancellationToken cancel)
```

**Parameters**

**cancel**

Type: System.Threading.CancellationToken

The cancellation token.

**Return Value**

Type: Task<ResultReadValueAccess> [2566].

An asynchronous task returning the ResultReadValueAccess [2566] as result.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>CannotAccessVirtualSymbolException [1641]</td>
<td></td>
</tr>
</tbody>
</table>

**Reference**

### 6.11.21.2.9 DynamicSymbol.OnSetInstanceName Method

Sets a new InstanceName InstancePath

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```
protected virtual void OnSetInstanceName(
    string instanceName
)
```
Parameters

instanceName  Type: System.String
Instance name.

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.10 DynamicSymbol.OnTryReadValue Method

Handler function for the

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected virtual int OnTryReadValue(
    int timeout,
    out Object value
)

Parameters

timeout  Type: System.Int32
The timeout.

value  Type: System.Object
The value.

Return Value

Type: Int32
The error Code.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>CannotAccessVirtualSymbolException [1641]</td>
<td></td>
</tr>
</tbody>

**Syntax**

**C#**

```csharp
protected virtual int OnTryWriteValue(
    Object value,
    int timeout
)
```

**Parameters**

- **value**
  - Type: System.Object
  - The value.

- **timeout**
  - Type: System.Int32
  - The timeout.

**Return Value**

Type: Int32

**Exceptions**

### 6.11.21.2.12 DynamicSymbol.OnWriteRawValue Method

Handler function for reading symbols raw value.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected virtual void OnWriteRawValue(
    byte[] rawValue,
    int timeout
)
```

**Parameters**

- **rawValue**
  - Type: System.Byte
  - The value as byte array.

- **timeout**
  - Type: System.Int32
  - The timeout.
6.11.21.2.13 DynamicSymbol.OnWriteRawValueAsync Method

Handler function for writing the raw DynamicSymbol value.

**Namespace:** TwinCAT.TypeSystem
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected virtual Task<ResultWriteAccess> OnWriteRawValueAsync(
    byte[] rawValue,
    CancellationToken cancel
)
```

**Parameters**

- `rawValue`: Type: `System.Byte`
  The raw value to write.

- `cancel`: Type: `System.Threading.CancellationToken`
  The cancellation token.

**Return Value**

Type: `Task<ResultWriteAccess>`
An asynchronous task object that represents the 'OnWriteRawValue' operation and returns a `ResultWriteAccess` as result.

**Reference**

DynamicSymbol Class
TwinCAT.TypeSystem Namespace

6.11.21.2.14 DynamicSymbol.OnWriteValue Method

Handler Function for writing value.

**Namespace:** TwinCAT.TypeSystem
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected virtual void OnWriteValue(
    Object value,
    int timeout
)
```
Parameters

value Type: System.Object
The value.

timeout Type: System.Int32
The timeout.

Exceptions

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected virtual Task<ResultWriteAccess> OnWriteValueAsync(
    Object value,
    CancellationToken cancel
)
```

Parameters

value Type: System.Object
The value.

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultWriteAccess> [2575],
Task<WriteValueResult>.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>CannotAccessVirtualSymbolException [1641]</td>

6.11.21.2.16 DynamicSymbol.ReadAnyValue Method

Reads the value of this Value [2254] into a new created instance of the managed type

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Object ReadAnyValue(
    TypemanagedType
)
```

**Parameters**

managedType

- **Type:** System.Type
- The tp.

**Return Value**

- **Type:** Object
- Read value (System.Object).

**Reference**

DynamicSymbol Class [1791]

**Reference**

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]
DynamicSymbol.ReadRawValue Method

Reads the raw value of the `IValueSymbol` (Ads Read / Write)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public byte[] ReadRawValue()
```

**Field Value**

Type: `Byte`
The raw value.

**Return Value**

Type: `Byte`
System.Byte[].

**Implements**

`IValueRawSymbol.ReadRawValue`. 

**Reference**

DynamicSymbol Class

ReadRawValue Overload

TwinCAT.TypeSystem Namespace

DynamicSymbol.ReadRawValue Method (Int32)

Reads the Symbols raw value

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public byte[] ReadRawValue(
    int timeout
)
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>timeout</td>
<td>System.Int32</td>
<td>The timeout in ms.</td>
</tr>
</tbody>
</table>
Field Value
Type: Byte
The raw value in bytes.

Return Value
Type: Byte
System.Byte[].

Implements
IValueRawSymbol.ReadRawValue(Int32) [2250]

Remarks
A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Reference
DynamicSymbol Class [1791]
ReadRawValue Overload [1825]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.18 DynamicSymbol.ReadRawValueAsync Method
Read raw value as an asynchronous operation.

    }
}
DateTimeOffset changedTime = e.DateTime.ToLocalTime(); // Convert to local time

// Val is a during Runtime created struct type and contains
// the same Properties as related PLC object.
int cycleTime = val.CycleTime;

Console.WriteLine("TaskInfo1Value changed TimeStamp: {0}", changedTime.ToString("HH:mm:ss:fff");

Reference

DynamicSymbol Class [1791]

ReadValue Overload [1828]

TwinCAT.TypeSystem Namespace [1622]

DynamicSymbol.ReadValue Method (Int32)

Reads the value of this DynamicSymbol [1791].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

public object ReadValue(int timeout)

Parameters

timeout Type: System.Int32
The timeout in ms.

Field Value

Type: Object
The value.

Return Value

Type: Object
System.Object.

Implements

IValueSymbol.ReadValue(Int32) [2263]

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures
and arrays) it depends on the ISymbolLoader [2200] settings what will happen. In non dynamic modes: the
raw byte Array will be returned, in dynamic mode: A Value will be created on the fly. A negative timeout
indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.
6.11.21.2.20  DynamicSymbol.ReadValueAsync Method

Reads the Value of the IValueSymbol [1254] asynchronously.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public Task<ResultReadValueAccess> ReadValueAsync(
    CancellationToken cancel
)

Parameters

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultReadValueAccess> [2566]
A tasks that represents the asynchronous 'ReadValue' operation. The read result is stored in the ResultReadValueAccess [2566] return value and contains the Value [2570] and the ErrorCode [2559].

Implements

IValueSymbol.ReadValueAsync(CancellationToken) [1264]

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader [2200] settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly.

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.21  DynamicSymbol.ToString Method

Returns a String that represents this instance.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public virtual string ToString()
```

Return Value

Type: `String`
A `String` that represents this instance.

Reference

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

### 6.11.21.22 DynamicSymbol.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the `DynamicObject` class can override this method to specify dynamic behavior for operations such as getting a value for a property.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

C#

```csharp
public virtual bool TryGetMember(
    GetMemberBinder binder,
    out Object result
)
```

#### Parameters

- **binder**
  - Type: `System.Dynamic.GetMemberBinder`
  - Provides information about the object that called the dynamic operation. The `binder.Name` property provides the name of the member on which the dynamic operation is performed. For example, for the `Console.WriteLine(sampleObject.SampleProperty)` statement, where `sampleObject` is an instance of the class derived from the `DynamicObject` class, `binder.Name` returns "SampleProperty". The `binder.IgnoreCase` property specifies whether the member name is case-sensitive.

- **result**
  - Type: `System.Object`
  - The result of the get operation. For example, if the method is called for a property, you can assign the property value to result.

#### Return Value

Type: `Boolean`
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

Reference

DynamicSymbol Class [1791]
6.11.21.2.23 DynamicSymbol.TryReadValue Method

Reads the Value of the IValueSymbol.

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public int TryReadValue(
    int timeout,
    out Object value
)

Parameters

timeout 
Type: System.Int32
The timeout in ms.

value
Type: System.Object
The symbol value.

Return Value

Type: Int32
The error code.

Implements

IValueSymbol.TryReadValue(Int32, Object.)

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Reference

DynamicSymbol Class

TwinCAT.TypeSystem Namespace

6.11.21.2.24 DynamicSymbol.TryWriteValue Method

Writes the specified value to the DynamicSymbol.

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int TryWriteValue(
    Object value,
    int timeout
)
```

Parameters

- **value**
  - Type: `System.Object`
  - The value.

- **timeout**
  - Type: `System.Int32`
  - The timeout in ms.

Return Value

Type: `Int32`
- The error code.

Implements

`IValueSymbol.TryWriteValue(Object, Int32)` [2265]

Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the `ISymbolLoader` [2200] settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Examples

Dynamic Write access

```csharp
namespace Sample

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.25 DynamicSymbol.UpdateAnyValue Method

Reads the value of this Value [2254] into the specified managed value.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public void UpdateAnyValue(
    ref Object valueObject
)
```

**Parameters**

`valueObject`  
Type: `System.Object`  
The managed object.

**Return Value**

Type:  
Read value (System.Object).

DynamicSymbol Class [1791]
TwinCAT.TypeSystem Namespace [1622]

DynamicSymbol.WriteRawValue Method (.Byte.)

Wtites the raw value of the IValueSymbol (Ads Read / Write)

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void WriteRawValue(
    byte[] rawValue
)
```

Parameters

rawValue Type: System.Byte. The value as byte array.

Implements

IValueRawSymbol.WriteRawValue(Byte) [2252]

Reference

DynamicSymbol Class [1791]
WriteRawValue Overload [1839]
TwinCAT.TypeSystem Namespace [1622]

DynamicSymbol.WriteRawValue Method (.Byte., Int32)

Wtites the raw value of the IValueSymbol (Ads Read / Write)
Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void WriteRawValue(
    byte[] rawValue,
    int timeout
)
```

Parameters

- **(rawValue)**
  - Type: **System.Byte**
  - The value as byte array.

- **timeout**
  - Type: **System.Int32**
  - The timeout.

Field Value

Type:
The value.

Implements

Delegate **IValueRawSymbol.WriteRawValue(byte[], Int32)**

Remarks

A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Reference

- **DynamicSymbol Class**
- **WriteRawValue Overload**
- **TwinCAT.TypeSystem Namespace**

**6.11.21.2.28 DynamicSymbol.WriteRawValueAsync Method**

Writes the raw value of the **IValueSymbol** (Ads Read / Write)

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultWriteAccess> WriteRawValueAsync(
    byte[] rawValue,
    CancellationToken cancel
)
```
Parameters

**rawValue**
- Type: `System.Byte`
- The value as byte array.

**cancel**
- Type: `System.Threading.CancellationToken`
- The cancellation token.

Return Value

**Type:** `Task<ResultWriteAccess>`
- A task that represents the asynchronous read operation. The `ResultRead` parameter contains the total number of bytes read into the buffer (`ReadBytes`) and the `ErrorCode` after execution.

Implements

- `IValueRawSymbol.WriteRawValueAsync(Byte, CancellationToken)`

    }
}

Reference

DynamicSymbol Class [1791]
WriteValue Overload [1841]
TwinCAT.TypeSystem Namespace [1622]

DynamicSymbol.WriteValue Method (Object, Int32)

Writes the specified value to the DynamicSymbol [1791].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void WriteValue(
    Object value,
    int timeout
)
```

Parameters

value Type: System.Object
The value.

timeout Type: System.Int32
The timeout in ms.

Implements

IValueSymbol.WriteValue(Object, Int32) [2267]
Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the [SymbolLoader](#2200) settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Examples

Dynamic Write access

```csharp
namespace Sample
{
    using System;
    using System.Diagnostics;
    using System.Threading;
    using TwinCAT;
    using TwinCAT.Ads;
    using TwinCAT.Ads.TypeSystem;
    using TwinCAT.Ads.ValueAccess;
    using TwinCAT.TypeSystem;
    using TwinCAT.TypeSystem.Generic;
    using TwinCAT.ValueAccess;

    class SymbolBrowserProgramV2DynamicTree
    {
        #region CODE_SAMPLE_SIMPLEDYNAMIC
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            // Get the AdsAddress from command-line arguments
            AmsAddress address = ArgParser.Parse(args);

            CancellationTokenSource cancelSource = new CancellationTokenSource();
            CancellationToken cancel = cancelSource.Token;

            using (AdsClient client = new AdsClient())
            {
                // Connect to the target device
                client.Connect(address);

                // Usage of "dynamic" Type and Symbols (>= .NET4 only)
                SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.DynamicTree);
                IAdsSymbolLoader dynLoader = (IAdsSymbolLoader)SymbolLoaderFactory.Create(client, settings);

                // Set the Default setting for Notifications
                dynLoader.DefaultNotificationSettings = new NotificationSettings(AdsTransModeOnChange, 200, 2000);

                // Get the Symbols (Dynamic Symbols)
                var resultSymbols = await ((IDynamicSymbolLoader)dynLoader).GetDynamicSymbolsAsync(cancel);

                dynamic dynamicSymbols = resultSymbols.Symbols;
                dynamic adsPort = dynamicSymbols.TwinCAT_SystemInfoVarList._AppInfo.AdsPort;

                #endregion

                // Access Main Symbol with Dynamic Language Runtime support (DLR)
                // Dynamically created property "Main"
                //dynamic symMain = dynamicSymbols.Main;

                // Main is an 'VirtualSymbol' / Organizational unit that doesn't have a value
                // Calling ReadValue is not allowed
                //bool test = symMain.HasValue;

                // With calling ReadValueAsync() a 'snapshot' of the Symbols Instance is taken (reading async)
            }
        }
    }
}
```

```csharp
TwinCAT.Ads Namespaces

DynamicSymbol Class [1791]
WriteValue Overload [1841]
TwinCAT.TypeSystem Namespace [1622]

6.11.21.2.30 DynamicSymbol.WriteValueAsync Method

Writes the Value of the IValueSymbol [2254]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#

public Task<ResultWriteAccess> WriteValueAsync(
    Object value,
    CancellationToken cancel
)

Parameters
value
    Type: System.Object
    The value.

cancel
    Type: System.Threading.CancellationToken
    The cancellation token.

Return Value
Type: Task<ResultWriteAccess> [2575]
A tasks that represents the asynchronous ‘ReadValue’ operation. The read result is stored in the
ResultWriteAccess [2575] return value and contains the ErrorCode [2559].

Implements
IValueSymbol.WriteValueAsync(Object, CancellationToken) [2268]
Remarks
Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the ISymbolLoader settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also.

DynamicSymbolsCollection Class [1853]
TwinCAT.TypeSystem Namespace [1622]

### 6.11.22.3.3 DynamicSymbolsCollection.GetEnumerator Method

Gets the enumerator.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdc3a3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public IEnumerator<ISymbol> GetEnumerator()
```

**Return Value**

Type: `IEnumerator<ISymbol>`
A `IEnumerator<T>` that can be used to iterate through the collection.

**Implements**

`IEnumerator<T>.GetEnumerator`.

**Reference**

DynamicSymbolsCollection Class [1853]
TwinCAT.TypeSystem Namespace [1622]

### 6.11.22.3.4 DynamicSymbolsCollection.TryGetInstance Method

Tries to get the `IInstance` of the specified path.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdc3a3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool TryGetInstance(
    string instanceSpecifier,
    out ISymbol symbol
)
```

Parameters

instanceSpecifier  Type: System.String
The instance path or Instance Name (dependent of Mode [2468] setting)
symbol  Type: TwinCAT.TypeSystem.ISymbol [2176].
The symbol.

Return Value

Type: Boolean
true if the Instance [2052] is found; otherwise, false

Exceptions

Reference

DynamicSymbolsCollection Class [1853]
TwinCAT.TypeSystem Namespace [1622]

6.11.22.3.5  DynamicSymbolsCollection.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual bool TryGetMember(
    GetMemberBinder binder,
    out Object result
)
```
Parameters

binder
Type: System.Dynamic.GetMemberBinder
Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the Console.WriteLine(sampleObject.SampleProperty) statement, where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

result
Type: System.Object
The result of the get operation. For example, if the method is called for a property, you can assign the property value to result.

Return Value
Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

6.11.23 DynamicUnionInstance Class
Dynamic union instance

Inheritance Hierarchy
System.Dynamic.DynamicObject
TwinCAT.TypeSystem.DynamicSymbol [1791]
TwinCAT.TypeSystem.DynamicUnionInstance
Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#

```csharp
public sealed class DynamicUnionInstance : DynamicSymbol,
    IUnionInstance, ISymbol, IAttributedInstance, IInstance, IBitSize
```

The DynamicUnionInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>_InnerSymbol</td>
<td>Gets the inner symbol of this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>AccessRights</td>
<td>Gets the access rights. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType [1800] in bits. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the category. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the IInstance [2052] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection bound to this DynamicSymbol [1791] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType [1806] of the IInstance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>FieldInstances</td>
<td>Gets the member instances of the Struct Instance [2158].</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is acontainer type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this instance is static. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NormalizedName</td>
<td>Gets the normalized instance name (fixed name for dynamic property access that doesn't contain invalid characters), (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>NotificationSettings</td>
<td>Gets the notification settings. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>
### Name

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Size [1811]</td>
<td>Gets the size of the Instance [2052] in bytes. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>SubSymbols [1812]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>TypeName [1812]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from DynamicSymbol [1791].)</td>
</tr>
<tr>
<td>ValueEncoding [1813]</td>
<td>Gets the value encoding. (Inherited from DynamicSymbol [1791].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [1816]</td>
<td>Equals (Inherited from DynamicSymbol [1791].)</td>

</tr>
</tbody>
</table>

### Reference

**DynamicUnionInstance Class [1860]**

**TwinCAT.TypeSystem Namespace [1622]**

#### 6.11.23.2.1 DynamicUnionInstance.GetDynamicMemberNames Method

Returns the enumeration of all dynamic member names.

**Namespace**: TwinCAT.TypeSystem [1622]

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public override IEnumerable<string> GetDynamicMemberNames()
```

**Return Value**

Type: `IEnumerable<String>`

A sequence that contains dynamic member names.

**Reference**

**DynamicUnionInstance Class [1860]**

**TwinCAT.TypeSystem Namespace [1622]**

#### 6.11.23.2.2 DynamicUnionInstance.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the `DynamicObject` class can override this method to specify dynamic behavior for operations such as getting a value for a property.

**Namespace**: TwinCAT.TypeSystem [1622]

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public override bool TryGetMember(
    GetMemberBinder binder,
    out Object result
)
```
**Parameters**

**binder**

| Type: System.Dynamic.GetMemberBinder |
| Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the Console.WriteLine(sampleObject.SampleProperty) statement, where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive. |

**result**

| Type: System.Object |
| The result of the get operation. For example, if the method is called for a property, you can assign the property value to result. |

**Return Value**

| Type: Boolean |
| true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.) |

**Reference**

DynamicUnionInstance Class [1860]

TwinCAT.TypeSystem Namespace [1622]

---

**6.11.23.2.3 DynamicUnionInstance.TrySetMember Method**

Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public virtual bool TrySetMember(
    SetMemberBinder binder,
    Object value
)
```

**Parameters**

**binder**

| Type: System.Dynamic.SetMemberBinder |
| Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member to which the value is being assigned. For example, for the statement sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive. |

**value**

| Type: System.Object |
| The value to set to the member. For example, for sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, the value is "Test". |
Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

    TwinCAT.TypeSystem.DynamicReferenceValue [› 1747]

Namespace: TwinCAT.TypeSystem [› 1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public class DynamicValue : DynamicObject,
IDynamicValue, IDynamicMetaObjectProvider, IValue, IStructValue, IArrayValue
```

The DynamicValue type exposes the following members.
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age</td>
<td>Gets the age of the value (last successful read of the value)</td>
</tr>
<tr>
<td>CachedRaw</td>
<td>Gets the cached Raw internal Data.</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the data type bound to this IValue.</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this IValue is a primitive value.</td>
</tr>
<tr>
<td>ResolvedType</td>
<td>Gets the resolved type.</td>
</tr>
<tr>
<td>Symbol</td>
<td>Gets the symbol that is bound to this value.</td>
</tr>
<tr>
<td>TimeStamp</td>
<td>Gets the Time stamp of the last successful read of the Value.</td>
</tr>
<tr>
<td>UpdateMode</td>
<td>Gets / Sets the update mode</td>
</tr>
<tr>
<td>ValueFactory</td>
<td>The value factory</td>
</tr>
</tbody>
</table>

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetDynamicMemberNames</td>
<td>Returns the enumeration of all dynamic member names.</td>
</tr>
<tr>
<td>Read</td>
<td>Reads the value (via ADS)</td>
</tr>
<tr>
<td>ReadAsync</td>
<td>read as an asynchronous operation.</td>
</tr>
<tr>
<td>ReadMember</td>
<td>Reads the specified member element.</td>
</tr>
<tr>
<td>ResolveValue</td>
<td>Resolves the Value object to its primitive value.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance.</td>
</tr>
<tr>
<td>TryConvert</td>
<td>Provides implementation for type conversion operations. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that convert an object from one type to another.</td>
</tr>
<tr>
<td>TryGetArrayElementValues</td>
<td>Returns Array Element values.</td>
</tr>
<tr>
<td>TryGetIndex</td>
<td>Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.</td>
</tr>
<tr>
<td>TryGetIndexValue</td>
<td>Reads the specified array element.</td>
</tr>
<tr>
<td>TryGetIndexValueнт32, Object</td>
<td>Tries the get index value.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>TryGetMember</td>
<td>Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property.</td>
</tr>
<tr>
<td>TryGetMemberValue</td>
<td>Tries the get member value.</td>
</tr>
<tr>
<td>TryInvoke</td>
<td>Provides the implementation for operations that invoke an object. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as invoking an object or a delegate.</td>
</tr>
<tr>
<td>TryInvokeMember</td>
<td>Provides the implementation for operations that invoke a member. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as calling a method.</td>
</tr>
<tr>
<td>TryResolveValue</td>
<td>Tries to resolves the Value object to its primitive value.</td>
</tr>
<tr>
<td>TrySetIndex</td>
<td>Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.</td>
</tr>
<tr>
<td>TrySetIndexValue</td>
<td>Tries to set the indexed value on Arrays</td>
</tr>
<tr>
<td>TrySetMember</td>
<td>Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property.</td>
</tr>
<tr>
<td>TrySetMemberValue</td>
<td>Tries to Set a Member/Property Value</td>
</tr>
<tr>
<td>Write</td>
<td>Writes the value (via ADS)</td>
</tr>
<tr>
<td>WriteAsync</td>
<td>Write as an asynchronous operation.</td>
</tr>
<tr>
<td>WriteMember</td>
<td>Writes the specified member element.</td>
</tr>
</tbody>
</table>

**Remarks**

The DynamicValue adds dynamic run time behaviour to the IValue[Value][IValue]. That means e.g. for struct values that .NET Properties are on-the-fly defined and dispatched at runtime just like defined in the structs structs data type definition. Another example is the access of Array Element values through indexes.

**Examples**

Sample for the dynamic resolution of Symbols and reading values:

**Dynamic Symbol access**

```csharp
/// <summary>
/// Defines the entry point of the application.
/// </summary>
static async void Main(string[] args)
{
    // Get the AdsAddress from command-line arguments
    AmsAddress address = ArgParser.Parse(args);
    CancellationTokenSource cancelSource = new CancellationTokenSource();
    CancellationToken cancel = cancelSource.Token;
    using (AdsClient client = new AdsClient())
```
{  
    // Connect to the target device
    client.Connect(address);

    // Usage of "dynamic" Type and Symbols (>= .NET4 only)
    SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.DynamicTree);
    IAdsSymbolLoader dynLoader = (IAdsSymbolLoader)SymbolLoaderFactory.Create(client, settings);
}

Reference
DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]

6.11.24.1.1 DynamicValue.Age Property
Gets the age of the value (last successful read of the value)

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public TimeSpan Age { get; }
```

Property Value

Type: `TimeSpan`
The age.

Implements

`IValue.Age` [2228]

Exceptions

6.11.24.1.2 DynamicValue.CachedRaw Property

Gets the cached Raw internal Data.

**Namespace:** `TwinCAT.TypeSystem` [1622]

**Assembly:** `TwinCAT.Ads` (in `TwinCAT.Ads.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public byte[] CachedRaw { get; }
```

Property Value

Type: `byte[]`
The raw cached data.

Implements

`IValue.CachedRaw` [2228]

Reference

`DynamicValue Class` [1869]

`TwinCAT.TypeSystem Namespace` [1622]
6.11.24.1.3 DynamicValue.DataType Property

Gets the data type bound to this [Value][2226]

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IDataType DataType { get; }
```

**Property Value**

Type: IDataType [1986]
The type of the data.

**Implements**

[Value.DataType][2228]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

DynamicValue Class [1869]

TwinCAT.TypeSystem Namespace [1622]

6.11.24.1.4 DynamicValue.IsPrimitive Property

Gets a value indicating whether this [Value][2226] is a primitive value.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsPrimitive { get; }
```

**Property Value**

Type: Boolean
true if this instance is primitive; otherwise, false.
6.11.24.1.5 DynamicValue.ResolvedType Property

Gets the resolved type.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
protected IDataType ResolvedType { get; }  

Property Value

Type: IDataType
Resolved type.

Reference

DynamicValue Class
TwinCAT.TypeSystem Namespace

6.11.24.1.6 DynamicValue.Symbol Property

Gets the symbol that is bound to this value.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
public ISymbol Symbol { get; }  

Property Value

Type: ISymbol
The symbol.

Reference

DynamicValue Class
TwinCAT.TypeSystem Namespace

Implements

IValue.IsPrimitive [2229]
6.11.24.1.7 DynamicValue.TimeStamp Property

Gets the Time stamp of the last successful read of the Value.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public DateTimeOffset TimeStamp { get; }

Property Value

Type: DateTimeOffset
The read time stamp.

Implements

IValue.TimeStamp

Reference

DynamicValue Class
TwinCAT.TypeSystem Namespace

6.11.24.1.8 DynamicValue.UpdateMode Property

Gets / Sets the update mode

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public ValueUpdateMode UpdateMode { get; set; }

Property Value

Type: ValueUpdateMode
The update mode.

Implements

IValue.UpdateMode
Remarks

The default value is initialized by the creating Value Factory.

<table>
<thead>

DynamicValue Class [1869]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.24.2.1 DynamicValue.GetDynamicMemberNames Method

Returns the enumeration of all dynamic member names.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll)  
**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public virtual IEnumerable<string> GetDynamicMemberNames()
```

**Return Value**

Type: `IEnumerable<String>`  
A sequence that contains dynamic member names.

**Reference**

DynamicValue Class [1869]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.24.2.2 DynamicValue.Read Method

Reads the value (via ADS)

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll)  
**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Read()
```

**Implements**

`IValue.Read` [2231]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>SymbolException</td>
<td>[2401]</td>
</tr>
</tbody>
</table>
6.11.24.2.3 DynamicValue.ReadAsync Method

read as an asynchronous operation.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAccess> ReadAsync(
    CancellationToken cancel
)
```

Parameters

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultAccess>
Task<ReadValueResult>.

Implements

IValue.ReadAsync(CancellationToken)

Reference

DynamicValue Class
TwinCAT.TypeSystem Namespace

6.11.24.2.4 DynamicValue.ReadMember Method

Reads the specified member element.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected virtual Object ReadMember(
    ISymbol memberInstance
)
```
Parameters
memberInstance  Type: TwinCAT.TypeSystem.ISymbol
The member instance.

Return Value
Type: Object

Reference
DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]

6.11.24.2.5 DynamicValue.ResolveValue Method
Resolves the Value object to its primitive value.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax
C#
public Object ResolveValue(
    bool resolveEnumToPrimitive
)

Parameters
resolveEnumToPrimitive  Type: System.Boolean
if set to true, EnumValue [2028]s are resolved to their primitives also.

Return Value
Type: Object
System.Object.

Implements
IValue.ResolveValue(Boolean) [2232]

Remarks
If the value is not primitive, this method returns the IValue [2226] itself.

Reference
DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]
6.11.24.2.6 **DynamicValue.ToString Method**

Returns a `String` that represents this instance.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public virtual string ToString()
```

**Return Value**

Type: `String`

A `String` that represents this instance.

**Reference**

DynamicValue Class

TwinCAT.TypeSystem Namespace

6.11.24.2.7 **DynamicValue.TryConvert Method**

Provides implementation for type conversion operations. Classes derived from the `DynamicObject` class can override this method to specify dynamic behavior for operations that convert an object from one type to another.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public virtual bool TryConvert(
    ConvertBinder binder,
    out Object result
)
```

**Parameters**

- **binder**
  Type: `System.Dynamic.ConvertBinder`
  Provides information about the conversion operation. The binder.Type property provides the type to which the object must be converted. For example, for the statement `(String)sampleObject` in C# (CType(sampleObject, Type) in Visual Basic), where `sampleObject` is an instance of the class derived from the `DynamicObject` class, binder.Type returns the `String` type. The binder.Explicit property provides information about the kind of conversion that occurs. It returns true for explicit conversion and false for implicit conversion.

- **result**
  Type: `System.Object`
  The result of the type conversion operation.
Return Value

Type: Boolean
ture if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

Reference

DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]

6.11.24.2.8 DynamicValue.TryGetArrayElementValues Method

Returns Array Element values.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool TryGetArrayElementValues(
    out IEnumerable<Object> elementValues
)
```

Parameters

- elementValues
  Type: System.Collections.Generic.IEnumerable<Object>
The element values.

Return Value

Type: Boolean
true if XXXX, false otherwise.

Implements

IArrayValue.TryGetArrayElementValues(IEnumerable.Object..) [1978]

Reference

DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]

6.11.24.2.9 DynamicValue.TryGetIndex Method

Provides the implementation for operations that get a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for indexing operations.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C# public virtual bool TryGetIndex(
    GetIndexBinder binder,
    Object[] indexes,
    out Object result
)

Parameters

binder Type: System.Dynamic.GetIndexBinder
Provides information about the operation.

indexes Type: System.Object
The indexes that are used in the operation. For example, for the sampleObject[3] operation in C# (sampleObject(3) in Visual Basic), where sampleObject is derived from the DynamicObject class, indexes[0] is equal to 3.

result Type: System.Object
The result of the index operation.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

Reads the specified array element.
## TwinCAT.Ads Namespaces

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public bool TryGetIndexValue(
    int[] indices,
    out Object value
)
```

### Parameters

- **indices**
  - Type: `System.Int32`
  - The indices.

- **value**
  - Type: `System.Object`
  - The value.

### Return Value

- Type: `Boolean`
- `System.Object`

### Implements

- `IArrayValue.TryGetIndexValue(Int32, Object)`

### Reference

- **DynamicValue Class**

TwinCAT.TypeSystem Namespace [1622]

6.11.24.2.11 DynamicValue.TryGetMember Method

Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public virtual bool TryGetMember(
    GetMemberBinder binder,
    out Object result
)

Parameters

binder

Type: System Dynamic GetMemberBinder
Provides information about the object that called the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the Console.WriteLine(sampleObject.SampleProperty) statement, where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleProperty". The binder.IgnoreCase property specifies whether the member name is case-sensitive.

result

Type: System Object.
The result of the get operation. For example, if the method is called for a property, you can assign the property value to result.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a run-time exception is thrown.)

Reference

DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]
6.11.24.2.12 DynamicValue.TryGetMemberValue Method

Tries the get member value.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public virtual bool TryGetMemberValue(
    string name,
    out Object result
)
```

**Parameters**

- **name**
  - Type: System.String
  - The name.

- **result**
  - Type: System.Object
  - The result.

**Return Value**

Type: Boolean
true if XXXX, false otherwise.

**Implements**

IStructValue.TryGetMemberValue(String, Object.)

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>

6.11.24.2.13 DynamicValue.TryInvoke Method

Provides the implementation for operations that invoke an object. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as invoking an object or a delegate.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public virtual bool TryInvoke(
    InvokeBinder binder,
    Object[] args,
    out Object result
)
```

Parameters

binder Type: System.Dynamic.InvokeBinder
Provides information about the invoke operation.

args Type: System.Object
The arguments that are passed to the object during the invoke operation. For example, for the sampleObject(100) operation, where sampleObject is derived from the DynamicObject class, args is equal to 100.

result Type: System.Object
The result of the object invocation.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.

Reference

DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]

6.11.24.14 DynamicValue.TryInvokeMember Method

Provides the implementation for operations that invoke a member. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as calling a method.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual bool TryInvokeMember(
    InvokeMemberBinder binder,
    Object[] args,
    out Object result
)
```

Parameters

binder Type: System.Dynamic.InvokeMemberBinder
Provides information about the dynamic operation. The binder.Name property provides the name of the member on which the dynamic operation is performed. For example, for the statement sampleObject.SampleMethod(100), where sampleObject is an instance of the class derived from the DynamicObject class, binder.Name returns "SampleMethod". The binder.IgnoreCase property specifies whether the member name is case-sensitive.
args

Type: System.Object.
The arguments that are passed to the object member during the invoke operation. For example, for the statement sampleObject.SampleMethod(100), where sampleObject is derived from the DynamicObject class, args[0] is equal to 100.

result

Type: System.Object.
The result of the member invocation.

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

Reference

DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]

6.11.24.2.15 DynamicValue.TryResolveValue Method

Tries to resolves the Value object to its primitive value.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool TryResolveValue(
    bool resolveEnumToPrimitive,
    out Object value
)

Parameters

resolveEnumToPrimitive

Type: System.Boolean
if set to true IEnumValue [2028]s are resolved to their primitives also.

value

Type: System.Object.
The value.

Return Value

Type: Boolean
true if value can be resolved, false otherwise.

Implements

IValue.TryResolveValue(Boolean, Object.) [2232]

Reference

DynamicValue Class [1869]
TwinCAT.TypeSystem Namespace [1622]
6.11.24.2.16 DynamicValue.TrySetIndex Method

Provides the implementation for operations that set a value by index. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations that access objects by a specified index.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public virtual bool TrySetIndex(
    SetIndexBinder binder,
    Object[] indexes,
    Object value
)
```

### Parameters

- **binder**
  - Type: `System.Dynamic.SetIndexBinder`
  - Provides information about the operation.

- **indexes**
  - Type: `System.Object`
  - The indexes that are used in the operation. For example, for the `sampleObject[3] = 10` operation in C# (sampleObject(3) = 10 in Visual Basic), where `sampleObject` is derived from the `DynamicObject` class, `indexes[0]` is equal to 3.

- **value**
  - Type: `System.Object`
  - The value to set to the object that has the specified index. For example, for the `sampleObject[3] = 10` operation in C# (sampleObject(3) = 10 in Visual Basic), where `sampleObject` is derived from the `DynamicObject` class, `value` is equal to 10.

### Return Value

- Type: `Boolean`
  - true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.

### Reference

- DynamicValue Class
- TwinCAT.TypeSystem Namespace

6.11.24.2.17 DynamicValue.TrySetIndexValue Method

Tries to set the indexed value on Arrays

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### Syntax

**C#**

```csharp
public bool TrySetIndexValue(
    Object[] indexes,
    Object value
)
```

#### Parameters

- **indexes**
  - Type: `System.Object`
  - The indexes.

- **value**
  - Type: `System.Object`
  - The value.

#### Return Value

Type: `Boolean`

true if succeeded, false otherwise.

#### Implements

`IArrayValue.TrySetIndexValue(Object, Object)`

#### Reference

- **TwinCAT.TypeSystem Namespace**

`DynamicValue.TrySetMember Method`

Provides the implementation for operations that set member values. Classes derived from the `DynamicObject` class can override this method to specify dynamic behavior for operations such as setting a value for a property.

**Namespace:** `TwinCAT.TypeSystem`

**Assembly:** `TwinCAT.Ads` (in `TwinCAT.Ads.dll` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14)

### Syntax

**C#**

```csharp
public virtual bool TrySetMember(
    SetMemberBinder binder,
    Object value
)
```

#### Parameters

- **binder**
  - Type: `System.Dynamic.SetMemberBinder`
  - Provides information about the object that called the dynamic operation. The `binder.Name` property provides the name of the member to which the value is being assigned. For example, for the statement `sampleObject.SampleProperty = "Test"`, where `sampleObject` is an instance of the class derived from the `DynamicObject` class, `binder.Name` returns "SampleProperty". The `binder.IgnoreCase` property specifies whether the member name is case-sensitive.
value

Type: System.Object
The value to set to the member. For example, for sampleObject.SampleProperty = "Test", where sampleObject is an instance of the class derived from the DynamicObject class, the value is "Test".

Return Value

Type: Boolean
true if the operation is successful; otherwise, false. If this method returns false, the run-time binder of the language determines the behavior. (In most cases, a language-specific run-time exception is thrown.)

Reference

Syntax

C#

public bool TrySetMemberValue(
    string name,
    Object value
)

Parameters

name

Type: System.String
The name of the member

value

Type: System.Object
The value.

Return Value

Type: Boolean
true if succeeded, otherwise false otherwise.

Implements

IStructValue.TrySetMemberValue(String, Object) [2170]

Reference

DynamicValue Class [1869]

**Syntax**

C#  
```csharp
public Task<ResultWriteAccess> WriteAsync(
    CancellationToken cancel
)
```

**Parameters**

| cancel | Type: System.Threading.CancellationToken  

The cancellation token.

**Return Value**

Type: Task<ResultWriteAccess> [2575],  
Task<WriteValueResult>.

**Implements**

IValue.WriteAsync(CancellationToken) [2233]
6.11.24.2.22 DynamicValue.WriteMember Method

Writes the specified member element.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected virtual void WriteMember(
    ISymbol memberInstance,
    Object value
)

Parameters

memberInstance Type: TwinCAT.TypeSystem.ISymbol
The member instance.

value Type: System.Object
The value.

<td>Gets the access rights. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the Symbol Attributes (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <a href="#">IDataType</a> in bits. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the category. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <a href="#">Instance</a> (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection bound to this DynamicSymbol (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <a href="#">IDataType</a> of the <a href="#">Instance</a>. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>HasRpcMethods</td>
<td>Gets a value indicating whether this instance has RPC methods (Inherited from DynamicStructInstance)</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this instance has value (only the non VirtualInstances, what means the Symbols with locations). (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this <a href="#">ISymbol</a> is persistent. (Inherited from DynamicSymbol)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the <a href="#">Instance</a> represents a Pointer type (Pointer TO) (Inherited from DynamicSymbol)</td>
</tr>

</table>
## TwinCAT.Ads Namespaces

### Name | Description
--- | ---
MemberInstances | Gets the member instances of the `Struct Instance` | (Inherited from `DynamicStructInstance`)
NormalizedName | Gets the normalized instance name (fixed name for dynamic property access that does't contain invalid characters), (Inherited from `DynamicSymbol`)
NotificationSettings | Gets the notification settings. (Inherited from `DynamicSymbol`)
Parent | Gets the parent Symbol (Inherited from `DynamicSymbol`)
Size | Gets the size of the `IInstance` in bytes. (Inherited from `DynamicSymbol`)
SubSymbols | Gets the SubSymbols of the `ISymbol` (Inherited from `DynamicSymbol`)
TypeName | Gets the name of the `DataType` that is used for this `IInstance`. (Inherited from `DynamicSymbol`)
ValueEncoding | Gets the value encoding. (Inherited from `DynamicSymbol`)

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddMember</td>
<td>Adds an member instance.</td>
</tr>
<tr>
<td>Equals</td>
<td>Equals (Inherited from <code>DynamicSymbol</code>).</td>
</tr>
<tr>
<td>GetDynamicMembers</td>
<td>Returns the enumeration of all dynamic member names. (Inherited from <code>DynamicStructInstance</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Inherited from <code>DynamicSymbol</code>).</td>
</tr>
<tr>
<td>ReadAnyValue</td>
<td>Reads the value of this <code>Value</code> into a new created instance of the managed type (Inherited from <code>DynamicSymbol</code>).</td>
</tr>
<tr>
<td>ReadRawValue</td>
<td>Reads the raw value of the <code>IValueSymbol</code> (Ads Read / Write) (Inherited from <code>DynamicSymbol</code>).</td>
</tr>
<tr>
<td>ReadRawValueAsync</td>
<td>Reads the Symbols raw value (Inherited from <code>DynamicSymbol</code>).</td>
</tr>
<tr>
<td>ReadValue</td>
<td>Read raw value as an asynchronous operation. (Inherited from <code>DynamicSymbol</code>).</td>
</tr>
<tr>
<td>ReadValueAsync</td>
<td>Reads the Value of the <code>IValueSymbol</code> asynchronously. (Inherited from <code>DynamicSymbol</code>).</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a <code>String</code> that represents this instance. (Inherited from <code>DynamicSymbol</code>.)</td>
</tr>
</tbody>
</table>
TryGetMember

Provides the implementation for operations that get member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as getting a value for a property. (Inherited from DynamicStructInstance.)

TryReadValue

Reads the Value of the IValueSymbol (Inherited from DynamicSymbol.)

TrySetMember

Provides the implementation for operations that set member values. Classes derived from the DynamicObject class can override this method to specify dynamic behavior for operations such as setting a value for a property. (Inherited from DynamicStructInstance.)

TryWriteValue

Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)

UpdateAnyValue

Reads the value of this Value into the specified managed value. (Inherited from DynamicSymbol.)

WriteAnyValue

Writes the value represented by the managed value to this Value (Inherited from DynamicSymbol.)

WriteRawValue(Byte).

Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)

WriteRawValue(Byte., Int32).

Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)

WriteRawValueAsync

Writes the raw value of the IValueSymbol (Ads Read / Write) (Inherited from DynamicSymbol.)

WriteValue(Object)

Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)

WriteValue(Object, Int32)

Writes the specified value to the DynamicSymbol. (Inherited from DynamicSymbol.)

WriteValueAsync

Writes the Value of the IValueSymbol (Inherited from DynamicSymbol.)

Events

RawValueChanged

Occurs when the RawValue of the IValueSymbol has changed. (Inherited from DynamicSymbol.)

ValueChanged

Occurs when the (Primitive) value of the IValueSymbol has changed. (Inherited from DynamicSymbol.)

Reference

DynamicVirtualStructInstance Class [1894]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.25.2.1 DynamicVirtualStructInstance.AddMember Method

Adds an member instance.
TwinCAT.Ads Namespaces

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool AddMember(
    ISymbol memberInstance,
    IVirtualStructInstance parent
)
```

Parameters

- **memberInstance**
  
  Type: TwinCAT.TypeSystem.ISymbol
  
  The member instance.

- **parent**
  
  Type: TwinCAT.TypeSystem.IVirtualStructInstance
  
  The parent struct instance. Usually the this pointer.

Return Value

Type: **Boolean**

Implements

IVirtualStructInstance.AddMember(ISymbol, IVirtualStructInstance)

Reference

DynamicVirtualStructInstance Class

### 6.11.25.3 DynamicVirtualStructInstance Events

The DynamicVirtualStructInstance type exposes the following members.

#### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RawValueChanged</td>
<td>Occurs when the RawValue of the IValueSymbol has changed. (Inherited from DynamicSymbol.)</td>
</tr>
<tr>
<td>ValueChanged</td>
<td>Occurs when the (Primitive) value of the IValueSymbol has changed. (Inherited from DynamicSymbol.)</td>
</tr>
</tbody>
</table>

Reference

DynamicVirtualStructInstance Class

TwinCAT.TypeSystem Namespace

### 6.11.26 EnumValue.T Class

Enum Value
**Inheritance Hierarchy**

```
System.Object
  TwinCAT.TypeSystem.EnumValue.T.
```

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public class EnumValue<T> : IEnumValue
where T : IConvertible
```

**Type Parameters**

- **T**
  
  Enum base type (byte,sbyte,short,ushort,int,uint,long or ulong)

The `EnumValue<T>` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedBaseType</td>
<td>Gets the enumeration base type (sint,byte,short,ushort,int,uint,Int64,UInt64 supported)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Enum Value</td>
</tr>
<tr>
<td>Primitive</td>
<td>Gets the value.</td>
</tr>
<tr>
<td>RawValue</td>
<td>Gets the raw value of the enumeration (as byte array)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the Enum value (in bytes)</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse</td>
<td>Parse Enum Type string</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a String that represents this instance. (Overrides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse</td>
<td>Parse EnumType string</td>
</tr>
</tbody>
</table>
6.11.26.1   EnumValue.T. Properties

The EnumValue.T. [1901] generic type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedBaseType</td>
<td>Gets the enumeration base type (sint, byte, short, ushort, int, uint, Int64, UInt64 supported)</td>
</tr>
<tr>
<td>Name [1904]</td>
<td>Gets the name of the Enum Value</td>
</tr>
<tr>
<td>Primitive [1904]</td>
<td>Gets the value.</td>
</tr>
<tr>
<td>RawValue [1904]</td>
<td>Gets the raw value of the enumeration (as byte array)</td>
</tr>
<tr>
<td>Size [1905]</td>
<td>Gets the size of the Enum value (in bytes)</td>
</tr>
</tbody>
</table>

Reference

EnumValue.T..Class [1901]
TwinCAT.TypeSystem Namespace [1622]

6.11.26.1.1 EnumValue.T..ManagedBaseType Property

Gets the enumeration base type (sint, byte, short, ushort, int, uint, Int64, UInt64 supported)

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public Type ManagedBaseType { get; }

Property Value

Type: Type
The type of the base.

Implements

IEnumValue.ManagedBaseType [2029]

Reference

EnumValue.T..Class [1901]
TwinCAT.TypeSystem Namespace [1622]
6.11.26.1.2 EnumValue.T..Name Property

Gets the name of the Enum Value

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public string Name { get; }
```

**Property Value**

Type: `String`
The name.

**Implements**

[EnumValue.Name [2029]]

**Reference**

EnumValue.T. Class [1901]

6.11.26.1.3 EnumValue.T..Primitive Property

Gets the value.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public T Primitive { get; }
```

**Property Value**

Type: `T` [1901]
The value.

**Reference**

EnumValue.T. Class [1901]
TwinCAT.TypeSystem Namespace [1622]

6.11.26.1.4 EnumValue.T..RawValue Property

Gets the raw value of the enumeration (as byte array)
### EnumValue.T..RawValue Property

**Type:** Byte

The raw value.

**Implements**

IEnumValue.RawValue

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotSupportedException</td>
<td>Base type of enum is not allowed!</td>
</tr>
</tbody>
</table>

### EnumValue.T..Size Property

**Gets the size of the Enum value (in bytes)**

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int Size { get; }
```

**Property Value**

Type: Int32

The size.

**Implements**

IEnumValue.Size

**Reference**

EnumValue.T. Class
TwinCAT.TypeSystem Namespace [1622]

6.11.26.2 EnumValue.T. Methods

The EnumValue.T. [1901] generic type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>

<td>Parse EnumType string</td>
</tr>
</tbody>
</table>

Reference

EnumValue.T. Class [1901]

TwinCAT.TypeSystem Namespace [1622]

6.11.26.2.1 EnumValue.T..Parse Method

Parse Enum Type string

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static EnumValue<T> Parse(
    IEnumType<T> type,
    string str
)
```

Parameters

| type | Type: TwinCAT.TypeSystem.IEnumType [2021], T [1901]. The type. |
| str  | Type: System.String The string. |
### Return Value

Type: `EnumValue<T>`.

### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>FormatException</td>
<td></td>
</tr>
</tbody>
</table>

### Reference

- `EnumValue<T>` Class [1901]

#### 6.11.26.2.2 EnumValue<T>.ToString Method

Returns a `String` that represents this instance.

**Namespace:** `TwinCAT.TypeSystem` [1622]  
**Assembly:** `TwinCAT.Ads` (in `TwinCAT.Ads.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public override string ToString()
```

### Return Value

Type: `String`

A `String` that represents this instance.

### Reference

- `EnumValue<T>` Class [1901]
- `TwinCAT.TypeSystem` Namespace [1622]

#### 6.11.26.2.3 EnumValue<T>.TryParse Method

Parse EnumType string

**Namespace:** `TwinCAT.TypeSystem` [1622]  
**Assembly:** `TwinCAT.Ads` (in `TwinCAT.Ads.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static bool TryParse(
    IEnumType<T> type,
    string str,
    out EnumValue<T> value
)
```
**Parameters**

- **type**
  - Type: TwinCAT.TypeSystem.IEnumType.2021.T.1901
  - The type.

- **str**
  - Type: System.String
  - The string.

- **value**
  - Type: TwinCAT.TypeSystem.EnumValue.1901.T.1901
  - The value.

**Return Value**

- Type: Boolean
  - true if XXXX, false otherwise.

**Reference**

- EnumValue.T.Class.1901
- TwinCAT.TypeSystem Namespace.1622

**6.11.27 EnumValueCollection Class**

Class EnumValueCollection.

**Inheritance Hierarchy**

- System.Object
- TwinCAT.TypeSystem.EnumValueCollection

**Namespace:** TwinCAT.TypeSystem.1622

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0-Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public class EnumValueCollection : IList<IEnumValue>, ICollection<IEnumValue>, IEnumerable<IEnumValue>, IEnumerable, IEnumValueCollection, IEnumValueCollection<IEnumValue, IConvertible>
```

The EnumValueCollection type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count.1910</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>IsReadOnly.1910</td>
<td>Gets a value indicating whether the ICollection.T. is read-only.</td>
</tr>
<tr>
<td>Item.Int32.1911</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String.1912</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add.1914</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Gets as read only.</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains(Object)</td>
<td>Determines whether [contains] [the specified value].</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td>Contains(IEnumValue)</td>
<td>Determines whether the ICollection.T. contains a specific value.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the entire list.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td>GetNames</td>
<td>Gets the names.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetValues</td>
<td>Gets the values.</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T. at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse</td>
<td>Parses the specified string to the Enum value.</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the ICollection.T.</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the IList.T. item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryGetInfo</td>
<td>Tries the get information.</td>
</tr>
<tr>
<td>TryParse(String, IConvertible)</td>
<td>Parse the specified string to the enum value.</td>
</tr>
<tr>
<td>TryParse(String, IEnumValue)</td>
<td>Parse the specified string to the enum value.</td>
</tr>
</tbody>
</table>

### 6.11.27.1 EnumValueCollection Properties

The EnumValueCollection[1908] type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [1910]</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>IsReadOnly [1910]</td>
<td>Gets a value indicating whether the ICollection.T is read-only.</td>
</tr>
<tr>
<td>Item.Int32. [1911]</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String. [1912]</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
</tbody>
</table>

Reference

EnumValueCollection Class [1908]
TwinCAT.TypeSystem Namespace [1622]

6.11.27.1.1 EnumValueCollection.Count Property

Gets the number of elements contained in the ICollection.T.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public int Count { get; }

Property Value

Type: Int32
The count.

Implements
ICollection.T.Count

Reference

EnumValueCollection Class [1908]
TwinCAT.TypeSystem Namespace [1622]

6.11.27.1.2 EnumValueCollection.IsReadOnly Property

Gets a value indicating whether the ICollection.T is read-only.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool IsReadOnly { get; }
```

Property Value

Type: Boolean
true if this instance is read only; otherwise, false.

Implements

`ICollection<T>.IsReadOnly`

Reference

`EnumValueCollection Class [1908]`

`TwinCAT.TypeSystem Namespace [1622]`

### 6.11.27.1.3 EnumValueCollection.Item Property

**Overload List**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

<td>Gets or sets the element at the specified index.</td>
</tr>
</tbody>
</table>

Reference

`EnumValueCollection Class [1908]`

`TwinCAT.TypeSystem Namespace [1622]`

**EnumValueCollection.Item Property (Int32)**

Gets or sets the element at the specified index.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IEnumValue this[int index] { get; set; }
```

**Parameters**

<table>
<thead>
<tr>
<th>index</th>
<th>Type: System.Int32</th>
</tr>
</thead>
<tbody>
<tr>
<td>The index.</td>
<td></td>
</tr>
</tbody>
</table>
Return Value

Type: IEnumValue
EnumValue<T>.

Implements

IList<T>.Item.Int32.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

EnumValueCollection Class
Item Overload
TwinCAT.TypeSystem Namespace

EnumValueCollection.Item Property (String)

Gets or sets the element at the specified index.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IConvertible this[string name] { get; }
```

Parameters

name Type: System.String
The name of the value

Return Value

Type: IConvertible
EnumValue<T>.

Implements

[EnumValueCollection.TEnumValue, TValue.Item.String]
Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>

6.11.27.2.2  EnumValueCollection.AsReadOnly Method

Gets as read only.

**Namespace:**  TwinCAT.TypeSystem [1622]
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ReadOnlyEnumValueCollection AsReadOnly()
```

**Field Value**

Type:  ReadOnlyEnumValueCollection [2300]
As read only.

**Return Value**

Type:  ReadOnlyEnumValueCollection [2300]
ReadOnlyEnumValueCollection.

**Reference**

EnumValueCollection Class [1908]
TwinCAT.TypeSystem Namespace [1622]

6.11.27.2.3  EnumValueCollection.Clear Method

Removes all items from the ICollection.T.

**Namespace:**  TwinCAT.TypeSystem [1622]
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void Clear()
```

**Implements**

ICollection.T.Clear.

**Reference**

EnumValueCollection Class [1908]
TwinCAT.TypeSystem Namespace [1622]
## 6.11.27.2.4 EnumValueCollection.Contains Method

### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains(Object)</td>
<td>Determines whether [contains] [the specified value].</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td>Contains(IEnumValue) [1916]</td>
<td>Determines whether the ICollection&lt;T&gt; contains a specific value.</td>
</tr>
</tbody>
</table>

### Reference

**EnumValueCollection Class** [1908]

**TwinCAT.TypeSystem Namespace** [1622]

### EnumValueCollection.Contains Method (Object)

Determines whether [contains] [the specified value].

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public bool Contains(
    Object value
)
```

### Parameters

- **value**
  - Type: `System.Object`
  - The value.

### Return Value

- Type: `Boolean`
  - true if [contains] [the specified value]; otherwise, false.

### Reference

**EnumValueCollection Class** [1908]

**Contains Overload** [1916]

**TwinCAT.TypeSystem Namespace** [1622]

### EnumValueCollection.Contains Method (String)

Determines whether [contains] [the specified name].
Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool Contains(
    string name
)
```

Parameters

name Type: System.String
The name.

Return Value

Type: Boolean
true if Contains (the specified name); otherwise, false.

Implements

IEnumeratorValueCollection.TEnumValue, TValue.Contains(String)

Reference

EnumValueCollection Class
Contains Overload
TwinCAT.TypeSystem Namespace

EnumValueCollection.Contains Method (IEnumeratorValue)

Determines whether the ICollection.T. contains a specific value.

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool Contains(
    IEnumeratorValue item
)
```

Parameters

item Type: TwinCAT.TypeSystem.IEnumValue
The object to locate in the ICollection.T.

Return Value

Type: Boolean
true if item is found in the ICollection.T.; otherwise, false.
6.11.27.2.5 EnumValueCollection.CopyTo Method

Copies the entire list.

**Namespace:** TwinCAT.TypeSystem [► 1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void CopyTo(IEnumValue[] array, int arrayIndex)
```

**Parameters**

- **array**
  - Type: .TwinCAT.TypeSystem.IEnumValue [► 2028],
  - The array.
- **arrayIndex**
  - Type: System.Int32
  - Index of the array.

**Reference**

- EnumValueCollection Class [► 1908]
- TwinCAT.TypeSystem Namespace [► 1622]

6.11.27.2.6 EnumValueCollection.GetEnumerator Method

Returns an enumerator that iterates through the collection.

**Namespace:** TwinCAT.TypeSystem [► 1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public IEnumerator<EnumValue> GetEnumerator()
```

Return Value

Type: `IEnumerator<EnumValue>` [2028].

A `IEnumerator<T>` that can be used to iterate through the collection.

Implements

`IEnumerator<T>.GetEnumerator`.

Reference

EnumValueCollection Class [1908]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.27.2.7 EnumValueCollection.GetNames Method

Gets the names.

Namespace: TwinCAT.TypeSystem [1622]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public string[] GetNames()
```

Return Value

Type: `System.String[]`.

Implements

`EnumValueCollection.TEnumValue, TValue..GetNames` [2037]

Reference

EnumValueCollection Class [1908]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.27.2.8 EnumValueCollection.GetValues Method

Gets the values.

Namespace: TwinCAT.TypeSystem [1622]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public IConvertible[] GetValues()
```

Return Value

Type: `IConvertible`, `T[]`.

Implements

Reference

`EnumValueCollection Class [6.11.27.2.9]`  
`TwinCAT.TypeSystem Namespace [6.11.27.2.9]`

6.11.27.2.9  EnumValueCollection.IndexOf Method

Determines the index of a specific item in the `IList<T>`.

**Namespace:** TwinCAT.TypeSystem [6.11.27.2.9]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb91b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int IndexOf(IEnumValue item)
```

Parameters

- `item`  
  Type: TwinCAT.TypeSystem.IEnumValue [6.11.27.2.9]  
  The object to locate in the `IList<T>`.

Return Value

Type: `Int32`  
The index of `item` if found in the list; otherwise, -1.

Implements

`IList<T>.IndexOf(T)`

Reference

`EnumValueCollection Class [6.11.27.2.9]`  
`TwinCAT.TypeSystem Namespace [6.11.27.2.9]`
6.11.27.2.10  EnumValueCollection.Insert Method

Inserts an item to the IList<T> at the specified index.

**Namespace:**  TwinCAT.TypeSystem [» 1622]

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public void Insert(
    int index,
    IEnumValue item
)
```

**Parameters**

- **index**
  - Type: System.Int32
  - The zero-based index at which item should be inserted.

- **item**
  - Type: TwinCAT.TypeSystem.IEnumValue [» 2028]
  - The object to insert into the IList<T>.

**Implements**

IList<T>.Insert(Int32, T)

**Reference**

EnumValueCollection Class [» 1908]

TwinCAT.TypeSystem Namespace [» 1622]

---

6.11.27.2.11  EnumValueCollection.Parse Method

Parses the specified string to the Enum value.

**Namespace:**  TwinCAT.TypeSystem [» 1622]

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public IConvertible Parse(
    string name
)
```

**Parameters**

- **name**
  - Type: System.String
  - The name.

**Return Value**

Type: IConvertible

T.
TwinCAT.Ads Namespaces

**Implements**

| implements | TwinCAT.Ads.Namespaces.IEnumValueCollection.TEnumValue, TwinCAT.Ads.TValue.Parse(String) |

**Exceptions**

**6.11.27.2.12 EnumValueCollection.Remove Method**

Removes the first occurrence of a specific object from the ICollection.T.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# code snippet

```csharp
public bool Remove(IEnumValue item)
```

**Parameters**

<table>
<thead>
<tr>
<th>item</th>
<th>Type: TwinCAT.TypeSystem.IEnumValue [2028]</th>
</tr>
</thead>
<tbody>
<tr>
<td>item</td>
<td>The object to remove from the ICollection.T.</td>
</tr>
</tbody>
</table>

**Return Value**

Type: Boolean

ture if item was successfully removed from the ICollection.T; otherwise, false. This method also returns false if item is not found in the original ICollection.T.

**Implements**

| ICollection.T.Remove(T) |

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

---

1922 Version: 1.1 TC1000
6.11.27.2.13 EnumValueCollection.RemoveAt Method

Removes the IList<T> item at the specified index.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public void RemoveAt(int index)

Parameters

index Type: System.Int32
The zero-based index of the item to remove.

Implements

IList<T>.RemoveAt(Int32)

Reference

EnumValueCollection Class [1908]
TwinCAT.TypeSystem Namespace [1622]

6.11.27.2.14 EnumValueCollection.TryGetInfo Method

Tries the get information.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool TryGetInfo(Object val, out IEnumValue ei)

Parameters

val Type: System.Object
The value.
ei
Type: TwinCAT.TypeSystem.IEnumValue
The ei.

Return Value
Type: Boolean
true if XXXX, false otherwise.

Reference
EnumValueCollection Class [1908]

Syntax

C#
public class EnumValueCollection<T> : IList<EnumValue<T>>,
   ICollection<EnumValue<T>>, IEnumerble<EnumValue<T>>, IEnumerable,
   IEnumValueCollection<EnumValue<T>, T>
where T : IConvertible

Type Parameters

T    Base type of enum

The EnumValueCollection<T> type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection&lt;T&gt; is read-only.</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the enumeration value str from the string representation.</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Gets as read only.</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether [contains] [the specified value].</td>
</tr>
<tr>
<td>Contains(EnumValue&lt;T&gt;)</td>
<td>Determines whether the ICollection&lt;T&gt; contains a specific value.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the entire list.</td>
</tr>
<tr>
<td>Empty</td>
<td>Return an Empty Collection.</td>
</tr>
</tbody>
</table>

<td>Gets a value indicating whether the ICollection.T is read-only.</td>
</tr>
<tr>
<td>Item.Int32 [1929]</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String [1930]</td>
<td>Gets the enumeration value str from the string representation.</td>
</tr>
</tbody>
</table>

Reference

EnumValueCollection.T..Class [1926]
TwinCAT.TypeSystem Namespace [1622]

6.11.28.1.1 EnumValueCollection.T..Count Property

Gets the number of elements contained in the ICollection.T.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int Count { get; }
```

Property Value

Type: Int32
The count.

Implements

ICollection.T.Count

Reference

EnumValueCollection.T..Class [1926]
TwinCAT.TypeSystem Namespace [1622]

6.11.28.1.2 EnumValueCollection.T..IsReadOnly Property

Gets a value indicating whether the ICollection.T is read-only.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#
```csharp
public bool IsReadOnly { get; }
```

Property Value

Type: Boolean
true if this instance is read only; otherwise, false.

Implements

ICollection<T>.IsReadOnly

<td>Item.String.1930</td>
<td>Gets the enumeration value str from the string representation.</td>
</tr>
</tbody>
</table>

Reference

EnumValueCollection<T>.Class [1926]
TwinCAT.TypeSystem Namespace [1622]

EnumValueCollection<T>.Item Property (Int32)

Gets or sets the element at the specified index.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
```csharp
public EnumValue<T> this[int index] { get; set; }
```

Parameters

index Type: System.Int32
The index.
Return Value

Type: EnumValue[T].

Implements

IList<T>.Item.Int32.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

### 6.11.28.2 EnumValueCollection.T. Methods

The EnumValueCollection.T. [1926] generic type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [1932]</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>AsReadOnly [1933]</td>
<td>Gets as read only.</td>
</tr>
<tr>
<td>Clear [1933]</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains(String) [1934]</td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td>Contains(T) [1935]</td>
<td>Determines whether [contains] [the specified value].</td>
</tr>
<tr>
<td>Contains(EnumValue.T.) [1935]</td>
<td>Determines whether the ICollection.T contains a specific value.</td>
</tr>
<tr>
<td>CopyTo [1936]</td>
<td>Copies the entire list.</td>
</tr>
<tr>
<td>Empty [1936]</td>
<td>Return an Empty Collection.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator [1937]</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetValues [1938]</td>
<td>Gets the values.</td>
</tr>
<tr>
<td>IndexOf [1938]</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert [1939]</td>
<td>Inserts an item to the IList.T. at the specified index.</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Parse</td>
<td>Parses the specified string to the Enum value.</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the <code>ICollection&lt;T&gt;</code>.</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the <code>IList&lt;T&gt;</code> item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>TryGetInfo</td>
<td>Tries the get information.</td>
</tr>
<tr>
<td>TryParse(String, EnumValue&lt;T&gt;)</td>
<td>Parse the specified string to the enum value.</td>
</tr>
<tr>
<td>TryParse(String, T)</td>
<td>Parse the specified string to the enum value.</td>
</tr>
</tbody>
</table>

#### 6.11.28.2.1 EnumValueCollection<T>. Add Method

Adds an item to the `ICollection<T>`.

**Namespace:** TwinCAT.TypeSystem  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll)  
**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public void Add(
    EnumValue<T> item
)
```

**Parameters**

*item*  
Type: TwinCAT.TypeSystem.EnumValue<T>  
The object to add to the `ICollection<T>`.

**Implements**

`ICollection<T>.Add(T)`

**Reference**

*EnumValueCollection<T>. Class*  

*TwinCAT.TypeSystem Namespace*
6.11.28.2.2  EnumValueCollection<T>.AsReadOnly Method

Gets as read only.

**Namespace:** TwinCAT.TypeSystem
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ReadOnlyEnumValueCollection<T> AsReadOnly()
```

**Field Value**

Type: `ReadOnlyEnumValueCollection<T>`

As read only.

**Return Value**

Type: `ReadOnlyEnumValueCollection<T>`

**Reference**

EnumValueCollection<T> Class

TwinCAT.TypeSystem Namespace

6.11.28.2.3  EnumValueCollection<T>.Clear Method

Removes all items from the `ICollection<T>`.

**Namespace:** TwinCAT.TypeSystem
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void Clear()
```

**Implements**

`ICollection<T>.Clear`

**Reference**

EnumValueCollection<T> Class

TwinCAT.TypeSystem Namespace
6.11.28.2.4 EnumValueCollection.T..Contains Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains(String)</td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether [contains] [the specified value].</td>
</tr>
<tr>
<td>Contains(EnumValue.T.)</td>
<td>Determines whether the ICollection.T contains a specific value.</td>
</tr>
</tbody>
</table>

Reference

EnumValueCollection.T..Class [1926]
TwinCAT.TypeSystem Namespace [1622]

EnumValueCollection.T..Contains Method (String)
Determines whether [contains] [the specified name].

Namespace:  TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd6ca3e72bc0ea15da1c14

Syntax

C#
public bool Contains(
    string name
)

Parameters

name      Type: System.String
          The name.

Return Value

Type: Boolean
type [contains] [the specified name]; otherwise, false.

Implements

IEnumerable<TEnumValue, TValue>.Contains(String) [2036]

Reference

EnumValueCollection.T..Class [1926]
Contains Overload [1934]
TwinCAT.TypeSystem Namespace [1622]
EnumValueCollection.T..Contains Method (T)

Determines whether [contains] [the specified value].

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool Contains(
    T value
)
```

Parameters

- value
  - Type: T
  - The value.

Return Value

- Type: Boolean
  - true if [contains] [the specified value]; otherwise, false.

Reference

EnumValueCollection.T..Contains Method (EnumValue.T.)

Determines whether the ICollection{T} contains a specific value.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool Contains(
    EnumValue<T> item
)
```

Parameters

- item
  - Type: TwinCAT.TypeSystem.EnumValue
  - The object to locate in the ICollection{T}.

Return Value

- Type: Boolean
  - true if item is found in the ICollection{T}; otherwise, false.
### EnumValueCollection.T..CopyTo Method

Copies the entire list.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public void CopyTo(
    EnumValue<T>[] array,  
    int arrayIndex  
)
```

**Parameters**

- **array**  
  Type: .TwinCAT.TypeSystem.EnumValue
  The array.

- **arrayIndex**  
  Type: System.Int32
  Index of the array.

**Implements**

- ICollection.T..CopyTo(T, Int32)

**Reference**

- EnumValueCollection.T..Class
- TwinCAT.TypeSystem Namespace
Syntax

C#

```csharp
public static EnumValueCollection<T> Empty()
```

Return Value

Type: `EnumValueCollection<T>`

Reference

`EnumValueCollection<T>.Class`

**6.11.28.2.7 EnumValueCollection<T>.GetEnumerator Method**

Returns an enumerator that iterates through the collection.

**Namespace:** `TwinCAT.TypeSystem`

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IEnumerator<EnumValue<T>> GetEnumerator()
```

Return Value

Type: `IEnumerator<EnumValueCollection<T>>`

A `IEnumerator<T>` that can be used to iterate through the collection.

**Implements**

`IEnumerable<T>.GetEnumerator`

Reference

`EnumValueCollection<T>.Class`

**6.11.28.2.8 EnumValueCollection<T>.GetNames Method**

Gets the names.

**Namespace:** `TwinCAT.TypeSystem`

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public string[] GetNames()
```
Return Value

Type: `System.String[]`.

Implements

`[EnumValueCollection.TEnumValue, TValue..GetNames.]` [2037]

Reference

`EnumValueCollection.T. Class` [1926]

`TwinCAT.TypeSystem Namespace` [1622]

### 6.11.28.2.9 EnumValueCollection.T..GetValues Method

Gets the values.

**Namespace:** `TwinCAT.TypeSystem` [1622]

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

**Syntax**

C#

```
public T[] GetValues()
```

Return Value

Type: `T` [1926],

`T[]`.

Implements

`[EnumValueCollection.TEnumValue, TValue..GetValues.]` [2037]

Reference

`EnumValueCollection.T. Class` [1926]

`TwinCAT.TypeSystem Namespace` [1622]

### 6.11.28.2.10 EnumValueCollection.T..IndexOf Method

Determines the index of a specific item in the `IList<T>`.

**Namespace:** `TwinCAT.TypeSystem` [1622]

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`
Syntax

C#

```csharp
public int IndexOf(
    EnumValue<T> item
)
```

Parameters

item Type: `TwinCAT.TypeSystem.EnumValue`<T>`[1901].T`<T>`[1926].` The object to locate in the `IList<T>`. 

Return Value

Type: `Int32` 
The index of item if found in the list; otherwise, -1.

Implements

`IList<T>.IndexOf(T)`

Reference

`EnumValueCollection<T>.Class`<T>`[1926]`
`TwinCAT.TypeSystem.Namespace`<T>`[1622]`

6.11.28.2.11 EnumValueCollection<T>.Insert Method

Inserts an item to the `IList<T>` at the specified index.

Namespace: `TwinCAT.TypeSystem`<T>`[1622]`

Assembly: `TwinCAT.Ads` (in `TwinCAT.Ads.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Insert(
    int index,
    EnumValue<T> item
)
```

Parameters

index Type: `System.Int32` The zero-based index at which item should be inserted.

item Type: `TwinCAT.TypeSystem.EnumValue`<T>`[1901].T`<T>`[1926].` The object to insert into the `IList<T>`.

Implements

`IList<T>.Insert(Int32, T)`
### 6.11.28.2.12 EnumValueCollection.T..Parse Method

Parses the specified string to the Enum value.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

```csharp
public T Parse(
    string name
)
```

#### Parameters

<table>
<thead>
<tr>
<th>name</th>
<th>Type: System.String</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The name.</td>
</tr>
</tbody>
</table>

#### Return Value

Type: T

T.

#### Implements

IEnumValueCollection.TEnumValue, TValue..Parse(String)

#### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentOutOfRangeException</td>
<td>name</td>
</tr>
</tbody>
</table>

### 6.11.28.2.13 EnumValueCollection.T..Remove Method

Removes the first occurrence of a specific object from the ICollection.T..

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool Remove(
    EnumValue<T> item
)
```

Parameters

**item**

Type: `TwinCAT.TypeSystem.EnumValue`<br>
The object to remove from the `ICollection<T>`.

Return Value

Type: `Boolean`
true if item was successfully removed from the `ICollection<T>`; otherwise, false. This method also returns false if item is not found in the original `ICollection<T>`.

Implements

`ICollection<T>.Remove(T)`

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

`EnumValueCollection.T.Class`<br>`TwinCAT.TypeSystem Namespace`

6.11.28.2.14 `EnumValueCollection.T..RemoveAt Method`

Removes the `IList<T>.Item` at the specified index.

**Namespace:** `TwinCAT.TypeSystem`<br>**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void RemoveAt(
    int index
)
```

Parameters

**index**

Type: `System.Int32`
The zero-based index of the item to remove.
TwinCAT.Ads Namespaces

Implements
IList<T>.RemoveAt(Int32)

Reference
EnumValueCollection.T.Class [► 1926]
TwinCAT.TypeSystem Namespace [► 1622]

6.11.28.2.15 EnumValueCollection.T..TryGetInfo Method
Tries the get information.

Namespace: TwinCAT.TypeSystem [► 1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool TryGetInfo(
    T val,
    out EnumValue<T> ei
)
```

Parameters

val
Type: T [► 1926]
The value.

ei
Type: TwinCAT.TypeSystem.EnumValue [► 1901].
The ei.

Return Value

Type: Boolean
true if XXXX, false otherwise.

Reference
EnumValueCollection.T.Class [► 1926]
TwinCAT.TypeSystem Namespace [► 1622]

6.11.28.2.16 EnumValueCollection.T..TryParse Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TryParse(String, EnumValue&lt;T&gt;) [► 1943]</td>
<td>Parse the specified string to the enum value.</td>
</tr>
<tr>
<td>TryParse(String, T) [► 1943]</td>
<td>Parse the specified string to the enum value.</td>
</tr>
</tbody>
</table>
EnumValueCollection<T>.TryParse Method (String, EnumValue<T>)

Parse the specified string to the enum value.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool TryParse(
    string name,
    out EnumValue<T> value
)
```

**Parameters**

- **name**
  Type: System.String
  The name.

- **value**
  Type: TwinCAT.TypeSystem.EnumValue
  The value.

**Return Value**

Type: Boolean
true if XXXX, false otherwise.

**Implements**

IEnumValueCollection.TEnumValue, TValue..TryParse(String, TValue.)

**Reference**

EnumValueCollection.T..Class

TryParse Overload

TwinCAT.TypeSystem Namespace
Syntax

C#

```csharp
public bool TryParse(
    string name,
    out T value
)
```

Parameters

- `name` Type: `System.String`  
The name.
- `value` Type: `T`  
The value.

Return Value

Type: `Boolean`  
true if XXXX, false otherwise.

Implements

- `EnumValueCollection.TEnumValue, TValue.TryParse(String, TValue)`  

Reference

- `EnumValueCollection.T. Class`  
- `TryParse Overload`  
- `TwinCAT.TypeSystem Namespace`

6.11.28.3 EnumValueCollection.T. Type Conversions

The `EnumValueCollection.T. Class` generic type exposes the following members.

Operators

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code> EnumValueCollection.T. to EnumValueCollection</code></td>
<td>Performs an explicit conversion from <code>EnumValueCollection.T. Class</code> to <code>EnumValueCollection</code>.</td>
</tr>
</tbody>
</table>

Reference

- `EnumValueCollection.T. Class`  
- `TwinCAT.TypeSystem Namespace`

6.11.28.3.1 EnumValueCollection.T. Conversion (EnumValueCollection.T to EnumValueCollection)

Performs an explicit conversion from `EnumValueCollection.T. Class` to `EnumValueCollection`. 
**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static explicit operator EnumValueCollection (EnumValueCollection<T> coll)
```

**Parameters**

- **coll**
  - Type: TwinCAT.TypeSystem.EnumValueCollection
  - T

**Return Value**

- Type: EnumValueCollection
  - The result of the conversion.

**Reference**

- EnumValueCollection<T> Class
- TwinCAT.TypeSystem Namespace

### 6.11.29 FieldCollection Class

Collection of IField objects.

**Inheritance Hierarchy**

- System.Object
  - TwinCAT.TypeSystem.Generic.InstanceCollection
  - TwinCAT.TypeSystem.IField
  - TwinCAT.TypeSystem.FieldCollection

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public class FieldCollection : InstanceCollection<IField>,
    IFieldCollection, IInstanceCollection<IField>, ICollection<IField>, IEnumerable<IField>, IEnumerable
```

The FieldCollection type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FieldCollection</td>
<td>Initializes a new instance of the FieldCollection class.</td>
</tr>
</tbody>
</table>
### FieldCollection(IEnumerable<Field>)
Initializes a new instance of the FieldCollection class (copy constructor)

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the collection count. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>InnerList</td>
<td>Gets the List of instances. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>InnerPathDict</td>
<td>The Path dictionary (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether this instance is read only. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the IInstance at the specified index. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the IInstance with the specified instance path. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Mode</td>
<td>The mode this InstanceCollection&lt;T&gt; is working in. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds the specified item. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>AddRange</td>
<td>Adds the specified items to this collection. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Returns a read only copy of this collection (shallow copy)</td>
</tr>
<tr>
<td>Clear</td>
<td>Clears this instance. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Clone</td>
<td>Clones this FieldCollection.</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether this collection contains an IInstance with the specified InstanceName / InstancePath (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether this collection contains the specified IInstance (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>ContainsName</td>
<td>Determines whether the specified instance name contains name. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies this InstanceCollection&lt;T&gt; to the specified array. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Gets the enumerator. (Inherited from InstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

FieldCollection Class [1945]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.29.3.1 FieldCollection.AsReadOnly Method

Returns a read only copy of this collection (shallow copy)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b609593ffdc3e72bc0ea15da1c14

**Syntax**

```csharp
public ReadonlyFieldCollection AsReadOnly()
```

**Return Value**

Type: ReadonlyFieldCollection [2317]

The readonly copy.

Reference

FieldCollection Class [1945]

TwinCAT.TypeSystem Namespace [1622]
6.11.29.3.2 FieldCollection.Clone Method

Clones this FieldCollection.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public FieldCollection Clone()

Return Value

Type: FieldCollection
A cloned FieldCollection.

Reference

FieldCollection Class
TwinCAT.TypeSystem Namespace

6.11.29.3.3 FieldCollection.TryGetMember Method

Tries to get the specified member

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool TryGetMember(
    string fieldName,
    out TwinCAT.TypeSystem.IField symbol
)

Parameters

fieldName Type: System.String
Name of the member.
symbol Type: TwinCAT.TypeSystem.IField
The symbol.

Return Value

Type: Boolean
true if found, false otherwise.

Implements

TwinCAT.TypeSystem.IFieldCollection.TryGetMember(String, IField)
6.11.30  IAliasInstance Interface

Interface representing an instance of an IAliasType.

Namespace:  TwinCAT.TypeSystem
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdc3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IAliasInstance : ISymbol, IAttributedInstance, IInstance, IBitSize
```

The IAliasInstance type exposes the following members.

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the IInstance (Inherited from IInstance.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a fullDataType but instead of some sort of bit mapping (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol is persistent. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance represents a Pointer type (Pointer TO) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that this instance is read only. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984]</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.TypeSystem.ISymbol [2176]

#### 6.11.30.1 IAliasInstance Properties

The IAliasInstance [1952] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the Instance [2052] (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the Instance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
</tbody>
</table>
### IAliasType Interface

Interface representing an Alias Type

**Namespace:** TwinCAT.TypeSystem [►1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public interface IAliasType : IDataType, IBitSize
```

The IAliasType type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>BaseType [1956]</td>
<td>Gets the Base Type</td>
</tr>
<tr>
<td>BaseType Name [1957]</td>
<td>Gets the BaseType name</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the IDataType [1986] exists. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.TypeSystem Namespace [1622]

6.11.31.1 IAliasType Properties

The IAliasType [1954] type exposes the following members.
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the [IDataType] (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>BaseType [1956]</td>
<td>Gets the Base Type</td>
</tr>
<tr>
<td>BaseType Name [1957]</td>
<td>Gets the BaseType name</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the [IDataType] in bits. (Inherited from [IBitSize].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from [IBitSize].)</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the [IDataType] (Namespace + Name) (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the Data Type (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full Data Type but instead of some sort of bit mapping (Inherited from [IBitSize].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from [IBitSize].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this [IDataType] is a container type (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this [IDataType] is a pointer type (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this [IDataType] is primitive (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this [IDataType] is a reference type (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the [IDataType] exists. (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from [BitSize].)</td>
</tr>
</tbody>
</table>

- TwinCAT.TypeSystem Namespace [1622]

### 6.11.31.1.1 IAliasType.BaseType Property

Gets the Base Type
Namespace:  TwinCAT.TypeSystem [1622]
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
IDataType BaseType { get; }

Property Value

Type: IDataType [1986]
The alias base type or null if not resolved.

Reference

IAliasType Interface [1954]
TwinCAT.TypeSystem Namespace [1622]

6.11.31.1.2 IAliasType.BaseTypeName Property

Gets the BaseType name

Namespace:  TwinCAT.TypeSystem [1622]
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
string BaseTypeName { get; }

Property Value

Type: String

Reference

IAliasType Interface [1954]
TwinCAT.TypeSystem Namespace [1622]

6.11.32 IAnyTypeMarshaler Interface

Interface IAnyTypeMarshaler Implements the IGenericTypeMarshaler [2046]

Namespace:  TwinCAT.TypeSystem [1622]
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public interface IAnyTypeMarshaler : IGenericTypeMarshaler,
ITypeMarshaler
## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CanMarshal(Object)</strong> [2217]</td>
<td>Determines whether ADS can marshal the specified value (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td><strong>CanMarshal(Type)</strong> [2218]</td>
<td>Determines whether ADS can marshal the specified managed data type. (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td><strong>CanMarshal(Object, Int32.)</strong> [1960]</td>
<td>Determines whether ADS can marshal the specified managed data type.</td>
</tr>
<tr>
<td><strong>CanMarshal(Type, Int32.)</strong> [1960]</td>
<td>Determines whether ADS can marshal the specified managed data type.</td>
</tr>
<tr>
<td><strong>Marshal(Object, Encoding, Span)</strong> [2219]</td>
<td>(Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td><strong>Marshal(Object, Int32., Encoding, Span)</strong> [1961]</td>
<td></td>
</tr>
<tr>
<td><strong>MarshalSize(Object, Encoding)</strong> [2219]</td>
<td>Gets the byte size of the value when marshalled. (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td><strong>MarshalSize(Object, Int32., Encoding)</strong> [1962]</td>
<td>Gets the byte size of the value when marshalled.</td>
</tr>
<tr>
<td><strong>Unmarshal(Type, ReadOnlySpan, Void, Byte)</strong> [2220]</td>
<td>(Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td><strong>Unmarshal(Type, Int32., ReadOnlySpan, Void, Byte)</strong> [1964]</td>
<td></td>
</tr>
<tr>
<td><strong>Unmarshal.T. (ReadOnlySpan, Void, Byte)</strong> [2048]</td>
<td>(Inherited from IGenericTypeMarshaler [2046].)</td>
</tr>
</tbody>
</table>

## Remarks

The IAnyTypeMarshaler supports value marshalling / Unmarshalling with the ADS ANY_TYPE concept, what means that the specified managed type is supported by an arguments metadata array (args parameter).

IAnyTypeMarshaler Interface [1957]

TwinCAT.TypeSystem Namespace [1622]

IAnyTypeMarshaler.CanMarshal Method (Object, Int32.)

Determines whether ADS can marshal the specified managed data type.

**Namespace**: TwinCAT.TypeSystem [1622]

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0e15da1c14

**Syntax**

C#

```csharp
bool CanMarshal(
    Object value,
    int[] args
)
```

**Parameters**

- **value**
  - Type: System.Object
  - The managed value.

- **args**
  - Type: System.Int32.
  - The arguments.

**Return Value**

Type: Boolean

true if this instance can marshal the specified managed type; otherwise, false.

Reference

IAnyTypeMarshaler Interface [1957]

CanMarshal Overload [1959]

TwinCAT.TypeSystem Namespace [1622]

IAnyTypeMarshaler.CanMarshal Method (Type, Int32.)

Determines whether ADS can marshal the specified managed data type.
Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
bool CanMarshal(
    Type anyType,
    int[] args
)
```

Parameters

- `anyType` Type: System.Type
  The Managed data type.
- `args` Type: System.Int32
  The arguments.

Return Value

Type: Boolean
true if this instance can marshal the specified managed type; otherwise, false.

**IAnyTypeMarshaler.MarshalSize Method (Object, Int32, Encoding)**

Gets the byte size of the value when marshalled.
**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
int MarshalSize(
    Object anyValue,
    int[] args,
    Encoding encoding
)
```

### Parameters

- **anyValue**
  - Type: `System.Object`
  - Any value.
- **args**
  - Type: `System.Int32`
  - The arguments.
- **encoding**
  - Type: `System.Text.Encoding`
  - The encoding.

### Return Value

Type: `Int32`

The marshal size of the value.

<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance. (Inherited from Instance.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the Instance. (Inherited from Instance.)</td>
</tr>
<tr>
<td>Dimensions</td>
<td>Gets the dimensions as read only collection.</td>
</tr>
<tr>
<td>Elements</td>
<td>Gets the contained Array Elements as read only collection.</td>
</tr>
<tr>
<td>ElementType</td>
<td>Gets the type of the contained elements.</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from Instance.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol is persistent. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the Instance represents a Pointer type (Pointer TO) (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the Instance represents a Reference type (REFERENCE TO) (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance is static. (Inherited from Instance.)</td>
</tr>
<tr>
<td>Item</td>
<td>Gets the ISymbol with the specified indices.</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from IBitSize.)</td>
</tr>
</tbody>
</table>
### IArrayInstance Properties

The `IArrayInstance` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from <code>IAtributedInstance</code>.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>IDataType</code> in bits. (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from <code>ISymbol</code>).</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <code>IInstance</code> (Inherited from <code>IInstance</code>).</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <code>IDataType</code> of the <code>IInstance</code>. (Inherited from <code>IInstance</code>).</td>
</tr>
<tr>
<td>Dimensions</td>
<td>Gets the dimensions as read only collection.</td>
</tr>
<tr>
<td>Elements</td>
<td>Gets the contained Array Elements as read only collection.</td>
</tr>
<tr>
<td>ElementType</td>
<td>Gets the type of the contained elements.</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.) (Inherited from <code>IInstance</code>).</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from <code>IInstance</code>).</td>
</tr>
</tbody>
</table>

---

### Methods

**6.11.33.1**  
**IArrayInstance Properties**

The `IArrayInstance` type exposes the following members.
## TwinCAT.Ads Namespaces

### IArrayInstance.Dimensions Property

Gets the dimensions as read only collection.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
IDimensionCollection Dimensions { get; }
```
6.11.33.1.2 IArrayInstance.Elements Property

Gets the contained Array Elements as read only collection.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp  
ISymbolCollection<ISymbol> Elements { get; }  
```

**Property Value**

Type: ISymbolCollection [2185] | Symbol [2176].
The elements.

**Reference**

IArrayInstance Interface [1964]
TwinCAT.TypeSystem Namespace [1622]

6.11.33.1.3 IArrayInstance.ElementType Property

Gets the type of the contained elements.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp  
IDataType ElementType { get; }  
```

**Property Value**

Type: IDataType [1986]
The type of the element.

**Reference**

IArrayInstance Interface [1964]
TwinCAT.TypeSystem Namespace [1622]
6.11.33.1.4  IArrayInstance.Item Property

Gets the `ISymbol` with the specified indices.

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
ISymbol this[int[] indices] { get; }
```

**Parameters**

- `indices`  
  Type: `System.Int32`.  
  The indices.

**Property Value**

Type: `ISymbol`  
The `ISymbol`.

**Return Value**

Type: `ISymbol`

IArrayInstance.TryGetElement Method (.Int32., ISymbol.)

Tries to get the array element with specified indices (only first level on jagged arrays)

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
bool TryGetElement(
    int[] indices,
    out ISymbol symbol
)
```

Parameters

- **indices**
  - Type: System.Int32
  - The indices.

- **symbol**
  - Type: TwinCAT.TypeSystem.ISymbol
  - The found Array element symbol (out-parameter).

Return Value

Type: Boolean
true if found, false if the indices specifiers is out-of-range.

6.11.34 IArrayType Interface

Interface representing an array DataType.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IArrayType : IDataType, IBitSize
```

The IArrayType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from IDataType)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Dimensions [1974]</td>
<td>Gets the dimensions as read only collection.</td>
</tr>
<tr>
<td>ElementType [1974]</td>
<td>Gets the type of the contained elements.</td>
</tr>
<tr>
<td>ElementTypeName [1974]</td>
<td>Gets the name of the element datatype.</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the Data Type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full Data Type but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsJagged [1975]</td>
<td>Gets a value indicating whether this instance is jagged.</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>JaggedLevel [1975]</td>
<td>Gets the jagged level (Non-Jagged Arrays have level 1)</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the IDataType [1986] exists. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
</tbody>
</table>

</table>

### Reference

- `IArrayType Interface` [1971]
- `TwinCAT.TypeSystem Namespace` [1622]
6.11.34.1.1  IArrayType.Dimensions Property

Gets the dimensions as read only collection.

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

IDimensionCollection Dimensions { get; }

Property Value

Type:  IDimensionCollection [2000]
The dimensions.

Reference

IArrayType Interface [1971]
TwinCAT.TypeSystem Namespace [1622]

6.11.34.1.2  IArrayType.ElementType Property

Gets the type of the contained elements.

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

IDataType ElementType { get; }

Property Value

Type:  IDataType [1986]
The type of the element or null if not resolved.

Reference

IArrayType Interface [1971]
TwinCAT.TypeSystem Namespace [1622]

6.11.34.1.3  IArrayType.ElementTypeName Property

Gets the name of the element datatype.

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### 6.11.34.1.4 IArrayType.IsJagged Property

Gets a value indicating whether this instance is jagged.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
bool IsJagged { get; }
```

#### Property Value

**Type:** Boolean

true if this instance is jagged; otherwise, false.

**Reference**

IArrayType Interface

TwinCAT.TypeSystem Namespace

### 6.11.34.1.5 IArrayType.JaggedLevel Property

Gets the jagged level (Non-Jagged Arrays have level 1)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
int JaggedLevel { get; }
```

#### Property Value

**Type:** Int32

The jagged level.
6.11.35  IArrayValue Interface

Interface IArrayValue

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IArrayValue : IValue
```

The IArrayValue type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age</td>
<td>Gets the age of the value (last successful read of the value) (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>CachedRaw</td>
<td>Gets the cached Raw internal Data. (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the data type bound to this IValue [2226] (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this IValue [2226] is a primitive value. (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>Symbol</td>
<td>Gets the symbol bound to this IValue [2226]. (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>TimeStamp</td>
<td>Gets the Time stamp of the last successful read of the Value (local user time, UTC) (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>UpdateMode</td>
<td>Gets the update mode (not implemented yet) (Inherited from IValue [2226].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read</td>
<td>Reads the value (via ADS) (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>ReadAsync</td>
<td>Reads the value (via ADS) (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>ResolveValue</td>
<td>Resolves the Value object to its primitive value. (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>TryGetArrayElement Values</td>
<td>Returns Array Element values.</td>
</tr>
<tr>
<td>TryGetIndexValue</td>
<td>Tries to get the specified Array Element</td>
</tr>
<tr>
<td>TryResolveValue</td>
<td>Tries to resolves the Value object to its primitive value. (Inherited from IValue [2226].)</td>
</tr>
</tbody>
</table>

### 6.11.35.2.1 IArrayValue.TryGetArrayElementValues Method

**Description:** Returns Array Element values.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
bool TryGetArrayElementValues(
    out IEnumerable<Object> elementValues
)
```

**Parameters**

- **elementValues**
  - The element values.

**Return Value**

- Type: Boolean
  - true if XXXX, false otherwise.

**Reference**

IArrayValue Interface

TwinCAT.TypeSystem Namespace

### 6.11.35.2.2 IArrayValue.TryGetIndexValue Method

**Description:** Tries to get the specified Array Element
**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
bool TryGetIndexValue(
    int[] indices,
    out Object value
)
```

**Parameters**

- **indices**
  - Type: `System.Int32`.
  - The indices.

- **value**
  - Type: `System.Object`.
  - The value.

**Return Value**

- Type: `Boolean`
  - `true` if XXXX, `false` otherwise.

### Reference

- IArrayValue Interface [1976]

### 6.11.35.2.3 IArrayValue.TrySetIndexValue Method

Tries to set the indexed value on Arrays

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool TrySetIndexValue(
    Object[] indexes,
    Object value
)
```

**Parameters**

- **indexes**
  - Type: `System.Object`.
  - The indexes.

- **value**
  - Type: `System.Object`.
  - The value.

**Return Value**

- Type: `Boolean`
  - `true` if succeeded, `false` otherwise.
6.11.36  IAttributedInstance Interface

Interface IAttributedInstance

Namespace:  TwinCAT.TypeSystem
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public interface IAttributedInstance : IInstance, IBitSize

The IAttributedInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes.</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance represents a Pointer type (Pointer TO) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the IInstance represents a Reference type (REFERENCE TO) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this IInstance is static. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from IBitSize.)</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>TypeName</strong> [1986]</td>
<td>Gets the name of the <strong>DataType</strong> that is used for this <strong>IInstance</strong>.</td>
</tr>
<tr>
<td><strong>ValueEncoding</strong> [1982]</td>
<td>Gets the value encoding.</td>
</tr>
</tbody>
</table>

### Reference

**TwinCAT.TypeSystem Namespace** [1.622]

**TwinCAT.TypeSystem.IInstance** [1.2052]

### 6.11.36.1 **IAtributedInstance** Properties

The **IAtributedInstance** [1.1980] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Attributes</strong> [1982]</td>
<td>Gets the Type Attributes.</td>
</tr>
<tr>
<td><strong>BitSize</strong> [1984]</td>
<td>Gets the size of the <strong>IDataType</strong> in bits. (Inherited from <strong>IBitSize</strong> [1982].)</td>
</tr>
<tr>
<td><strong>ByteSize</strong> [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <strong>IBitSize</strong> [1982].)</td>
</tr>
<tr>
<td><strong>Comment</strong> [2053]</td>
<td>Gets the comment of the <strong>Instance</strong> (Inherited from <strong>IInstance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>DataType</strong> [2054]</td>
<td>Gets the <strong>IDataType</strong> of the <strong>Instance</strong>. (Inherited from <strong>IInstance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>InstanceName</strong> [2054]</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from <strong>IInstance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>InstancePath</strong> [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from <strong>IInstance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>IsBitType</strong> [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full <strong>DataType</strong> but instead of some sort of bit mapping (Inherited from <strong>IBitSize</strong> [1982].)</td>
</tr>
<tr>
<td><strong>IsByteAligned</strong> [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <strong>IByteAligned</strong> [1982].)</td>
</tr>
<tr>
<td><strong>IsPointer</strong> [2055]</td>
<td>Indicates that the <strong>Instance</strong> represents a Pointer type (Pointer TO) (Inherited from <strong>IPointer</strong> [2052].)</td>
</tr>
<tr>
<td><strong>IsReference</strong> [2056]</td>
<td>Indicates that the <strong>Instance</strong> represents a Reference type (REFERENCE TO) (Inherited from <strong>IReference</strong> [2052].)</td>
</tr>
<tr>
<td><strong>IsStatic</strong> [2056]</td>
<td>Gets a value indicating whether this <strong>Instance</strong> is static. (Inherited from <strong>IStatic</strong> [2052].)</td>
</tr>
<tr>
<td><strong>Size</strong> [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on <strong>IsBitType</strong> [1984] (Inherited from <strong>ISize</strong> [1982].)</td>
</tr>
<tr>
<td><strong>TypeName</strong> [2056]</td>
<td>Gets the name of the <strong>DataType</strong> that is used for this <strong>Instance</strong>.</td>
</tr>
<tr>
<td><strong>ValueEncoding</strong> [1982]</td>
<td>Gets the value encoding.</td>
</tr>
</tbody>
</table>
6.11.36.1.1  IAttributedInstance.Attributes Property

Gets the Type Attributes.

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
ITypeAttributeCollection Attributes { get; }
```

**Property Value**

Type:  ITypeAttributeCollection

The attributes.

**Reference**

IAttributedInstance Interface
TwinCAT.TypeSystem Namespace

6.11.36.1.2  IAttributedInstance.ValueEncoding Property

Gets the value encoding.

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
Encoding ValueEncoding { get; }
```

**Property Value**

Type:  Encoding

The value encoding.

**Reference**

IAttributedInstance Interface
TwinCAT.TypeSystem Namespace

6.11.37  IBitSize Interface

Interface IBitSize
Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

The IBitSize type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits.</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType</td>
</tr>
</tbody>
</table>

Remarks

Specifies the Bitness of the the object and the bit resp. byte sizes.

Reference

TwinCAT.TypeSystem Namespace

6.11.37.1 IBitSize Properties

The IBitSize type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits.</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType</td>
</tr>
</tbody>
</table>

Reference

IBitSize Interface

TwinCAT.TypeSystem Namespace
6.11.37.1.1 IBitSize.BitSize Property

Gets the size of the [DataType] in bits.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
int BitSize { get; }
```

Property Value

Type: Int32
The size of [DataType] in bits.

Reference

IBitSize Interface
TwinCAT.TypeSystem Namespace

6.11.37.1.2 IBitSize.ByteSize Property

Gets the (aligned) size of the Type/Instance in Bytes

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
int ByteSize { get; }
```

Property Value

Type: Int32
The size of the byte.

Reference

IBitSize Interface
TwinCAT.TypeSystem Namespace

6.11.37.1.3 IBitSize.IsBitType Property

Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
```csharp
bool IsBitType { get; }
```

Property Value

Type: Boolean
true if this instance is bit mapping; otherwise, false.

Reference

IBitSize Interface [1982]

Syntax

C#
```csharp
int Size { get; }
```

Property Value

Type: Int32
The size of the bit.
Reference

IBitSize Interface [1982]

TwinCAT.TypeSystem Namespace [1622]

6.11.38 IDataType Interface

Base interface for objects representing data types

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public interface IDataType : IBitSize

The IQ>DataType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Bytesize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment behind the variable declaration.</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType (Namespace + Name)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the Data Type</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataTy</td>
</tr>
</tbody>
</table>
6.11.38.1  IDataType Properties

The IDataType [1986] type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the IDataType [1986]</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration.</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full Data Type but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
</tbody>
</table>

Reference

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

ITypeAttributeCollection Attributes { get; }

Property Value

Type: ITypeAttributeCollection [2211]
The attributes.

Reference

IDataType Interface [1986]
TwinCAT.TypeSystem Namespace [1622]

6.11.38.1.2 IDataType.Category Property

Gets the Data Type category

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

DataTypeCategory Category { get; }

Property Value

Type: DataTypeCategory [1649]
The category.

Reference

IDataType Interface [1986]
TwinCAT.TypeSystem Namespace [1622]

6.11.38.1.3 IDataType.Comment Property

Gets the comment behind the variable declaration.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

string Comment { get; }
6.11.38.1.4  **IDataType.FullName Property**

Gets the full name of the [IDataType](#) (Namespace + Name)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
string FullName { get; }
```

**Property Value**

Type: **String**

The full name.

**Reference**

[IDataType Interface](#) [1986]

TwinCAT.TypeSystem Namespace [1622]

6.11.38.1.5  **IDataType.Id Property**

Gets the ID of the DataType

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
int Id { get; }
```

**Property Value**

Type: **Int32**

The id.

**Reference**

[IDataType Interface](#) [1986]

TwinCAT.TypeSystem Namespace [1622]
6.11.38.1.6  IDatatype.IsContainer Property

Gets a value indicating whether this IDatatype [1986] is a container type

**Namespace:**  TwinCAT.TypeSystem [1622]

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool IsContainer { get; }
```

**Property Value**

Type:  Boolean

ture if this instance is container type; otherwise, false.

**Remarks**

Container Types are all types that contain SubElements like

- Array [1649]
- Pointer [1649]
- Union [1649]
- Struct [1649]
- Function [1649]
- FunctionBlock [1649]
- Program [1649]

and the Alias [1649] and Reference [1649] types, if they have a container type as base type.

IDatatype.Category [1988]

6.11.38.1.7  IDatatype.IsPointer Property

Gets a value indicating whether this IDatatype [1986] is a pointer type

**Namespace:**  TwinCAT.TypeSystem [1622]

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool IsPointer { get; }
```
Property Value

Type: Boolean
true if this instance is pointer type; otherwise, false.

Remarks

Pointer types can be dereferenced with the '^' operator.

6.11.38.1.10 IDatatype.Name Property

Gets the name of the Data Type (without namespace)

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
string Name { get; }

Property Value

Type: String
The name.

Reference

IDataType Interface [1986]
TwinCAT.TypeSystem Namespace [1622]

6.11.38.1.11 IDatatype.Namespace Property

Gets the namespace string within the IDatatype [1986] exists.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
string Namespace { get; }

Property Value

Type: String
The namespace.

Reference

IDataType Interface [1986]
6.11.39 **IDataTypeCollection Interface**

Interface `IDataTypeCollection` implements the `[ICollection<T>`.

**Namespace:** `TwinCAT.TypeSystem`  
**Assembly:** `TwinCAT.Ads.Abstractions` (in `TwinCAT.Ads.Abstractions.dll`)  
**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IDataTypeCollection : IDataTypeCollection<IDataType>, ICollection<IDataType>, IEnumerable<IDataType>, IEnumerable
```

The `IDataTypeCollection` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the <code>[ICollection&lt;T&gt;</code>.. (Inherited from <code>[ICollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the <code>[ICollection&lt;T&gt;</code> is read-only. (Inherited from <code>[ICollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
<tr>
<td>Item [1996]</td>
<td>Gets the <code>[IDataType](#)</code> with the specified name. (Inherited from <code>[IDataTypeCollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the <code>[ICollection&lt;T&gt;</code>.. (Inherited from <code>[ICollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the <code>[ICollection&lt;T&gt;</code>.. (Inherited from <code>[ICollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the <code>[ICollection&lt;T&gt;</code> contains a specific value. (Inherited from <code>[ICollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
<tr>
<td>ContainsType [1997]</td>
<td>Determines whether the container contains the specified <code>[IDataType](#)</code> [1986]. (Inherited from <code>[IDataTypeCollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the <code>[ICollection&lt;T&gt;</code> to an <code>Array</code>, starting at a particular <code>Array</code> index. (Inherited from <code>[ICollection&lt;T.Interface&gt;](#)</code>.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from <code>[GetEnumerator](#)</code>.)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the <code>[ICollection&lt;T&gt;</code>.. (Inherited from <code>[Remove](#)</code>.)</td>
</tr>
<tr>
<td>TryGetType [1998]</td>
<td>Tries to get the specified <code>[IDataType](#)</code> from the <code>[IDataTypeCollection&lt;T.Interface&gt;](#)</code>.. (Inherited from <code>[TryGetType](#)</code>.)</td>
</tr>
</tbody>
</table>

The `IDataTypeCollection` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the <code>ICollection&lt;T&gt;</code> is read-only. (Inherited from <code>ICollection&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>Item</td>
<td>Gets the <code>IDataType</code> with the specified name. (Inherited from <code>DataTypeCollection&lt;T&gt;</code>.)</td>
</tr>
</tbody>
</table>

6.11.39.2  **IDataTypeCollection Methods**

The `IDataTypeCollection` type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the <code>ICollection&lt;T&gt;</code> contains a specific value. (Inherited from <code>ICollection&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>ContainsType</td>
<td>Determines whether the container contains the specified <code>IDataType</code>. (Inherited from <code>IDataTypeCollection&lt;T&gt;</code>.)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the <code>ICollection&lt;T&gt;</code> to an <code>Array</code>, starting at a particular <code>Array</code> index. (Inherited from <code>ICollection&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from <code>IEnumerable&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;IDataType&gt;</code>.)</td>
</tr>
<tr>
<td>TryGetType</td>
<td>Tries to get the specified <code>IDataType</code> from the <code>DataTypeCollection&lt;T&gt;</code> (Inherited from <code>IDataTypeCollection&lt;T&gt;</code>.)</td>
</tr>
</tbody>
</table>

`IDataTypeCollection Interface` [1993]

`TwinCAT.TypeSystem Namespace` [1622]
### IDataTypeCollection<T> Interface

Data Type container interface

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public interface IDataTypeCollection<T> : ICollection<T>, IEnumerable<T>, IEnumerable
where T : class, IDataType
```

**Type Parameters**

- **T**  

  Data Type type.

The `IDataTypeCollection<T>` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the <code>ICollection&lt;T&gt;</code> is read-only. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Item [1996]</td>
<td>Gets the <code>IDataType [1986]</code> with the specified name.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the <code>ICollection&lt;T&gt;</code> contains a specific value. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>ContainsType [1997]</td>
<td>Determines whether the container contains the specified <code>IDataType [1986]</code>.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the <code>ICollection&lt;T&gt;</code> to an <code>Array</code>, starting at a particular <code>Array</code> index. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from <code>IEnumerable&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
</tbody>
</table>
| TryGetType [1998] | Tries to get the specified `IDataType [1986]` from the `IDataTypeCollection<T>`.

### 6.11.40.2.1 IDataTypeCollection_T..ContainsType Method

Determines whether the container contains the specified IDataType [1986].

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
bool ContainsType(
    string name
)
```

### Parameters

**name**  
Type: System.String  
The name.

### Return Value

Type: Boolean  
true if contained; otherwise, false.

### Reference

IDataTypeCollection_T.Interface [1995]  
TwinCAT.TypeSystem Namespace [1622]
### 6.11.40.2.2 IDataTypeCollection.T..TryGetType Method

Tries to get the specified IDataType from the IDataTypeCollection.T.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
bool TryGetType(
    string name,
    out T type
)
```

**Parameters**

- **name**
  - Type: System.String
  - The name.
  
- **type**
  - Type: T
  - The type (Out parameter)

**Return Value**

Type: Boolean
true if found

### 6.11.41 IDimension Interface

Interface representing a single Dimension of an ArrayType.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public interface IDimension
```

The IDimension type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ElementCount</td>
<td>Gets the number of elements within that IDimension.</td>
</tr>
<tr>
<td>LowerBound</td>
<td>Gets the lower bound of elements within that IDimension.</td>
</tr>
</tbody>
</table>
6.11.41.1 IDimension Properties

The IDimension type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ElementCount</td>
<td>Gets the number of elements within that IDimension.</td>
</tr>
<tr>
<td>LowerBound</td>
<td>Gets the lower bound of elements within that IDimension.</td>
</tr>
</tbody>
</table>

6.11.41.1.1 IDimension.ElementCount Property

Gets the number of elements within that IDimension.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
int ElementCount { get; }
```

**Property Value**

Type: Int32

The element count.

6.11.41.1.2 IDimension.LowerBound Property

Gets the lower bound of elements within that IDimension.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
int LowerBound { get; }
```

Property Value

Type: Int32
The lower bound.

### 6.11.42 IDimensionCollection Interface

Interface IDimensionCollection

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IDimensionCollection : IList<IDimension>, ICollection<IDimension>, IEnumerable<IDimension>, IEnumerable
```

The IDimensionCollection type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T. (Inherited from ICollection.IDimension [1998].)</td>
</tr>
<tr>
<td>ElementCount</td>
<td>Gets the Number of elements in all Dimensions</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T is read-only. (Inherited from ICollection.IDimension [1998].)</td>
</tr>
<tr>
<td>Item</td>
<td>Gets or sets the element at the specified index. (Inherited from IList.IDimension [1998].)</td>
</tr>
<tr>
<td>LowerBounds</td>
<td>Gets the lower bounds.</td>
</tr>
<tr>
<td>UpperBounds</td>
<td>Gets the lower bounds.</td>
</tr>
</tbody>
</table>

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T. (Inherited from ICollection.IDimension [1998].)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T. (Inherited from ICollection.IDimension [1998].)</td>

Interface IDynamicSymbol

**Namespace:**  TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public interface IDynamicSymbol : ISymbol, IAttributedInstance, IInstance, IBitSize
```

The IDynamicSymbol type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance [2052] (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.) (Inherited from IInstance [2052]).</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from IInstance [2052]).</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982]).</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982]).</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176].</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052]).</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from IInstance [2052].</td>
</tr>
<tr>
<td>NormalizedName</td>
<td>Gets the normalized instance name (fixed name for dynamic property access)</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from IInstance [2052].</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].</td>
</tr>
</tbody>
</table>

<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>NormalizedName [2007]</td>
<td>Gets the normalized instance name (fixed name for dynamic property access)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance.)</td>
</tr>
</tbody>
</table>

### Reference

TwinCAT.TypeSystem Namespace [› 1622]

#### 6.11.43.1.1 IDynamicSymbol.NormalizedName Property

Gets the normalized instance name (fixed name for dynamic property access)

**Namespace:** TwinCAT.TypeSystem [› 1622]
**Assembly:** TwinCAT.Ads.Abstractions.dll (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
string NormalizedName { get; }
```

**Property Value**

Type: String  
The normalized instance name (can be the same like InstanceName [› 2054])

**Reference**

IDynamicSymbol Interface [› 2004]
TwinCAT.TypeSystem Namespace [› 1622]
IInstance.InstanceName [› 2054]
ISymbolFactory.InvalidCharacters [› 2190]

#### 6.11.44 IDynamicSymbolLoader Interface

Dynamic symbol loader interface

**Namespace:** TwinCAT.TypeSystem [› 1622]
**Assembly:** TwinCAT.Ads.Abstractions.dll (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public interface IDynamicSymbolLoader : ISymbolLoader,  
    ISymbolProvider, ISymbolServer
```

The IDynamicSymbolLoader type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BuildInTypes [2202]</td>
<td>Gets the build in types. (Inherited from ISymbolLoader [2200].)</td>
</tr>
<tr>
<td>DataTypes [2206]</td>
<td>Gets the data types (Inherited from ISymbolServer [2205].)</td>
</tr>
<tr>
<td>DefaultValueEncoding [2206]</td>
<td>Gets the default value encoding. (Inherited from ISymbolServer [2205].)</td>
</tr>
<tr>
<td>RootNamespaceName [2204]</td>
<td>Gets the name of the root namespace (Inherited from ISymbolProvider [2203].)</td>
</tr>
<tr>
<td>Settings [2202]</td>
<td>Gets or sets the access Method (Inherited from ISymbolLoader [2200].)</td>
</tr>
<tr>
<td>Symbols [2207]</td>
<td>Gets the symbols. (Inherited from ISymbolServer [2205].)</td>
</tr>
<tr>
<td>SymbolsDynamic [2009]</td>
<td>Gets the symbols (late bound as dynamic objects)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetDataTypesAsync [2208]</td>
<td>Gets the data types asynchronously. (Inherited from ISymbolServer [2205].)</td>
</tr>
<tr>
<td>GetDynamicSymbolsAsync [2010]</td>
<td>Gets the dynamic symbols asynchronously</td>
</tr>
<tr>
<td>GetSymbolsAsync [2208]</td>
<td>Gets the symbols asynchronously (Inherited from ISymbolServer [2205].)</td>
</tr>
</tbody>
</table>

Remarks

Dynamic symbols are late bound symbols who are created and will expand during runtime. These symbols can represent complex user defined type instances like PLC Structures and Arrays created during PLC access and assure type safe to their fields and elements.

</tr>
<tr>
<td>GetSymbolsAsync</td>
<td>Gets the symbols asynchronously (Inherited from ISymbolServer.)</td>
</tr>
</tbody>
</table>
**6.11.44.2.1 IDynamicSymbolLoader.GetDynamicSymbolsAsync Method**

Gets the dynamic symbols asynchronously.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
Task<ResultDynamicSymbols> GetDynamicSymbolsAsync(
    CancellationToken cancel
)
```

**Parameters**

cancel Type: System.Threading.CancellationToken

The cancellation token.

**Return Value**

Type: Task<ResultDynamicSymbols>

Task<ResultDynamicSymbols>.

### IEnumType Interface

Common Enum type interface

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public interface IEnumType : IAliasType, IDataType, IBitSize
```

The IEnumType type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>BaseType [1956]</td>
<td>Gets the Base Type (Inherited from IAliasType [1954].)</td>
</tr>
<tr>
<td>BaseTypeName [1957]</td>
<td>Gets the BaseType name (Inherited from IAliasType [1954].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>EnumValues [2016]</td>
<td>Enumeration specification (if enum)</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name)  (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>

C#
string[] GetNames()  

Return Value

Type:  System.String[].

Reference

[EnumType Interface [› 2014]

TwinCAT.TypeSystem Namespace [› 1622]

6.11.47.2.3  IEnumType.GetValues Method

Gets the values of the [EnumType.T. [› 2021]

Namespace:  TwinCAT.TypeSystem [› 1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
IConvertible[] GetValues()  

Return Value

Type:  System.IConvertible.T[].

Reference

[EnumType Interface [› 2014]
6.11.47.2.4 IEnumType.Parse Method

Parses a value name of the IEnumType.T. and returns the value (as base type)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
IConvertible Parse(
    string name
)
```

**Parameters**

- **name**  
  Type: System.String  
  The value name.

**Return Value**

Type: IConvertible  
T.

**Reference**

IEnumType Interface | 2014

TwinCAT.TypeSystem Namespace | 1622

6.11.47.2.5 IEnumType.ToString Method

Returns a String that represents the specified value.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
string ToString(
    IConvertible val
)
```

**Parameters**

- **val**  
  Type: System.IConvertible  
  The value.

**Return Value**

Type: String  
A String that represents this value.
6.11.47.2.6  IEnumType.TryParse Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TryParse(String, IConvertible.)</td>
<td>Parses the value from value name.</td>
</tr>
<tr>
<td>TryParse(String, IEnumValue.)</td>
<td>Parses the value from value name.</td>
</tr>
</tbody>
</table>

C#

```csharp
bool TryParse(
    string name,
    out IConvertible value
)
```

Parameters

<table>
<thead>
<tr>
<th>name</th>
<th>Type: System.String</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The value name.</td>
</tr>
<tr>
<td>value</td>
<td>Type: System.IConvertible.</td>
</tr>
<tr>
<td></td>
<td>The value.</td>
</tr>
</tbody>
</table>

Return Value

Type: Boolean
true if value name was found, false otherwise.

</table>
IEnumType.TryParse Method (String, IEnumValue.)

Parses the value from value name.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool TryParse(
    string name,
    out IEnumValue value
)
```

**Parameters**

- `name`  
  Type: System.String  
  The value name.

- `value`  
  Type: TwinCAT.TypeSystem.IEnumValue  
  The value.

**Return Value**

Type: Boolean  
true if value name was found, false otherwise.

### 6.11.48 IEnumType.T. Interface

Interface representing an enum type

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IEnumType<T> : IAliasType,
    IDataType, IBitSize
where T : IConvertible
```

**Type Parameters**

- `T`  
  Base type of the Enum

The IEnumType.T. type exposes the following members.
### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the [IDataType [1986]] (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>BaseType [1956]</td>
<td>Gets the Base Type (Inherited from [IAliasType [1954]].)</td>
</tr>
<tr>
<td>BaseTypeName [1957]</td>
<td>Gets the BaseType name (Inherited from [IAliasType [1954]].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the [IDataType [1986]] in bits. (Inherited from [IBitSize [1982]].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from [IBitSize [1982]].)</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>EnumValues [2024]</td>
<td>Enumeration specification (if enum)</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the [IDataType [1986]] (Namespace + Name) (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from [IBitSize [1982]].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from [IBitSize [1982]].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this [IDataType [1986]] is a container type (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this [IDataType [1986]] is a pointer type (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this [IDataType [1986]] is primitive (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this [IDataType [1986]] is a reference type (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>Name [1991]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the [IDataType [1986]] exists. (Inherited from [IDataType [1986]].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from [IBitSize [1982]].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains [2025]</td>
<td>Determines whether the enum values contains the specified name</td>
</tr>
<tr>
<td>GetNames [2025]</td>
<td>Gets the filed names of the IEnumType.T.</td>
</tr>
<tr>
<td>GetValues [2026]</td>
<td>Gets the values of the IEnumType.T.</td>
</tr>
<tr>
<td>Parse [2026]</td>
<td>Parses a name of the IEnumType.T. and returns the value (as base type)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>

### 6.11.48.1 IEnumType.T. Properties

The IEnumType.T [2021] generic type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>BaseType [1956]</td>
<td>Gets the Base Type (Inherited from IAliasType [1954]).</td>
</tr>
<tr>
<td>BaseType Name [1957]</td>
<td>Gets the BaseType name (Inherited from IAliasType [1954]).</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982]).</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982]).</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>EnumValues [2024]</td>
<td>Enumeration specification (if enum)</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982]).</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982]).</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from IDataType [1986]).</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the IDataType exists. (Inherited from IDataType.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from IBitSize.)</td>
</tr>
</tbody>
</table>

### Reference

IEnumType.T. Interface [2021]

TwinCAT.TypeSystem Namespace [1622]

#### 6.11.48.1.1 IEnumType.T..EnumValues Property

Enumeration specification (if enum)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
IEnumValueCollection EnumValues { get; }
```

**Property Value**

Type: IEnumValueCollection [2031]
The enum specification.

**Reference**

IEnumType.T. Interface [2021]

TwinCAT.TypeSystem Namespace [1622]

#### 6.11.48.2 IEnumType.T. Methods

The IEnumType.T. [2021] generic type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains</td>
<td>Determines whether the enum values contains the specified name</td>
</tr>
<tr>
<td>GetNames</td>
<td>Gets the filed names of the IEnumType.T. [2021]</td>
</tr>
<tr>
<td>GetValues</td>
<td>Gets the values of the IEnumType.T. [2021]</td>
</tr>
<tr>
<td>Parse</td>
<td>Parses a name of the IEnumType.T. [2021] and returns the value (as base type)</td>
</tr>
<tr>
<td>Tostring</td>
<td>Returns a String that represents the specified value.</td>
</tr>
<tr>
<td>TryParse</td>
<td>Parses the value from value name.</td>
</tr>
</tbody>
</table>
6.11.48.2.1  IEnumType.T..Contains Method

Determines whether the enum values contains the specified name

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
bool Contains(
    string name
)

Parameters

name  Type: System.String
The name.

Return Value

Type: Boolean
true if contains the value, otherwise, false.

Reference

IEnumType.T. Interface
TwinCAT.TypeSystem Namespace

6.11.48.2.2  IEnumType.T..GetNames Method

Gets the filed names of the IEnumType.T..

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
string[] GetNames()

Return Value

Type: String,
System.String[].

Reference

IEnumType.T. Interface

### 6.11.48.2.3 IEnumType.T..GetValues Method

 Gets the values of the IEnumType.T. 

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
T[] GetValues()
```

**Return Value**

Type: T[]

**Reference**

IEnumType.T. Interface

TwinCAT.TypeSystem Namespace

### 6.11.48.2.4 IEnumType.T..Parse Method

 Parses a name of the IEnumType.T. and returns the value (as base type)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
T Parse(
    string name
)
```

**Parameters**

name Type: System.String
The name.

**Return Value**

Type: T

**Reference**

IEnumType.T. Interface

TwinCAT.TypeSystem Namespace
6.11.48.2.5  IEnumType.T.ToString Method

Returns a String that represents the specified value.

Namespace:  TwinCAT.TypeSystem
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
string ToString(
    T val
)

Parameters

val  Type: T

Return Value

Type: String
A String that represents this value.

Reference

IEnumType.T. Interface
TwinCAT.TypeSystem Namespace

6.11.48.2.6  IEnumType.T.TryParse Method

Parses the value from value name.

Namespace:  TwinCAT.TypeSystem
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
bool TryParse(
    string name,
    out T value
)

Parameters

name  Type: System.String
value  Type: T

Return Value

Type: Boolean
true if value name was found, false otherwise.
6.11.49 IEnumValue Interface

Generic interface for EnumValues

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IEnumValue
```

The IEnumValue type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedBaseType</td>
<td>Gets the enumeration base type (sint, byte, short, ushort, int, uint, Int64, UInt64 supported)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Enumeration Value (value as string)</td>
</tr>
<tr>
<td>Primitive</td>
<td>Gets the (Primitive, BaseType) Value of the enumeration as object</td>
</tr>
<tr>
<td>RawValue</td>
<td>Gets the raw value of the enumeration (as byte array)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the Enum value (in bytes)</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.TypeSystem Namespace [1622]

6.11.49.1 IEnumValue Properties

The IEnumValue [2028] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedBaseType</td>
<td>Gets the enumeration base type (sint, byte, short, ushort, int, uint, Int64, UInt64 supported)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Enumeration Value (value as string)</td>
</tr>
<tr>
<td>Primitive</td>
<td>Gets the (Primitive, BaseType) Value of the enumeration as object</td>
</tr>
<tr>
<td>RawValue</td>
<td>Gets the raw value of the enumeration (as byte array)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the Enum value (in bytes)</td>
</tr>
</tbody>
</table>
Reference

IEnumValue Interface [› 2028]
TwinCAT.TypeSystem Namespace [› 1622]

6.11.49.1.1 IEnumValue.ManagedBaseType Property

Gets the enumeration base type (sint,byte,short,ushort,int,uint,Int64,UInt64 supported)

Namespace: TwinCAT.TypeSystem [› 1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Type ManagedBaseType { get; }
```

Property Value

Type: Type
The type of the base.

Reference

IEnumValue Interface [› 2028]
TwinCAT.TypeSystem Namespace [› 1622]

6.11.49.1.2 IEnumValue.Name Property

Gets the name of the Enumeration Value (value as string)

Namespace: TwinCAT.TypeSystem [› 1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
string Name { get; }
```

Property Value

Type: String
The name.

Reference

IEnumValue Interface [› 2028]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```
int Size { get; }
```
TwinCAT.Ads Namespaces

Property Value
Type: Int32
The size.

Reference
IEnumValue Interface [2028]

TwinCAT.TypeSystem Namespace [1622]

6.11.50 IEnumValueCollection Interface

Interface IEnumValueCollection

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IEnumValueCollection : IEnumValueCollection<IEnumValue, IConvertible>, ICollection<IEnumValue>, IEnumerable<IEnumValue>, IEnumerable
```

The IEnumValueCollection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection. (Inherited from ICollection.IEnumValue...)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection is read-only. (Inherited from ICollection.IEnumValue...)</td>
</tr>
<tr>
<td>Item [2035]</td>
<td>Gets or sets the element at the specified index. (Inherited from IEnumValueCollection.TEnumValue, TValue...)</td>
</tr>
</tbody>

### Reference

- IEnumValueCollection Interface [2031]
- TwinCAT.TypeSystem Namespace [1622]

### 6.11.51 IEnumValueCollection.TEnumValue, TValue. Interface

Interface for collections of IEnumValues [2028]. Implements the ICollection..

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IEnumValueCollection<TEnumValue, TValue> : ICollection<TEnumValue>,
   IEnumerable<TEnumValue>, IEnumerable
   where TEnumValue : class, IEnumValue
   where TValue : IConvertible
```

**Type Parameters**

- TEnumValue
- TValue

The IEnumValueCollection.TEnumValue, TValue. type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.. (Inherited from ICollection, TEnumValue..)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.. is read-only. (Inherited from ICollection, TEnumValue..)</td>
</tr>
<tr>
<td>Item [2035]</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
</tbody>
</table>
## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Add</code></td>
<td>Adds an item to the <code>ICollection&lt;T&gt;.</code> (Inherited from <code>ICollection&lt;TEnumValue..&gt;</code>)</td>
</tr>
<tr>
<td><code>Clear</code></td>
<td>Removes all items from the <code>ICollection&lt;T&gt;.</code> (Inherited from <code>ICollection&lt;TEnumValue..&gt;</code>)</td>
</tr>
<tr>
<td><code>Contains(T)</code></td>
<td>Determines whether the <code>ICollection&lt;T&gt;</code> contains a specific value. (Inherited from <code>ICollection&lt;TEnumValue..&gt;</code>)</td>
</tr>
<tr>
<td><code>Contains(String)</code></td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td><code>CopyTo</code></td>
<td>Copies the elements of the <code>ICollection&lt;T&gt;</code> to an <code>Array</code>, starting at a particular <code>Array</code> index. (Inherited from <code>ICollection&lt;TEnumValue..&gt;</code>)</td>
</tr>
<tr>
<td><code>GetEnumerator</code></td>
<td>Returns an enumerator that iterates through the collection. (Inherited from <code>IEnumerable&lt;TEnumValue..&gt;</code>)</td>
</tr>
<tr>
<td><code>GetNames</code></td>

**Syntax**

C#  

```csharp
bool TryParse(
    string strValue,
    out TEnumValue value
)
```

**Parameters**

- **strValue**
  - Type: `System.String`
  - The value in string representation.
- **value**
  - Type: `TEnumValue`.
  - The value.

**Return Value**

Type: Boolean
true if XXXX, false otherwise.

**Reference**

TwinCAT.TypeSystem Namespace

6.11.52 IField Interface

Specifies a single field/member of a Struct DataType.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public interface IField : IAttributedInstance, IInstance, IBitSize

The IField type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the IInstance (Inherited from IInstance.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize.)</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

### IField Properties

The `IField` type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from <code>IAtributedInstance</code>.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>IDataType</code> in bits. (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes. (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <code>IInstance</code> (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <code>IDataType</code> of the <code>IInstance</code>. (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.)). (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)). (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping. (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0). (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the <code>IInstance</code> represents a Pointer type (Pointer TO). (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the <code>IInstance</code> represents a Reference type (REFERENCE TO). (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this <code>IInstance</code> is static. (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>ParentType</td>
<td>Gets the Parent Struct/Union of this <code>IField</code>.</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on <code>IsBitType</code>. (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the <code>DataType</code> that is used for this <code>IInstance</code>. (Inherited from <code>IInstance</code>.)</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from <code>IAtributedInstance</code>.)</td>
</tr>
</tbody>
</table>

Interface IGenericTypeMarshaler Implements the ITypeMarshaler [2216]

Namespace: TwinCAT.TypeSystem [1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

public interface IGenericTypeMarshaler : ITypeMarshaler

The IGenericTypeMarshaler type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CanMarshal(Object)</td>
<td>Determines whether ADS can marshal the specified value (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>CanMarshal(Type)</td>
<td>Determines whether ADS can marshal the specified managed data type. (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>Marshal [2219]</td>
<td>(Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>MarshalSize [2219]</td>
<td>Gets the byte size of the value when marshalled. (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>Unmarshal(Type, ReadOnlySpan, Void, Byte) [2220]</td>
<td>(Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>Unmarshal.T, (ReadOnlySpan, Void, Byte) [2048]</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

The IGenericTypeMarshaler extends the ITypeMarshaler [2216] by generic methods.
6.11.54.1 IGenericTypeMarshaler Methods

The IGenericTypeMarshaler [2046] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CanMarshal(Object)</td>
<td>Determines whether ADS can marshal the specified value (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>CanMarshal(Type)</td>
<td>Determines whether ADS can marshal the specified managed data type. (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>Marshal</td>
<td>(Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>MarshalSize</td>
<td>Gets the byte size of the value when marshalled. (Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>Unmarshal(Type, ReadOnlySpan, Void, Byte)</td>
<td>(Inherited from ITypeMarshaler [2216].)</td>
</tr>
<tr>
<td>Unmarshal(T, (ReadOnlySpan, Void, Byte)]</td>
<td></td>
</tr>
</tbody>
</table>

IGenericTypeMarshaler.Unmarshal<T>. Method (ReadOnlySpan`1, Void, Byte)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
int Unmarshal<T>(
    ReadOnlySpan source,
    void encoding,
    byte value
)
```

**Parameters**

- **source**  
  Type: `ReadOnlySpan`

- **encoding**  
  Type: `System.Void`

- **value**  
  Type: `System.Byte`

**Type Parameters**

- **T**

**Return Value**

Type: `Int32`

6.11.55  **IHierarchicalSymbol Interface**

Bindable Symbol interface (for internal use only)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public interface IHierarchicalSymbol : ISymbol,
    IAttributedInstance, IInstance, IBitSize
```

The IHierarchicalSymbol type exposes the following members.
### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the Instance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the Instance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>
## Methods

### 6.11.55.1 IHierarchicalSymbol Properties

The IHierarchicalSymbol [2048] type exposes the following members.

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the IInstance [2052] (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>-----------------------------------------------------------------------------</td>

<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984]</td>
</tr>
<tr>
<td>(Inherited from</td>
<td></td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052].</td>
</tr>
<tr>
<td>(Inherited from</td>
<td></td>
</tr>
<tr>
<td>Instance [2052].)</td>
<td>)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

6.11.55.2.1 IHierarchicalSymbol.SetParent Method

Sets the parent of the Symbol

Namespace: TwinCAT.TypeSystem [1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
void SetParent(
    ISymbol symbol
)
```

Parameters

- symbol Type: TwinCAT.TypeSystem.ISymbol [2176]
  The symbol.
## 6.11.56 IInstance Interface

Interface specifying instance objects.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**
```
public interface IInstance : IBitSize
```

The `IInstance` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from <code>IBitSize [1982]</code>.)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the <code>IDataType [1986]</code> of the IInstance.</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods (.))</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.))</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from <code>IBitSize [1982]</code>.)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <code>IBitSize [1982]</code>.)</td>

<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <code>IInstance</code></td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <code>IDataType</code> of the <code>IInstance</code>.</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping (Inherited from <code>IBitSize</code>.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the <code>IInstance</code> represents a Pointer type (Pointer TO)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the <code>IInstance</code> represents a Reference type (REFERENCE TO)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this <code>IInstance</code> is static.</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on <code>IsBitType</code> (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the <code>DataType</code> that is used for this <code>IInstance</code></td>
</tr>
</tbody>
</table>

#### Reference

- `IInstance Interface`<br>- `TwinCAT.TypeSystem Namespace`<br>- `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### 6.11.56.1.1 Instance.Comment Property

Gets the comment of the `IInstance`.

**Namespace:** `TwinCAT.TypeSystem`<br>
**Assembly:** `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
string Comment { get; }
```
Property Value
Type: String
The comment.

Reference
IInstance Interface [2052]
TwinCAT.TypeSystem Namespace [1622]

6.11.56.1.2 IInstance.DataType Property
Gets the IDataType of the IInstance.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
IDataType DataType { get; }

Property Value
Type: IDataType
The type of the data.

Remarks
The DataType can be unresolved in rare circumstances and therefore could have value null.

Reference
IInstance Interface [2052]
TwinCAT.TypeSystem Namespace [1622]

6.11.56.1.3 IInstance.InstanceName Property
Gets the name of the instance (without periods .)

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
string InstanceName { get; }

Property Value
Type: String
The name of the instance.
### 6.11.56.1.4 IInstance.InstancePath Property

Gets the relative / absolute access path to the instance (with periods ( . ))

**Namespace:** TwinCAT.TypeSystem
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
string InstancePath { get; }
```

**Property Value**

Type: **String**  
The instance path.

**Remarks**

If this path is relative or absolute depends on the context. IMember [2065] are using relative paths, ISymbol [2176]s are using absolute ones.

### 6.11.56.1.5 IInstance.IsPointer Property

Indicates that the IInstance [2052] represents a Pointer type (Pointer TO)

**Namespace:** TwinCAT.TypeSystem
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
bool IsPointer { get; }
```

**Property Value**

Type: **Boolean**  
true if is ReferenceTo, otherwise false.
TwinCAT.TypeSystem Namespace

6.11.56.1.6 IInstance.IsReference Property

Indicates that the IInstance represents a Reference type (REFERENCE TO)

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

bool IsReference { get; }

Property Value

Type: Boolean
true if is ReferenceTo, otherwise false.

Reference

IInstance Interface
TwinCAT.TypeSystem Namespace

6.11.56.1.7 IInstance.IsStatic Property

Gets a value indicating whether this IInstance is static.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

bool IsStatic { get; }

Property Value

Type: Boolean
true if this instance is static; otherwise, false.

Reference

IInstance Interface
TwinCAT.TypeSystem Namespace

6.11.56.1.8 IInstance.TypeName Property

Gets the name of the DataType that is used for this IInstance.

Reference

IInstance Interface
TwinCAT.TypeSystem Namespace
Syntax

C#

```csharp
string TypeName { get; }
```

Property Value

Type: `String`
The name of the type.

Reference

IInstance Interface [2052]

TwinCAT.TypeSystem Namespace [1622]

6.11.57 IInstanceCollection<T>. Interface

Generic IInstanceCollection interface.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IInstanceCollection<T> : IList<T>, ICollection<T>, IEnumerable<T>, IEnumerable
where T : class, IInstance
```

Type Parameters

T

The IInstanceCollection<T> type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection&lt;T&gt; (Inherited from ICollection&lt;T&gt;)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection&lt;T&gt; is read-only. (Inherited from ICollection&lt;T&gt;)</td>
</tr>
<tr>
<td>Item(Int32)</td>
<td>Gets or sets the element at the specified index. (Inherited from IList&lt;T&gt;)</td>
</tr>
<tr>
<td>Item(String)</td>
<td>Gets the IInstance [2052] with the specified instance path.</td>
</tr>
<tr>
<td>Mode [2060]</td>
<td>Gets the InstanceCollectionMode [2075].</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T.. (Inherited from ICollection.T..)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T.. (Inherited from ICollection.T..)</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether the ICollection.T.. contains a specific value. (Inherited from ICollection.T..)</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether this collection contains an instance with the specified instance path.</td>
</tr>
<tr>
<td>ContainsName</td>
<td>Determines whether this collection contains an instance with the specified instance name.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the ICollection.T.. to an Array, starting at a particular Array index. (Inherited from ICollection.T..)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from IEnumerable.T..)</td>
</tr>
<tr>
<td>GetInstance</td>
<td>Gets the IInstance by instance path.</td>
</tr>
<tr>
<td>GetInstanceByName</td>
<td>Gets the IInstance by instance name.</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T.. (Inherited from IList.T..)</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T.. at the specified index. (Inherited from IList.T..)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the ICollection.T.. (Inherited from ICollection.T..)</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the IList.T.. item at the specified index. (Inherited from IList.T..)</td>
</tr>
<tr>
<td>TryGetInstance</td>
<td>Tries to get the specified instance.</td>
</tr>
<tr>
<td>TryGetInstanceByName</td>
<td>Tries to get the specified instance by name.</td>
</tr>
</tbody>
</table>

**Reference**

IInstanceCollection.T. Interface [2057]

TwinCAT.TypeSystem Namespace [1622]

### IInstanceCollection.T..Item Property (String)

Gets the Instance with the specified instance path.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
T this[string instancePath] { get; }
```

**Parameters**

instancePath Type: System.String

**Property Value**

Type: T [2057]

**Reference**

IInstanceCollection.T. Interface [2057]

Item Overload [2059]
6.11.57.1.2  \texttt{IInstanceCollection.T..Mode} Property

Gets the \texttt{InstanceCollectionMode}~\cite{2075}.

\textbf{Syntax}

\texttt{C#}

\begin{verbatim}
InstanceCollectionMode Mode { get; }
\end{verbatim}

\textbf{Property Value}

Type: \texttt{InstanceCollectionMode}~\cite{2075}

The mode.

\textbf{Reference}

\texttt{IInstanceCollection.T. Interface}~\cite{2057}

\texttt{TwinCAT.TypeSystem Namespace}~\cite{1622}

6.11.57.2  \texttt{IInstanceCollection.T. Methods}

The \texttt{IInstanceCollection.T}~\cite{2057} generic type exposes the following members.

\textbf{Methods}

\begin{tabular}{|l|l|}
\hline
\textbf{Name} & \textbf{Description} \\
\hline
\texttt{Add} & Adds an item to the \texttt{ICollection.T}. (Inherited from \texttt{ICollection.T}~\cite{2057}..) \\
\hline
\texttt{Clear} & Removes all items from the \texttt{ICollection.T}. (Inherited from \texttt{ICollection.T} \cite{2057}..) \\
\hline
\texttt{Contains(T)} & Determines whether the \texttt{ ICollection.T} contains a specific value. (Inherited from \texttt{ ICollection.T} \cite{2057}..) \\
\hline
\texttt{Contains(String)} \cite{2061} & Determines whether this collection contains an instance with the specified instance path. \\
\hline
\texttt{ContainsName} \cite{2062} & Determines whether this collection contains an instance with the specified instance name. \\
\hline
\texttt{CopyTo} & Copies the elements of the \texttt{ICollection.T} to an \texttt{Array}, starting at a particular \texttt{Array} index. (Inherited from \texttt{ICollection.T}~\cite{2057}..) \\
\hline
\texttt{GetEnumerator} & Returns an enumerator that iterates through the collection. (Inherited from \texttt{IEnumerable.T}~\cite{2057}..) \\
\hline
\texttt{GetInstance} \cite{2062} & Gets the \texttt{IInstance} \cite{2052} by instance path. \\
\hline
\texttt{GetInstanceByName} \cite{2063} & Gets the \texttt{IInstance} \cite{2052} by instance name. \\
\hline
\texttt{IndexOf} & Determines the index of a specific item in the \texttt{IList.T}. (Inherited from \texttt{IList.T} \cite{2057}..) \\
\hline
\end{tabular}
<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert</td>
<td>Inserts an item to the <code>IList&lt;T&gt;</code> at the specified index. (Inherited from <code>IList&lt;T&gt;[..]</code>)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;T&gt;[..]</code>)</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the <code>IList&lt;T&gt;</code> item at the specified index. (Inherited from <code>IList&lt;T&gt;[..]</code>)</td>
</tr>
<tr>
<td>TryGetInstance</td>
<td>Tries to get the specified instance.</td>
</tr>
<tr>
<td>TryGetInstanceByName</td>
<td>Tries to get the specified instance by name.</td>
</tr>
</tbody>
</table>

- `TwinCAT.TypeSystem Namespace[.]1622`

### InstanceCollection<T>.Contains Method (String)

Determines whether this collection contains an instance with the specified instance path.

**Namespace:** TwinCAT.TypeSystem[.]1622  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdc3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
bool Contains(
    string instancePath
)
```

### Parameters

- `instancePath`  
  Type: `System.String`  
  The instance path.
**Return Value**

Type: Boolean  
true if this collection contains the specified instance path; otherwise, false.

**Reference**

IInstanceCollection.T. Interface [2057]

Contains Overload [2061]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.57.2.2  IInstanceCollection.T..ContainsName Method

Determines whether this collection contains an instance with the specified instance name.

**Namespace**: TwinCAT.TypeSystem [1622]  
**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```c#
bool ContainsName(
    string instanceName
)
```

**Parameters**

instanceName  
Type: System.String  
Name of the instance.

**Return Value**

Type: Boolean  
true if this collection contains the specified instance path; otherwise, false.

**Reference**

IInstanceCollection.T. Interface [2057]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.57.2.3  IInstanceCollection.T..GetInstance Method

Gets the IInstance [2052] by instance path.

**Namespace**: TwinCAT.TypeSystem [1622]  
**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```c#
T GetInstance(
    string instancePath
)
```
Parameters

instancePath
Type: System.String
The instance path.

Return Value

Type: T [2057]
T.

Reference

IInstanceCollection.T. Interface [2057]
TwinCAT.TypeSystem Namespace [1622]

6.11.57.2.4 IInstanceCollection.T..GetInstanceByName Method

Gets the IInstance [2052] by instance name.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

IList<T> GetInstanceByName(
    string instanceName
)

Parameters

instanceName
Type: System.String
Name of the instance.

Return Value

Type: IList<T> [2057].
IList<T>.

Reference

IInstanceCollection.T. Interface [2057]
TwinCAT.TypeSystem Namespace [1622]

6.11.57.2.5 IInstanceCollection.T..TryGetInstance Method

Tries to get the specified instance.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### Syntax

**C#**

```
bool TryGetInstance(
    string instancePath,
    out T symbol
)
```

**Parameters**

- **instancePath**
  - Type: `System.String`
  - The instance path.

- **symbol**
  - Type: `T` [2057]
  - The symbol.

**Return Value**

- Type: `Boolean`
  - `true` if the `IInstance` [2052] is found; otherwise, `false`.

**Reference**

- `IInstanceCollection.T.Interface` [2057]
- `TwinCAT.TypeSystem Namespace` [1622]

### 6.11.57.2.6 `IInstanceCollection.T..TryGetInstanceByName` Method

Tries to get the specified instance by name.

**Namespace:** `TwinCAT.TypeSystem` [1622]

**Assembly:** `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```
bool TryGetInstanceByName(
    string instanceName,
    out IList<T> symbols
)
```

**Parameters**

- **instanceName**
  - Type: `System.String`
  - Name of the instance.

- **symbols**
  - Type: `System.Collections.Generic.IList<T>` [2057]
  - The found symbols.

**Return Value**

- Type: `Boolean`
  - `true` if the `IInstance` [2052] is found; otherwise, `false`.

**Reference**

- `IInstanceCollection.T.Interface` [2057]
6.11.58 **IMember Interface**

Specifies a single field/member of a **Struct DataType**.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public interface IMember : IField,
    IAttributedInstance, IInstance, IBitSize
```

The IMember type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitOffset [2067]</td>
<td>Gets the bit offset.</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteOffset [2067]</td>
<td>Gets the byte offset.</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance [2052] (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>Offset [2068]</td>
<td>Gets the offset of the IMember within the parent IStructType [2162] in bits or bytes dependent on IsBitType.</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ParentType</td>
<td>Gets the Parent Struct/Union of this IField. (Inherited from IField.)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType. (Inherited from BitSize.)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance.)</td>
</tr>
</tbody>
</table>

**Reference**

### 6.11.58.1 IMember Properties

The IMember type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance.)</td>
</tr>
<tr>
<td>BitOffset</td>
<td>Gets the bit offset.</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteOffset</td>
<td>Gets the byte offset.</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.). (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)). (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance represents a Pointer type (Pointer TO) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the IInstance represents a Reference type (REFERENCE TO) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this IInstance is static. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Offset [2068]</td>
<td>Gets the offset of the IMember [2065] within the parent IStructType [2162] in bits or bytes dependent on IsBitType.</td>
</tr>
<tr>
<td>ParentType [2042]</td>
<td>Gets the Parent Struct/Union of this IField [2040]. (Inherited from IField [2040].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

IMember Interface [2065]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.58.1.1 IMember.BitOffset Property

Gets the bit offset.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
int BitOffset { get; }
```

**Property Value**

Type: Int32

The bit offset.

**Reference**

IMember Interface [2065]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.58.1.2 IMember.ByteOffset Property

Gets the byte offset.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
int ByteOffset { get; }
```
**Property Value**

Type: `Int32`
The byte offset.

**Reference**

- [IMember Interface](#)
- [TwinCAT.TypeSystem Namespace](#)

### 6.11.58 IMember.Offset Property

Gets the offset of the `IMember` within the parent `IStructType` in bits or bytes dependent on `IsBitType`.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
int Offset { get; }
```

**Property Value**

Type: `Int32`
The bit offset.

### 6.11.59 IMemberCollection Interface

Interface `IMemberCollection` Implements the `IInstanceCollection<T>`.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IMemberCollection : IInstanceCollection<IMember>, IList<IMember>, ICollection<IMember>, IEnumerable<IMember>, IEnumerable
```

The `IMemberCollection` type exposes the following members.
**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T. (Inherited from ICollection.IMember [2065]..)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T is read-only. (Inherited from ICollection.IMember [2065]..)</td>
</tr>
<tr>
<td>Item.String. [2059]</td>
<td>Gets the Instance [2052] with the specified instance path. (Inherited from InstanceCollection.T. [2057].)</td>
</tr>
<tr>
<td>Item.Int32.</td>
<td>Gets or sets the element at the specified index. (Inherited from List.IMember [2065]..)</td>
</tr>
<tr>
<td>Mode [2060]</td>
<td>Gets the InstanceCollectionMode [2075]. (Inherited from InstanceCollection.T. [2057].)</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T. (Inherited from ICollection.IMember [2065]..)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T. (Inherited from ICollection.IMember [2065]..)</td>
</tr>
<tr>
<td>Contains(String) [2061]</td>
<td>Determines whether this collection contains an instance with the specified instance path. (Inherited from InstanceCollection.T. [2057].)</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether the ICollection.T contains a specific value. (Inherited from ICollection.IMember [2065]..)</td>
</tr>
<tr>
<td>ContainsName [2062]</td>
<td>Determines whether this collection contains an instance with the specified instance name. (Inherited from InstanceCollection.T. [2057].)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the ICollection.T to an Array, starting at a particular Array index. (Inherited from ICollection.IMember [2065]..)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from IEnumerable.IMember [2065]..)</td>
</tr>
<tr>
<td>GetInstance [2062]</td>
<td>Gets the Instance [2052] by instance path. (Inherited from InstanceCollection.T. [2057].)</td>
</tr>
<tr>
<td>GetInstanceByName [2063]</td>
<td>Gets the Instance [2052] by instance name. (Inherited from InstanceCollection.T. [2057].)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the List.T. (Inherited from List.IMember [2065]..)</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the List.T at the specified index. (Inherited from List.IMember [2065]..)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the ICollection.T. (Inherited from ICollection.IMember [2065]..)</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the List.T item at the specified index. (Inherited from List.IMember [2065]..)</td>
</tr>
<tr>
<td>TryGetInstance [2063]</td>
<td>Tries to get the specified instance. (Inherited from InstanceCollection.T. [2057].)</td>

`IMemberCollection Interface [2068]`

`TwinCAT.TypeSystem Namespace [1622]`

### 6.11.59.2.1 IMemberCollection.TryGetMember Method

Gets the member with the specified name from the collection.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd72ca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool TryGetMember(
    string memberName,
    out TwinCAT.TypeSystem.IMember symbol
)
```

**Parameters**

- **memberName**  
  Type: `System.String`  
  Name of the member.

- **symbol**  
  Type: `TwinCAT.TypeSystem.IMember [2065]`.  
  The symbol.

**Return Value**

Type: Boolean  
true if found, false otherwise.

TwinCAT.TypeSystem Namespace [► 1622]

6.11.60 INamespaceCollection Interface

Interface INamespaceCollection

Namespace: TwinCAT.TypeSystem [► 1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public interface INamespaceCollection : INamespaceCollection<IDataType>, ICollection<INamespace<IDataType>>, IEnumerable<INamespace<IDataType>>, IEnumerable

The INamespaceCollection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection&lt;T&gt;. (Inherited from ICollection&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection&lt;T&gt; is read-only. (Inherited from ICollection&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection&lt;T&gt;. (Inherited from ICollection&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection&lt;T&gt;. (Inherited from ICollection&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the ICollection&lt;T&gt; contains a specific value. (Inherited from ICollection&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the ICollection&lt;T&gt; to an Array, starting at a particular Array index. (Inherited from ICollection&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from IEnumerable&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the ICollection&lt;T&gt;. (Inherited from ICollection&lt;INamespace&lt;T&gt;, IDatatype&gt;)</td>
</tr>
</tbody>
</table>

TwinCAT.TypeSystem Namespace [1622]

6.11.63.1 **InsufficientAccessRightsException Constructor**

Initializes a new instance of the `InsufficientAccessRightsException` class.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public InsufficientAccessRightsException(
    IValueSymbol symbol,
    SymbolAccessRights requested
)
```

**Parameters**

- `symbol`: Type: `TwinCAT.TypeSystem.IValueSymbol` [2254]
  The symbol.
- `requested`: Type: `TwinCAT.TypeSystem.SymbolAccessRights` [2396]
  The requested.

### 6.11.64 IOversamplingArrayInstance Interface

#### Interface IOversamplingArrayInstance

**Namespace:** TwinCAT.TypeSystem [› 1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

C#

```csharp
public interface IOversamplingArrayInstance : IArrayInstance,
    ISymbol, IAttributedInstance, IInstance, IBitSize
```

The IOversamplingArrayInstance type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance[› 1980].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType[› 1986] in bits. (Inherited from IBitSize[› 1982].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize[› 1982].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol[› 2176].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance[› 2052] (Inherited from IInstance[› 2052].)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType[› 1986] of the Instance[› 2052]. (Inherited from IInstance[› 2052].)</td>
</tr>
<tr>
<td>Dimensions</td>
<td>Gets the dimensions as read only collection. (Inherited from IArrayInstance[› 1964].)</td>
</tr>
<tr>
<td>Elements</td>
<td>Gets the contained Array Elements as read only collection. (Inherited from IArrayInstance[› 1964].)</td>
</tr>
<tr>
<td>ElementType</td>
<td>Gets the type of the contained elements. (Inherited from IArrayInstance[› 1964].)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.) (Inherited from IInstance[› 2052].)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from IInstance[› 2052].)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize[› 1982].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the size of the object is byte aligned (BitSize % 8 == 0) (Inherited from IBitSize)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol is persistent. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance represents a Pointer type (Pointer TO) (Inherited from IInstance)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the IInstance represents a Reference type (REFERENCE TO) (Inherited from IInstance)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this IInstance is static. (Inherited from IInstance)</td>
</tr>
<tr>
<td>Item</td>
<td>Gets the ISymbol with the specified indices. (Inherited from IArrayInstance)</td>
</tr>
<tr>
<td>OversamplingElement</td>
<td>Gets the oversampling element.</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from ISymbol)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from IBitSize)</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the ISymbol (Inherited from ISymbol)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this Instance (Inherited from IInstance)</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance)</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TryGetElement(List&lt;Int32, ISymbol&gt;)</td>
<td>Tries to get the array element with the specified indices (jagged array support). (Inherited from IArrayInstance)</td>
</tr>
<tr>
<td>TryGetElement(Int32, ISymbol)</td>
<td>Tries to get the array element with specified indices (only first level on jagged arrays) (Inherited from IArrayInstance)</td>

Gets the oversampling element.

*Namespace: TwinCAT.TypeSystem [1622]*

*Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14*

**Syntax**

**C#**

```csharp
ISymbol OversamplingElement { get; }
```

**Property Value**

Type: ISymbol [2176]

The oversampling element.

6.11.65 IPointerInstance Interface

Interface representing an instance of an IPointerType [➤ 2086]

Namespace: TwinCAT.TypeSystem [➤ 1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IPointerInstance : ISymbol, IAttributedInstance, IInstance, IBitSize
```

The IPointerInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [➤ 1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [➤ 1980].)</td>
</tr>
<tr>
<td>BitSize [➤ 1984]</td>
<td>Gets the size of the IDataType [➤ 1986] in bits. (Inherited from IBitSize [➤ 1982].)</td>
</tr>
<tr>
<td>ByteSize [➤ 1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [➤ 1982].)</td>
</tr>
<tr>
<td>Category [➤ 2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [➤ 2176].)</td>

</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <code>IBitSize</code>.</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from <code>IDataType</code>).</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment behind the variable declaration. (Inherited from <code>IDataType</code>).</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the <code>IDataType</code> (Namespace + Name) (Inherited from <code>IDataType</code>).</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from [IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from [IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from [IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this [DataType [1986] is a container type (Inherited from [IDataType [1986].)</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this [DataType [1986] is a pointer type (Inherited from [IDataType [1986].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this [DataType [1986] is primitive (Inherited from [IDataType [1986].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this [DataType [1986] is a reference type (Inherited from [IDataType [1986].)</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from [IDataType [1986].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the [DataType [1986] exists. (Inherited from [IDataType [1986].)</td>
</tr>
<tr>
<td>ReferencedType [2088]</td>
<td>Gets the the referenced type.</td>
</tr>
<tr>
<td>ReferenceTypeName [2089]</td>
<td>Gets the name of the referenced datatype</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from [IBitSize [1982].)</td>
</tr>
</tbody>
</table>

[IPointerType Interface [2086]]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.66.1.1 IPointerType.ReferencedType Property

Gets the the referenced type.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
IDataType ReferencedType { get; }
```

**Property Value**

Type: [IDataType [1986]]

The datatype of the reference or null if not resolved.
6.11.66.1.2 IPointerType. ReferenceTypeName Property

Gets the name of the referenced datatype

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294.Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
string ReferenceTypeName { get; }
```

**Property Value**

Type: `String`

The name of the reference datatype.

---

6.11.67 IPrimitiveType Interface

Interface IPrimitiveType

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294.Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public interface IPrimitiveType : IDataType, IBitSize
```

The IPrimitiveType type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from IDataType.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from BitSize.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from IDataType.)</td>
</tr>
</tbody>
</table>
### IPrimitiveType Properties

The IPrimitiveType type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from IDataType.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from IDataType.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the <a href="#">IDataType</a> (Namespace + Name) (Inherited from <a href="#">IDataType</a>.)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the DataType (Inherited from <a href="#">IDataType</a>.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a fullDataType but instead of some sort of bit mapping (Inherited from <a href="#">IBitSize</a>.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <a href="#">IBitSize</a>.)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this <a href="#">DataType</a> is a container type (Inherited from <a href="#">IDataType</a>.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this <a href="#">DataType</a> is a pointer type (Inherited from <a href="#">IDataType</a>.)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this <a href="#">DataType</a> is primitive (Inherited from <a href="#">IDataType</a>.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this <a href="#">DataType</a> is a reference type (Inherited from <a href="#">IDataType</a>.)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from <a href="#">IDataType</a>.)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the <a href="#">DataType</a> exists. (Inherited from <a href="#">IDataType</a>.)</td>

### 6.11.67.1.1 IPrimitiveType.PrimitiveFlags Property

Indicates types of different PrimitiveTypes with flags.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

`PrimitiveTypeFlags PrimitiveFlags { get; }`

**Property Value**

Type: PrimitiveTypeFlags [2289]

**Reference**

[IPrimitiveType Interface](#)[2289]
TwinCAT.TypeSystem Namespace [\p 1622]

### 6.11.68 IProcessImageAddress Interface

Interface describing a Process Image Address

**Namespace:** TwinCAT.TypeSystem [\p 1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IProcessImageAddress : IBitSize
```

The `IProcessImageAddress` type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BitSize [\p 1984]</td>
<td>Gets the size of the <code>IDataType \[\p 1986\]</code> in bits. (Inherited from <code>IBitSize \[\p 1982\].</code>)</td>
</tr>
<tr>
<td>ByteSize [\p 1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <code>IBitSize \[\p 1982\].</code>)</td>
</tr>
<tr>
<td>IndexGroup [\p 2093]</td>
<td>Gets the index group of the Symbol</td>
</tr>
<tr>
<td>IndexOffset [\p 2093]</td>
<td>Gets the index offset of the Symbol</td>
</tr>
<tr>
<td>IsBitType [\p 1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping (Inherited from <code>IBitSize \[\p 1982\].</code>)</td>
</tr>
<tr>
<td>IsByteAligned [\p 1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <code>IBitSize \[\p 1982\].</code>)</td>
</tr>
<tr>
<td>IsVirtual [\p 2094]</td>
<td>Gets a value indicating whether this instance is virtual.</td>
</tr>
<tr>
<td>Size [\p 1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on <code>IsBitType \[\p 1984\]</code> (Inherited from <code>IBitSize \[\p 1982\].</code>)</td>
</tr>
</tbody>
</table>

### 6.11.68.1 IProcessImageAddress Properties

The `IProcessImageAddress \[\p 2092\]` type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BitSize [\p 1984]</td>
<td>Gets the size of the <code>IDataType \[\p 1986\]</code> in bits. (Inherited from <code>IBitSize \[\p 1982\].</code>)</td>
</tr>
<tr>
<td>ByteSize [\p 1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from <code>IBitSize \[\p 1982\].</code>)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IndexGroup</td>
<td>Gets the index group of the Symbol</td>
</tr>
<tr>
<td>IndexOffset</td>
<td>Gets the index offset of the Symbol</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize)</td>
</tr>
<tr>
<td>IsVirtual</td>
<td>Gets a value indicating whether this instance is virtual.</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from IBitSize)</td>
</tr>
</tbody>
</table>

**Reference**

IProcessImageAddress Interface [2092]

TwinCAT.TypeSystem Namespace [1622]

**6.11.68.1.1 IProcessImageAddress.IndexGroup Property**

Gets the index group of the Symbol

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
uint IndexGroup { get; }
```

**Property Value**

Type: UInt32
The index group.

**Reference**

IProcessImageAddress Interface [2092]

TwinCAT.TypeSystem Namespace [1622]

**6.11.68.1.2 IProcessImageAddress.IndexOffset Property**

Gets the index offset of the Symbol

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
uint IndexOffset { get; }
```

Property Value

Type: UInt32
The index offset.

Reference

IProcessImageAddress Interface [2092]
TwinCAT.TypeSystem Namespace [1622]

6.11.68.1.3 IProcessImageAddress.IsVirtual Property

Gets a value indicating whether this instance is virtual.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
bool IsVirtual { get; }
```

Property Value

Type: Boolean
true if this instance is virtual; otherwise, false.

Remarks

Virtual symbols are are only organizational elements within the Symbols Hierarchy and cannot be accessed seperately by IndexGroup/IndexOffset, Value Read/Writes, notifications or handles.

</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>ReferencedType [2097]</td>
<td>Gets the referenced type</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

**Name** | **Description**
---|---
ResolvedByteSize [2098] | Get the ByteSize of the (completely) resolved Symbol
ResolvedCategory [2098] | Gets the Category of the (completely) resolved Symbol.
ResolvedType [2099] | Gets the (completely) resolved type
Size [1985] | Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)
SubSymbols [2182] | Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)
TypeName [2056] | Gets the name of the DataType [1986] that is used for this IInstance [2052], (Inherited from IInstance [2052].)
ValueEncoding [1982] | Gets the value encoding. (Inherited from IAttributedInstance [1980].)

TwinCAT.TypeSystem Namespace [1622]

### 6.11.69.1 IReferenceInstance Properties

The IReferenceInstance [2094] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance [2052] (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol is persistent. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance represents a Pointer type (Pointer TO) (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the Instance represents a Reference type (REFERENCE TO) (Inherited from Instance.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance is static. (Inherited from Instance.)</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>ReferencedType</td>
<td>Gets the referenced type</td>
</tr>
<tr>
<td>ResolvedByteSize</td>
<td>Get the ByteSize of the (completely) resolved Symbol</td>
</tr>
<tr>
<td>ResolvedCategory</td>
<td>Gets the Category of the (completely) resolved Symbol.</td>
</tr>
<tr>
<td>ResolvedType</td>
<td>Gets the (completely) resolved type</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the ISymbol (Inherited from ISymbol.)</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this Instance (Inherited from Instance.)</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance.)</td>
</tr>
</tbody>
</table>

**Reference**

IReferenceInstance Interface [2094]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.69.1.1 IReferenceInstance.ReferencedType Property

Gets the referenced type

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

IDataType ReferencedType { get; }
### Property Value

**Type:** `IDataType`  
The type of the referenced type

**Remarks**

This is no complete resolution, only the next level. The referenced type can be a reference again.

**Reference**

[IReferenceInstance Interface](http://example.com)  
[TwinCAT.TypeSystem Namespace](http://example.com)

#### 6.11.69.1.2 IReferenceInstance.ResolvedByteSize Property

Get the ByteSize of the (completely) resolved Symbol

**Namespace:**  **TwinCAT.TypeSystem**  
**Assembly:**  **TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version:**  
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
int ResolvedByteSize { get; }
```

**Property Value**

**Type:** `Int32`  
The byte size of the resolved type.

**Reference**

[IReferenceInstance Interface](http://example.com)  
[TwinCAT.TypeSystem Namespace](http://example.com)

#### 6.11.69.1.3 IReferenceInstance.ResolvedCategory Property

Gets the Category of the (completely) resolved Symbol.

**Namespace:**  **TwinCAT.TypeSystem**  
**Assembly:**  **TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version:**  
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
DataTypeCategory ResolvedCategory { get; }
```

**Property Value**

**Type:** `DataTypeCategory`  
The resolved category.
6.11.69.1.4  IReferenceInstance.ResolvedType Property

Gets the (completely) resolved type

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
IDataType ResolvedType { get; }  

Property Value

Type:  |DataType [1986]
The type of the resolved symbol

Reference

IReferenceInstance Interface [2094]
TwinCAT.TypeSystem Namespace [1622]

6.11.70   IReferenceType Interface

Interface representing a reference/pointer type

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
public interface IReferenceType : IDataType, IBitSize

The IReferenceType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes  (Inherited from</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category  (Inherited from</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the IDataType [1986] exists. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>ReferencedType [2102]</td>
<td>Gets the the referenced type.</td>
</tr>
<tr>
<td>ReferencedTypeName [2102]</td>
<td>Gets the name of the referenced type.</td>
</tr>
<tr>
<td>ResolvedByteSize [2102]</td>
<td>Get the ByteSize of the (completely) resolved Symbol</td>
</tr>
<tr>
<td>ResolvedCategory [2103]</td>
<td>Gets the Category of the (completely) resolved Symbol.</td>
</tr>
<tr>
<td>ResolvedType [2103]</td>
<td>Gets the (completely) resolved type</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
</tbody>
</table>

**Reference**

TwinCAT.TypeSystem Namespace [1622]

### 6.11.70.1 IReferenceType Properties

The IReferenceType [2099] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [1988]</td>
<td>Gets the Data Type category (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Comment [1988]</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the IDataType [1986] exists. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>ReferencedType [2102]</td>
<td>Gets the the referenced type.</td>
</tr>
<tr>
<td>ReferencedTypeName [2102]</td>
<td>Gets the name of the referenced type.</td>
</tr>
<tr>
<td>ResolvedByteSize [2102]</td>
<td>Get the ByteSize of the (completely) resolved Symbol</td>
</tr>
<tr>
<td>ResolvedCategory [2103]</td>
<td>Gets the Category of the (completely) resolved Symbol.</td>
</tr>
<tr>
<td>ResolvedType [2103]</td>
<td>Gets the (completely) resolved type</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
</tbody>
</table>

Reference

IReferenceType Interface [2099]

TwinCAT.TypeSystem Namespace [1622]
### 6.11.70.1.1 IReferenceType.ReferencedType Property

Gets the the referenced type.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
IDataType ReferencedType { get; }

**Property Value**

Type: IDataType [1986]  
The data type of the referenced type or null if not resolved.

**Reference**

IReferenceType Interface [2099]  
TwinCAT.TypeSystem Namespace [1622]

### 6.11.70.1.2 IReferenceType.ReferencedTypeName Property

Gets the name of the referenced type.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
string ReferencedTypeName { get; }

**Property Value**

Type: String  
The name of the referenced type.

**Reference**

IReferenceType Interface [2099]  
TwinCAT.TypeSystem Namespace [1622]

### 6.11.70.1.3 IReferenceType.ResolvedByteSize Property

Get the ByteSize of the (completely) resolved Symbol

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
int ResolvedByteSize { get; }
```

Property Value

Type: `Int32`
The size of the resolved byte.

Reference

`IReferenceType Interface` [2099]
`TwinCAT.TypeSystem Namespace` [1622]

### 6.11.70.1.4 `IReferenceType.ResolvedCategory` Property

Gets the Category of the (completely) resolved Symbol.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
DataTypeCategory ResolvedCategory { get; }
```

Property Value

Type: `DataTypeCategory` [1649]
The resolved category.

Reference

`IReferenceType Interface` [2099]
`TwinCAT.TypeSystem Namespace` [1622]

### 6.11.70.1.5 `IReferenceType.ResolvedType` Property

Gets the (completely) resolved type

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
IDataType ResolvedType { get; }
```

Property Value

Type: `IDataType` [1986]
The type of the resolved symbol
**Reference**

IReferenceType Interface [2099]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.71 IRpcCallableInstance Interface

Interface for an RPC callable PLC Method (Remote procedure call)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IRpcCallableInstance
```

The IRpcCallableInstance type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RpcMethods</td>
<td>Gets the Method descriptions for the IRpcCallableType [2121]</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InvokeRpcMethod(String, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, Object, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, Object, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td>TryInvokeRpcMethod(String, Object, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>TryInvokeRpcMethod(String, Object, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>TryInvokeRpcMethod(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object)</td>
<td>Invokes the specified RpcMethod of the IRpcCallableInstance.</td>
</tr>
</tbody>
</table>

**Reference**

TwinCAT.TypeSystem Namespace [1622]

### 6.11.71.1 IRpcCallableInstance Properties

The IRpcCallableInstance [2104] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RpcMethods</td>
<td>Gets the Method descriptions for the IRpcCallableType [2121]</td>
</tr>
</tbody>
</table>

**Reference**

IRpcCallableInstance Interface [2104]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.71.1.1 IRpcCallableInstance.RpcMethods Property

Gets the Method descriptions for the IRpcCallableType [2121]

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

**C#**

```csharp
IRpcMethodCollection RpcMethods { get; }
```

**Property Value**

Type: `IRpcMethodCollection` [2127]

The methods.

**Reference**

- IRpcCallableInstance Interface [2104]
- TwinCAT.TypeSystem Namespace [1622]

### 6.11.71.2 IRpcCallableInstance Methods

**Methods**

<table>

<tr>
<td>InvokeRpcMethod(String, _Object, _AnyTypeSpecifier, _AnyTypeSpecifier, _Object, _Object))</td>
<td>Invokes the specified RPC Method</td>
</tr>
</tbody>
</table>

**Reference**

IRpcCallableInstance Interface [2104]

TwinCAT.TypeSystem Namespace [1622]

**IRpcCallableInstance.InvokeRpcMethod Method (String, .Object.)**

Invokes the specified RPC Method

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
Object InvokeRpcMethod(
    string methodName,
    Object[] inParameters
)
```

Parameters

- **methodName**
  Type: `System.String`
  The method name.

- **inParameters**
  Type: `System.Object`
  The input parameters or NULL

Return Value

Type: `Object`
The return value of the Method (as object).

Remarks

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```csharp
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
            // Call a Method that has the following signature (within MAIN Program)
            /*

Reference

IRpcCallableInstance Interface [2104]

InvokeRpcMethod Overload [2107]

TwinCAT.TypeSystem Namespace [1622]

IRpcCallableInstance.InvokeRpcMethod Method (String, .Object., .Object..)

Invokes the specified RPC Method

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Object InvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    out Object[] outParameters
)

Parameters

methodName Type: System.String
The method name.
inParameters Type: System.Object
The input parameters or NULL
outParameters Type: System.Object..
The output parameters.

Return Value

Type: Object
The return value of the Method (as object).

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.
Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            IQueryable {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */ /*
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            // Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}

Reference

IRpcCallableInstance Interface [2104]

InvokeRpcMethod Overload [2107]

TwinCAT.TypeSystem Namespace [1622]

IRpcCallableInstance.InvokeRpcMethod Method
(String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..)

Invokes the specified RPC Method

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

Object InvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters
)

Parameters

methodName
Type: System.String
The method name.

inParameters
Type: System.Object
The parameters.

outSpecifiers
Type: TwinCAT.TypeSystem.AnyTypeSpecifier[]
The out specifiers (specifying the out types) or NULL.

retSpecifier
Type: TwinCAT.TypeSystem.AnyTypeSpecifier[]
The ret specifier (specifying the return value) or NULL.

outParameters
Type: System.Object
The out parameters.

Return Value

Type: Object
The return value of the Method (as object).

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.

Reference

IRpcCallableInstance Interface [2104]

TwinCAT.TypeSystem Namespace [1622]
IRpcCallableInstance.InvokeRpcMethodAsync Method (String, .Object., CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Task<ResultRpcMethodAccess> InvokeRpcMethodAsync(
    string methodName,
    Object[] inParameters,
    CancellationToken cancel
)
```

Parameters

- **methodName**
  - Type: System.String
  - The method name.

- **inParameters**
  - Type: System.Object
  - The parameters.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token

Return Value

Type: Task<ResultRpcMethodAccess> [2571].
A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethodAccess [2571] results contains the return value (ReturnValue [2574]) together with the output parameters. The succeeded communication is indicated by the ErrorCode property (ErrorCode [2559]) after the communication.

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>

IRpcCallableInstance Interface [2104]

InvokeRpcMethodAsync Overload [2112]

TwinCAT.TypeSystem Namespace [1622]

IRpcCallableInstance.InvokeRpcMethodAsync Method

(String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultRpcMethodAccess> InvokeRpcMethodAsync(
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    CancellationToken cancel
)

Parameters

methodName Type: System.String
The method name.
inParameters  Type: System.Object
The parameters.

outSpecifiers Type: TwinCAT.TypeSystem.AnyTypeSpecifier[1633]
The out specifiers (specifying the out types) or NULL.

retSpecifier Type: TwinCAT.TypeSystem.AnyTypeSpecifier[1633]
The ret specifier (specifying the return value) or NULL.

cancel Type: System.Threading.CancellationToken
The cancellation token

Return Value
Type: Task.ResultRpcMethodAccess[2571].
A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethodAccess[2571] results contains the return value (ReturnValue[2574]) together with the output parameters. The succeeded communication is indicated by the ErrorCode property (ErrorCode[2559]) after the communication.

Remarks
The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples
The following sample shows how to call (Remote Procedures / Methods) within the PLC.

TwinCAT.TypeSystem Namespace [1622]

IRpcCallableInstance.TryInvokeRpcMethod Method (String, Object, Object.)

Invokes the specified RPC Method

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstracts (in TwinCAT.Ads.Abstracts.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
int TryInvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    out Object retval
)
```

Parameters

- **methodName**: Type: `System.String`. The method name.
- **inParameters**: Type: `System.Object`. The parameters.
- **retval**: Type: `System.Object`. The return value of the RPC method as object.

Return Value

- **Type**: `Int32`. The result value of the call (ErrorCode). 0 means Succeeded.

Remarks

Because this overload doesn't provide any `AnyTypeSpecifier` specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

**Dynamic Tree Mode**

```csharp
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.

IRpcCallableInstance.TryInvokeRpcMethod Method
(String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object., Object.)

Invokes the specified RpcMethod of the IRpcCallableInstance [2104].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
int TryInvokeRpcMethod(
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters,
    out Object retValue
)
```

Parameters

**methodName**
Type: System.String
Name of the method.

**inParameters**
Type: .System.Object.
The parameters.

**outSpecifiers**
Type: TwinCAT.TypeSystem.AnyTypeSpecifier [1633]
The out specifiers (specifying the out types) or NULL.

**retSpecifier**
Type: TwinCAT.TypeSystem.AnyTypeSpecifier [1633]
The ret specifier (specifying the return value) or NULL.

**outParameters**
Type: .System.Object.
The out parameters.

**retValue**
Type: System.Object.
The return value of the RPC method./>

Return Value

Type: Int32 AdsErrorCode.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

**Dynamic Tree Mode**

class RpcCall1VirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
    
}
using (AdsClient client = new AdsClient())
{
    //client.Synchronize = false;
    // Connect to the target device
    client.Connect(address);
    SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.VirtualTree);
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
    // Get the Symbols (Dynamic Symbols)
    IRpcStructInstance main = (IRpcStructInstance)loader.Symbols("MAIN"); // Gets the MAIN Instance of the PLC Program
    short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});
    // Call a Method that has no parameter and returns VOID
    main.InvokeRpcMethod("M_Method1", new object[]{ });
    // Browsing RpcMethods
    foreach (IRpcMethod method in main.RpcMethods)
    {
        string methodName = method.Name;
        foreach (IRpcMethodParameter parameter in method.Parameters)
        {
            string parameterName = parameter.Name;
            string parameterType = parameter.TypeName;
        }
    }
}

TwinCAT.TypeSystem Namespace
6.11.73.1.5 IRpcMethod.OutParameters Property

Gets the Out-Parameters of the IRpcMethod [2123]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

IRpcMethodParameterCollection OutParameters { get; }

Property Value

Type: IRpcMethodParameterCollection [2137]
The out- and ref-parameters.

Remarks

The Out-Parameters doesn't include the Ref Parameters. These are included in the InParameters [2124] set.

Reference

IRpcMethod Interface [2123]
TwinCAT.TypeSystem Namespace [1622]

6.11.73.1.6 IRpcMethod.Parameters Property

Gets all parameters (In, Out and ref parameters) of the IRpcMethod [2123]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

IRpcMethodParameterCollection Parameters { get; }

Property Value

Type: IRpcMethodParameterCollection [2137]
The parameters.

Reference

IRpcMethod Interface [2123]
TwinCAT.TypeSystem Namespace [1622]

6.11.73.1.7 IRpcMethod.ReturnType Property

Gets the return type.
6.11.73.1.8 IRpcMethod.ReturnTypeSize Property

Gets the size of the return type in bytes.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
int ReturnTypeSize { get; }
```

**Property Value**

Type: Int32
The size of the return type.

**Reference**

IRpcMethod Interface

TwinCAT.TypeSystem Namespace

6.11.74 IRpcMethodCollection Interface

Interface for RPC Method collections.

Interface IRpcMethodParameter

**Namespace:** TwinCAT.TypeSystem [› 1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

public interface IRpcMethodParameter

The IRpcMethodParameter type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HasLengthIsParameter [2135]</td>
<td>Gets a value indicating whether this instance has a related LengthIs Parameter.</td>
</tr>
<tr>
<td>LengthIsParameterIndex [2135]</td>
<td>Gets the index of the LengthIs parameter (within the MethodParameter List)</td>
</tr>
<tr>
<td>Name [2135]</td>
<td>Gets the Parameter Name</td>
</tr>
<tr>
<td>ParameterFlags [2136]</td>
<td>Gets the parameter flags.</td>
</tr>
<tr>
<td>Size [2136]</td>
<td>Gets the size of the IRpcMethodParameter</td>
</tr>
<tr>
<td>TypeName [2137]</td>
<td>Gets the Data type of the Parameter</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.TypeSystem Namespace [1622]

6.11.75.1 IRpcMethodParameter Properties

The IRpcMethodParameter [2133] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HasLengthIsParameter [2135]</td>
<td>Gets a value indicating whether this instance has a related LengthIs Parameter.</td>
</tr>
<tr>
<td>LengthIsParameterIndex [2135]</td>
<td>Gets the index of the LengthIs parameter (within the MethodParameter List)</td>
</tr>
<tr>
<td>Name [2135]</td>
<td>Gets the Parameter Name</td>
</tr>
<tr>
<td>ParameterFlags [2136]</td>
<td>Gets the parameter flags.</td>
</tr>
<tr>
<td>Size [2136]</td>
<td>Gets the size of the IRpcMethodParameter</td>
</tr>
<tr>
<td>TypeName [2137]</td>
<td>Gets the Data type of the Parameter</td>
</tr>
</tbody>
</table>

Reference

IRpcMethodParameter Interface [2133]

TwinCAT.TypeSystem Namespace [1622]
6.11.75.1.1 IRpcMethodParameter.HasLengthIsParameter Property

Gets a value indicating whether this instance has a related LengthIs Parameter.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
bool HasLengthIsParameter { get; }
```

**Property Value**

Type: Boolean

true if this instance has a LengthIs parameter; otherwise, false.

**Reference**

IRpcMethodParameter Interface

TwinCAT.TypeSystem Namespace

6.11.75.1.2 IRpcMethodParameter.LengthIsParameterIndex Property

Gets the index of the LengthIs parameter (within the MethodParameter List)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
int LengthIsParameterIndex { get; }
```

**Property Value**

Type: Int32

The index of the length is parameter.

**Remarks**

This field references to the Parameter that defines the length for this generic one. Equally to the marshalling attributes of COM (sizeof, length) this enables to transport parameter of type (PVOID)

Gets the Parameter Name
namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

string Name { get; }

Property Value

Type: String
The name.

Reference

IRpcMethodParameter Interface [2133]
TwinCAT.TypeSystem Namespace [1622]

6.11.75.1.4 IRpcMethodParameter.ParameterFlags Property

Gets the parameter flags.

namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

MethodParamFlags ParameterFlags { get; }

Property Value

Type: MethodParamFlags [2288]
The parameter flags.

Reference

IRpcMethodParameter Interface [2133]
TwinCAT.TypeSystem Namespace [1622]

6.11.75.1.5 IRpcMethodParameter.Size Property

Gets the size of the IRpcMethodParameter [2133]

namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

int Size { get; }
6.11.75.1.6 IRpcMethodParameter.TypeName Property

Gets the Data type of the Parameter

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
string TypeName { get; }

Property Value

Type: String
The type.

6.11.76 IRpcMethodParameterCollection Interface

Interface IRpcMethodParameterCollection

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public interface IRpcMethodParameterCollection : IList<IRpcMethodParameter>, ICollection<IRpcMethodParameter>, IEnumerable<IRpcMethodParameter>, IEnumerable

The IRpcMethodParameterCollection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T. (Inherited from ICollection&lt;IRpcMethodParameter&gt; [2133]..)</td>
</tr>
</tbody>
</table>
TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T. is read-only. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>Item</td>
<td>Gets or sets the element at the specified index. (Inherited from IList.IRpcMethodParameter [2133].)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the ICollection.T. contains a specific value. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the ICollection.T. to an Array, starting at a particular Array index. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from IEnumerable.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>GetLengthIsParameter</td>
<td>Gets the corresponding LengthIs parameter.</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T. (Inherited from IList.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T. at the specified index. (Inherited from IList.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the ICollection.T. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the IList.T. item at the specified index. (Inherited from IList.IRpcMethodParameter [2133].)</td>
</tr>
</tbody>
</table>

Reference

6.11.76.1 IRpcMethodParameterCollection Properties

The IRpcMethodParameterCollection [2137] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T. is read-only. (Inherited from ICollection.IRpcMethodParameter [2133].)</td>
</tr>
<tr>
<td>Item</td>
<td>Gets or sets the element at the specified index. (Inherited from IList.IRpcMethodParameter [2133].)</td>
</tr>
</tbody>
</table>

## 6.11.76.2 IRpcMethodParameterCollection Methods

The `IRpcMethodParameterCollection` type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the <code>ICollection&lt;T&gt;</code> (Inherited from <code>ICollection&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the <code>ICollection&lt;T&gt;</code> (Inherited from <code>ICollection&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the <code>ICollection&lt;T&gt;</code> contains a specific value. (Inherited from <code>ICollection&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the <code>ICollection&lt;T&gt;</code> to an <code>Array</code>, starting at a particular <code>Array</code> index. (Inherited from <code>ICollection&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from <code>IEnumerable&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>GetLengthIsParameter</td>
<td>Gets the corresponding LengthIs parameter.</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the <code>IList&lt;T&gt;</code> (Inherited from <code>IList&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the <code>IList&lt;T&gt;</code> at the specified index. (Inherited from <code>IList&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the <code>ICollection&lt;T&gt;</code> (Inherited from <code>ICollection&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the <code>IList&lt;T&gt;</code> item at the specified index. (Inherited from <code>IList&lt;IRpcMethodParameter&gt;</code>..)</td>
</tr>
</tbody>
</table>

6.11.77 IRpcStructInstance Interface

Interface IRpcStructInstance

Namespace: TwinCAT>TypeSystem\[1622\]  
Assembly: TwinCAT>Ads>Abstractions (in TwinCAT>Ads>Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public interface IRpcStructInstance : IStructInstance,  
ISymbol, IAttributedInstance, IInstance, IBitSize, IRpcCallableInstance
```

The IRpcStructInstance type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes[1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance[1980].)</td>
</tr>
<tr>
<td>BitSize[1984]</td>
<td>Gets the size of the IDataType[1986] in bits. (Inherited from IBitSize[1982].)</td>
</tr>
<tr>
<td>ByteSize[1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize[1982].)</td>
</tr>
<tr>
<td>Category[2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol[2176].)</td>
</tr>
<tr>
<td>Comment[2053]</td>
<td>Gets the comment of the IInstance[2052] (Inherited from IInstance[2052].)</td>
</tr>
<tr>
<td>DataType[2054]</td>
<td>Gets the IDataType[1986] of the IInstance[2052]. (Inherited from IInstance[2052].)</td>
</tr>
<tr>
<td>HasRpcMethods[2161]</td>
<td>Gets a value indicating whether this instance has RPC methods (Inherited from IStructInstance[2158].)</td>
</tr>
<tr>
<td>InstanceName[2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance[2052].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-----------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)). (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0). (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this [ISymbol [2176] is persistent. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>MemberInstances [2162]</td>
<td>Gets the member instances of the Struct Instance [2158]. (Inherited from StructInstance [2158].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>RpcMethods [2105]</td>
<td>Gets the Method descriptions for the IRpcCallableType [2121] (Inherited from IRpcCallableInstance [2104].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InvokeRpcMethod(S string, Object) [2107]</td>
<td>Invokes the specified RPC Method (Inherited from IRpcCallableInstance [2104].)</td>
</tr>
<tr>
<td>InvokeRpcMethod(S string, Object, Object) [2109]</td>
<td>Invokes the specified RPC Method (Inherited from IRpcCallableInstance [2104].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object)</td>
<td>Invokes the specified RPC Method (Inherited from IRpcCallableInstance [2104].)</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, Object, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from IRpcCallableInstance [2104].)</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from IRpcCallableInstance [2104].)</td>

### 6.11.78.1 IStringInstance Properties

The IStringInstance [2145] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [</td>
</tr>
<tr>
<td></td>
<td>1982].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from Instance</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Inherited from Instance</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol</td>
</tr>
<tr>
<td>IsFixedSize</td>
<td>Gets a value indicating whether this instance is a string of static length</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the Instance</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the Instance</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from ISymbol</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the ISymbol</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the IDataType</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance</td>
</tr>
</tbody>
</table>

IStringInstance Interface | [2145]
6.11.78.1.1  IString Instance.IsFixedLength Property

Gets a value indicating whether this instance is a string of static length

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
bool IsFixedLength { get; }
```

**Property Value**

Type: Boolean  

true if this instance is of static length; otherwise, false.

**Reference**

IString Instance Interface  

IString Marshaler Interface

6.11.79  IStringMarshaler Interface

Common interface for marshalling ADS string values.

**Namespace:**  TwinCAT.TypeSystem

Syntax
C#
public interface IStringType : IDataType, IBitSize

The IStringType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the [IDataType ], 1986 (Inherited from [IDataType ], 1986).</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the [IDataType ], 1986 in bits. (Inherited from [IBitSize ], 1982).</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from [IBitSize ], 1982).</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from [IDataType ], 1986).</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment behind the variable declaration. (Inherited from [IDataType ], 1986).</td>
</tr>
<tr>
<td>Encoding</td>
<td>Gets the encoding of the String (Encoding.Default (STRING) or Encoding.UNICODE (WSTRING)).</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the [IDataType ], 1986 (Namespace + Name) (Inherited from [IDataType ], 1986).</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the DataType (Inherited from [IDataType ], 1986).</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from [IBitSize ], 1982).</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from [IBitSize ], 1982).</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this [IDataType] is a container type (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>IsFixedLength</td>
<td>Gets a value indicating whether the string is of fixed length.</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this [IDataType] is a pointer type (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this [IDataType] is primitive (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this [IDataType] is a reference type (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Length</td>
<td>Gets the number of characters within the string (when fixed length).</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Namespace</td>
<td>Gets the namespace string within the [IDataType] exists. (Inherited from [IDataType].)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from [IBitSize].)</td>
</tr>
</tbody>
</table>

### 6.11.80.1.2 IStringType.IsFixedLength Property

Gets a value indicating whether the string is of fixed length.
**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
bool IsFixedLength { get; }
```

### Property Value

**Type:** Boolean

true if this instance is fixed length; otherwise, false.

### Reference

IStringType Interface

TwinCAT.TypeSystem Namespace

#### 6.11.80.1.3 IStringType.Length Property

Gets the number of characters within the string (when fixed length).

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
int Length { get; }
```

### Property Value

**Type:** Int32

The length if fixed length, otherwise -1

### Reference

IStringType Interface

TwinCAT.TypeSystem Namespace

#### 6.11.81 IStructInstance Interface

Interface representing an instance of a IStructType

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public interface IStructInstance : ISymbol, IAttributedInstance, IInstance, IBitSize
```
The IStructInstance type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the DataType in bits. (Inherited from IBitSize)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from IBitSize)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance (Inherited from Instance)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the DataType of the Instance. (Inherited from IInstance)</td>
</tr>
<tr>
<td>HasRpcMethods</td>
<td>Gets a value indicating whether this instance has RPC methods</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from Instance)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from Instance)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol is persistent. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the Instance represents a Pointer type (Pointer TO) (Inherited from Instance)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the Instance represents a Reference type (REFERENCE TO) (Inherited from Instance)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance is static. (Inherited from Instance)</td>
</tr>
<tr>
<td>MemberInstances</td>
<td>Gets the member instances of the Struct Instance.</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from ISymbol)</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType (Inherited from IBitSize)</td>
</tr>
</tbody>
</table>
## IStructInstance Properties

The `IStructInstance` type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from <code>IAtributedInstance</code>)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>IDataType</code> in bits. (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in bytes. (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <code>IInstance</code> (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <code>IDataType</code> of the <code>IInstance</code>. (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>HasRpcMethods</td>
<td>Gets a value indicating whether this instance has RPC methods</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this <code>ISymbol</code> is persistent. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the <code>IInstance</code> represents a Pointer type (Pointer TO) (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from Instance [2052].)</td>

<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>MemberInstances [2162]</td>
<td>Gets the member instances of the Struct Instance [2158].</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from AttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

Reference

IStructInstance Interface [2158]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.81.1.1 IStructInstance.HasRpcMethods Property

Ggets a value indicating whether this instance has RPC methods

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
bool HasRpcMethods { get; }
```

**Property Value**

Type: Boolean
ture if this instance has RPC methods; otherwise, false.

**Remarks**

If the struct instance supports RPC Methods, then the instance class is also supporting IRpcStructInstance [2140]:

Reference

IStructInstance Interface [2158]
6.11.81.1.2 IStructInstance.MemberInstances Property

Gets the member instances of the Struct Instance.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  

```
ISymbolCollection<ISymbol> MemberInstances { get; }
```

Property Value

Type: ISymbolCollection | ISymbol. The member instances.

Reference

IStructInstance Interface

TwinCAT.TypeSystem Namespace

6.11.82 IStructType Interface

Interface representing Struct data types

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  

```
public interface IStructType : IDataType, IBitSize
```

The IStructType type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllMembers</td>
<td>Gets all members (down the derivation hierarchy)</td>
</tr>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from IDataType)</td>
</tr>
<tr>
<td>BaseType</td>
<td>Gets the structs Base Type (Null if not derived).</td>
</tr>
</tbody>
</table>

6.11.82.1.3 **IStructType.BaseTypeName Property**

Gets the the Name of the Base class (if derived)

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
string BaseTypeName { get; }
```

Property Value

Type: String
Empty if not derived.

Reference

[StructType Interface [2162]]

[TwinCAT.TypeSystem Namespace [1622]]

6.11.82.1.4 IStructType.HasRpcMethods Property

Gets a value indicating whether this instance has RPC methods (Struct types only)

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
bool HasRpcMethods { get; }
```

Property Value

Type: Boolean
true if this instance has RPC methods; otherwise, false.

Remarks

The DataType (Structure) must be marked with the PlcAttribute 'TcRpcEnable' to enable RpcMethods, otherwise RpcMethods are not passed through to the ADS symbolic information.

Reference

[StructType Interface [2162]]

[TwinCAT.TypeSystem Namespace [1622]]

6.11.82.1.5 IStructType.Members Property

Gets a readonly collection of the Members [2065] of the IStructType [2162].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
IMemberCollection Members { get; }
```
Property Value

Type: IMemberCollection [2068]
The members as readonly collection.

Remarks

If the IStructType [2162] is derived, only the extended members are returned. To get all supported members down the inheritance chain, use the AllMembers [2165] property.

Syntax

C# public interface IStructValue : IValue

The IStructValue type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age [2228]</td>
<td>Gets the age of the value (last successful read of the value) (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>CachedRaw [2228]</td>
<td>Gets the cached Raw internal Data. (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>DataType [2228]</td>
<td>Gets the data type bound to this IValue [2226] (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>IsPrimitive [2229]</td>
<td>Gets a value indicating whether this IValue [2226] is a primitive value. (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>Symbol [2229]</td>
<td>Gets the symbol bound to this IValue [2226]. (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>TimeStamp [2230]</td>
<td>Gets the Time stamp of the last successful read of the Value (local user time, UTC) (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>UpdateMode [2230]</td>
<td>Gets the update mode (not implemented yet) (Inherited from IValue [2226].)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read [2231]</td>
<td>Reads the value (via ADS) (Inherited from IValue [2226].)</td>
</tr>
<tr>
<td>ReadAsync [2231]</td>
<td>Reads the value (via ADS) (Inherited from IValue [2226].)</td>

### 6.11.83.2.1 IStructValue.TryGetMemberValue Method

Tries to get a property/Member value.

**Namespace:** TwinCAT.TypeSystem.1622  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)  
**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool TryGetMemberValue(
    string name,
    out Object value
)
```

**Parameters**

| name | Type: System.String  
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The name of the member</td>
</tr>
</tbody>
</table>
| value| Type: System.Object  
|      | The value. |

**Return Value**

Type: Boolean  
true if succeeded, otherwise false otherwise.

**Reference**

6.11.83.2.2 IStructValue.TrySetMemberValue Method

Tries to Set a Member/Property Value

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
bool TrySetMemberValue(
    string name,
    Object value
)
```

Parameters

name  
Type: System.String  
The name of the member

value  
Type: System.Object  
The value.

Return Value

Type: Boolean  
true if succeeded, otherwise false otherwise.

Reference

TwinCAT.TypeSystem Namespace

6.11.85 ISubRangeType.T Interface

Interface representing a SubRange type

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public interface ISubRangeType<T> : ISubRangeType,
IDataType, IBitSize
where T : struct, new()
Type Parameters

T

The ISubRangeType.T. type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1987]</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>BaseType [2172]</td>
<td>Gets the base type of the ISubRangeType [2170] (Inherited from ISubRangeType [2170].)</td>
</tr>

</tr>
<tr>
<td>FullName [1989]</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Id [1989]</td>
<td>Gets the ID of the DataType (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPointer [1990]</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPrimitive [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsReference [1991]</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>LowerBound [2176]</td>
<td>Gets the lower bound.</td>
</tr>
<tr>
<td>Name [1992]</td>
<td>Gets the name of the Data Type (without namespace) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Namespace [1992]</td>
<td>Gets the namespace string within the IDataType [1986] exists. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>UpperBound [2176]</td>
<td>Gets the upper bound.</td>
</tr>
</tbody>
</table>
6.11.85.1  ISubRangeType.T. Properties

The ISubRangeType.T. [2173] generic type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType [1986] (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>BaseType</td>
<td>Gets the the base type of the ISubRangeType [2170] (Inherited from ISubRangeType [2170].)</td>
</tr>
<tr>
<td>BaseTypeName</td>
<td>Gets the name of the base type. (Inherited from ISubRangeType [2170].)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType [1986] (Namespace + Name) (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the DataType (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainer</td>
<td>Gets a value indicating whether this IDataType [1986] is a container type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Gets a value indicating whether this IDataType [1986] is a pointer type (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsPrimitive</td>
<td>Gets a value indicating whether this IDataType [1986] is primitive (Inherited from IDataType [1986].)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Gets a value indicating whether this IDataType [1986] is a reference type (Inherited from IDataType [1986].)</td>

<td>Gets the upper bound.</td>
</tr>
</tbody>
</table>
6.11.85.1.1 ISubRangeType.T..LowerBound Property

Gets the lower bound.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
T LowerBound { get; }
```

**Property Value**

Type: T

The lower bound.

6.11.85.1.2 ISubRangeType.T..UpperBound Property

Gets the upper bound.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
T UpperBound { get; }
```

**Property Value**

Type: T

The upper bound.

6.11.86 ISymbol Interface

Interface specifying Symbols ( 
TwinCAT.Ads Namespaces

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface ISymbol : IAttributedInstance,
    IInstance, IBitSize
```

The ISymbol type exposes the following members.

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the IInstance (Inherited from IInstance.)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the IDataType of the IInstance. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full Data-</td>
</tr>
<tr>
<td></td>
<td>Type but instead of some sort of bit mapping. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type.</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this ISymbol is persistent.</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the IInstance represents a Pointer type (Pointer TO) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only.</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive.</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the IInstance represents a Reference type (Reference TO) (Inherited from IInstance.)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this IInstance is static. (Inherited from IInstance.)</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>

### 6.11.86.1 ISymbol Properties

The ISymbol [2176] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods (.) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full</td>
</tr>
<tr>
<td></td>
<td>DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td></td>
<td>(Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type.</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent.</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO)</td>
</tr>
<tr>
<td></td>
<td>(Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type.</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only.</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>

<tr>
<td>IsReference</td>
<td>Indicates that the Instance represents a Reference type (REFERENCE TO)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this Instance is static.</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol</td>
</tr>
<tr>
<td>Size</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType</td>
</tr>
<tr>
<td>SubSymbols</td>
<td>Gets the SubSymbols of the ISymbol</td>
</tr>
<tr>
<td>TypeName</td>
<td>Gets the name of the DataType that is used for this Instance</td>
</tr>
<tr>
<td>ValueEncoding</td>
<td>Gets the value encoding.</td>
</tr>
</tbody>
</table>

### Reference

**ISymbol Interface**

**TwinCAT.TypeSystem Namespace**

### 6.11.86.1.1 ISymbol.Category Property

Gets the Symbol/Datatype Category

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
DataTypeCategory Category { get; }
```

**Property Value**

Type: `DataTypeCategory`

The category.

### Reference

**ISymbol Interface**

**TwinCAT.TypeSystem Namespace**

### 6.11.86.1.2 ISymbol.IsContainerType Property

Gets a value indicating whether this Symbol is a container type.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
bool IsContainerType { get; }
```

**Property Value**

Type: `Boolean`

true if this instance is container type; otherwise, false.

**Reference**

`ISymbol Interface [2176]`

`TwinCAT.TypeSystem Namespace [1622]`

### 6.11.86.1.3 ISymbol.IsPersistent Property

Gets a value indicating whether this `ISymbol` is persistent.

**Namespace:** `TwinCAT.TypeSystem [1622]`

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool IsPersistent { get; }
```

**Property Value**

Type: `Boolean`

true if this instance is persistent; otherwise, false.

**Reference**

`ISymbol Interface [2176]`

`TwinCAT.TypeSystem Namespace [1622]`

### 6.11.86.1.4 ISymbol.IsPrimitiveType Property

Gets a value indicating whether this instance is a primitive type.

**Namespace:** `TwinCAT.TypeSystem [1622]`

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool IsPrimitiveType { get; }
```

**Property Value**

Type: `Boolean`

true if this instance is primitive type; otherwise, false.
6.11.86.1.5  ISymbol.IsReadOnly Property

Indicates that this instance is read only.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
bool IsReadOnly { get; }
```

**Property Value**

Type: Boolean

**Remarks**

Actually, this Flag is restricted to TcCOM-Objects readonly Parameters. Within the PLC this is used for the ApplicationName and ProjectName of PLC instances. Write-Access on these Modules will create an DeviceAccessDenied error.

**Reference**

ISymbol Interface

TwinCAT.TypeSystem Namespace

6.11.86.1.6  ISymbol.IsRecursive Property

Gets a value indicating whether this instance is recursive.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
bool IsRecursive { get; }
```

**Property Value**

Type: Boolean

true if this instance is recursive; otherwise, false.
6.11.86.1.7  ISymbol.Parent Property

Gets the parent Symbol

Namespace:  TwinCAT.TypeSystem
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

ISymbol Parent { get; }

Property Value

Type:  ISymbol
The parent.

Reference

ISymbol Interface
TwinCAT.TypeSystem Namespace

6.11.86.1.8  ISymbol.SubSymbols Property

Gets the SubSymbols of the ISymbol

Namespace:  TwinCAT.TypeSystem
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

ISymbolCollection<ISymbol> SubSymbols { get; }

Property Value

Type:  ISymbolCollection, ISymbol

Remarks

Used for Array, Struct, Pointer and Reference instances. Otherwise empty

Reference

ISymbol Interface
TwinCAT.TypeSystem Namespace

6.11.87  ISymbolCollection Interface

Interface ISymbolCollection Implements the IInstanceCollection.T.
Syntax

C#

```csharp
public interface ISymbolCollection : ISymbolCollection<ISymbol>,
  IInstanceCollection<ISymbol>, IList<ISymbol>, ICollection<ISymbol>,
  IEnumerable<ISymbol>, IEnumerable
```

The ISymbolCollection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T is read-only.</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the IInstance with the specified instance path.</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Mode</td>
<td>Gets the InstanceCollectionMode.</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether this collection contains an instance with the specified</td>
</tr>
<tr>
<td></td>
<td>instance path.</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether the ICollection.T contains a specific value.</td>
</tr>
<tr>
<td>ContainsName</td>
<td>Determines whether this collection contains an instance with the specified</td>
</tr>
<tr>
<td></td>
<td>instance name.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the ICollection.T to an Array, starting at a particular</td>
</tr>
<tr>
<td></td>
<td>Array index.</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetInstance</td>
<td>Gets the IInstance by instance path.</td>
</tr>
<tr>
<td>GetInstanceByName</td>
<td>Gets the IInstance by instance name.</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T at the specified index.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>

ISymbolCollection Interface [2182]

TwinCAT.TypeSystem Namespace [1622]

6.11.88 ISymbolCollection<T>. Interface

Interface ISymbolCollection

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0a15da1c14

Syntax

C#

```csharp
public interface ISymbolCollection<T> : IInstanceCollection<T>,
  IList<T>, ICollection<T>, IEnumerable<T>, IEnumerable<T>
where T : class, ISymbol
```

Type Parameters

T
The `ISymbolCollection<T>` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the <code>ICollection&lt;T&gt;</code>. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>

<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the <code>ICollection&lt;T&gt;</code> is read-only. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td><code>Item[String]</code></td>
<td>Gets the <code>IInstance</code> with the specified instance path. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Item.Int32.</td>
<td>Gets or sets the element at the specified index. (Inherited from <code>IList&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Mode</td>
<td>Gets the <code>InstanceCollectionMode</code>. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the <code>ICollection&lt;T&gt;</code> (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the <code>ICollection&lt;T&gt;</code> (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether this collection contains an instance with the specified instance path. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether the <code>ICollection&lt;T&gt;</code> contains a specific value. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>ContainsName</td>
<td>Determines whether this collection contains an instance with the specified instance name. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the elements of the <code>ICollection&lt;T&gt;</code> to an <code>Array</code>, starting at a particular <code>Array</code> index. (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection. (Inherited from <code>IEnumerable&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>GetInstance</td>
<td>Gets the <code>IInstance</code> by instance path. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>GetInstanceByName</td>
<td>Gets the <code>IInstance</code> by instance name. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the <code>IList&lt;T&gt;</code>. (Inherited from <code>IList&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the <code>IList&lt;T&gt;</code> at the specified index. (Inherited from <code>IList&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the <code>ICollection&lt;T&gt;</code> (Inherited from <code>ICollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the <code>IList&lt;T&gt;</code> item at the specified index. (Inherited from <code>IList&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>TryGetInstance</td>
<td>Tries to get the specified instance. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
<tr>
<td>TryGetInstanceByName</td>
<td>Tries to get the specified instance by name. (Inherited from <code>IInstanceCollection&lt;T&gt;</code>)</td>
</tr>
</tbody>
</table>

### 6.11.89 ISymbolFactory Interface

Symbol Factory Interface

**Namespace:** TwinCAT.TypeSystem ![1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface ISymbolFactory
```

The ISymbolFactory type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>FactoryServices</strong></td>
<td>Gets the factory services.</td>
</tr>
<tr>
<td><strong>HasInvalidCharacters</strong></td>
<td>Gets a value indicating whether <code>ISymbol</code> has invalid characters</td>
</tr>
<tr>
<td><strong>InvalidCharacters</strong></td>
<td>Gets the invalid characters that are not allowed to appear within the Instance Name</td>
</tr>
</tbody>
</table>

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CreateArrayElement</strong></td>
<td>Creates a single Array Element</td>
</tr>

<td>InvalidCharacters</td>
<td>Gets the invalid characters that are not allowed to appear within the Instance Name</td>
</tr>
</tbody>
</table>

#### Reference

- ISymbolFactory Interface [2188]
  - TwinCAT.TypeSystem Namespace [1622]

### 6.11.89.1.1 ISymbolFactory.FactoryServices Property

Gets the factory services.
**TwinCAT.Ads Namespaces**

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
ISymbolFactoryServices FactoryServices { get; }
```

### Property Value

Type: ISymbolFactoryServices
The factory services.

### Reference

- ISymbolFactory Interface
- TwinCAT.TypeSystem Namespace

### 6.11.89.1.2 ISymbolFactory.HasInvalidCharacters Property

Gets a value indicating whether |Symbol|s have invalid characters

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool HasInvalidCharacters { get; }
```

### Property Value

Type: Boolean
true if this instance has invalid characters; otherwise, false.

### Reference

- ISymbolFactory Interface
- TwinCAT.TypeSystem Namespace
- ISymbolFactory.InvalidCharacters

### 6.11.89.1.3 ISymbolFactory.InvalidCharacters Property

Gets the invalid characters that are not allowed to appear within the Instance Name

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
char[] InvalidCharacters { get; }

Property Value

Type: Char
The forbidden characters.

Reference

ISymbolFactory Interface [2188]
TwinCAT.TypeSystem Namespace [1622]
ISymbolFactory.SetInvalidCharacters(Char) [2197]
ISymbolFactory.HasInvalidCharacters [2190]

6.11.89.2 ISymbolFactory Methods

The ISymbolFactory [2188] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CreateArrayElement</td>
<td>Creates a single Array Element</td>
</tr>
<tr>
<td>CreateArrayElementInstances</td>
<td>Creates all Element Instances of the specified array parent symbol.</td>
</tr>
<tr>
<td>CreateFieldInstance</td>
<td>Creates a single Instance member on a struct parent</td>
</tr>
<tr>
<td>CreateFieldInstances</td>
<td>Creates the Member Instances collection for the specified parent instance</td>
</tr>
<tr>
<td>CreateInstance</td>
<td>Creates the Symbol with the specified resolver</td>
</tr>
<tr>
<td>CreateInstanceAsync</td>
<td>Creates the Symbol with the specified resolver</td>
</tr>
<tr>
<td>CreateReferenceInstance</td>
<td>Creates the dereferenced Pointer instance</td>
</tr>
<tr>
<td>CreateVirtualStruct</td>
<td>Creates the virtual structure.</td>

</tr>
</tbody>
</table>

Reference

ISymbolFactory Interface [2188]
TwinCAT.TypeSystem Namespace [1622]

6.11.89.2.1 ISymbolFactory.CreateArrayElement Method

Creates a single Array Element

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
ISymbol CreateArrayElement(  
    IArrayType arrayType,  
    int[] currentIndex,  
    ISymbol parent  
)

**Parameters**

- `arrayType`: Type: TwinCAT.TypeSystem.IArrayType [1971]  
  Resolved Array type.
- `currentIndex`: Type: System.Int32  
  Array Index of the Element
- `parent`: Type: TwinCAT.TypeSystem.ISymbol [2176]  
  Array Instance

**Return Value**

Type: ISymbol [2176]  
Array element

**Reference**

ISymbolFactory Interface [2188]  
TwinCAT.TypeSystem Namespace [1622]

6.11.89.2.2 ISymbolFactory.CreateArrayElementInstances Method

Creates all Element Instances of the specified array parent symbol.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
ISymbolCollection<ISymbol> CreateArrayElementInstances(  
    ISymbol parentInstance,  
    IArrayType arrayType  
)
Parameters

parentInstance
Type: TwinCAT.TypeSystem.ISymbol
The parent instance.

arrayType
Type: TwinCAT.TypeSystem.IArrayType
Resolved array type.

Return Value

Type: ISymbolCollection|SymbolCollection.

Reference

ISymbolFactory Interface
TwinCAT.TypeSystem Namespace

6.11.89.2.3 ISymbolFactory.CreateFieldInstance Method

Creates a single Instance member on a struct parent

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

ISymbol CreateFieldInstance(
    IFIELD field,
    ISymbol parent
)

Parameters

field
Type: TwinCAT.TypeSystem.IField
Field

parent
Type: TwinCAT.TypeSystem.ISymbol
Parent Struct/Alias/Union

Return Value

Type: ISymbol
Instance member

Remarks

Because the Alias type can act like a struct, the parent can be an IAliasInstance also.

Reference

ISymbolFactory Interface
TwinCAT.TypeSystem Namespace
6.11.89.2.4 ISymbolFactory.CreateFieldInstances Method

Creates the Member Instances collection for the specified parent instance

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
ISymbolCollection<ISymbol> CreateFieldInstances(
    ISymbol parentInstance,
    IDataType parentType
)
```

**Parameters**

- **parentInstance**  
  Type: TwinCAT.TypeSystem.ISymbol [2176]  
  The parent instance.

- **parentType**  
  Type: TwinCAT.TypeSystem.IDataType [1986]  
  Parent Type (Struct/Alias/Union).

**Return Value**

Type: ISymbolCollection [2185] ISymbol [2176].  
SymbolCollection.

**Reference**

ISymbolFactory Interface [2188]  
TwinCAT.TypeSystem Namespace [1622]

6.11.89.2.5 ISymbolFactory.CreateInstance Method

Creates the Symbol with the specified resolver

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
ISymbol CreateInstance(
    ISymbolInfo entry,
    ISymbol parent
)
```

**Parameters**

- **entry**  
  Type: TwinCAT.TypeSystem.ISymbolInfo [2199]  
  Symbol Entry.

- **parent**  
  Type: TwinCAT.TypeSystem.ISymbol [2176]  
  The parent.
### Return Value

Type: ISymbol

Symbol instance.

### Reference

ISymbolFactory Interface

TwinCAT.TypeSystem Namespace

### 6.11.89.2.6 ISymbolFactory.CreateInstanceAsync Method

Creates the Symbol with the specified resolver

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
Task<ResultValue<ISymbol>> CreateInstanceAsync(
    ISymbolInfo entry,
    ISymbol parent,
    CancellationToken cancel
)
```

**Parameters**

- **entry**  
  Type: TwinCAT.TypeSystem.ISymbolInfo
  Symbol Entry.

- **parent**  
  Type: TwinCAT.TypeSystem.ISymbol
  The parent.

- **cancel**  
  Type: System.Threading.CancellationToken
  The cancellation token.

**Return Value**

Type: Task<ResultValue<ISymbol>>

Task<ResultValue<ISymbol>>.

**Reference**

ISymbolFactory Interface

TwinCAT.TypeSystem Namespace

### 6.11.89.2.7 ISymbolFactory.CreateReferenceInstance Method

Creates the dereferenced Pointer instance

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### Syntax

**C#**

```csharp
ISymbol CreateReferenceInstance(
    IPointerType type,
    ISymbol parent
)
```

#### Parameters

- **type**  
  Type: `TwinCAT.TypeSystem.IPointerType`  
  Reference/Pointer type.

- **parent**  
  Type: `TwinCAT.TypeSystem.ISymbol`  
  Parent Instance of the reference

#### Return Value

Type: `ISymbol`  
Reference/Pointer instance.

### Reference

`ISymbolFactory Interface`  
`TwinCAT.TypeSystem Namespace`

### 6.11.89.2.8  `ISymbolFactory.CreateVirtualStruct Method`

Creates the virtual structure.

**Namespace:** `TwinCAT.TypeSystem`  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
ISymbol CreateVirtualStruct(
    string instanceName,
    string instancePath,
    ISymbol parent
)
```

#### Parameters

- **instanceName**  
  Type: `System.String`  
  Name of the instance.

- **instancePath**  
  Type: `System.String`  
  The instance path.

- **parent**  
  Type: `TwinCAT.TypeSystem.ISymbol`  
  The parent.

#### Return Value

Type: `ISymbol`  
Virtual struct instance
6.11.89.2.9  ISymbolFactory.Initialize Method

Initializes the ISymbolFactory.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
void Initialize(
    ISymbolFactoryServices services
)
```

**Parameters**

services  Type: ISymbolFactoryServices  
The services.

**Reference**

ISymbolFactory Interface

TwinCAT.TypeSystem Namespace

6.11.89.2.10  ISymbolFactory.SetInvalidCharacters Method

Sets the invalid characters.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
void SetInvalidCharacters(
    char[] invalidChars
)
```

**Parameters**

invalidChars  Type: System.Char  
The character.

**Reference**

ISymbolFactory Interface

TwinCAT.TypeSystem Namespace
6.11.90 ISymbolFactoryServiceProvider Interface

Symbol Value Access interface

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

class ISymbolFactoryServiceProvider

The ISymbolFactoryServiceProvider type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>

### 6.11.91.1  ISymbolInfo.InstancePath Property

 Gets the Symbol Path

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
string InstancePath { get; }
```

**Property Value**

Type: `String`

The path.

**Reference**

ISymbolInfo Interface

TwinCAT.TypeSystem Namespace

### 6.11.91.2  ISymbolInfo.TypeName Property

 Gets the data type Name

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
string TypeName { get; }
```

**Property Value**

Type: `String`

The type of the data.

**Reference**

ISymbolInfo Interface

TwinCAT.TypeSystem Namespace

### 6.11.92  ISymbolLoader Interface

 Symbol Loader interface

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

public interface ISymbolLoader : ISymbolProvider, ISymbolServer

The ISymbolLoader type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BuildInTypes</td>
<td>Gets the build in types.</td>
</tr>
<tr>
<td>DataTypes       [2206]</td>
<td>Gets the data types (Inherited from ISymbolServer [2205].)</td>
</tr>
<tr>
<td>DefaultValueEncoding [2206]</td>
<td>Gets the default value encoding. (Inherited from ISymbolServer [2205].)</td>

#### 6.11.94.1.1  **ISymbolServer.DataTypes Property**

Gets the data types

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
IDataTypeCollection<IDataType> DataTypes { get; }
```

**Property Value**

Type: `IDataTypeCollection` `IDataType`.

The data types.

**Remarks**

This property reads the DataTypes synchronously, if the data is not available yet. For performance reasons, the asynchronous counterpart **GetDataTypesAsync(CancellationToken)** should be preferred for the first call.

**Reference**

- **ISymbolServer Interface**
- **TwinCAT.TypeSystem Namespace**

TwinCAT.TypeSystem Namespace

---

6.11.94.1.3 **ISymbolServer.Symbols Property**

Gets the symbols.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
ISymbolCollection<ISymbol> Symbols { get; }
```

**Property Value**

Type: `ISymbolCollection`, `ISymbol`

The symbols.

**Remarks**

This property reads the Symbol information synchronously, if the data is not available yet. For performance reasons, the asynchronous counterpart `GetSymbolsAsync(CancellationToken)` should be preferred for the first call.

- `TwinCAT.TypeSystem Namespace [1.162]`

#### 6.11.94.2.1 ISymbolServer.GetDataTypesAsync Method

Gets the data types asynchronously.

- **Namespace:** TwinCAT.TypeSystem [1.162]
- **Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.R.90bb1a4b36095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
Task<ResultDataTypes> GetDataTypesAsync(
    CancellationToken cancel
)
```

**Parameters**

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

**Return Value**

- **Type:** `Task<ResultDataTypes>`
  - A task that represents the asynchronous 'GetDataTypes' operation. The `ResultDataTypes` parameter contains the data types (DataTypes [2349]) and the `ErrorCode` [992] after execution.

### Reference

- `ISymbolServer Interface [1.205]`

#### 6.11.94.2.2 ISymbolServer.GetSymbolsAsync Method

Gets the symbols asynchronously.

- **Namespace:** TwinCAT.TypeSystem [1.162]
- **Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.R.90bb1a4b36095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
Task<ResultSymbols> GetSymbolsAsync(
    CancellationToken cancel
)
```

Parameters

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultSymbols>
A task that represents the asynchronous 'GetDataTypes' operation. The ResultSymbols parameter contains the data types (Symbols) and the ErrorCode after execution.

Interface ITypeMarshaler

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public interface ITypeMarshaler

The ITypeMarshaler type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CanMarshal(Object)</td>
<td>Determines whether ADS can marshal the specified value</td>
</tr>
<tr>
<td>CanMarshal(Type)</td>
<td>Determines whether ADS can marshal the specified managed data type.</td>
</tr>
<tr>
<td>Marshal</td>
<td>Gets the byte size of the value when marshalled.</td>
</tr>
<tr>
<td>MarshalSize</td>
<td></td>
</tr>
<tr>
<td>Unmarshal</td>
<td></td>
</tr>
</tbody>
</table>
Remarks
The ITypeMarshaler is the common base interface for marshalling classes. It supports marshalling / unmarshalling of primitive managed values.

Reference
TwinCAT.TypeSystem Namespace [1622]

6.11.97.1 ITypeMarshaler Methods
The ITypeMarshaler [2216] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CanMarshal(Object)</td>
<td>Determines whether ADS can marshal the specified value</td>
</tr>
<tr>
<td>CanMarshal(Type)</td>
<td>Determines whether ADS can marshal the specified managed data type.</td>
</tr>
<tr>
<td>Marshal</td>
<td></td>
</tr>
<tr>
<td>MarshalSize</td>
<td>Gets the byte size of the value when marshalled.</td>
</tr>
<tr>
<td>Unmarshal</td>
<td></td>
</tr>
</tbody>
</table>

<tr>
<td>CanMarshal(Type)</td>
<td>Determines whether ADS can marshal the specified managed data type.</td>
</tr>
</tbody>
</table>

Reference
ITypeMarshaler Interface [2216]
TwinCAT.TypeSystem Namespace [1622]

ITypeMarshaler.CanMarshal Method (Object)
Determines whether ADS can marshal the specified value

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
bool CanMarshal(
    Object value
)
```

Parameters

value Type: `System.Object`
The value.

Return Value

Type: `Boolean`
true if this instance can marshal the specified value; otherwise, false.

Reference

`ITypeMarshaler Interface [2216]`

`CanMarshal Overload [2217]`

`TwinCAT.TypeSystem Namespace [1622]`

`ITypeMarshaler.CanMarshal Method (Type)`

Determines whether ADS can marshal the specified managed data type.

Namespace: `TwinCAT.TypeSystem [1622]`
Assembly: `TwinCAT.Ads.Abstractions` (in `TwinCAT.Ads.Abstractions.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
bool CanMarshal(
    Type type
)
```

Parameters

type Type: `System.Type`
The Managed data type.

Return Value

Type: `Boolean`
true if this instance can marshal the specified managed type; otherwise, false.

6.11.98 IUnionInstance Interface

Interface for an Instance of the IUnionType [2224].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public interface IUnionInstance : ISymbol,
IAttributedInstance, IInstance, IBitSize
```

The `IUnionInstance` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from <code>IAttributedInstance</code>)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the <code>IDataType</code> in bits. (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the <code>IInstance</code> in Bytes (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the <code>Instance</code> (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the <code>IDataType</code> of the <code>IInstance</code> (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>FieldInstances</td>
<td>Gets the field instances of the <code>Union</code></td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods .) (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods .)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full <code>DataType</code> but instead of some sort of bit mapping (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <code>IBitSize</code>)</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this <code>IInstance</code> is persistent. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the <code>Instance</code> represents a Pointer type (Pointer TO) (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from <code>ISymbol</code>)</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the <code>Instance</code> represents a Reference type (REFERENCE TO) (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this <code>Instance</code> is static. (Inherited from <code>IInstance</code>)</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol (Inherited from <code>ISymbol</code>)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>

### 6.11.98.1 IUnionInstance Properties

The IUnionInstance [2220] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance [2052] (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>FieldInstances [2223]</td>
<td>Gets the field instances of the Union</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods .)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full</td>
</tr>
<tr>
<td></td>
<td>.DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0)</td>
</tr>
<tr>
<td></td>
<td>(Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052]).</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052]).</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from BitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

## 6.11.99 IUnionType Interface

Interface for an union data type.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public interface IUnionType : IDataType, IBitSize

The IUnionType type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the attributes of the IDataType (Inherited from IDataType.)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the IDataType in bits. (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Data Type category (Inherited from IDataType.)</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment behind the variable declaration. (Inherited from IDataType.)</td>
</tr>
<tr>
<td>Fields</td>
<td>Gets a readonly collection of the Members of the IUnionType.</td>
</tr>
<tr>
<td>FullName</td>
<td>Gets the full name of the IDataType (Namespace + Name) (Inherited from IDataType.)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the ID of the Data Type (Inherited from IDataType.)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize.)</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize.)</td>
</tr>
<tr>

</table>

Reference

IUnionType Interface [2224]
TwinCAT.TypeSystem Namespace [1622]

6.11.99.1.1 IUnionType.Fields Property

Gets a readonly collection of the Members [2040] of the IUnionType [2224].

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
IFieldCollection Fields { get; }
```

Property Value

Type: IFieldCollection [2042]
The members as readonly collection.

Remarks

If the IStructType [2162] is derived, only the extended members are returned. To get all supported members down the inheritance chain, use the AllMembers [2165] property.

6.11.100.1.2  IValue.CachedRaw Property

Gets the cached Raw internal Data.

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
byte[] CachedRaw { get; }
```

**Property Value**

Type:  `Byte`

The raw cached data.

**Reference**

- IValue Interface
- TwinCAT.TypeSystem Namespace

6.11.100.1.3  IValue.DataType Property

Gets the data type bound to this `IValue`

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
## TwinCAT.Ads Namespaces

### Syntax

**C#**

```csharp
IDataType DataType { get; }
```

### Property Value

Type: `IDataType` [1986]

The type of the data.

### Reference

- `IValue Interface` [2226]
- `TwinCAT.TypeSystem Namespace` [1622]

### 6.11.100.1.4 IValue.IsPrimitive Property

Gets a value indicating whether this `IValue` [2226] is a primitive value.

**Namespace:** `TwinCAT.TypeSystem` [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
bool IsPrimitive { get; }
```

### Property Value

Type: `Boolean`

true if this instance is primitive; otherwise, false.

### Reference

- `IValue Interface` [2226]
- `TwinCAT.TypeSystem Namespace` [1622]

### 6.11.100.1.5 IValue.Symbol Property

Gets the symbol bound to this `IValue` [2226].

**Namespace:** `TwinCAT.TypeSystem` [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
ISymbol Symbol { get; }
```

### Property Value

Type: `ISymbol` [2176]

The symbol.
6.11.100.1.6 IValue.TimeStamp Property

Gets the Time stamp of the last successful read of the Value (local user time, UTC)

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
DateTimeOffset Timestamp { get; }
```

Property Value

Type: DateTimeOffset
The read time stamp.

Reference

IValue Interface [2226]
TwinCAT.TypeSystem Namespace [1622]

6.11.100.1.7 IValue.UpdateMode Property

Gets the update mode (not implemented yet)

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
ValueUpdateMode UpdateMode { get; }
```

Property Value

Type: ValueUpdateMode [150]
The update mode.

Reference

IValue Interface [2226]
TwinCAT.TypeSystem Namespace [1622]

6.11.100.2 IValue Methods

The [IValue [2226]] type exposes the following members.
### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read [2231]</td>
<td>Reads the value (via ADS)</td>
</tr>
<tr>
<td>ReadAsync [2231]</td>
<td>Reads the value (via ADS)</td>
</tr>
<tr>
<td>ResolveValue [2232]</td>
<td>Resolves the Value object to its primitive value.</td>
</tr>
<tr>
<td>TryResolveValue [2232]</td>
<td>Tries to resolves the Value object to its primitive value.</td>
</tr>
<tr>
<td>Write [2233]</td>
<td>Writes the value (via ADS)</td>
</tr>
<tr>
<td>WriteAsync [2233]</td>
<td>Writes the value (via ADS)</td>
</tr>
</tbody>
</table>

### Reference

IValue Interface [2226]

TwinCAT.TypeSystem Namespace [1622]

#### 6.11.100.2.1 IValue.Read Method

Reads the value (via ADS)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
void Read()
```

**Reference**

IValue Interface [2226]

TwinCAT.TypeSystem Namespace [1622]

#### 6.11.100.2.2 IValue.ReadAsync Method

Reads the value (via ADS)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
Task<ResultAccess> ReadAsync(
    CancellationToken cancel)
```
TwinCAT.Ads Namespaces

Parameters

cancel  
Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task.ResultAccess [2556].
Task<ReadValueResult>.

Reference

IValue Interface [2226]

TwinCAT.TypeSystem Namespace [1622]

6.11.100.2.3  IValue.ResolveValue Method

Resolves the Value object to its primitive value.

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
Object ResolveValue(
    bool resolveEnumToPrimitive
)

Parameters

resolveEnumToPrimitive  
Type: System.Boolean
if set to true IEnumValue [2028]s are resolved to their primitives also.

Return Value

Type: Object
System.Object.

Remarks

If the value is not primitive, this method returns the IValue [2226] itself.

Reference

IValue Interface [2226]

TwinCAT.TypeSystem Namespace [1622]

6.11.100.2.4  IValue.TryResolveValue Method

Tries to resolves the Value object to its primitive value.

Namespace:  TwinCAT.TypeSystem [1622]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
bool TryResolveValue(
    bool resolveEnumToPrimitive,
    out Object value
)
```

Parameters

- `resolveEnumToPrimitive`: Type: System.Boolean
  If set to true, `IEnumValue` are resolved to their primitives also.
- `value`: Type: System.Object
  The value.

Return Value

Type: Boolean
true if value can be resolved, false otherwise.

Interface IValueAnySymbol

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IValueAnySymbol : ISymbol,
   IAttributedInstance, IInstance, IBitSize
```

The IValueAnySymbol type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance [2052] (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>
## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

IValueAnySymbol Interface

TwinCAT.TypeSystem Namespace

### IValueAnySymbol.ReadAnyValue Method (Type)

Reads the value of this Value into a new created instance of the managed type

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
Object ReadAnyValue(
    Type managedType
)
```
### Parameters

- **managedType**
  - **Type:** System.Type
  - The tp.

### Return Value

- **Type:** Object
  - Read value (System.Object).

### Reference

- IValueAnySymbol Interface [2235]
- ReadAnyValue Overload [2239]
- TwinCAT.TypeSystem Namespace [1622]

### IValueAnySymbol.ReadAnyValue Method (Type, Int32)

Reads the value of this Value [2254] into a new created instance of the managed type

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstracts (in TwinCAT.Ads.Abstracts.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd6ca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
Object ReadAnyValue(
    Type managedType,
    int timeout
)
```

**Parameters**

- **managedType**
  - Type: System.Type
  - The tp.
- **timeout**
  - Type: System.Int32
  - The timeout in ms.

**Return Value**

- **Type:** Object
  - Read value (System.Object).

### Reference

6.11.102.2.2 **IValueAnySymbol.ReadAnyValueAsync Method**

Reads the (AnyType) value asynchronously.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
Task<ResultReadValueAccess> ReadAnyValueAsync(
    Type managedType,
    CancellationToken cancel
)
```

**Parameters**

- `managedType`  
  Type: `System.Type`  
  Managed type of the value to read.

- `cancel`  
  Type: `System.Threading.CancellationToken`  
  The cancellation token.

**Return Value**

Type: `Task<ResultReadValueAccess>` [2566].

A task object that is representing the asynchronous 'ReadAnyValue' operation. The result will be returned in a `ResultReadValueAccess` [2566], which contains the `Value` [2570] and the `ErrorCode` [2559].

Reference
IValueAnySymbol Interface [2235]
TwinCAT.TypeSystem Namespace [1622]

IValueAnySymbol.WriteAnyValue Method (Object)

Writes the value represented by the managed value to this Value [2254]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
void WriteAnyValue(
    Object managedValue
  )

Parameters

managedValue              Type: System.Object
                           The managed value.
IValueAnySymbol.WriteAnyValue Method (Object, Int32)

Writers the value represented by the managed value to this Value

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
void WriteAnyValue(
    Object managedValue,
    int timeout
)
```

**Parameters**

- `managedValue` Type: `System.Object`
  The managed value.
- `timeout` Type: `System.Int32`
  The timeout in ms.

6.11.103 IValueRawSymbol Interface

Interface IValueRawSymbol

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
The IValueRawSymbol type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance)</td>
</tr>
<tr>
<td>BitSize</td>
<td>Gets the size of the [DataType] in bits. (Inherited from IBitSize)</td>
</tr>
<tr>
<td>ByteSize</td>
<td>Gets the (aligned) size of the Type/Instance in Bytes (Inherited from BSize)</td>
</tr>
<tr>
<td>Category</td>
<td>Gets the Symbol/Datatype Category</td>
</tr>
<tr>
<td>Comment</td>
<td>Gets the comment of the Instance</td>
</tr>
<tr>
<td>DataType</td>
<td>Gets the [DataType] of the Instance</td>
</tr>
<tr>
<td>HasValue</td>
<td>Gets a value indicating whether this [ValueSymbol] has a value</td>
</tr>
<tr>
<td>InstanceName</td>
<td>Gets the name of the instance (without periods)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the relative / absolute access path to the instance (with periods)</td>
</tr>
<tr>
<td>IsBitType</td>
<td>Gets a value indicating whether this instance is not basing on a full</td>
</tr>
<tr>
<td></td>
<td>DataType but instead of some sort of bit mapping</td>
</tr>
<tr>
<td>IsByteAligned</td>
<td>Indicates that the Size of the Object is Byte aligned</td>
</tr>
<tr>
<td>IsContainerType</td>
<td>Gets a value indicating whether this Symbol is a container type.</td>
</tr>
<tr>
<td>IsPersistent</td>
<td>Gets a value indicating whether this [Symbol] is persistent.</td>
</tr>
<tr>
<td>IsPointer</td>
<td>Indicates that the [Instance] represents a Pointer type (Pointer TO)</td>
</tr>
<tr>
<td>IsPrimitiveType</td>
<td>Gets a value indicating whether this instance is a primitive type.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Indicates that this instance is read only.</td>
</tr>
<tr>
<td>IsRecursive</td>
<td>Gets a value indicating whether this instance is recursive.</td>
</tr>
<tr>
<td>IsReference</td>
<td>Indicates that the [Instance] represents a Reference type (REFERENCE TO)</td>
</tr>
<tr>
<td>IsStatic</td>
<td>Gets a value indicating whether this [Instance] is static.</td>
</tr>
<tr>
<td>Parent</td>
<td>Gets the parent Symbol</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>ValueAccessor [2248]</td>
<td>Gets the value accessor.</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>

<tbody>
<tr>
<td>Attributes [► 1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [► 1980].)</td>
</tr>
<tr>
<td>BitSize [► 1984]</td>
<td>Gets the size of the IDataType [► 1986] in bits. (Inherited from IBitSize [► 1982].)</td>
</tr>
<tr>
<td>ByteSize [► 1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [► 1982].)</td>
</tr>
<tr>
<td>Category [► 2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [► 2176].)</td>
</tr>
<tr>
<td>Comment [► 2053]</td>
<td>Gets the comment of the IInstance [► 2052] (Inherited from IInstance [► 2052].)</td>
</tr>
<tr>
<td>DataType [► 2054]</td>
<td>Gets the IDataType [► 1986] of the IInstance [► 2052]. (Inherited from IInstance [► 2052].)</td>
</tr>
<tr>
<td>HasValue [► 2248]</td>
<td>Gets a value indicating whether this IValueSymbol [► 2254] has a value.</td>
</tr>
<tr>
<td>InstanceName [► 2054]</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from IInstance [► 2052].)</td>
</tr>
<tr>
<td>InstancePath [► 2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.) (Inherited from IInstance [► 2052].)</td>
</tr>
<tr>
<td>IsBitType [► 1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [► 1982].)</td>
</tr>
<tr>
<td>IsByteAligned [► 1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [► 1982].)</td>
</tr>
<tr>
<td>IsContainerType [► 2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [► 2176].)</td>
</tr>
<tr>
<td>IsPersistent [► 2180]</td>
<td>Gets a value indicating whether this ISymbol [► 2176] is persistent. (Inherited from ISymbol [► 2176].)</td>
</tr>
<tr>
<td>IsPointer [► 2055]</td>
<td>Indicates that the IInstance [► 2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [► 2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [► 2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [► 2176].)</td>
</tr>
<tr>
<td>IsReadOnly [► 2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [► 2176].)</td>
</tr>
<tr>
<td>IsRecursive [► 2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [► 2176].)</td>
</tr>
<tr>
<td>IsReference [► 2056]</td>
<td>Indicates that the IInstance [► 2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [► 2052].)</td>
</tr>
<tr>
<td>IsStatic [► 2056]</td>
<td>Gets a value indicating whether this IInstance [► 2052] is static. (Inherited from IInstance [► 2052].)</td>
</tr>
<tr>
<td>Parent [► 2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [► 2176].)</td>
</tr>
<tr>
<td>Size [► 1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [► 1984] (Inherited from IBitSize [► 1982].)</td>

### Reference

- `IValueRawSymbol Interface` ([2244]
- `TwinCAT.TypeSystem Namespace` ([1622]

### 6.11.103.1.1 `IValueRawSymbol.HasValue Property`

Gets a value indicating whether this `IValueSymbol` ([2254] has a value.

#### Syntax

**C#**

```csharp
bool HasValue { get; }
```

#### Property Value

**Type:** `Boolean`

- `true` if this instance has value; otherwise, `false`.

#### Remarks

A `VirtualSymbol` does not support values, but in terms of the `IValueSymbol` ([2254] definition, is a `IValueSymbol` ([2254]

### Reference

- `IValueRawSymbol Interface` ([2244]

### 6.11.103.1.2 `IValueRawSymbol.ValueAccessor Property`

Gets the value accessor.

#### Syntax

**C#**

```csharp
IAccessorRawValue ValueAccessor { get; }
```
Property Value

Type: I_accessorRawValue

The value accessor.

Reference

I_valueRawSymbol Interface

TwinCAT.TypeSystem Namespace

6.11.103.2 I_valueRawSymbol Methods

The I_valueRawSymbol type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ReadRawValue()</td>
<td>Reads the raw value of the I_valueSymbol (Ads Read / Write)</td>

IValueRawSymbol.ReadRawValue Method

Reads the raw value of the IValueSymbol (Ads Read / Write)

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
byte[] ReadRawValue()

Field Value

Type: .Byte.
The raw value.

Return Value

Type: .Byte.
System.Byte[].

Reference

IValueRawSymbol Interface
ReadRawValue Overload
TwinCAT.TypeSystem Namespace

IValueRawSymbol.ReadRawValue Method (Int32)

Reads the raw value of the IValueSymbol (Ads Read / Write)

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
byte[] ReadRawValue(
    int timeout
)

Parameters

timeout Type: System.Int32
The timeout in ms.
Field Value
Type: .Byte
The raw value.

Return Value
Type: .Byte
System.Byte[].

Remarks
A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

6.11.103.2.2 IValueRawSymbol.ReadRawValueAsync Method

Reads the raw value of the IValueSymbol [2254] (Ads Read / Write) asynchronously.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
Task<ResultReadRawAccess> ReadRawValueAsync(
    CancellationToken cancel
)

Parameters
cancel Type: System.Threading.CancellationToken
The cancellation token.

Field Value
Type: Task<ResultReadRawAccess> [2564].
The raw value.

Return Value
Type: Task<ResultReadRawAccess> [2564].
System.Byte[].

Reference

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
void WriteRawValue(
    byte[] rawValue
)
```

Parameters

rawValue Type: System.Byte

The value as byte array.

Reference

IValueRawSymbol Interface [2244]

WriteRawValue Overload [2252]

TwinCAT.TypeSystem Namespace [1622]

IValueRawSymbol.WriteRawValue Method (.Byte., Int32)

Writes the raw value of the IValueSymbol (Ads Read / Write)

Namespace: TwinCAT.TypeSystem [1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
void WriteRawValue(
    byte[] rawValue,
    int timeout
)
```

Parameters

- `rawValue` Type: `System.Byte`
The value as byte array.

- `timeout` Type: `System.Int32`
The timeout.

Field Value

Type: `The value`

Remarks

A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

### 6.11.103.2.4 IValueRawSymbol.WriteRawValueAsync Method

Writes the raw value of the `IValueSymbol` (Ads Read / Write)

**Namespace:** `TwinCAT.TypeSystem` [1622]

**Assembly:** `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Task<ResultWriteAccess> WriteRawValueAsync(
    byte[] rawValue,
    CancellationToken cancel
)
```

Parameters

- `rawValue` Type: `System.Byte`
The value as byte array.

- `cancel` Type: `System.Threading.CancellationToken`
The cancellation token.
Return Value

Type: Task.ResultWriteAccess [2575].
A task that represents the asynchronous read operation. The ResultRead [1008] parameter contains the total number of bytes read into the buffer (ReadBytes [1010]) and the ErrorCode [992] after execution.

### 6.11.104.1 IValueSymbol Properties

The IValueSymbol [2254] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AccessRights [2253]</td>
<td>Gets the access rights.</td>
</tr>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980])</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982])</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982])</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176])</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the Instance [2052] (Inherited from IInstance [2052])</td>
</tr>
<tr>
<td>Connection [2260]</td>
<td>Gets the connection that produces values for this IValueSymbol [2254]</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the Instance [2052] (Inherited from IInstance [2052])</td>
</tr>
<tr>
<td>HasValue [2248]</td>
<td>Gets a value indicating whether this IValueSymbol [2254] has a value (Inherited from IValueRawSymbol [2244])</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods .) (Inherited from IInstance [2052])</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods .) (Inherited from IInstance [2052])</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982])</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982])</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176])</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176])</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the Instance [2052] represents a Pointer type (Pointer TO) (Inherited from Symbol [2176].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from Symbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from Symbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from Symbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the Instance [2052] represents a Reference type (REFERENCE TO) (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this Instance [2052] is static. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>NotificationSettings [2260]</td>
<td>Gets or sets the notification settings.</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from Symbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from BitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the Symbol [2176] (Inherited from Symbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this Instance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>ValueAccessor [2248]</td>
<td>Gets the value accessor. (Inherited from ValueRawSymbol [2244].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from AttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

IValueSymbol Interface [2254]
TwinCAT.TypeSystem Namespace [1622]

### 6.11.104.1.1 IValueSymbol.AccessRights Property

Gets the access rights.

**Namespace**: TwinCAT.TypeSystem [1622]
**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
SymbolAccessRights AccessRights { get; }
```

**Property Value**

Type: SymbolAccessRights [2396]  
The access rights.
Reference

IValueSymbol Interface [2254]
TwinCAT.TypeSystem Namespace [1622]

6.11.104.1.2 IValueSymbol.Connection Property

Gets the connection that produces values for this IValueSymbol [2254]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
IConnection Connection { get; }

Property Value

Type: IConnection [74]
The connection object.

Reference

IValueSymbol Interface [2254]
TwinCAT.TypeSystem Namespace [1622]

6.11.104.1.3 IValueSymbol.NotificationSettings Property

Gets or sets the notification settings.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
INotificationSettings NotificationSettings { get; set; }

Property Value

Type: INotificationSettings [972]
The notification settings.

Remarks

The NotificationSettings will be inherited from Parent [2182] if the setting is not overwritten.

### 6.11.104.2 IValueSymbol Methods

The **IValueSymbol** type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ReadRawValue</strong></td>
<td>Reads the raw value of the <strong>IValueSymbol</strong> (Ads Read / Write) (Inherited from <strong>IValueRawSymbol</strong>.)</td>
</tr>
<tr>
<td><strong>ReadRawValue(Int32)</strong></td>
<td>Reads the raw value of the <strong>IValueSymbol</strong> (Ads Read / Write) (Inherited from <strong>IValueRawSymbol</strong>.)</td>
</tr>
<tr>
<td><strong>ReadRawValueAsync</strong></td>
<td>Reads the raw value of the <strong>IValueSymbol</strong> asynchronously. (Inherited from <strong>IValueRawSymbol</strong>.)</td>
</tr>
<tr>
<td><strong>ReadValue</strong></td>
<td>Reads the Value of the <strong>IValueSymbol</strong>.</td>
</tr>
<tr>
<td><strong>ReadValue(Int32)</strong></td>
<td>Reads the Value of the <strong>IValueSymbol</strong>.</td>
</tr>
<tr>
<td><strong>ReadValueAsync</strong></td>
<td>Reads the Value of the <strong>IValueSymbol</strong> asynchronously.</td>
</tr>
<tr>
<td><strong>SetParent</strong></td>
<td>Sets the parent of the Symbol (Inherited from <strong>IHierarchicalSymbol</strong>.)</td>
</tr>
<tr>
<td><strong>TryReadValue</strong></td>
<td>Reads the Value of the <strong>IValueSymbol</strong>.</td>
</tr>
<tr>
<td><strong>TryWriteValue</strong></td>
<td>Writes the Value of the <strong>IValueSymbol</strong>.</td>
</tr>
<tr>
<td><strong>WriteRawValue(Byte, Int32)</strong></td>
<td>Writes the raw value of the <strong>IValueSymbol</strong> (Ads Read / Write) (Inherited from <strong>IValueRawSymbol</strong>.)</td>
</tr>
<tr>
<td><strong>WriteRawValueAsync(Byte, Int32)</strong></td>
<td>Writes the raw value of the <strong>IValueSymbol</strong> asynchronously. (Inherited from <strong>IValueRawSymbol</strong>.)</td>
</tr>
<tr>
<td><strong>WriteValue(Object)</strong></td>
<td>Writes the Value of the <strong>IValueSymbol</strong>.</td>
</tr>
<tr>
<td><strong>WriteValue(Object, Int32)</strong></td>
<td>Writes the Value of the <strong>IValueSymbol</strong>.</td>
</tr>
<tr>
<td><strong>WriteValueAsync</strong></td>
<td>Writes the Value of the <strong>IValueSymbol</strong>.</td>
</tr>
</tbody>
</table>

#### Extension Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PollValuesAnnotated</strong></td>
<td>Overloaded. Polls the values as <strong>ValueChangedEventArgs</strong> sequence annotated value on trigger sequence (Defined by <strong>ValueSymbolExtensions</strong>.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>PollValuesAnnotated(TimeSpan)</td>
<td>Overloaded. Polls the values as <code>ValueChangedEventArgs</code> sequence with a specified period time. (Defined by <code>ValueSymbolExtensions</code>.)</td>
</tr>
<tr>
<td>WhenValueChanged</td>
<td>Gets an observable sequence when the value of the <code>IValueSymbol</code> has changed. (Defined by <code>ValueSymbolExtensions</code>.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object.)</td>
<td>Overloaded. Subscribes the <code>IValueSymbol</code> to an observable sequence of values and writes them to the <code>IValueSymbol</code>. (Defined by <code>ValueSymbolExtensions</code>.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object., Action.Exception.)</td>
<td>Overloaded. Subscribes the <code>IValueSymbol</code> to an observable sequence of values and writes them to the <code>IValueSymbol</code>. (Defined by <code>ValueSymbolExtensions</code>.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object., CancellationToken)</td>
<td>Overloaded. Subscribes the <code>IValueSymbol</code> to an observable sequence of values and writes them to the <code>IValueSymbol</code>. (Defined by <code>ValueSymbolExtensions</code>.)</td>
</tr>
<tr>
<td>WriteValues(IObservable.Object., Action.Exception., CancellationToken)</td>
<td>Overloaded. Subscribes the <code>IValueSymbol</code> to an observable sequence of values and writes them to the <code>IValueSymbol</code>. (Defined by <code>ValueSymbolExtensions</code>.)</td>
</tr>
</tbody>
</table>

### 6.11.104.2.1 `IValueSymbol.ReadValue Method`

**Overload List**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ReadValue()</td>
<td>Reads the Value of the <code>IValueSymbol</code></td>
</tr>
<tr>
<td>ReadValue(Int32)</td>
<td>Reads the Value of the <code>IValueSymbol</code></td>
</tr>
</tbody>
</table>

Reference

`IValueSymbol Interface` [2254]

`TwinCAT.TypeSystem Namespace` [1622]
IValueSymbol.ReadValue Method

Reads the Value of the IValueSymbol [2254]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
Object ReadValue()

Field Value

Type: Object
The value.

Return Value

Type: Object
System.Object.

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader [2200] settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly.

Reference

IValueSymbol Interface [2254]
ReadValue Overload [2262]
TwinCAT.TypeSystem Namespace [1622]

IValueSymbol.ReadValue Method (Int32)

Reads the Value of the IValueSymbol [2254]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
Object ReadValue(
    int timeout
)

Parameters

timeout Type: System.Int32
The timeout in ms.
Field Value

Type: Object
The value.

Return Value

Type: Object
System.Object.

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Reference

IValueSymbol Interface
ReadValue Overload
TwinCAT.TypeSystem Namespace

6.11.104.2.2 IValueSymbol.ReadValueAsync Method

Reads the Value of the IValueSymbol as asynchronously.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions.dll (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultReadValueAccess> ReadValueAsync(
    CancellationToken cancel
)

Parameters

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultReadValueAccess>, A tasks that represents the asynchronous ‘ReadValue’ operation. The read result is stored in the ResultReadValueAccess return value and contains the Value and the ErrorCode.

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly.
6.11.104.2.3 IValueSymbol.TryReadValue Method

Reads the Value of the IValueSymbol [› 2254]

Namespace: TwinCAT.TypeSystem [› 1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
int TryReadValue(
    int timeout,
    out Object value
)
```

Parameters

timeout            Type: System.Int32
                   The timeout in ms.

value              Type: System.Object
                   The symbol value.

Return Value

Type: Int32
The error code.

Remarks

Calling on primitive types, a call of this method will return the primitive value. On complex types (structures and arrays) it depends on the ISymbolLoader [› 2200] settings what will happen. In non dynamic modes: the raw byte Array will be returned, in dynamic mode: A Value will be created on the fly. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

Reference

IValueSymbol Interface [› 2254]

TwinCAT.TypeSystem Namespace [› 1622]

6.11.104.2.4 IValueSymbol.TryWriteValue Method

Writes the Value of the IValueSymbol [› 2254]

Namespace: TwinCAT.TypeSystem [› 1622]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
int TryWriteValue(
    Object value,
    int timeout
)
```

Parameters

- **value**
  Type: `System.Object`
  The value.

- **timeout**
  Type: `System.Int32`
  The timeout in ms.

Return Value

Type: `Int32`
The error code.

Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the `ISymbolLoader` settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written in dynamic mode: A Value that represents the value will be accepted also. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.

**IValueSymbol.WriteValue Method (Object)**

Writes the Value of the `IValueSymbol [2254]`

**Namespace:** `TwinCAT.TypeSystem [1622]`
**Assembly:** `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

**C#**

```csharp
void WriteValue(
    Object value
)
```

**Parameters**

- `value`  
  Type: `System.Object`  
  The value.

**Remarks**

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the `ISymbolLoader` settings what will happen. In non dynamic modes: Only `byte` Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also.

**IValueSymbol.WriteValue Method (Object, Int32)**

Writes the Value of the `IValueSymbol`  

**Namespace:** `TwinCAT.TypeSystem` [1622]  
**Assembly:** `TwinCAT.Ads.Abstractions` (in `TwinCAT.Ads.Abstractions.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
void WriteValue(
    Object value,
    int timeout
)
```

**Parameters**

- `value`  
  Type: `System.Object`  
  The value.
- `timeout`  
  Type: `System.Int32`  
  The timeout in ms.

**Remarks**

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the `ISymbolLoader` settings what will happen. In non dynamic modes: Only `byte` Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also. A negative timeout indicates that the Default Timeout for the communication will be used. 0 means timeout is switched off.
6.11.104.2.6 IValueSymbol.WriteValueAsync Method

Writes the Value of the IValueSymbol [2254] Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultWriteAccess> WriteValueAsync(
    Object value,
    CancellationToken cancel)

Parameters

value
Type: System.Object
The value.
cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultWriteAccess> [2575].
A tasks that represents the asynchronous 'ReadValue' operation. The read result is stored in the ResultWriteAccess [2575] return value and contains the ErrorCode [2559].

Remarks

Calling on primitive types, a call of this method will directly write this Value. On complex types (structs and arrays) it depends on the ISymbolLoader [2200] settings what will happen. In non dynamic modes: Only byte Arrays (of correct size) can be written) in dynamic mode: A Value that represents the value will be accepted also.

### 6.11.105 IVirtualStructInstance Interface

Virtual Struct instance interface.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IVirtualStructInstance : IStructInstance, ISymbol, IAttributedInstance, IInstance, IBitSize
```

The IVirtualStructInstance type exposes the following members.
### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attributes [1982]</td>
<td>Gets the Type Attributes. (Inherited from IAttributedInstance [1980].)</td>
</tr>
<tr>
<td>BitSize [1984]</td>
<td>Gets the size of the IDataType [1986] in bits. (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>ByteSize [1984]</td>
<td>Gets the (aligned) size of of the Type/Instance in Bytes (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>Category [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Comment [2053]</td>
<td>Gets the comment of the IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>DataType [2054]</td>
<td>Gets the IDataType [1986] of the IInstance [2052]. (Inherited from Instance [2052].)</td>
</tr>
<tr>
<td>HasRpcMethods [2161]</td>
<td>Gets a value indicating whether this instance has RPC methods (Inherited from IStructInstance [2158].)</td>
</tr>
<tr>
<td>InstanceName [2054]</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>InstancePath [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsBitType [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full DataType but instead of some sort of bit mapping (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsByteAligned [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is acontainer type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Indicates that this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>MemberInstances [2162]</td>
<td>Gets the member instances of the Struct Instance [2158]. (Inherited from IStructInstance [2158].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>TypeName</strong> [1986]</td>
<td>Gets the name of the <strong>DataType</strong> [1986] that is used for this <strong>Instance</strong> [2052]. (Inherited from <strong>Instance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>ValueEncoding</strong> [1982]</td>
<td>Gets the value encoding. (Inherited from <strong>AttributedInstance</strong> [1980].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddMember [2273]</td>
<td>Adds the member.</td>

TwinCAT.TypeSystem Namespace [1622]

TwinCAT.TypeSystem.IStructInstance [2158]

### 6.11.105.1 IVirtualStructInstance Properties

The **IVirtualStructInstance** [2269] type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Attributes</strong> [1982]</td>
<td>Gets the Type Attributes. (Inherited from <strong>AttributedInstance</strong> [1980].)</td>
</tr>
<tr>
<td><strong>BitSize</strong> [1982]</td>
<td>Gets the size of the <strong>DataType</strong> [1986] in bits. (Inherited from <strong>BitSize</strong> [1982].)</td>
</tr>
<tr>
<td><strong>ByteSize</strong> [1982]</td>
<td>Gets the (aligned) size of the <strong>Type/Instance</strong> in Bytes (Inherited from <strong>BitSize</strong> [1982].)</td>
</tr>
<tr>
<td><strong>Category</strong> [2179]</td>
<td>Gets the Symbol/Datatype Category (Inherited from <strong>Symbol</strong> [2176].)</td>
</tr>
<tr>
<td><strong>Comment</strong> [2053]</td>
<td>Gets the comment of the <strong>Instance</strong> [2052] (Inherited from <strong>Instance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>DataType</strong> [2054]</td>
<td>Gets the <strong>DataType</strong> [1986] of the <strong>Instance</strong> [2052]. (Inherited from <strong>Instance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>HasRpcMethods</strong> [2161]</td>
<td>Gets a value indicating whether this instance has RPC methods (Inherited from <strong>StructInstance</strong> [2158].)</td>
</tr>
<tr>
<td><strong>InstanceName</strong> [2054]</td>
<td>Gets the name of the instance (without periods (.)) (Inherited from <strong>Instance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>InstancePath</strong> [2055]</td>
<td>Gets the relative / absolute access path to the instance (with periods (.)) (Inherited from <strong>Instance</strong> [2052].)</td>
</tr>
<tr>
<td><strong>IsBitType</strong> [1984]</td>
<td>Gets a value indicating whether this instance is not basing on a full <strong>DataType</strong> but instead of some sort of bit mapping (Inherited from <strong>BitSize</strong> [1982].)</td>
</tr>
<tr>
<td><strong>IsByteAligned</strong> [1985]</td>
<td>Indicates that the Size of the Object is Byte aligned (BitSize % 8 == 0) (Inherited from <strong>BitSize</strong> [1982].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsContainerType [2179]</td>
<td>Gets a value indicating whether this Symbol is a container type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPersistent [2180]</td>
<td>Gets a value indicating whether this ISymbol [2176] is persistent. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsPointer [2055]</td>
<td>Indicates that the IInstance [2052] represents a Pointer type (Pointer TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsPrimitiveType [2180]</td>
<td>Gets a value indicating whether this instance is a primitive type. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReadOnly [2181]</td>
<td>Gets a value indicating whether this instance is read only. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsRecursive [2181]</td>
<td>Gets a value indicating whether this instance is recursive. (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>IsReference [2056]</td>
<td>Indicates that the IInstance [2052] represents a Reference type (REFERENCE TO) (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>IsStatic [2056]</td>
<td>Gets a value indicating whether this IInstance [2052] is static. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>MemberInstances [2162]</td>
<td>Gets the member instances of the Struct Instance [2158]. (Inherited from IStructInstance [2158].)</td>
</tr>
<tr>
<td>Parent [2182]</td>
<td>Gets the parent Symbol (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>Size [1985]</td>
<td>Gets the size of the object in bytes or Bits dependant on IsBitType [1984] (Inherited from IBitSize [1982].)</td>
</tr>
<tr>
<td>SubSymbols [2182]</td>
<td>Gets the SubSymbols of the ISymbol [2176] (Inherited from ISymbol [2176].)</td>
</tr>
<tr>
<td>TypeName [2056]</td>
<td>Gets the name of the DataType [1986] that is used for this IInstance [2052]. (Inherited from IInstance [2052].)</td>
</tr>
<tr>
<td>ValueEncoding [1982]</td>
<td>Gets the value encoding. (Inherited from IAttributedInstance [1980].)</td>
</tr>
</tbody>
</table>

6.11.105.2 IVirtualStructInstance Methods

The IVirtualStructInstance [2269] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddMember [2279]</td>
<td>Adds the member.</td>
</tr>
</tbody>
</table>

Reference

IVirtualStructInstance Interface [2269]

TwinCAT.TypeSystem Namespace [1622]
6.11.105.2.1 IVirtualStructInstance.AddMember Method

Adds the member.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
bool AddMember(
    ISymbol memberInstance,
    IVirtualStructInstance parent
)
```

**Parameters**

- **memberInstance**
  
  Type: TwinCAT.TypeSystem.ISymbol
  
  The member instance.

- **parent**
  
  Type: TwinCAT.TypeSystem.IVirtualStructInstance
  
  The parent struct instance. Usually the this pointer.

**Return Value**

Type: Boolean

6.11.106 MarshalException Class

Common Marshalling Exception

**Inheritance Hierarchy**

- System.Object
  - System.Exception
    - TwinCAT.AdsException
      - TwinCAT.TypeSystem.MarshalException

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
[SerializableAttribute]
public sealed class MarshalException : AdsException
```

The MarshalException type exposes the following members.
### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MarshalException</td>
<td>Initializes a new instance of the MarshalException class.</td>
</tr>
<tr>
<td>MarshalException(String)</td>
<td>Initializes a new instance of the MarshalException class.</td>
</tr>
<tr>
<td>MarshalException(DataType)</td>
<td>Initializes a new instance of the MarshalException class.</td>
</tr>
<tr>
<td>MarshalException(String, Exception)</td>
<td>Initializes a new instance of the AdsException class.</td>
</tr>
<tr>
<td>MarshalException(DataType, Object)</td>
<td>Initializes a new instance of the MarshalException class.</td>
</tr>
<tr>
<td>MarshalException(DataType, Type)</td>
<td>Initializes a new instance of the MarshalException class.</td>
</tr>
<tr>
<td>MarshalException(DataType, Type, String)</td>
<td>Initializes a new instance of the MarshalException class.</td>
</tr>
<tr>
<td>MarshalException(Iinstance, Type, MemberInfo)</td>
<td>Initializes a new instance of the MarshalException class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HResult</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception.</td>
</tr>
</tbody>
</table>

### 6.11.106.1.2 MarshalException Constructor (String)

Initializes a new instance of the MarshalException class.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public MarshalException(
    string message)
```

**Parameters**

- **message**
  - Type: System.String
  - The message.

**Reference**

MarshalException Class [2273]
6.11.106.1.3 MarshalException Constructor (IDataType)

Initializes a new instance of the MarshalException class.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public MarshalException(
    IDataType source
)
```

**Parameters**

- **source**  
  Type: TwinCAT.TypeSystem.IDataType  
  The source dataType.

6.11.106.1.4 MarshalException Constructor (String, Exception)

Initializes a new instance of the AdsException class.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public MarshalException(
    string message,
    Exception innerException
)
```

**Parameters**

- **message**  
  Type: System.String  
  The message.

- **innerException**  
  Type: System.Exception  
  The inner exception.

**Reference**

- MarshalException Class
6.11.106.1.5 MarshalException Constructor (IDataType, Object)

Initializes a new instance of the MarshalException class.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public MarshalException(
    IDataType target,
    Object value
)
```

**Parameters**

- **target**
  - Type: TwinCAT.TypeSystem.IDataType
  - The datatype information.

- **value**
  - Type: System.Object
  - The value.

**Reference**

- MarshalException Class
- MarshalException Overload
- TwinCAT.TypeSystem Namespace

6.11.106.1.6 MarshalException Constructor (IDataType, Type)

Initializes a new instance of the MarshalException class.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public MarshalException(
    IDataType source,
    Type target
)
```

**Parameters**

- **source**
  - Type: TwinCAT.TypeSystem.IDataType
  - The source.

- **target**
  - Type: System.Type
  - The target.
6.11.106.1.7 MarshalException Constructor (IDataType, Type, String)

Initializes a new instance of the MarshalException class.

**Namespace**: TwinCAT.TypeSystem

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb91b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public MarshalException(
    IDataType source,
    Type target,
    string message
)
```

**Parameters**

- `source` Type: TwinCAT.TypeSystem.IDataType
  The source.
- `target` Type: System.Type
  The target.
- `message` Type: System.String
  The message.

MarshalException Class [2273]

MarshalException Overload [2275]

TwinCAT.TypeSystem Namespace [1622]

6.11.106.1.8 MarshalException Constructor (IInstance, Type, MemberInfo)

Initializes a new instance of the MarshalException class.

**Namespace**: TwinCAT.TypeSystem

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb91b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public MarshalException(
    IInstance instance,
    Type tp,
    MemberInfo member
)
```
Parameters

instance Type: TwinCAT.TypeSystem.IInstance
The instance.

tp Type: System.Type
The type.

member Type: System.Reflection.MemberInfo
The member.

### 6.11.107.3 MemberCollection Methods

The `MemberCollection ![2281](image)` type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add <img src="image" alt="2469" /></td>
<td>Adds the specified item. (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>AddRange <img src="image" alt="2470" /></td>
<td>Adds the specified items to this collection. (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>AsReadOnly <img src="image" alt="2286" /></td>
<td>Returns a read only copy of this collection (shallow copy)</td>
</tr>
<tr>
<td>Clear <img src="image" alt="2471" /></td>
<td>Clears this instance. (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>Clone <img src="image" alt="2287" /></td>
<td>Clones this <code>MemberCollection ![2281](image)</code></td>
</tr>
<tr>
<td>Contains(String) <img src="image" alt="2472" /></td>
<td>Determines whether this collection contains an <code>IInstance ![2052](image)</code> with the specified <code>InstanceName / InstancePath</code> (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>Contains(T) <img src="image" alt="2472" /></td>
<td>Determines whether this collection contains the specified <code>IInstance ![2052](image)</code> (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>ContainsName <img src="image" alt="2473" /></td>
<td>Determines whether the specified instance name contains name. (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>CopyTo <img src="image" alt="2474" /></td>
<td>Copies this <code>InstanceCollection.T ![2460](image)</code> to the specified array. (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>Empty <img src="image" alt="2287" /></td>
<td>Returns an Empty Member Collection.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object ![image]</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object ![image]</code>.)</td>
</tr>
<tr>
<td>GetEnumerator <img src="image" alt="2474" /></td>
<td>Gets the enumerator. (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object ![image]</code>.)</td>
</tr>
<tr>
<td>GetInstance <img src="image" alt="2475" /></td>
<td>Gets the <code>IInstance ![2052](image)</code> by instance path. (Inherited from <code>InstanceCollection.T ![2460](image)</code>.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>GetInstanceByName</td>
<td>Gets the name of the instance by. (Inherited from InstanceCollection.T.</td>
</tr>
<tr>
<td></td>
<td>[2476]</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf [2476]</td>
<td>Determines the index of the specified Instance [2052]. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Insert [2477]</td>
<td>Inserts the specified Instance [2052] at the specified index. (Inherited</td>
</tr>
<tr>
<td></td>
<td>from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove [2478]</td>
<td>Removes the specified item. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>RemoveAt [2479]</td>
<td>Removes the Instance [2052] at the specified index. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object)</td>
</tr>
<tr>
<td>TryGetInstance [2479]</td>
<td>Tries to get the Instance [2052] of the specified path. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>TryGetInstanceByName</td>
<td>Tries to get Instances by name. (Inherited from InstanceCollection.T.</td>
</tr>
<tr>
<td></td>
<td>[2460].)</td>
</tr>
<tr>
<td>TryGetMember [2287]</td>
<td>Tries to get the specified member</td>
</tr>
</tbody>
</table>

MemberCollection Class [2281]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.107.3.1 MemberCollection.AsReadOnly Method

Returns a read only copy of this collection (shallow copy)

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public ReadOnlyMemberCollection AsReadOnly()
```

**Return Value**

Type: ReadOnlyMemberCollection [2322]

The readonly copy.

**Reference**

MemberCollection Class [2281]

TwinCAT.TypeSystem Namespace [1622]
6.11.107.3.2 MemberCollection.Clone Method

Clones this MemberCollection.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public MemberCollection Clone()
```

**Return Value**

Type: MemberCollection

A cloned MemberCollection.

**Reference**

- MemberCollection Class
- TwinCAT.TypeSystem Namespace

6.11.107.3.3 MemberCollection.Empty Method

Returns an Empty Member Collection.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static MemberCollection Empty()
```

**Return Value**

Type: MemberCollection

MemberCollection.

**Reference**

- MemberCollection Class
- TwinCAT.TypeSystem Namespace

6.11.107.3.4 MemberCollection.TryGetMember Method

Tries to get the specified member

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool TryGetMember(
    string fieldName,
    out IMember symbol
)
```

Parameters

- `fieldName`  
  Type: `System.String`  
  Name of the member.

- `symbol`  
  Type: `TwinCAT.TypeSystem.IMember`  
  The symbol.

Return Value

Type: `Boolean`  
true if found, false otherwise.

Implements

`IMemberCollection.TryGetMember(String, IMember.)`  

Reference

</table>

### Reference

ReadOnlyDataTypeCollection Class [2291]

TwinCAT.TypeSystem Namespace [1622]
6.11.12 **ReadOnlyDimensionCollection Class**

ReadOnly version of the DimensionCollection

**Inheritance Hierarchy**

- System.Object
  - System.Collections.ObjectModel.ReadOnlyCollection<br>  - IDimension
- TwinCAT.TypeSystem.ReadOnlyDimensionCollection

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public class ReadOnlyDimensionCollection : ReadOnlyCollection<IDimension>,
IDimensionCollection, IList<IDimension>, ICollection<IDimension>,
IEnumerable<IDimension>, IEnumerable
```

The `ReadOnlyDimensionCollection` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the <code>ReadOnlyCollection</code>. Instance. (Inherited from <code>ReadOnlyCollection</code>. <code>IDimension</code>)</td>
</tr>
<tr>
<td>ElementCount</td>
<td>Gets the Number of elements in all Dimensions</td>
</tr>
<tr>
<td>Item</td>
<td>Gets the element at the specified index. (Inherited from <code>ReadOnlyCollection</code>. <code>IDimension</code>)</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the <code>IList</code> that the <code>ReadOnlyCollection</code> wraps. (Inherited from <code>ReadOnlyCollection</code>. <code>IDimension</code>)</td>
</tr>
<tr>
<td>LowerBounds</td>
<td>Gets the lower bounds.</td>
</tr>
<tr>
<td>UpperBounds</td>
<td>Gets the upper bounds.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains</td>
<td>Determines whether an element is in the <code>ReadOnlyCollection</code>. (Inherited from <code>ReadOnlyCollection</code>. <code>IDimension</code>)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the entire <code>ReadOnlyCollection</code> to a compatible one-dimensional <code>Array</code>, starting at the specified index of the target array. (Inherited from <code>ReadOnlyCollection</code>. <code>IDimension</code>)</td>
</tr>
<tr>
<td>Empty</td>
<td>Returns an empty <code>ReadOnlyDimensionCollection</code></td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>)</td>
</tr>
</tbody>
</table>

#### 6.11.112.1 ReadOnlyDimensionCollection Properties

The ReadOnlyDimensionCollection [2295] type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ReadOnlyCollection&lt;T&gt; instance. (Inherited from ReadOnlyCollection,IDimension[1998]..)</td>
</tr>
<tr>
<td>ElementCount</td>
<td>Gets the Number of elements in all Dimensions</td>
</tr>
<tr>
<td>Item</td>
<td>Gets the element at the specified index. (Inherited from ReadOnlyCollection,IDimension[1998]..)</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the IList&lt;T&gt; that the ReadOnlyCollection&lt;T&gt; wraps. (Inherited from ReadOnlyCollection,IDimension[1998]..)</td>
</tr>
<tr>
<td>LowerBounds</td>
<td>Gets the lower bounds.</td>
</tr>
<tr>
<td>UpperBounds</td>
<td>Gets the upper bounds.</td>
</tr>
</tbody>
</table>

### Reference

ReadOnlyDimensionCollection Class [2295]

TwinCAT.TypeSystem Namespace [1622]

#### 6.11.112.1.1 ReadOnlyDimensionCollection.ElementCount Property

Gets the Number of elements in all Dimensions

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdcdca3e72bc0ea15da1c14
Syntax

C#
public int ElementCount { get; }

Property Value

Type: Int32

Implements

IDimensionCollection.ElementCount [› 2002]

Reference

ReadOnlyDimensionCollection Class [› 2295]
TwinCAT.TypeSystem Namespace [› 1622]

6.11.112.1.2 ReadOnlyDimensionCollection.LowerBounds Property

Gets the lower bounds.

Namespace: TwinCAT.TypeSystem [› 1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public int[] LowerBounds { get; }

Property Value

Type: Int32.
The lower bounds.

Implements

IDimensionCollection.LowerBounds [› 2002]

Reference

ReadOnlyDimensionCollection Class [› 2295]
TwinCAT.TypeSystem Namespace [› 1622]

6.11.112.1.3 ReadOnlyDimensionCollection.UpperBounds Property

Gets the upper bounds.

Namespace: TwinCAT.TypeSystem [› 1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
public int[] UpperBounds { get; }

Property Value
Type: .Int32.
The upper bounds.

Implements
IDimensionCollection.UpperBounds [2002]

Reference
ReadOnlyDimensionCollection Class [2295]
TwinCAT.TypeSystem Namespace [1622]

6.11.112.2 ReadOnlyDimensionCollection Methods

The ReadOnlyDimensionCollection [2295] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains</td>
<td>Determines whether an element is in the ReadOnlyCollection&lt;T.. (Inherited from ReadOnlyCollection.IDimension[1998].)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the entire ReadOnlyCollection&lt;T. to a compatible one-dimensional Array, starting at the specified index of the target array. (Inherited from ReadOnlyCollection.IDimension[1998].)</td>
</tr>
<tr>
<td>Empty</td>
<td>Returns an empty ReadOnlyDimensionCollection [2295]</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetDimensionLengths</td>
<td>Gets an array the specifies the Lengths of each Array Dimension [2299]</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the ReadOnlyCollection&lt;T.. (Inherited from ReadOnlyCollection.IDimension[1998].)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Searches for the specified object and returns the zero-based index of the first occurrence within the entire ReadOnlyCollection&lt;T.. (Inherited from ReadOnlyCollection.IDimension[1998].)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### ToString

**Description**
Returns a string that represents the current object. (Inherited from `Object`.)

### 6.11.112.2.1 `ReadOnlyDimensionCollection.Empty` Method

**Description**
Returns an empty `ReadOnlyDimensionCollection`.

**Namespace**: `TwinCAT.TypeSystem`  
**Assembly**: `TwinCAT.Ads.Abstractions` (in `TwinCAT.Ads.Abstractions.dll`)  
**Version**: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**C#**
```
public static ReadOnlyDimensionCollection Empty()
```

**Return Value**
Type: `ReadOnlyDimensionCollection`  
`ReadOnlyDimensionCollection`.

**Reference**
- `ReadOnlyDimensionCollection Class`  
- `TwinCAT.TypeSystem Namespace`  

### 6.11.112.2.2 `ReadOnlyDimensionCollection.GetDimensionLengths` Method

**Description**
Gets an array the specifies the Lengths of each Array Dimension

**Namespace**: `TwinCAT.TypeSystem`  
**Assembly**: `TwinCAT.Ads.Abstractions` (in `TwinCAT.Ads.Abstractions.dll`)  
**Version**: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**C#**
```
public int[] GetDimensionLengths()
```

**Return Value**
Type: `Int32`.  
System.Int32[].

**Implements**
- `IDimensionCollection.GetDimensionLengths`
### TwinCAT.Ads Namespaces

**Reference**
- `ReadOnlyDimensionCollection Class` [*2295*]
- `TwinCAT.TypeSystem Namespace` [*1622*]

### 6.11.13 `ReadOnlyEnumValueCollection Class`

Read only version of the `EnumValueCollection.T` [*1926*]

**Inheritance Hierarchy**

```
System.Object
   System.Collections.ObjectModel.ReadOnlyCollection<IEnumValue>
      TwinCAT.TypeSystem.ReadOnlyEnumValueCollection
```

**Namespace:** `TwinCAT.TypeSystem` [*1622*]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public class ReadOnlyEnumValueCollection : ReadOnlyCollection<IEnumValue>, IEnumValueCollection, IEnumValueCollection<IEnumValue, IConvertible>, ICollection<IEnumValue>, IEnumerable<IEnumValue>, IEnumerable
```

The `ReadOnlyEnumValueCollection` type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ReadOnlyEnumValueCollection</code> [<em>2301</em>]</td>
<td>Initializes a new instance of the <code>ReadOnlyEnumValueCollection.T</code> [<em>2309</em>] class.</td>
</tr>
</tbody>
</table>

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Count</code></td>
<td>Gets the number of elements contained in the <code>ReadOnlyCollection.T</code> instance. (Inherited from <code>ReadOnlyCollection.IEnumValue</code> [<em>2028</em>].)</td>
</tr>
<tr>
<td><code>Item.Int32</code></td>
<td>Gets the element at the specified index. (Inherited from <code>ReadOnlyCollection.IEnumValue</code> [<em>2028</em>].)</td>
</tr>
<tr>
<td><code>Item.String</code> [<em>2302</em>]</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td><code>Items</code></td>
<td>Returns the <code>IList.T</code> that the <code>ReadOnlyCollection.T</code> wraps. (Inherited from <code>ReadOnlyCollection.IEnumValue</code> [<em>2028</em>].)</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Contains(String)</code> [<em>2305</em>]</td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td><code>Contains(T)</code></td>
<td>Determines whether an element is in the <code>ReadOnlyCollection.T</code>. (Inherited from <code>ReadOnlyCollection.IEnumValue</code> [<em>2028</em>].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the entire <code>ReadOnlyCollection&lt;T&gt;</code> to a compatible one-dimensional Array, starting at the specified index of the target array. (Inherited from <code>ReadOnlyCollection&lt;TEnumValue&gt;</code>)</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the <code>ReadOnlyCollection&lt;T&gt;</code>. (Inherited from <code>ReadOnlyCollection&lt;TEnumValue&gt;</code>)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetNames</td>
<td>Gets the Value Names.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetValues</td>
<td>Gets the values.</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Searches for the specified object and returns the zero-based index of the first occurrence within the entire <code>ReadOnlyCollection&lt;T&gt;</code>. (Inherited from <code>ReadOnlyCollection&lt;TEnumValue&gt;</code>)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>Parse</td>
<td>Parses the specified name.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>TryParse</td>
<td>Tries to parse the string value of the Enum.</td>
</tr>
<tr>
<td>TryParse</td>
<td>Tries to parse the string value of the Enum.</td>
</tr>
</tbody>
</table>

### 6.11.113.1 `ReadOnlyEnumValueCollection` Constructor

Initializes a new instance of the `ReadOnlyEnumValueCollection<T>` class.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-S.0.9bb9a1b43b6095934ffdc3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public ReadOnlyEnumValueCollection(
    EnumValueCollection coll
)```

TC1000  
Version: 1.1  
2301
Parameters

coll

Type: TwinCAT.TypeSystem.EnumValueCollection

The coll.

Reference

ReadOnlyEnumValueCollection Class [2300]

### 6.11.114.2 ReadOnlyEnumValueCollection.T. Properties

The `ReadOnlyEnumValueCollection.T` generic type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the <code>ReadOnlyCollection&lt;T&gt;</code> instance. (Inherited from <code>ReadOnlyCollection.EnumValueCollection</code>...)</td>
</tr>
<tr>
<td>Item.Int32.</td>
<td>Gets the element at the specified index. (Inherited from <code>ReadOnlyCollection.EnumValueCollection</code>...)</td>
</tr>
<tr>
<td>Item.String. [2312]</td>
<td>Gets the enumeration value <code>T</code> from its string representation.</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the <code>IList&lt;T&gt;</code> that the <code>ReadOnlyCollection&lt;T&gt;</code> wraps. (Inherited from <code>ReadOnlyCollection.EnumValueCollection</code>...)</td>
</tr>
</tbody>
</table>

Reference

ReadOnlyEnumValueCollection.T. Class [2309]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.114.2.1 ReadOnlyEnumValueCollection.T..Item Property

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item.Int32.</td>
<td>Gets the element at the specified index. (Inherited from <code>ReadOnlyCollection.EnumValueCollection</code>...)</td>
</tr>
<tr>
<td>Item.String. [2312]</td>
<td>Gets the enumeration value <code>T</code> from its string representation.</td>
</tr>
</tbody>
</table>

Reference

ReadOnlyEnumValueCollection.T. Class [2309]

TwinCAT.TypeSystem Namespace [1622]
ReadOnlyEnumValueCollection.T..Item Property (String)

Gets the enumeration value T from its string representation.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public T this[string name] { get; }
```

**Parameters**

- **name**
  - Type: System.String
  - The name of the enum value.

**Return Value**

- Type: T[2309]
  - T.

**Implements**

- IEnumValueCollection.TEnumValue, TValue..Item.String. [2035]

**Reference**

- ReadOnlyEnumValueCollection.T. Class [2309]
- Item Overload [2311]

### 6.11.114.3 ReadOnlyEnumValueCollection.T. Methods

The **ReadOnlyEnumValueCollection.T. [2309]** generic type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains(String) [2313]</td>
<td>Determines whether [contains] [the specified name].</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether an element is in the ReadOnlyCollection.T.. (Inherited from ReadOnlyCollection.EnumValue [1901], T[2309]... )</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the entire ReadOnlyCollection.T. to a compatible one-dimensional Array, starting at the specified index of the target array. (Inherited from ReadOnlyCollection.EnumValue [1901], T[2309]... )</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object. )</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object. )</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the <code>ReadOnlyCollection&lt;T&gt;</code> . (Inherited from <code>ReadOnlyCollection&lt;T&gt;</code> . <code>EnumValue { 1901, T } { 2309 }...</code>)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetNames</td>
<td>Gets the Value Names.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>GetValues</td>
<td>Gets the values.</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Searches for the specified object and returns the zero-based index of the first occurrence within the entire <code>ReadOnlyCollection&lt;T&gt;</code> . (Inherited from <code>ReadOnlyCollection&lt;T&gt;</code> . <code>EnumValue { 1901, T } { 2309 }...</code>)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>Parse</td>
<td>Parses the specified name.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>TryParse(String, EnumValue&lt;T&gt;)</td>
<td>Tries to parse the string value of the Enum.</td>
</tr>
<tr>
<td>TryParse(String, T)</td>
<td>Tries to parse the string value of the Enum.</td>
</tr>
</tbody>
</table>

**ReadOnlyEnumValueCollection<T>..Contains Method (String)**

Determines whether [contains] [the specified name].

**Namespace:** TwinCAT.TypeSystem { 1622 }

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public bool Contains(
    string value
)
```

**Parameters**

- `value`  
  Type: `System.String`  
  Value

**Return Value**

Type: `Boolean`  
true if [contains] [the specified name]; otherwise, false.

**Implements**

`IEnumValueCollection.TEnumValue, TValue..Contains(String)` [2313]

**Reference**

- `ReadOnlyEnumValueCollection.T. Class [2309]`

### 6.11.143.2 `ReadOnlyEnumValueCollection.T..GetNames Method`

Gets the Value Names.

**Namespace:** `TwinCAT.TypeSystem [1622]`
**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

**Syntax**

**C#**

```csharp
public string[] GetNames()
```

**Return Value**

Type: `System.String[]`.  
Implements  
`IEnumValueCollection.TEnumValue, TValue..GetNames. [2037]`

**Reference**

- `ReadOnlyEnumValueCollection.T. Class [2309]`
- `TwinCAT.TypeSystem Namespace [1622]`
6.11.114.3.3  **ReadonlyEnumValueCollection.T..GetValues Method**

Gets the values.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdc3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public T[] GetValues()
```

**Return Value**

Type: T[].

**Implements**

IEnumValueCollection.TEnumValue, TValue..GetValues.

**Reference**

ReadonlyEnumValueCollection.T. Class

TwinCAT.TypeSystem Namespace

6.11.114.3.4  **ReadonlyEnumValueCollection.T..Parse Method**

Parses the specified name.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdc3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public T Parse(
    string name
)
```

**Parameters**

- **name**
  - Type: System.String
  - The name.

**Return Value**

Type: T[].

**Implements**

IEnumValueCollection.TEnumValue, TValue.Parse(String)
6.11.114.3.5  ReadOnlyEnumValueCollection.T..TryParse Method

**Overload List**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TryParse(String, EnumValue&lt;T..)</td>
<td>Tries to parse the string value of the Enum.</td>
</tr>
<tr>
<td>TryParse(String, T.)</td>
<td>Tries to parse the string value of the Enum.</td>
</tr>
</tbody>
</table>

**Reference**

ReadOnlyEnumValueCollection.T..Class [2309]

TwinCAT.TypeSystem Namespace [1622]

**ReadOnlyEnumValueCollection.T..TryParse Method (String, EnumValue<T..)**

Tries to parse the string value of the Enum.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool TryParse(
    string strValue,
    out EnumValue<T> value
)
```

**Parameters**

- `strValue`  
  Type: `System.String`  
  The Value in string representation.

- `value`  
  Type: `TwinCAT.TypeSystem.EnumValue<T..>`  
  The value.

**Return Value**

Type: `Boolean`  
true if XXXX, false otherwise.

**Implements**

`IEnumValueCollection.TEnumValue, TValue..TryParse(String, TValue..)` [2039]
ReadonlyEnumValueCollection.T..TryParse Method (String, T.)

Tries to parse the string value of the Enum.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
```csharp
public bool TryParse(
    string strValue,
    out T value
)
```

Parameters

- **strValue**  
  Type: System.String
  The Value in string representation.

- **value**  
  Type: T [2309],
  The value.

Return Value

Type: Boolean  
true if XXXX, false otherwise.

Implements

- IEnumValueCollection.TEnumValue, TValue..TryParse(String, TValue.) [2039]

Tries to get the specified member

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool TryGetMember(
    string fieldName,
    out TwinCAT.TypeSystem.IField symbol
)
```

**Parameters**

- **fieldName**
  - Type: `System.String`
  - Name of the member.

- **symbol**
  - Type: `TwinCAT.TypeSystem.IField`
  - The symbol.

**Return Value**

- Type: `Boolean`
  - true if found, false otherwise.

### Reference

TwinCAT.TypeSystem Namespace [1622]

### 6.11.116.1 `ReadOnlyMemberCollection` Constructor

Initializes a new instance of the `ReadOnlyMemberCollection [2322]` class.
Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public ReadOnlyMemberCollection(
    MemberCollection members
)
```

Parameters

members Type: TwinCAT.TypeSystem.MemberCollection [2281]
The members.

Reference

ReadOnlyMemberCollection Class [2322]
TwinCAT.TypeSystem Namespace [1622]

6.11.116.2 ReadOnlyMemberCollection Properties

The ReadOnlyMemberCollection [2322] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ReadOnlyCollection{T}.instance. (Inherited from ReadOnlyCollection.IMember [2065].)</td>
</tr>
<tr>
<td>Item.Int32.</td>
<td>Gets the element at the specified index. (Inherited from ReadOnlyCollection.IMember [2065].)</td>
</tr>
<tr>
<td>Item.String.</td>
<td>Gets the element with the specified instance path. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the IList{T} that the ReadOnlyCollection{T}.wraps. (Inherited from ReadOnlyCollection.IMember [2065].)</td>
</tr>
<tr>
<td>Mode</td>
<td>Gets the InstanceCollectionMode [2075]. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
</tbody>
</table>

Reference

ReadOnlyMemberCollection Class [2322]

- `TwinCAT.TypeSystem Namespace ![1622]`
6.11.116.3.1 ReadOnlyMemberCollection.Empty Method

Returns an Empty ReadOnlyMemberCollection.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static ReadOnlyMemberCollection Empty()
```

Return Value

Type: ReadOnlyMemberCollection
ReadOnlyMemberCollection.

Reference

ReadOnlyMemberCollection Class
TwinCAT.TypeSystem Namespace

6.11.116.3.2 ReadOnlyMemberCollection.TryGetMember Method

Tries to get the specified member

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool TryGetMember(
    string memberName,
    out IMember symbol)
```

Parameters

- memberName
  Type: System.String
  Name of the member.

- symbol
  Type: TwinCAT.TypeSystem.IMember
  The symbol.

Return Value

Type: Boolean
true if found, false otherwise.

Implements

IMemberCollection.TryGetMember(String, IMember)
Reference

ReadOnlyMemberCollection Class [2322]

  vTableIndex.

- **method**  
  Type: TwinCAT.TypeSystem.IRpcMethod [2123].
  The method if found, NULL otherwise.

**Return Value**

Type: Boolean  
true if found, false otherwise.

**Implements**

IRpcMethodCollection.TryGetMethod(Int32, IRpcMethod.) [2132]

**Reference**

ReadonlyRpcMethodCollection Class [2330]

TryGetMethod Overload [2334]

TwinCAT.TypeSystem Namespace [1622]

**ReadonlyRpcMethodCollection.TryGetMethod Method (String, IRpcMethod.)**

Tries to get the specified method.
**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public bool TryGetMethod(
    string methodName,
    out IRpcMethod method
)
```

### Parameters

- **methodName**
  - Type: `System.String`
  - Name of the method.

- **method**
  - Type: `TwinCAT.TypeSystem.IRpcMethod`
  - The method if found, NULL otherwise.

### Return Value

- Type: `Boolean`
  - true if found, false otherwise.

### Implements

- `IRpcMethodCollection.TryGetMethod(String, IRpcMethod)` [2133]

### Reference

- `ReadOnlyRpcMethodCollection Class` [2330]
- `TryGetMethod Overload` [2334]
- `TwinCAT.TypeSystem Namespace` [1622]

### 6.11.119 ReadOnlySymbolCollection Class

ReadOnly collection containing `ISymbol` objects.

### Inheritance Hierarchy

- `System.Object`
    - `TwinCAT.TypeSystem.Generic.ReadOnlyInstanceCollection<ISymbol>` [2505]
      - `TwinCAT.TypeSystem.Generic.ReadOnlySymbolCollection<ISymbol>` [2522]
        - `TwinCAT.TypeSystem.ReadOnlySymbolCollection` [1622]
The ReadOnlySymbolCollection type exposes the following members.

### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="#">ReadOnlySymbolCollection</a></td>
<td>Initializes a new instance of the ReadOnlySymbolCollection class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ReadOnlyCollection&lt;T&gt; instance. (Inherited from ReadOnlyCollection&lt;T&gt;.ISymbol...)</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets the element at the specified index. (Inherited from ReadOnlyCollection&lt;T&gt;.ISymbol...)</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the element with the specified instance path. (Inherited from ReadOnlyInstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the IList&lt;T&gt; that the ReadOnlyCollection&lt;T&gt; wraps. (Inherited from ReadOnlyCollection&lt;T&gt;.ISymbol...)</td>
</tr>
<tr>
<td>Mode</td>
<td>Gets the InstanceCollectionMode. (Inherited from ReadOnlyInstanceCollection&lt;T&gt;.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains(String)</td>
<td>Determines whether the ReadOnlyInstanceCollection&lt;T&gt;.Contains&lt;T&gt; contains an instance with the specified instance path. (Inherited from ReadOnlyInstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether an element is in the ReadOnlyCollection&lt;T&gt;. (Inherited from ReadOnlyCollection&lt;T&gt;.ISymbol...)</td>
</tr>
<tr>
<td>ContainsName</td>
<td>Determines whether the specified instance is contained. (Inherited from ReadOnlyInstanceCollection&lt;T&gt;.)</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the entire ReadOnlyCollection&lt;T&gt; to a compatible one-dimensional Array, starting at the specified index of the target array. (Inherited from ReadOnlyCollection&lt;T&gt;.ISymbol...)</td>
</tr>
<tr>
<td>Empty</td>
<td>Returns an Empty collection.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the ReadOnlyCollection&lt;T&gt;. (Inherited from ReadOnlyCollection&lt;T&gt;.ISymbol...)</td>
</tr>
</tbody>
</table>

6.11.121 ResultDataTypes Class

Class representing the asynchronous result of reading a IDataTypeCollection [1993] via ADS. Implements the ResultValue.TValue [1029]

Inheritance Hierarchy

System Object
  TwinCAT.Ads.ResultAds [989]
    TwinCAT.Ads.ResultValue [1029], IDataTypeCollection [1995], IDataType [1986].
  TwinCAT.TypeSystem.ResultDataTypes

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch/releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public class ResultDataTypes : ResultValue<IDataTypeCollection<IDataType>>

The ResultDataTypes type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ResultDataTypes</td>
<td>Initializes a new instance of the ResultDataTypes class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DataTypes</td>
<td>Gets the data types.</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Value</td>
<td>The value object. (Inherited from ResultValue.TValue [1029].)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Finalize</strong></td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>GetHashCode</strong></td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>GetType</strong></td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>

TwinCAT.Ads.ResultValue.TValue [1029]

#### 6.11.121.1 ResultDataTypes Constructor

Initializes a new instance of the ResultDataTypes [2347] class.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ResultDataTypes(
    AdsErrorCode errorCode,
    IDataTypeCollection<IDataType> dataTypes
)
```

**Parameters**

- **errorCode**  
  Type: TwinCAT.Ads.AdsErrorCode [575]  
  The error code.

- **dataTypes**  
  Type: TwinCAT.TypeSystem.IDataTypeCollection [1995], IDataType [1986]  
  The datatype collection.

### Reference

ResultDataTypes Class [2347]

#### 6.11.121.2 ResultDataTypes Properties

The ResultDataTypes [2347] type exposes the following members.
### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DataTypes</strong></td>
<td>Gets the data types.</td>
</tr>
<tr>
<td><strong>ErrorCode</strong></td>
<td>Gets the ADS Error code bound to this Result object. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td><strong>Failed</strong></td>
<td>Gets a value indicating whether the ResultAds state is failed. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td><strong>Succeeded</strong></td>
<td>Gets a value indicating whether the ResultAds state is succeeded. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td><strong>Value</strong></td>
<td>The value object. (Inherited from ResultValue.TValue.)</td>
</tr>
</tbody>
</table>

### Reference

#### 6.11.121.2.1 ResultDataTypes.DataTypes Property

Gets the data types.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)  
**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fedca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public IDataTypeCollection<IDataType> DataTypes { get; }
```

**Property Value**

Type: IDataTypeCollection[IDatatype]  
The data types.

**Reference**

- ResultDataTypes Class [2347]

#### 6.11.121.3 ResultDataTypes Methods

The ResultDataTypes [2347] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Equals</strong></td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>SetError [997]</td>
<td>Sets the error state of this ResultAds [989] (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

### 6.11.122 ResultDynamicSymbols Class

Class representing the asynchronous result of reading a dynamic symbol collection via ADS. Implements the ResultValue.TValue. [1029]

#### Inheritance Hierarchy

System.Object

TwinCAT.Ads.ResultAds [989]

TwinCAT.TypeSystem.ResultDynamicSymbols

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractsions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public class ResultDynamicSymbols : ResultSymbols<IDynamicSymbolsCollection>
```

The ResultDynamicSymbols type exposes the following members.

#### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ResultDynamicSymbols [2351]</td>
<td>Initializes a new instance of the ResultDynamicSymbols class.</td>
</tr>
</tbody>
</table>

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ErrorCode [992]</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
<th>Inherited From</th>
</tr>

<td>ResultAds [989]</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object.</td>
<td>Object</td>
</tr>
</tbody>
</table>

### Remarks

This result class is used to return Symbol instances of dynamic nature in an IDynamicSymbolsCollection [2010]. The value/result of the completed operation can be returned by the Symbols [2358] property.

### Reference

TwinCAT.TypeSystem Namespace [1622]
TwinCAT.Ads.ResultValue.TValue [1029]

### 6.11.122.1 ResultDynamicSymbols Constructor

Initializes a new instance of the ResultDynamicSymbols [2350] class.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ResultDynamicSymbols(    AdsErrorCode errorCode,    IDynamicSymbolsCollection symbols)
```
TwinCAT.Ads Namespaces

Parameters

errorCode  
Type: TwinCAT.Ads.AdsErrorCode [575]  
The error code.

symbols  
Type: TwinCAT.TypeSystem.IDynamicSymbolsCollection [2010]  
The result symbols.

### 6.11.123 ResultSymbols Class

Class representing the asynchronous result of reading an symbol collection of type `ISymbolCollection<T>` via ADS. Implements the `ResultValue.TValue`.

**Inheritance Hierarchy**

```
System.Object                                                                                               
TwinCAT.Ads.ResultAds [989]                                                                                  
TwinCAT.TypeSystem.ResultSymbols [2356] ISymbolCollection [2185] ISymbol [2176]..                           
TwinCAT.TypeSystem.ResultSymbols
```

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b436095934fadca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public class ResultSymbols : ResultSymbols<ISymbolCollection<ISymbol>>
```

The ResultSymbols type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ResultSymbols</td>
<td>Initializes a new instance of the ResultSymbols class.</td>
</tr>
</tbody>
</table>

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result (Inherited from ResultAds)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds state is failed. (Inherited</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds state is succeeded. (Inherited</td>
</tr>
<tr>
<td>Symbols</td>
<td>Get the Symbols enumerable (T) as result of an asynchronous operation.</td>
</tr>
<tr>
<td>Value</td>
<td>The value object. (Inherited from ResultValue.TValue)</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>

Reference

RpcInvokeException Class [2359]

TwinCAT.TypeSystem Namespace [1622]

6.11.125.1.1  RpcInvokeException Constructor (SerializationInfo, StreamingContext)

Initializes a new instance of the RpcInvokeException [2359] class.

Namespace: TwinCAT.TypeSystem [1622]  
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  

```csharp
protected RpcInvokeException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
</table>

RpcInvokeException Overload [2361]  
TwinCAT.TypeSystem Namespace [1622]
6.11.125.2 RpcInvokeException Constructor (IRpcStructInstance, String, Int32)

Initializes a new instance of the RpcInvokeException [2359] class.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public RpcInvokeException(
    IRpcStructInstance rpcInstance,
    string methodName,
    int errorCode
)
```

Parameters

- **rpcInstance**: Type: TwinCAT.TypeSystem.IRpcStructInstance [2140]
The RPC instance.
- **methodName**: Type: System.String
Name of the method.
- **errorCode**: Type: System.Int32
The error code.

6.11.125.2 RpcInvokeException Properties

The RpcInvokeException [2359] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HRESULT</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InstancePath</td>
<td>Gets the instance path. (Inherited from SymbolException [2401].)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Symbol [2411]</td>
<td>Gets the symbol. (Inherited from SymbolException [2401].)</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### 6.11.125.3 RpcInvokeException Methods

The RpcInvokeException [2359] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData [2363]</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides SymbolException.GetObjectData(SerializationInfo, StreamingContext) [2412].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

RpcInvokeException Class [2359]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.125.3.1 RpcInvokeException.GetObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context)
```

Parameters

- **info**
  - Type: `System.Runtime.Serialization.SerializationInfo`
  - The `SerializationInfo` that holds the serialized object data about the exception being thrown.

- **context**
  - Type: `System.Runtime.Serialization.StreamingContext`
  - The `StreamingContext` that contains contextual information about the source or destination.

Implements

- `ISerializable.GetObjectData(SerializationInfo, StreamingContext)`
- `Exception.GetObjectData(SerializationInfo, StreamingContext)`

Exceptions

Syntax

C#
public class RpcMethodCollection : IRpcMethodCollection,
    IList<IRpcMethod>, ICollection<IRpcMethod>, IEnumerable<IRpcMethod>,
    IEnumerable

The RpcMethodCollection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T is read-only.</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the IRpcMethod with the specified method name.</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Gets a read only collection of this RpcMethodCollection</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether this collection contains the specified method name.</td>
</tr>
<tr>
<td>ContainsItem</td>
<td>Determines whether the ICollection.T contains a specific value.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies to.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T at the specified index.</td>
</tr>
</tbody>
</table>

### 6.11.126.1.1 RpcMethodCollection.Count Property

Gets the number of elements contained in the `ICollection<T>`. 

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#
```
public int Count { get; }
```
**Property Value**

Type: Int32
The count.

**Implements**

ICollection.T.Count

**Reference**

RpcMethodCollection Class [2364]

TwinCAT.TypeSystem Namespace [1622]

**6.11.126.1.2 RpcMethodCollection.IsReadOnly Property**

Gets a value indicating whether the ICollection.T is read-only.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsReadOnly { get; }
```

**Property Value**

Type: Boolean
true if this instance is read only; otherwise, false.

**Implements**

ICollection.T.IsReadOnly

</tbody>
</table>

RpcMethodCollection.Item Property (Int32)

Gets or sets the element at the specified index.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IRpcMethod this[int index] { get; set; }
```

**Parameters**

- **index**
  - Type: System.Int32
  - The index.

**Return Value**

Type: IRpcMethod

RpcMethod.

**Implements**

IList<T>.Item.Int32

**Exceptions**

<table>

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Add(
    IRpcMethod item
)
```

**Parameters**

item

Type: TwinCAT.TypeSystem.IRpcMethod [2123]

The object to add to the ICollection.
Implements

ICollection<T>.Add(T)

Reference

RpcMethodCollection Class [2364]

TwinCAT.TypeSystem Namespace [1622]

6.11.126.2.2 RpcMethodCollection.AsReadOnly Method

Gets a read only collection of this RpcMethodCollection [2364]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public ReadOnlyRpcMethodCollection AsReadOnly()

Field Value

Type: ReadOnlyRpcMethodCollection [2330]
Returns a read only version of this RpcMethodCollection [2364]

Return Value

Type: ReadOnlyRpcMethodCollection [2330]
ReadOnlyRpcMethodCollection.

Reference

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool Contains(
    string methodName
)
```

**Parameters**

**methodName**

Type: System.String

Name of the method.

**Return Value**

Type: Boolean

ture if contained.; otherwise, false.

**Implements**

IRpcMethodCollection.Contains(String) [2131]

**Reference**

RpcMethodCollection Class [2364]
RpcMethodCollection.Contains Method (IRpcMethod)

Determines whether the ICollection.T contains a specific value.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool Contains(
    IRpcMethod item
)
```

**Parameters**

item

Type: TwinCAT.TypeSystem.IRpcMethod

The object to locate in the ICollection.T.

**Return Value**

Type: Boolean

true if item is found in the ICollection.T.; otherwise, false.

**Implements**

ICollection.T.Contains(T)

**Reference**

RpcMethodCollection Class [2364]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.126.2.5 RpcMethodCollection.CopyTo Method

Copies to.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void CopyTo(
    IRpcMethod[] array,
    int arrayIndex
)
```
Parameters

array Type: TwinCAT.TypeSystem.IRpcMethod[].
The array.
arrayIndex Type: System.Int32
Index of the array.

Implements

ICollection<T>.CopyTo(T, Int32)

Reference

RpcMethodCollection Class [2364]
TwinCAT.TypeSystem Namespace [1622]

6.11.126.2.6 RpcMethodCollection.GetEnumerator Method

Returns an enumerator that iterates through the collection.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IEnumerator<IRpcMethod> GetEnumerator()

Return Value

Type: IEnumerator<IRpcMethod>[2123].
A IEnumerator<T> that can be used to iterate through the collection.

Implements

IEnumerable<T>.GetEnumerator.

Reference

RpcMethodCollection Class [2364]
TwinCAT.TypeSystem Namespace [1622]

6.11.126.2.7 RpcMethodCollection.IndexOf Method

Determines the index of a specific item in the IList<T>.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int IndexOf(
    IRpcMethod item
)
```

Parameters

- **item**
  
  Type: `TwinCAT.TypeSystem.IRpcMethod`
  
  The object to locate in the `IList<T>`.

Return Value

Type: `Int32`

The index of item if found in the list; otherwise, -1.

Implements

`IList<T>.IndexOf(T)`

Reference

- `RpcMethodCollection Class [2364]`
- `TwinCAT.TypeSystem Namespace [1622]`

**6.11.126.2.8 RpcMethodCollection.Insert Method**

Inserts an item to the `IList<T>` at the specified index.

Namespace: `TwinCAT.TypeSystem [1622]`

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb91b43b6095934fddca3e72bc0e1a5da1c14

Syntax

C#

```csharp
public void Insert(
    int index,
    IRpcMethod item
)
```

Parameters

- **index**
  
  Type: `System.Int32`
  
  The zero-based index at which item should be inserted.

- **item**
  
  Type: `TwinCAT.TypeSystem.IRpcMethod`
  
  The object to insert into the `IList<T>`.

Implements

`IList<T>.Insert(Int32, T)`
6.11.126.9 RpcMethodCollection.Remove Method

Removes the first occurrence of a specific object from the ICollection<T>.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public bool Remove(
    IRpcMethod item
)
```

**Parameters**

- `item`  
  Type: TwinCAT.TypeSystem.IRpcMethod [2123]  
  The object to remove from the ICollection<T>.

**Return Value**

- Type: Boolean  
  true if item was successfully removed from the ICollection<T>; otherwise, false. This method also returns false if item is not found in the original ICollection<T>.

**Implements**

- ICollection<T>.Remove(T)

---

6.11.126.2.1 RpcMethodCollection.RemoveAt Method

Removes the IList<T> item at the specified index.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public void RemoveAt(
    int index
)
```
Parameters

index Type: System.Int32
The zero-based index of the item to remove.

Implements

IList<T>.RemoveAt(Int32)

Reference

</table>

Reference

RpcMethodCollection Class [2364]
TwinCAT.TypeSystem Namespace [1622]

RpcMethodCollection.TryGetMethod Method (Int32, IRpcMethod.)

Tries to get the specified method.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool TryGetMethod(
    int vTableIndex,
    out IRpcMethod method
)
```

Parameters

vTableIndex Type: System.Int32
VTable index.
method

Type: TwinCAT.TypeSystem.IRpcMethod [ CLAIM 2123]
The method if fund, NULL otherwise.

Return Value

Type: Boolean
true if found, false otherwise.

Implements

IRpcMethodCollection.TryGetMethod(Int32, IRpcMethod) [ CLAIM 2132]

Reference

RpcMethodCollection Class [ CLAIM 2364]
TryGetMethod Overload [ CLAIM 2377]

Syntax

C#

public bool TryGetMethod(
    string methodName,
    out IRpcMethod method)

Parameters

methodName
Type: System.String
Name of the method.

method
Type: TwinCAT.TypeSystem.IRpcMethod [ CLAIM 2123]
The method if fund, NULL otherwise.

Return Value

Type: Boolean
true if found, false otherwise.

Implements

IRpcMethodCollection.TryGetMethod(String, IRpcMethod) [ CLAIM 2133]

Syntax

C#

[SerializableAttribute]
public class RpcMethodNotSupportedException : SymbolException

The RpcMethodNotSupportedException type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>RpcMethodNotSupportedException(Int32, ISymbol)</td>
<td>Initializes a new instance of the RpcMethodNotSupportedException class.</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>RpcMethodNotSupportedException(SerializationInfo, StreamingContext)</td>
<td>Initializes a new instance of the RpcMethodNotSupportedException class.</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>RpcMethodNotSupportedException(String, ISymbol)</td>
<td>Initializes a new instance of the RpcMethodNotSupportedException class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HRESULT</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstancePath</td>
<td>Gets the instance path. (Inherited from SymbolException.)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Symbol</td>
<td>Gets the symbol. (Inherited from SymbolException.)</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Inherited from SymbolException.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SerializeObjectState</td>
<td>Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### 6.11.127.1.1 RpcMethodNotSupportedException Constructor (Int32, ISymbol)

Initializes a new instance of the RpcMethodNotSupportedException class.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public RpcMethodNotSupportedException(
    int vTableIndex,
    ISymbol symbol
)
```

**Parameters**

- **vTableIndex**
  - Type: System.Int32
  - Index of the v table.

- **symbol**
  - Type: TwinCAT.TypeSystem.ISymbol [2176]
  - The symbol.

**Reference**

RpcMethodNotSupportedException Class [2379]

RpcMethodNotSupportedException Overload [2381]

TwinCAT.TypeSystem Namespace [1622]
6.11.127.1.2 RpcMethodNotSupportedException Constructor (SerializationInfo, StreamingContext)

Initializes a new instance of the RpcMethodNotSupportedException [2379] class.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#:

```csharp
protected RpcMethodNotSupportedException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)
```

**Parameters**

SerializationInfo: Type: System.Runtime.Serialization.SerializationInfo
The serialization information.

The streaming context.

**Exceptions**

```
<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>
```

6.11.127.1.3 RpcMethodNotSupportedException Constructor (String, ISymbol)

Initializes a new instance of the RpcMethodNotSupportedException [2379] class.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstracts.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#:

```csharp
public RpcMethodNotSupportedException(
    string methodName,
    ISymbol symbol
)
```
Parameters

methodName Type: System.String
Name of the method.

symbol Type: TwinCAT.TypeSystem.ISymbol
The symbol.

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#  
public bool Contains(
    IRpcMethodParameter item
)  

Parameters

item Type: TwinCAT.TypeSystem.IRpcMethodParameter [2133]
The object to locate in the ICollection.T.

Return Value

Type: Boolean
ture if item is found in the ICollection.T.; otherwise, false.

Implements

ICollection.T.Contains(T)

Reference

RpcMethodParameterCollection Class [2384]
6.11.128.2.5 RpcMethodParameterCollection.CopyTo Method

Copies to.

**Syntax**

**C#**

```csharp
public IRpcMethodParameter GetLengthIsParameter(
    IRpcMethodParameter parameter
)
```

**Parameters**

- **parameter**
  
  Type: TwinCAT.TypeSystem.IRpcMethodParameter [2133]
  
  The parameter.

**Return Value**

Type: IRpcMethodParameter [2133]

IRpcMethodParameter.

**Implements**

IRpcMethodParameterCollection.GetLengthIsParameter(IRpcMethodParameter) [2139]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td>parameter</td>
</tr>
<tr>
<td>ArgumentException</td>
<td>Parameter is not contained in ParameterList - parameter</td>
</tr>
</tbody>
</table>

**Reference**

RpcMethodParameterCollection Class [2384]

TwinCAT.TypeSystem Namespace [1622]

### 6.11.128.2.8 RpcMethodParameterCollection.IndexOf Method

Determines the index of a specific item in the `List<T>`. 
Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int IndexOf(
    IRpcMethodParameter item
)
```

Parameters

item 
Type: TwinCAT.TypeSystem.IRpcMethodParameter
The object to locate in the `IList<T>`.

Return Value

Type: Int32
The index of `item` if found in the list; otherwise, -1.

Implements

`IList<T>.IndexOf(T)`

Reference

 RpcMethodParameterCollection Class
TwinCAT.TypeSystem Namespace

6.11.128.2.9 RpcMethodParameterCollection.Insert Method

Inserts an item to the `IList<T>` at the specified index.

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Insert(
    int index,
    IRpcMethodParameter item
)
```

Parameters

index 
Type: System.Int32
The zero-based index at which item should be inserted.

item 
Type: TwinCAT.TypeSystem.IRpcMethodParameter
The object to insert into the `IList<T>`.
6.11.128.2.1 RpcMethodParameterCollection.Remove Method

Removes the first occurrence of a specific object from the ICollection<T>.

**Namespace:** TwinCAT.TypeSystem [» 1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public bool Remove(
    IRpcMethodParameter item
)
```

**Parameters**

- **item**
  - Type: TwinCAT.TypeSystem.IRpcMethodParameter [» 2133]
  - The object to remove from the ICollection<T>.

**Return Value**

- **Type:** Boolean
  - true if item was successfully removed from the ICollection<T>; otherwise, false. This method also returns false if item is not found in the original ICollection<T>.

**Implements**

- ICollection<T>.Remove(T)

---

6.11.128.2.1 RpcMethodParameterCollection.RemoveAt Method

Removes the IList<T> item at the specified index.

**Namespace:** TwinCAT.TypeSystem [» 1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public void RemoveAt(
    int index
)
```

**Parameters**

- **index**
  
  Type: `System.Int32`

  The zero-based index of the item to remove.

**Implements**

- `IList<T>.RemoveAt(Int32)`

</table>

**Reference**

TwinCAT.TypeSystem Namespace [1622]

6.11.131 SymbolCollection Class

Interface represents a collection of ISymbol [2176] objects.

**Inheritance Hierarchy**

System.Object
  TwinCAT.TypeSystem.Generic.InstanceCollection [2460].ISymbol [2176].
  TwinCAT.TypeSystem.Generic.SymbolCollection [2526].ISymbol [2176].
  TwinCAT.TypeSystem.SymbolCollection

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public class SymbolCollection : SymbolCollection<ISymbol>,
    ISymbolCollection, ISymbolCollection<ISymbol>,
    IInstanceCollection<ISymbol>,
    IList<ISymbol>, ICollection<ISymbol>, IEnumerable<ISymbol>,
    IEnumerable
```

The SymbolCollection type exposes the following members.
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [2464]</td>
<td>Gets the collection count. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>InnerList [2465]</td>
<td>Gets the List of instances. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>InnerPathDict [2465]</td>
<td>The Path dictionary (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>IsReadOnly [2465]</td>
<td>Gets a value indicating whether this instance is read only. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>Item.Int32. [2466]</td>
<td>Gets or sets the IInstance [2052] at the specified index. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>Item.String. [2467]</td>
<td>Gets the IInstance [2052] with the specified instance path. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>Mode [2468]</td>
<td>The mode this InstanceCollection.T [2460] is working in. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
</tbody>
</table>

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [2469]</td>
<td>Adds the specified item. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>AddRange [2470]</td>
<td>Adds the specified items to this collection. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>AsReadOnly [2400]</td>
<td>Returns a Read only version of this collection (shallow copy).</td>
</tr>
<tr>
<td>Clear [2471]</td>
<td>Clears this instance. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>Clone [2400]</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>Contains(String) [2472]</td>
<td>Determines whether this collection contains an IInstance [2052] with the specified InstanceName / InstancePath (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>Contains(T) [2472]</td>
<td>Determines whether this collection contains the specified IInstance [2052] (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>ContainsName [2473]</td>
<td>Determines whether the specified instance name contains name. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>CopyTo [2474]</td>
<td>Copies this InstanceCollection.T [2460] to the specified array. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>Empty [2401]</td>
<td>Returns an Empty Collection.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator [2474]</td>
<td>Gets the enumerator. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>Get Instance [2475]</td>
<td>Gets the IInstance [2052] by instance path. (Inherited from InstanceCollection.T [2460].)</td>
</tr>
</tbody>
</table>
### SymbolCollection Properties

The **SymbolCollection** type exposes the following members.

#### Properties

<table>

### SymbolCollection Methods

The `SymbolCollection` type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add ![2469]</td>
<td>Adds the specified item. (Inherited from <code>InstanceCollection.T. ![2460]</code>)</td>
</tr>
<tr>
<td>AddRange ![2470]</td>
<td>Adds the specified items to this collection. (Inherited from <code>InstanceCollection.T. ![2460]</code>)</td>
</tr>
<tr>
<td>AsReadOnly ![2400]</td>
<td>Returns a Read only version of this collection (shallow copy).</td>
</tr>
<tr>
<td>Clear ![2471]</td>
<td>Clears this instance. (Inherited from <code>InstanceCollection.T. ![2460]</code>)</td>
</tr>
<tr>
<td>Clone ![2400]</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>Contains(String) ![2472]</td>
<td>Determines whether this collection contains an <code>IInstance ![2052]</code> with the specified InstanceName / InstancePath (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>Contains(T) ![2472]</td>
<td>Determines whether this collection contains the specified <code>IInstance ![2052]</code> (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>ContainsName ![2473]</td>
<td>Determines whether the specified instance name contains name. (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>CopyTo ![2474]</td>
<td>Copies this <code>InstanceCollection.T. ![2460]</code> to the specified array. (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>Empty ![2401]</td>
<td>Returns an Empty Collection.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object.</code>)</td>
</tr>
<tr>
<td>GetEnumerator ![2474]</td>
<td>Gets the enumerator. (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object.</code>)</td>
</tr>
<tr>
<td>GetInstanceByName ![2476]</td>
<td>Gets the name of the instance by. (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object.</code>)</td>
</tr>
<tr>
<td>IndexOf ![2476]</td>
<td>Determines the index of the specified <code>IInstance ![2052]</code>. (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>Insert ![2477]</td>
<td>Inserts the specified <code>IInstance ![2052]</code> at the specified index. (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object.</code>)</td>
</tr>
<tr>
<td>Remove ![2478]</td>
<td>Removes the specified item. (Inherited from <code>InstanceCollection.T. ![2460]</code>).</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RemoveAt</td>
<td>Removes the IInstance at the specified index. (Inherited from InstanceCollection.T.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryGetInstance</td>
<td>Tries to get the IInstance of the specified path. (Inherited from InstanceCollection.T.)</td>
</tr>
<tr>
<td>TryGetInstanceByName</td>
<td>Tries to get Instances by name. (Inherited from InstanceCollection.T.)</td>
</tr>
<tr>
<td>TryGetInstances</td>
<td>Try to get instances with predicate function (Inherited from SymbolCollection.T.)</td>
</tr>
</tbody>
</table>

### Reference

SymbolCollection Class

TwinCAT.TypeSystem Namespace

### 6.11.131.2.1 SymbolCollection.AsReadOnly Method

Returns a Read only version of this collection (shallow copy).

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public ReadOnlySymbolCollection AsReadOnly()
```

**Return Value**

Type: ReadOnlySymbolCollection

Read only collection.

**Reference**

SymbolCollection Class

TwinCAT.TypeSystem Namespace

### 6.11.131.2.2 SymbolCollection.Clone Method

Clones this instance.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public SymbolCollection Clone()
```
Return Value

Type: SymbolCollection

Cloned SymbolCollection.

Reference

SymbolCollection Class

TwinCAT.TypeSystem Namespace

6.11.131.2.3 SymbolCollection.Empty Method

Returns an Empty Collection.

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

**Name** | **Description**
--- | ---
HelpLink | Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)
HRESULT | Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)
InnerException | Gets the Exception instance that caused the current exception. (Inherited from Exception.)
InstancePath | Gets the instance path.
Message | Gets a message that describes the current exception. (Inherited from Exception.)
Source | Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)
StackTrace | Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)
Symbol | Gets the symbol.
TargetSite | Gets the method that throws the current exception. (Inherited from Exception.)

### Methods

**Name** | **Description**
--- | ---
Equals | Determines whether the specified object is equal to the current object. (Inherited from Object.)
Finalize | Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)
GetBaseException | When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)
GetHashCode | Serves as the default hash function. (Inherited from Object.)
GetObjectData | When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overridess Exception.GetObjectData(SerializationInfo, StreamingContext).)
GetType | Gets the runtime type of the current instance. (Inherited from Exception.)
MemberwiseClone | Creates a shallow copy of the current Object. (Inherited from Object.)
ToString | Creates and returns a string representation of the current exception. (Inherited from Exception.)

### Events

**Name** | **Description**
--- | ---
SerializeObjectState | Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception.)

#### Reference

- SymbolException Class [2401]
- TwinCAT.TypeSystem Namespace [1622]

### 6.11.132.1.1 SymbolException Constructor (ISymbol)

Initializes a new instance of the SymbolException [2401] class.
**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public SymbolException(
    ISymbol symbol
)
```

**Parameters**

- `symbol`: Type: TwinCAT.TypeSystem.ISymbol [2176]
  The symbol.

### Reference

- SymbolException Class [2401]
- SymbolException Overload [2404]
- TwinCAT.TypeSystem Namespace [1622]

#### 6.11.132.1.2 SymbolException Constructor (SerializationInfo, StreamingContext)

Initializes a new instance of the SymbolException class.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected SymbolException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)
```

**Parameters**

- `serializationInfo`: Type: System.Runtime.Serialization.SerializationInfo
  The serialization information.
  The streaming context.

### 6.11.132.1.4 SymbolException Constructor (ISymbol, Exception)

Initializes a new instance of the SymbolException [2401] class.

**Namespace:** TwinCAT.TypeSystem [1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public SymbolException(
    ISymbol symbol,
    Exception innerException
)
```

**Parameters**

**symbol**

Type: TwinCAT.TypeSystem.ISymbol [2176]

The symbol.

**innerException**

Type: System.Exception

The inner exception.

**Reference**

SymbolException Class [2401]

SymbolException Overload [2404]

TwinCAT.TypeSystem Namespace [1622]
6.11.132.1.5 SymbolException Constructor (ISymbol, Int32)

Initializes a new instance of the SymbolException class.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#  

```csharp
public SymbolException(
    ISymbol symbol,
    int errorCode
)
```

Parameters

- **symbol**  
  Type: TwinCAT.TypeSystem.ISymbol  
  The symbol.

- **errorCode**  
  Type: System.Int32  
  The error code.

Reference

SymbolException Class
SymbolException Overload
TwinCAT.TypeSystem Namespace

6.11.132.1.6 SymbolException Constructor (String, ISymbol, Exception)

Initializes a new instance of the SymbolException class.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#  

```csharp
public SymbolException(
    string message,  
    ISymbol symbol,  
    Exception innerException
)
```

Parameters

- **message**  
  Type: System.String  
  The message.

- **symbol**  
  Type: TwinCAT.TypeSystem.ISymbol  
  The symbol.

- **innerException**  
  Type: System.Exception  
  The inner exception.
6.11.132.1.7 SymbolException Constructor (String, ISymbol, Int32)

Initializes a new instance of the SymbolException class.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public SymbolException(
    string message,
    ISymbol symbol,
    int errorCode
)
```

**Parameters**

- **message**
  - Type: `System.String`
  - The message.

- **symbol**
  - Type: `TwinCAT.TypeSystem.ISymbol`
  - The symbol.

- **errorCode**
  - Type: `System.Int32`
  - The error code.

6.11.132.2 SymbolException Properties
The SymbolException [2401] type exposes the following members.
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Data</strong></td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><strong>HelpLink</strong></td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><strong>HResult</strong></td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><strong>InnerException</strong></td>
<td>Gets the <code>Exception</code> instance that caused the current exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><strong>InstancePath</strong></td>
<td>Gets the instance path.</td>
</tr>
<tr>
<td><strong>Message</strong></td>
<td>Gets a message that describes the current exception. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><strong>Source</strong></td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><strong>StackTrace</strong></td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from <code>Exception</code>.)</td>
</tr>
<tr>
<td><strong>Symbol</strong></td>
<td>Gets the symbol.</td>
</tr>
<tr>
<td><strong>TargetSite</strong></td>
<td>Gets the method that throws the current exception. (Inherited from <code>Exception</code>.)</td>
</tr>
</tbody>
</table>

### Reference

6.11.132.3 SymbolException Methods

The SymbolException type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides Exception.GetObjectData(SerializationInfo, StreamingContext).)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

**Reference**

SymbolException Class

TwinCAT.TypeSystem Namespace
6.11.132.3.1 SymbolException.GetObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context
)

Parameters

info Type: System.Runtime.Serialization.SerializationInfo
The SerializationInfo that holds the serialized object data about the exception being thrown.

context Type: System.Runtime.Serialization.StreamingContext
The StreamingContext that contains contextual information about the source or destination.

Implements

ISerializable.GetObjectData(SerializationInfo, StreamingContext)
Exception.GetObjectData(SerializationInfo, StreamingContext)

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td>info</td>

### 6.11.133 TypeAttribute Class

**ADS Attribute**

**Inheritance Hierarchy**

- System.Object
- TwinCAT.TypeSystem.TypeAttribute

**Namespace:** TwinCAT.TypeSystem [► 1622]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public class TypeAttribute : ITypeAttribute
```

The TypeAttribute type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name [► 2414]</td>
<td>Name of the Attribute</td>
</tr>
<tr>
<td>Value [► 2414]</td>
<td>Gets the value of the attribute</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [► 2415]</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

**Operators**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equality [► 2417]</td>
<td>Operator==</td>
</tr>
<tr>
<td>Inequality [► 2417]</td>
<td>Implements the != operator.</td>
</tr>
</tbody>
</table>
6.11.133.1 TypeAttribute Properties

The TypeAttribute type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Name of the Attribute</td>
</tr>
<tr>
<td>Value</td>
<td>Gets the value of the attribute</td>
</tr>
</tbody>
</table>

Reference

TypeAttribute Class [2413]

TwinCAT.TypeSystem Namespace [1622]

6.11.133.1.1 TypeAttribute.Name Property

Name of the Attribute

Namespace: TwinCAT.TypeSystem

Syntax

C#

```csharp
public string Name { get; }
```

Property Value

Type: String

The name.

Implements

ITypeAttribute.Name [2210]

Reference

TypeAttribute Class [2413]

TwinCAT.TypeSystem Namespace [1622]

6.11.133.1.2 TypeAttribute.Value Property

Gets the value of the attribute
**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public string Value { get; }
```

**Property Value**

Type: `String`

The value.

**Implements**

`ITypeAttribute.Value` [2210]

**Reference**

TypeAttribute Class [2413]

### 6.11.133.2 TypeAttribute Methods

The `TypeAttribute` [2413] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Equals (Overrides <code>Object.Equals(Object)</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Overrides <code>Object.GetHashCode</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>

### 6.11.133.2.1 TypeAttribute.Equals Method

Equals
**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public override bool Equals(
    Object obj
)
```

**Parameters**

**obj**

Type: System.Object

The object to compare with the current object.

**Return Value**

Type: **Boolean**

true if the specified Object is equal to this instance; otherwise, false.

### Reference

**TypeAttribute Class**

TwinCAT.TypeSystem Namespace

6.11.133.2.2 *TypeAttribute.GetHashCode Method*

Gets the HashCode of the Address

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public override int GetHashCode()
```

**Return Value**

Type: **Int32**

A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

### Reference

#### 6.11.133.3.1 TypeAttribute.Equality Operator

**Operator==**

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static bool operator ==(
    TypeAttribute o1,
    TypeAttribute o2
)
```

**Parameters**

- `o1` Type: TwinCAT.TypeSystem.TypeAttribute [2413]
  - The o1.

- `o2` Type: TwinCAT.TypeSystem.TypeAttribute [2413]
  - The o2.

**Return Value**

Type: Boolean
- The result of the operator.

**Reference**

#### 6.11.133.3.2 TypeAttribute.Inequality Operator

**Implements the != operator.**

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public static bool operator !=(
    TypeAttribute o1,
    TypeAttribute o2
)
```

Parameters

- **o1**
  - Type: `TwinCAT.TypeSystem.TypeAttribute`
  - The `o1`.
- **o2**
  - Type: `TwinCAT.TypeSystem.TypeAttribute`
  - The `o2`.

Return Value

- Type: `Boolean`
  - The result of the operator.

Reference

### 6.11.134 TypeAttributeCollection Class

Collection of `AdsAttributes` [2209]

Inheritance Hierarchy

- `System.Object`
  - `TwinCAT.TypeSystem.TypeAttributeCollection`

Namespace: `TwinCAT.TypeSystem` [1622]

Assembly: `TwinCAT.Ads` (in `TwinCAT.Ads.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public class TypeAttributeCollection : ITypeAttributeCollection,
    IList<ITypeAttribute>, ICollection<ITypeAttribute>, IEnumerable<ITypeAttribute>,
    IEnumerable
```

The `TypeAttributeCollection` type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="2420" alt="TypeAttributeCollection" /></td>
<td>Initializes a new instance of the <code>TypeAttributeCollection</code> class.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>TypeAttributeCollection(IEnumerable&gt;TypeAttribute.)</td>
<td>Initializes a new instance of the TypeAttributeCollection class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T is read-only.</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the String with the specified name.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>AddRange</td>
<td>Adds the range.</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Gets a read only version of this TypeAttributeCollection</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether this TypeAttributeCollection contains the ITypeAttribute with the specified name.</td>
</tr>
<tr>
<td>Contains(ITypeAttribute)</td>
<td>Determines whether the ICollection.T contains a specific value.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies to.</td>
</tr>
<tr>
<td>Empty</td>
<td>Returns an Empty TypeAttributeCollection.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the_IList.T.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the_IList.T at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remove(String)</td>
<td>Removes the specified ITypeAttribute [2209] from the TypeAttributeCollection.</td>
</tr>
<tr>
<td>Remove(ITypeAttribute)</td>
<td>Removes the first occurrence of a specific object from the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the IList&lt;T&gt; item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryGetAttribute</td>
<td>Tries to get the specified ITypeAttribute [2209].</td>
</tr>
<tr>
<td>TryGetValue</td>
<td>Tries to get the specified Attribute value.</td>

### 6.11.134.1.1 TypeAttributeCollection Constructor

Initializes a new instance of the TypeAttributeCollection [2418] class.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public TypeAttributeCollection() 
```

**Reference**

TypeAttributeCollection Class [2418]
6.11.134.1.2 TypeAttributeCollection Constructor (IEnumerable.ITypeAttribute.)

Initializes a new instance of the TypeAttributeCollection class.

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

**C#**

```csharp
public TypeAttributeCollection(
    IEnumerable<ITypeAttribute> coll
)
```

Parameters

coll  
Type: System.Collections.Generic.IEnumerable.ITypeAttribute

The coll.

Reference

TwinCAT.TypeSystem Namespace

6.11.134.2.1 TypeAttributeCollection.Count Property

Gets the number of elements contained in the ICollection<T>.
Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public int Count { get; }
```

Property Value

Type: Int32
The count.

Implements

ICollection<T>.Count

Reference

TypeAttributeCollection Class

TwinCAT.TypeSystem Namespace

6.11.134.2.2 TypeAttributeCollection.IsReadOnly Property

Gets a value indicating whether the ICollection<T> is read-only.

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public bool IsReadOnly { get; }
```

Property Value

Type: Boolean
true if this instance is read only; otherwise, false.

Implements

ICollection<T>.IsReadOnly

Reference

### TypeAttributeCollection.Item Property (Int32)

Gets or sets the element at the specified index.

**Namespace:** TwinCAT.TypeSystem [1622]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public ITypeAttribute this[int index] { get; set; }
```

#### Parameters

- `index`  
  - Type: System.Int32  
  - The index.

#### Return Value

Type: ITypeAttribute [2209]  
AdsAttribute.

#### Implements

IList<T>.Item.Int32.

#### Reference

- TypeAttributeCollection Class [2418]
- Item Overload [2423]
- TwinCAT.TypeSystem Namespace [1622]

### TypeAttributeCollection.Item Property (String)

Gets the String with the specified name.
**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294*Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

---

**Syntax**

### C#

```csharp
public string this[string name] { get; }
```

**Parameters**

- **name**: Type: `System.String`
  
  The name.

**Return Value**

Type: `String`

`System.String`.

**Implements**

`ITypeAttributeCollection.Item.String` [2213]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>KeyNotFoundException</td>
<td></td>
</tr>
</tbody>
</table>

### 6.11.134.3 TypeAttributeCollection Methods

The TypeAttributeCollection [2418] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>AddRange</td>
<td>Adds the range.</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Gets a read only version of this TypeAttributeCollection [2418].</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether this TypeAttributeCollection [2418] contains the ITypeAttribute [2209] with the specified name.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>Contains(ITypeAttribute)</td>
<td>Determines whether the ICollection.T. contains a specific value.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies to.</td>
</tr>
<tr>
<td>Empty</td>
<td>Returns an Empty TypeAttributeCollection.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T. at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove(String)</td>
<td>Removes the specified ITypeAttribute from the TypeAttributeCollection.</td>
</tr>
<tr>
<td>Remove(ITypeAttribute)</td>
<td>Removes the first occurrence of a specific object from the ICollection.T.</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the IList.T. item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryGetAttribute</td>
<td>Tries to get the specified ITypeAttribute.</td>
</tr>
<tr>
<td>TryGetValue</td>
<td>Tries to get the specified Attribute value.</td>
</tr>
</tbody>
</table>

Reference

TypeAttributeCollection Class

TwinCAT.TypeSystem Namespace

6.11.134.3.1 TypeAttributeCollection.Add Method

Adds an item to the ICollection.T.

Namespace: TwinCAT.TypeSystem

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public void Add(ITypeAttribute item)
```

Parameters

- **item**: Type: `TwinCAT.TypeSystem.ITypeAttribute`<br>The object to add to the `ICollection<T>`.

Implements

- `ICollection<T>.Add(T)`

Reference

- `TypeAttributeCollection Class` [2418]
- `TwinCAT.TypeSystem Namespace` [1622]

### 6.11.134.3.2 TypeAttributeCollection.AddRange Method

Adds the range.

**Namespace**: `TwinCAT.TypeSystem` [1622]<br>**Assembly**: `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

Syntax

C#

```csharp
public void AddRange(IEnumerable<ITypeAttribute> items)
```

Parameters

- **items**: Type: `System.Collections.Generic.IEnumerable`<br>`ITypeAttribute`<br>The items.

Reference

- `TypeAttributeCollection Class` [2418]
- `TwinCAT.TypeSystem Namespace` [1622]

### 6.11.134.3.3 TypeAttributeCollection.AsReadOnly Method

Gets a read only version of this `TypeAttributeCollection`.

**Namespace**: `TwinCAT.TypeSystem` [1622]<br>**Assembly**: `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`
Syntax

C#

```csharp
public ReadOnlyTypeAttributeCollection AsReadOnly()
```

Field Value

Type: `ReadOnlyTypeAttributeCollection` [2340]
As read only.

Return Value

Type: `ReadOnlyTypeAttributeCollection` [2340]
`ReadOnlyAttributeCollection`.

Reference

`TypeAttributeCollection Class` [2418]
`TwinCAT.TypeSystem Namespace` [1622]

6.11.134.3.4 TypeAttributeCollection.Clear Method

Removes all items from the `ICollection<T>`.

Namespace: `TwinCAT.TypeSystem` [1622]
Assembly: `TwinCAT.Ads` (in `TwinCAT.Ads.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Clear()
```

Implements

`IICollection<T.Clear>`

Reference

`TypeAttributeCollection Class` [2418]
`TwinCAT.TypeSystem Namespace` [1622]

6.11.134.3.5 TypeAttributeCollection.Contains Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains(String) [2428]</td>
<td>Determines whether this <code>TypeAttributeCollection</code> [2418] contains the <code>ITypeAttribute</code> [2209] with the specified name.</td>
</tr>
<tr>
<td>Contains(ITypeAttribute) [2428]</td>
<td>Determines whether the <code>IICollection&lt;T&gt;</code> contains a specific value.</td>
</tr>
</tbody>
</table>
TypeAttributeCollection.Contains Method (String)

Determines whether this `TypeAttributeCollection` contains the `ITypeAttribute` with the specified name.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool Contains(
    string name
)
```

**Parameters**

- name
  - Type: System.String
  - The name.

**Return Value**

- Type: Boolean
  - true if [contains] [the specified name]; otherwise, false.

**Implements**

- `ITypeAttributeCollection.Contains(String)`

**Reference**

- `TypeAttributeCollection Class` [2418]
- `TwinCAT.TypeSystem Namespace` [1622]

- `Contains Overload` [2427]

- `TwinCAT.TypeSystem Namespace` [1622]

TypesAttributeCollection.Contains Method (ITypeAttribute)

Determines whether the `ICollection<T>` contains a specific value.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public bool Contains(ITypeAttribute item)
```

**Parameters**

- `item`: Type: `TwinCAT.TypeSystem.ITypeAttribute`<sup>2209</sup>
  - The object to locate in the `ICollection<T>`.

**Return Value**

Type: `Boolean`
- true if `item` is found in the `ICollection<T>`; otherwise, false.

**Implements**

- `ICollection<T>.Contains(T)`

**Reference**

- `TypeAttributeCollection Class [】2418]`
- `Contains Overload [】2427]`
- `TwinCAT.TypeSystem Namespace [】1622]`

### 6.11.134.3.6 TypeAttributeCollection.CopyTo Method

Copies to.

**Namespace:** `TwinCAT.TypeSystem [】1622]`

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

**Syntax**

**C#**

```csharp
public void CopyTo(ITypeAttribute[] array, int arrayIndex)
```

**Parameters**

- `array`: Type: `TwinCAT.TypeSystem.ITypeAttribute`<sup>2209</sup>
  - The array.

- `arrayIndex`: Type: `System.Int32`
  - Index of the array.

**Implements**

- `ICollection<T>.CopyTo(T, Int32)`
6.11.134.3.7 TypeAttributeCollection.Empty Method

Returns an Empty TypeAttributeCollection.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static TypeAttributeCollection Empty()
```

**Return Value**

Type: TypeAttributeCollection.

Reference

TypeAttributeCollection Class

TwinCAT.TypeSystem Namespace

6.11.134.3.8 TypeAttributeCollection.GetEnumerator Method

Returns an enumerator that iterates through the collection.

**Namespace:** TwinCAT.TypeSystem

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public IEnumerator<ITypeAttribute> GetEnumerator()
```

**Return Value**

Type: IEnumerator.ITypeAttribute.

A IEnumerator.T. that can be used to iterate through the collection.

**Implements**

IEnumerator.T.GetEnumerator.

Reference

TypeAttributeCollection Class
### 6.11.134.3.9 TypeAttributeCollection.IndexOf Method

Determines the index of a specific item in the `IList<T>`.

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int IndexOf(ITypeAttribute item)
```

**Parameters**

- `item`  
  Type: `TwinCAT.TypeSystem.ITypeAttribute`  
  The object to locate in the `IList<T>`.

**Return Value**

- **Type:** `Int32`  
  The index of `item` if found in the list; otherwise, -1.

**Implements**

- `IList<T>.IndexOf(T)`

**Reference**

- `TypeAttributeCollection Class [p.2418]`
- `TwinCAT.TypeSystem Namespace [p.1622]

### 6.11.134.3.1 TypeAttributeCollection.Insert Method

Inserts an item to the `IList<T>` at the specified index.

**Namespace:**  TwinCAT.TypeSystem

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Insert(int index, ITypeAttribute item)
```
Parameters

index Type: System.Int32
The zero-based index at which item should be inserted.

item Type: TwinCAT.TypeSystem.ITypeAttribute
The object to insert into the IList.

Implements

IList<T>.Insert(Int32, T)

Reference

TypeAttributeCollection Class [2418]
TwinCAT.TypeSystem Namespace [1622]

6.11.134.3.1 TypeAttributeCollection.Remove Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remove(String) [2432]</td>
<td>Removes the specified ITypeAttribute [2209] from the TypeAttributeCollection [2418]</td>
</tr>
<tr>
<td>Remove(ITypeAttribute) [2433]</td>
<td>Removes the first occurrence of a specific object from the ICollection&lt;T&gt;.</td>
</tr>
</tbody>
</table>

Reference

TypeAttributeCollection Class [2418]
TwinCAT.TypeSystem Namespace [1622]

TypeAttributeCollection.Remove Method (String)

Removes the specified ITypeAttribute [2209] from the TypeAttributeCollection [2418]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool Remove(
    string name
)
```

Parameters

name Type: System.String
The name.
Return Value

Type: Boolean
true if XXXX, false otherwise.

Reference

TypeAttributeCollection Class [2418]
Remove Overload [2432]
TwinCAT.TypeSystem Namespace [1622]

**TypeAttributeCollection**.Remove Method (ITypeAttribute)

Removes the first occurrence of a specific object from the ICollection.T.

**Namespace:** TwinCAT.TypeSystem [1622]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd1ca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool Remove(ITypeAttribute item)
```

**Parameters**

- item
  
  Type: TwinCAT.TypeSystem.ITypeAttribute[2209]

  The object to remove from the ICollection.T.

**Return Value**

Type: Boolean
true if item was successfully removed from the ICollection.T.; otherwise, false. This method also returns false if item is not found in the original ICollection.T.

**Implements**

ICollection<T>.Remove(T)

**Reference**

TypeAttributeCollection Class [2418]
Remove Overload [2432]
TwinCAT.TypeSystem Namespace [1622]

6.11.134.3.1 TypeAttributeCollection.RemoveAt Method 2

Removes the IList<T> item at the specified index.
Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public void RemoveAt(
    int index
)

Parameters

index Type: System.Int32
The zero-based index of the item to remove.

Implements

IList.RemoveAt(Int32)

Reference

TypeAttributeCollection Class [2418]
TwinCAT.TypeSystem Namespace [1622]

6.11.134.3.1 TypeAttributeCollection.TryGetAttribute Method

Tries to get the specified ITypeAttribute [2209]

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public bool TryGetAttribute(
    string name,
    out ITypeAttribute att
)

Parameters

name Type: System.String
The name of the ITypeAttribute [2209].

att Type: TwinCAT.TypeSystem.ITypeAttribute [2209].
The att.

Return Value

Type: Boolean
true if found, false otherwise.
Implements

ITypeAttributeCollection.TryGetAttribute(String, ITypeAttribute) [2215]

Reference

TypeAttributeCollection Class [2418]
TwinCAT.TypeSystem Namespace [1622]

6.11.134.3.1 TypeAttributeCollection.TryGetValue Method

Tries to get the specified Attribute value.

Namespace: TwinCAT.TypeSystem [1622]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool TryGetValue(
    string name,
    out string value
)

Parameters

name Type: System.String
    The name.
value Type: System.String
    The value.

Return Value

Type: Boolean
    true if XXXX, false otherwise.

Implements

ITypeAttributeCollection.TryGetValue(String, String) [2215]

Reference

TypeAttributeCollection Class [2418]
TwinCAT.TypeSystem Namespace [1622]

6.11.135 ValueChangedEventArgs Class

Event args for the RawValueChanged [2254] event.
Inheritance Hierarchy

```
System.Object
 System.EventArgs
 TwinCAT.TypeSystem.ValueChangedEventArgs
 TwinCAT.TypeSystem.RawValueChangedEventArgs
 TwinCAT.TypeSystem.ValueChangedBaseEventArgs
```

Namespace: TwinCAT.TypeSystem
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

```
public class ValueChangedBaseEventArgs : EventArgs
```

The ValueChangedBaseEventArgs type exposes the following members.

### Constructors

## 6.12.1 DataTypeCollection.T. Class

Data type collection

### Inheritance Hierarchy

```
System.Object
  TwinCAT.TypeSystem.Generic.DataTypeCollection.T.
    TwinCAT.TypeSystem.DataTypeCollection. [1650]

Namespace: TwinCAT.TypeSystem.Generic. [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
```

### Syntax

C#
```
public class DataTypeCollection<T> : IList<T>, ICollection<T>, IEnumerable<T>, IEnumerable, IDataTypeCollection<T>
where T : class, IDataType
```

### Type Parameters

T

The DataTypeCollection<T> type exposes the following members.

### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DataTypeCollection.T.</td>
<td>Initializes a new instance of the DataTypeCollection. [1650] class.</td>
</tr>
<tr>
<td>DataTypeCollection.T.IEnumerable.T.</td>
<td>Initializes a new instance of the DataTypeCollection.T. class.</td>
</tr>
</tbody>
</table>
### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the count of contained <code>IDataType</code>'s.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether this instance is read only.</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the <code>IDataType</code> at the specified index.</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the <code>IDataType</code> with the specified name.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds the specified item to the collection.</td>
</tr>
<tr>
<td>AddRange</td>
<td>Adds a range of types</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Converts the <code>DataTypeCollection.T</code> into a <code>ReadOnlyCollection.T</code>.</td>
</tr>
<tr>
<td>Clear</td>
<td>Clears the collection.</td>
</tr>
<tr>
<td>Clone</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether this <code>DataTypeCollection</code> contains the specified <code>IDataType</code>.</td>
</tr>
<tr>
<td>ContainsType</td>
<td>Determines whether the container contains the specified <code>IDataType</code>.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies the data types to the specified array, starting at the array index.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Gets the enumerator.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the Index of the specified <code>IDataType</code>.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an <code>IDataType</code> into the <code>DataTypeCollection</code>.</td>
</tr>
<tr>
<td>LookupType</td>
<td>Determines the specified <code>IDataType</code>.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the specified <code>IDataType</code>.</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the <code>IDataType</code> object at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>)</td>
</tr>
<tr>
<td>TryGetType</td>
<td>Tries to get the specified <code>IDataType</code> from the <code>IDataTypeCollection.T</code>.</td>
</tr>
</tbody>
</table>

</table>

#### Reference

DataTypeCollection.T. Class [2442]

TwinCAT.TypeSystem.Generic Namespace [2441]

### 6.12.1.1.1  DataTypeCollection.T. Constructor

Initializes a new instance of the **DataTypeCollection** [1650] class.

**Namespace**: TwinCAT.TypeSystem.Generic [2441]

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.9bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public DataTypeCollection()
```

#### Reference

DataTypeCollection.T. Class [2442]

DataTypeCollection.T. Overload [2444]

TwinCAT.TypeSystem.Generic Namespace [2441]

### 6.12.1.1.2  DataTypeCollection.T. Constructor (IEnumerable.T.)

Initializes a new instance of the **DataTypeCollection.T** [2442] class.
Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public DataTypeCollection(
    IEnumerable<T> types
)
```

Parameters

Reference

DataTypeCollection.T. Class [2442]
DataTypeCollection.T. Overload [2444]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.1.2 DataTypeCollection.T. Properties

The DataTypeCollection.T. [2442] generic type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [2445]</td>
<td>Gets the count of contained IDataType [1986]s.</td>
</tr>
<tr>
<td>IsReadOnly [2446]</td>
<td>Gets a value indicating whether this instance is read only.</td>
</tr>
<tr>
<td>Item.Int32. [2447]</td>
<td>Gets or sets the IDataType [1986] at the specified index.</td>
</tr>
<tr>
<td>Item.String. [2448]</td>
<td>Gets the IDataType [1986] with the specified name.</td>
</tr>
</tbody>
</table>

Reference

DataTypeCollection.T. Class [2442]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.1.2.1 DataTypeCollection.T..Count Property

Gets the count of contained IDataType [1986]s.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
## Syntax

### C#

```csharp
public int Count { get; }
```

### Property Value

Type: `Int32`

The count.

**Implements**

`ICollection<T>.Count`

### Reference

- `DataTypeCollection<T>.Class` [2442]
- `TwinCAT.TypeSystem.Generic Namespace` [2441]

### 6.12.1.2.2 DataTypeCollection<T>.IsReadOnly Property

Gets a value indicating whether this instance is read only.

**Namespace:** `TwinCAT.TypeSystem.Generic` [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

```csharp
public bool IsReadOnly { get; }
```

### Property Value

Type: `Boolean`

true if this instance is read only; otherwise, false.

**Implements**

`ICollection<T>.IsReadOnly`

### Reference

- `DataTypeCollection<T>.Class` [2442]
- `TwinCAT.TypeSystem.Generic Namespace` [2441]

### 6.12.1.2.3 DataTypeCollection<T>.Item Property

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item&lt;Int32&gt;</td>
<td>Gets or sets the <code>IDataType</code> at the specified index.</td>
</tr>
</tbody>
</table>
**Item.String**

**Description**

Gets the IDataType with the specified name.

---

**Reference**

DataTypeCollection.T. Class [2442]

TwinCAT.TypeSystem.Generic Namespace [2441]

---

**DataTypeCollection.T..Item Property (Int32)**

Gets or sets the IDataType at the specified index.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```
public T this[int index] { get; set; }
```

**Parameters**

- `index` Type: System.Int32
  
  The index.

**Return Value**

Type: T [2442]

T.

**Implements**

IList.T..Item.Int32.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

**Reference**

DataTypeCollection.T. Class [2442]

Item Overload [2446]

TwinCAT.TypeSystem.Generic Namespace [2441]
**DataTypeCollection.T..Item Property (String)**

Gets the `IDataType` with the specified name.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public T this[string name] { get; }
```

**Parameters**

- **name**
  - Type: `System.String`
  - The name.

**Return Value**

- **Type:** `T` ([2442])
- `T`

**Implements**

`IDataTypeCollection.T..Item.String` ([1996])

---

**Reference**

### 6.12.1.3 **DataTypeCollection.T. Methods**

The `DataTypeCollection.T` generic type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [2449]</td>
<td>Adds the specified item to the collection.</td>
</tr>
<tr>
<td>AddRange [2450]</td>
<td>Adds a range of types</td>
</tr>
<tr>
<td>AsReadOnly [2450]</td>
<td>Converts the <code>DataTypeCollection.T</code> into a `ReadOnlyCollection.T.</td>
</tr>
<tr>
<td>Clear [2451]</td>
<td>Clears the collection.</td>
</tr>
<tr>
<td>Clone [2451]</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>Contains [2451]</td>
<td>Determines whether this <code>DataTypeCollection</code> contains the specified <code>IDataType</code> [1986].</td>
</tr>
<tr>
<td>ContainsType [2452]</td>
<td>Determines whether the container contains the specified <code>IDataType</code> [1986].</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>-----------------------------------------------------------------------------</td>

</tbody>
</table>

**Reference**

`DataTypeCollection.T. Class` [2442]

`TwinCAT.TypeSystem.Generic Namespace` [2441]

### 6.12.1.3.1 `DataTypeCollection.T..Add Method`

Adds the specified item to the collection.

**Namespace:** `TwinCAT.TypeSystem.Generic` [2441]

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Add(
    T item
)
```

**Parameters**

item Type: `T` [2442]

The item.
Implements

ICollection<T>.Add(T)

Reference

DataTypeCollection<T>.Class [2442]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.1.3.2  DataTypeCollection<T>.AddRange Method

Adds a range of types

Namespace:  TwinCAT.TypeSystem.Generic [2441]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public void AddRange(
  IEnumerable<T> types
)

Parameters

types Type: System.Collections.Generic.IEnumerable<T> [2442].
The types.

Reference

DataTypeCollection<T>.Class [2442]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.1.3.3  DataTypeCollection<T>.AsReadOnly Method

Converts the DataTypeCollection<T> [2442] into a ReadOnlyCollection<T>.

Namespace:  TwinCAT.TypeSystem.Generic [2441]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public ReadOnlyDataTypeCollection<T> AsReadOnly()

Return Value

Type: ReadOnlyDataTypeCollection<T> [2499].
ReadOnlyDataTypeCollection<T> [2442].

Reference

DataTypeCollection<T>.Class [2442]
6.12.1.3.4  **DataTypeCollection.T..Clear Method**

Clears the collection.

**Namespace:**  TwinCAT.TypeSystem.Generic [➤ 2441]
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public void Clear()
```

**Implements**

**Reference**

DataTypeCollection.T. Class [➤ 2442]
TwinCAT.TypeSystem.Generic Namespace [➤ 2441]

6.12.1.3.5  **DataTypeCollection.T..Clone Method**

Clones this instance.

**Namespace:**  TwinCAT.TypeSystem.Generic [➤ 2441]
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public DataTypeCollection<T> Clone()
```

**Return Value**

Type:  DataTypeCollection [➤ 2442] T [➤ 2442].
DataTypeCollection<T>.

**Reference**

DataTypeCollection.T. Class [➤ 2442]
TwinCAT.TypeSystem.Generic Namespace [➤ 2441]

6.12.1.3.6  **DataTypeCollection.T..Contains Method**

Determines whether this DataTypeCollection [➤ 1650] contains the specified IDataType [➤ 1986].

**Namespace:**  TwinCAT.TypeSystem.Generic [➤ 2441]
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

**C#**

```csharp
public bool Contains(
    T item
)
```

**Parameters**

- **item**
  Type: **T**
  The item.

**Return Value**

Type: **Boolean**
true if [contains] [the specified item]; otherwise, false.

**Implements**

`ICollection<T>.Contains(T)`

**Reference**

`DataTypeCollection.T. Class [2442]`

`TwinCAT.TypeSystem.Generic Namespace [2441]`

6.12.1.3.7 **DataTypeCollection.T..ContainsType Method**

Determines whether the container contains the specified `IDataType [1986]`.

**Namespace: TwinCAT.TypeSystem.Generic [2441]**

**Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14**

Syntax

**C#**

```csharp
public bool ContainsType(
    string name
)
```

**Parameters**

- **name**
  Type: **System.String**
  The name.

**Return Value**

Type: **Boolean**
true if contained; otherwise, false.

**Implements**

`IDataTypeCollection.T..ContainsType(String) [1997]`
6.12.1.3.8 **DataTypeCollection.T..CopyTo Method**

Copies the data types to the specified array, starting at the array index.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public void CopyTo(
    T[] array,
    int arrayIndex
)
```

**Parameters**

- `array` : Type: `T` [2442]. The array.

**Implements**

`ICollection<T>.CopyTo(T, Int32)`

6.12.1.3.9 **DataTypeCollection.T..GetEnumerator Method**

Gets the enumerator.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public IEnumerator<T> GetEnumerator()
```

**Return Value**

Type: `IEnumerator<T>` [2442]. A `IEnumerator<T>` that can be used to iterate through the collection.
6.12.1.3.10  **DataTypeCollection.T..IndexOf Method**

Determines the Index of the specified IDataType.

**Namespace**: TwinCAT.TypeSystem.Generic

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public int IndexOf(
    T item
)
```

**Parameters**

- **item**: Type: T

**Return Value**

Type: Int32
The index of item if found in the list; otherwise, -1.

**Implements**

- IList.T..IndexOf(T)

**Reference**

- DataTypeCollection.T..Class
- TwinCAT.TypeSystem.Generic Namespace

6.12.1.3.11  **DataTypeCollection.T..Insert Method**

Inserts anIDataType into the DataTypeCollection.

**Namespace**: TwinCAT.TypeSystem.Generic

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Reference**

- DataTypeCollection.T..Class
- TwinCAT.TypeSystem.Generic Namespace
Syntax

**C#**

```csharp
public void Insert(
    int index,
    T item
)
```

**Parameters**

- **index**
  - Type: `System.Int32`
  - The index.

- **item**
  - Type: `T` [2442]
  - The item.

**Implements**

`IList<T>.Insert(Int32, T)`

**Reference**

- `DataTypeCollection.T. Class` [2442]
- `TwinCAT.TypeSystem.Generic Namespace` [2441]

### 6.12.1.3.12 `DataTypeCollection.T..LookupType Method`

Determines the specified `IDataType` [1986]

**Namespace:** `TwinCAT.TypeSystem.Generic` [2441]

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll)` Version: 5.0.294+Branch.releases-5.0Sha.90bb9a1b43b6095934fddca3e72bc0e15da1c14

**Syntax**

**C#**

```csharp
public T LookupType(
    string name
)
```

**Parameters**

- **name**
  - Type: `System.String`
  - The name.

**Return Value**

- Type: `T` [2442]
  - The `IDataType` [1986] if found, otherwise NULL

**Reference**

- `DataTypeCollection.T. Class` [2442]
- `TwinCAT.TypeSystem.Generic Namespace` [2441]
### 6.12.1.3.13  DataTypeCollection.T..Remove Method

Removes the specified IDataType.  

**Namespace:** TwinCAT.TypeSystem.Generic  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public bool Remove(T item)
```

#### Parameters

- **item**  
  Type: T  
  The item.

#### Return Value

Type: Boolean  
true if item was successfully removed from the ICollection.T.; otherwise, false. This method also returns false if item is not found in the original ICollection.T.

#### Implements

ICollection.T..Remove(T)

#### Reference

DataTypeCollection.T..Class [2442]  
TwinCAT.TypeSystem.Generic Namespace [2441]

### 6.12.1.3.14  DataTypeCollection.T..RemoveAt Method

Removes the IDataType object at the specified index.  

**Namespace:** TwinCAT.TypeSystem.Generic  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public void RemoveAt(int index)
```

#### Parameters

- **index**  
  Type: System.Int32  
  The index.
6.12.1.3.15   **DataTypeCollection.T..TryGetType Method**

Tries to get the specified `IDataType` from the `IDataTypeCollection.T.`.

**Namespace:**   TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool TryGetType(
    string name,
    out T type
)
```

**Parameters**

- **name**
  - Type: `System.String`
  - The name.

- **type**
  - Type: `T`.
  - The type (Out parameter)

**Return Value**

- Type: `Boolean`
  - true if found

**Implements**

`IDataTypeCollection.T..TryGetType(String, T.)` [1998]

**Reference**

`DataTypeCollection.T. Class` [2442]

`TwinCAT.TypeSystem.Generic Namespace` [2441]

6.12.1.4   **DataTypeCollection.T. Fields**

The `DataTypeCollection.T.` generic type exposes the following members.
Fields

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>list [2458]</td>
<td>Internal list of data types</td>
</tr>
</tbody>
</table>

Reference

Syntax

C#
public interface INamespace<TType>
where TType : class, IDataType

Type Parameters

TType          DataType class used within this Namespace interface

The INamespace..TType..type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DataTypes</td>
<td>Data types organized by the INamespace.TType.</td>
</tr>
<tr>
<td>Name</td>

### 6.12.3  InstanceCollection.T. Class

Base class for **Instance**  [›  2052] object collections (abstract).

**Inheritance Hierarchy**

System.Object
  TwinCAT.TypeSystem.Generic_InstanceCollection.T.
    TwinCAT.TypeSystem.FieldCollection  [›  1945]
    TwinCAT.TypeSystem.Generic.SymbolCollection.T.  [›  2526]
    TwinCAT.TypeSystem.MemberCollection  [›  2281]
**Namespace:**  TwinCAT.TypeSystem.Generic  [›  2441]
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public abstract class InstanceCollection<T> : IList<T>, ICollection<T>, IEnumerable<T>, IEnumerable, IInstanceCollection<T>
where T : class, IInstance
```

**Type Parameters**

T

The InstanceCollection.T. type exposes the following members.
## Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstanceCollection.T (InstanceCollection Mode)</td>
<td>Initializes a new instance of the InstanceCollection.T. class.</td>
</tr>
</tbody>
</table>

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the collection count.</td>
</tr>
<tr>
<td>InnerList</td>
<td>Gets the List of instances.</td>
</tr>
<tr>
<td>InnerPathDict</td>
<td>The Path dictionary</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether this instance is read only.</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets or sets the IInstance at the specified index.</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the IInstance with the specified instance path.</td>
</tr>
<tr>
<td>Mode</td>
<td>The mode this InstanceCollection.T. is working in.</td>
</tr>
</tbody>
</table>

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds the specified item.</td>
</tr>
<tr>
<td>AddRange</td>
<td>Adds the specified items to this collection.</td>
</tr>
<tr>
<td>AsReadOnly</td>
<td>Converts the InstanceCollection.T. to an ReadOnlyInstanceCollection.T.</td>
</tr>
<tr>
<td>Clear</td>
<td>Clears this instance.</td>
</tr>
<tr>
<td>Contains(String)</td>
<td>Determines whether this collection contains an IInstance with the specified InstanceName / InstancePath</td>
</tr>
<tr>
<td>Contains(T)</td>
<td>Determines whether this collection contains the specified IInstance.</td>
</tr>
<tr>
<td>ContainsName</td>
<td>Determines whether the specified instance name contains name.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies this InstanceCollection.T. to the specified array.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetEnumerator</td>
<td>Gets the enumerator.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetInstance [2475]</td>
<td>Gets the IInstance [2052] by instance path.</td>
</tr>
<tr>
<td>GetInstanceByName [2476]</td>
<td>Gets the name of the instance by.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf [2476]</td>
<td>Determines the index of the specified IInstance [2052].</td>
</tr>
<tr>
<td>Insert [2477]</td>
<td>Inserts the specified IInstance [2052] at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove [2478]</td>
<td>Removes the specified item.</td>
</tr>
<tr>
<td>RemoveAt [2479]</td>
<td>Removes the IInstance [2052] at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryGetInstance [2479]</td>
<td>Tries to get the IInstance [2052] of the specified path.</td>
</tr>
<tr>
<td>TryGetInstanceByName [2480]</td>
<td>Tries to get Instances by name.</td>
</tr>
</tbody>
</table>

### Reference

InstanceCollection.T. Class [2460]

TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.3.1.1 InstanceCollection.T. Constructor (InstanceCollectionMode)

Initializes a new instance of the InstanceCollection.T. class.

**Namespace:** TwinCAT>TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected InstanceCollection(
    InstanceCollectionMode mode
)
```

**Parameters**

- `mode`  
  Type: TwinCAT>TypeSystem>InstanceCollectionMode
  
  The mode.

**Reference**

- InstanceCollection.T.Class
- InstanceCollection.T.Overload
- TwinCAT>TypeSystem.Generic Namespace

6.12.3.1.2 InstanceCollection.T. Constructor (IEnumerable<T>, InstanceCollectionMode)

Initializes a new instance of the InstanceCollection.T. class.

**Namespace:** TwinCAT>TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected InstanceCollection(
    IEnumerable<T> coll,
    InstanceCollectionMode mode
)
```

**Parameters**

- `coll`  
  Type: System.Collections.Generic(IEnumerable<T>)
  
  The copy collection

- `mode`  
  Type: TwinCAT>TypeSystem>InstanceCollectionMode
  
  The mode.

**Reference**

- InstanceCollection.T.Class
- InstanceCollection.T.Overload

6.12.3.2 InstanceCollection.T. Properties

The InstanceCollection.T. [2460] generic type exposes the following members.

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [2464]</td>
<td>Gets the collection count.</td>
</tr>
<tr>
<td>InnerList [2465]</td>
<td>Gets the List of instances.</td>
</tr>
<tr>
<td>InnerPathDict [2465]</td>
<td>The Path dictionary</td>
</tr>
<tr>
<td>IsReadOnly [2465]</td>
<td>Gets a value indicating whether this instance is read only.</td>
</tr>
<tr>
<td>Item.Int32. [2466]</td>
<td>Gets or sets the IInstance [2052] at the specified index.</td>
</tr>
<tr>
<td>Item.String. [2467]</td>
<td>Gets the IInstance [2052] with the specified instance path.</td>
</tr>
<tr>
<td>Mode [2468]</td>
<td>The mode this InstanceCollection.T. [2460] is working in.</td>
</tr>
</tbody>
</table>

### 6.12.3.2.1 InstanceCollection.T..Count Property

Gets the collection count.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int Count { get; }
```

**Property Value**

- **Type:** Int32
- The count.

**Implements**

ICollection.T..Count

**Reference**

InstanceCollection.T. Class [2460]

TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.3.2.2 InstanceCollection.T..InnerList Property

 Gets the list of instances.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
protected IList<T> InnerList { get; }
```

**Property Value**

Type: `IList<T>` [2460].
The inner list.

**Reference**

InstanceCollection.T.. Class [2460]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.2.3 InstanceCollection.T..InnerPathDict Property

The path dictionary

**Namespace:** TwinCAT.TypeSystem.Generic [2441]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
protected IDictionary<string, T> InnerPathDict { get; }
```

**Property Value**

Type: `IDictionary<string, T>` [2460].

**Reference**

InstanceCollection.T.. Class [2460]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.2.4 InstanceCollection.T..IsReadOnly Property

Gets a value indicating whether this instance is read only.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool IsReadOnly { get; };
```

Property Value

Type: Boolean
true if this instance is read only; otherwise, false.

Implements

ICollection.T..IsReadOnly

Reference

InstanceCollection.T. Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.2.5 InstanceCollection.T..Item Property

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item.Int32.</td>
<td>Gets or sets the</td>
</tr>
<tr>
<td>Item.String.</td>
<td>Gets the</td>
</tr>
</tbody>
</table>

Reference

InstanceCollection.T. Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]

InstanceCollection.T..Item Property (Int32)

Gets or sets the |Instance| at the specified index.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public T this[int index] { get; set; }
```

Parameters

index Type: System.Int32
The index.
Return Value

Type: T [2460]
T.

Implements

IList<T>.Item.Int32.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

InstanceCollection.T..Class [2460]

Item Overload [2466]

TwinCAT.TypeSystem.Generic Namespace [2441]

**InstanceCollection.T..Item Property (String)**

Gets the IInstance [2052] with the specified instance path.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public T this[string instanceSpecifier] { get; }
```

Parameters

- `instanceSpecifier` Type: System.String
  The instance path or Instance Name (dependent of Mode [2468] setting)

Return Value

Type: T [2460]
T.

Implements

IInstanceCollection.T..Item.String. [2059]
**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td></td>
</tr>
<tr>
<td>ArgumentException</td>
<td></td>
</tr>
</tbody>
</table>

**Remarks**

Dependent what this `InstanceCollection.T. [2460]` contains configured by the `InstanceCollectionMode [2075]` the instance specifier should be the `InstanceName [2054]` or the `InstancePath [2055]`.

**6.12.3.2.6 InstanceCollection.T..Mode Property**

The mode this `InstanceCollection.T. [2460]` is working in.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public InstanceCollectionMode Mode { get; }
```

**Property Value**

Type: `InstanceCollectionMode [2075]`

**Implements**

`IInstanceCollection.T..Mode [2060]`

**Reference**

- `InstanceCollection.T. Class [2460]`
- `TwinCAT.TypeSystem.Generic Namespace [2441]`

**6.12.3.3 InstanceCollection.T. Methods**

The `InstanceCollection.T. [2460]` generic type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Add] [2469]</td>
<td>Adds the specified item.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>

InstanceCollection.T.Class {2460}

TwinCAT.TypeSystem.Generic Namespace {2441}

6.12.3.3.1 InstanceCollection.T..Add Method

Adds the specified item.
Syntax

C#

```csharp
public void Add(
    T item
)
```

Parameters

item Type: `T`[2460]
The item.

Implements

`ICollection<T>.Add(T)`

Reference

InstanceCollection.T. Class [2460]

`TwinCAT.TypeSystem.Generic Namespace [2441]`

6.12.3.3.2 InstanceCollection.T..AddRange Method

Adds the specified items to this collection.

Namespace: `TwinCAT.TypeSystem.Generic [2441]`
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void AddRange(
    IEnumerable<T> items
)
```

Parameters

items Type: `System.Collections.Generic.IEnumerable<T>`[2460],
The items.

Reference

InstanceCollection.T. Class [2460]

`TwinCAT.TypeSystem.Generic Namespace [2441]`

6.12.3.3.3 InstanceCollection.T..AsReadOnly Method

Converts the `InstanceCollection.T. [2460]` to an `ReadOnlyInstanceCollection.T. [2505]`
## TwinCAT.Ads Namespaces

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public ReadOnlyInstanceCollection<T> AsReadOnly()
```

**Return Value**

Type: `ReadOnlyInstanceCollection<T>`.

### Reference

- `InstanceCollection<T>.Class` [2460]

### 6.12.3.3.4 InstanceCollection<T>.Clear Method

Clears this instance.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Clear()
```

**Implements**

- `ICollection<T>.Clear`

### Reference

- `InstanceCollection<T>.Class` [2460]
- `TwinCAT.TypeSystem.Generic Namespace` [2441]

### 6.12.3.3.5 InstanceCollection<T>.Contains Method

**Overload List**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains(String) [2472]</td>
<td>Determines whether this collection contains an <code>IInstance</code> [2052] with the specified InstanceName / InstancePath</td>
</tr>
<tr>
<td>Contains(T) [2472]</td>
<td>Determines whether this collection contains the specified <code>IInstance</code> [2052]</td>
</tr>
</tbody>
</table>
InstanceCollection.T..Contains Method (String)

Determines whether this collection contains an IInstance with the specified InstanceName / InstancePath.

**Namespace:**  TwinCAT.TypeSystem.Generic
**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool Contains(
    string instanceSpecifier
)
```

**Parameters**

instanceSpecifier  
Type: System.String  
The instance path or Instance Name (dependent of Mode setting)

**Return Value**

Type: Boolean  
true if [contains] [the specified instance path]; otherwise, false.

**Implements**

IInstanceCollection.T..Contains(String)  

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td>instancePath</td>
</tr>
<tr>
<td>ArgumentException</td>
<td></td>
</tr>

### Contains Method

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool Contains(T item)
```

#### Parameters

- **item**
  - Type: `T`  
  - The item.

#### Return Value

- Type: `Boolean`
  - true if contains [the specified item]; otherwise, false.

**Implements**

- `ICollection<T>.Contains(T)`

**Reference**

- `InstanceCollection.T. Class`  
- `Contains Overload`  
- TwinCAT.TypeSystem.Generic Namespace

### Contains Name Method

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool ContainsName(string instanceName)
```

#### Parameters

- **instanceName**
  - Type: `System.String`
  - Name of the instance.

#### Return Value

- Type: `Boolean`
  - true if the specified instance name contains name; otherwise, false.
Implements

IInstanceCollection.T.ContainsName(String) [2062]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

InstanceCollection.T.Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.3.7 InstanceCollection.T.CopyTo Method

Copies this InstanceCollection.T. [2460] to the specified array.

Namespace:  TwinCAT.TypeSystem.Generic [2441]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void CopyTo(
    T[] array,
    int arrayIndex
)
```

Parameters

array  Type: .T. [2460].
The array.
arrayIndex  Type: System.Int32
Index of the array.

Implements

ICollection.T.CopyTo(T, Int32)

Reference

InstanceCollection.T.Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.3.8 InstanceCollection.T.GetEnumerator Method

Gets the enumerator.
Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IEnumerator<T> GetEnumerator()
```

Return Value

Type: `IEnumerator<T>`
A `IEnumerator<T>` that can be used to iterate through the collection.

Implements

`IEnumerable<T>.GetEnumerator`

Reference

InstanceCollection.T.Class
TwinCAT.TypeSystem.Generic Namespace

6.12.3.3.9 InstanceCollection.T..GetInstance Method

Gets the `IInstance` by instance path.

Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public T GetInstance(
    string instanceSpecifier
)
```

Parameters

`instanceSpecifier` Type: `System.String`
The instance path or Instance Name (dependent of `Mode` setting)

Return Value

Type: `T`

Implements

`IInstanceCollection<T>.GetInstance(String)`
Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>Path not found!;instancePath</td>
</tr>
</tbody>
</table>

Reference

**InstanceCollection.T..Class** [2460]

### 6.12.3.3.10 InstanceCollection.T..GetInstanceByName Method

Gets the name of the instance by.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public IList<T> GetInstanceByName(
    string instanceName
)
```

**Parameters**

- instanceName
  - Type: System.String
  - Name of the instance.

**Return Value**

Type: **IList<T>** [2460].

**Implements**

IInstanceCollection.T..GetInstanceByName(String) [2063]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>Name not found!;instanceName</td>
</tr>
</tbody>
</table>

Reference

**InstanceCollection.T..Class** [2460]

**TwinCAT.TypeSystem.Generic Namespace** [2441]

### 6.12.3.3.11 InstanceCollection.T..IndexOf Method

Determines the index of the specified **IInstance** [2052].
**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int IndexOf(
    T item
)
```

**Parameters**

- **item**
  - Type: `T` [2460]
  - The item.

**Return Value**

Type: `Int32`
The index of `item` if found in the list; otherwise, -1.

**Implements**

`IList<T>.IndexOf(T)`

**Reference**

`InstanceCollection<T>.Class` [2460]

TwinCAT.TypeSystem.Generic Namespace [2441]

---

**6.12.3.3.12 InstanceCollection<T>.Insert Method**

Inserts the specified `IInstance` [2052] at the specified index.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void Insert(
    int index,
    T instance
)
```

**Parameters**

- **index**
  - Type: `System.Int32`
  - The instance.

- **instance**
  - Type: `T` [2460]
  - The item.
Implements

IList<T>.Insert(Int32, T)

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td>index or index</td>
</tr>
<tr>
<td>ArgumentNullException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

InstanceCollection<T>.Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.3.13 InstanceCollection<T>.Remove Method

Removes the specified item.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool Remove(T item)

Parameters

item Type: T [2460]
The item.

Return Value

Type: Boolean
ture if item was successfully removed from the ICollection<T>; otherwise, false. This method also returns false if item is not found in the original ICollection<T>.

Implements

ICollection<T>.Remove(T)

Reference

InstanceCollection<T>.Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.3.3.14 InstanceCollection.T..RemoveAt Method

Removes the IInstance [2052] at the specified index.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public void RemoveAt(
    int index
)

Parameters

index Type: System.Int32
The index.

Implements

IList.T..RemoveAt(Int32)

Reference

InstanceCollection.T. Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.3.15 InstanceCollection.T..TryGetInstance Method

Tries to get the IInstance [2052]. of the specified path.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool TryGetInstance(
    string instanceSpecifier,
    out T symbol
)

Parameters

instanceSpecifier Type: System.String
The instance path or Instance Name (dependent of Mode [2468] setting)
symbol Type: T [2460].
The symbol.

Return Value

Type: Boolean
ture if the IInstance [2052] is found; otherwise, false
Implements

IInstanceCollection.T.TryGetInstance(String, T) [2063]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td>instancePath</td>
</tr>
<tr>
<td>ArgumentException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

InstanceCollection.T.Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.3.3.16 InstanceCollection.T.TryGetInstanceByName Method

Tries to get Instances by name.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public virtual bool TryGetInstanceByName(
    string instanceName,
    out IList<T> instances
)
```

Parameters

- `instanceName` Type: System.String
  Name of the instance.

- `instances` Type: System.Collections.Generic.IList<T>
  The instances found.

Return Value

Type: Boolean
true if the IInstance [2052] is found; otherwise, false

Implements

IInstanceCollection.T.TryGetInstanceByName(String, IList<T>) [2064]

Reference

InstanceCollection.T.Class [2460]
TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.4 ISymbolProvider.TNamespace, TDataType, TSymbol. Interface

Symbol provider interface

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface ISymbolProvider<TNamespace, TDataType, TSymbol>
    where TDataType : class, IDataType
    where TSymbol : class, ISymbol
```

**Type Parameters**

- **TNamespace**
  - Namespace type
- **TDataType**
  - DataType type
- **TSymbol**
  - Symbol type

The ISymbolProvider.TNamespace, TDataType, TSymbol. type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DataTypes</td>
<td>Gets all data types from all Namespaces</td>
</tr>
<tr>
<td>Namespaces</td>
<td>Get the Namespaces of DataTypes for this Symbol provider</td>
</tr>
<tr>
<td>RootNamespace</td>
<td>Gets the root (main) namespace of the Symbol provider.</td>
</tr>
<tr>
<td>RootNamespaceName</td>
<td>Gets the name of the root namespace</td>
</tr>
<tr>
<td>Symbols</td>
<td>Gets the (root) symbols of the Symbol provider.</td>
</tr>
</tbody>
</table>

**Reference**

-TwinCAT.TypeSystem.Generic Namespace [2441]-

### 6.12.4.1.1 ISymbolProvider.TNamespace, TDataType, TSymbol..DataTypes Property

Gets all data types from all Namespaces

- **Namespace:** TwinCAT.TypeSystem.Generic [2441]
- **Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
IDataTypeCollection<TDataType> DataTypes { get; }
```

**Property Value**

Type: [IDataTypeCollection [1995], TDataType [2481]].
The data types.

### Reference

-TwinCAT.TypeSystem.Generic Namespace [2441]-

### 6.12.4.1.2 ISymbolProvider.TNamespace, TDataType, TSymbol..Namespaces Property

Get the Namespaces of DataTypes for this Symbol provider

- **Namespace:** TwinCAT.TypeSystem.Generic [2441]
- **Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
INamespaceCollection<TDataType> Namespaces { get; }
```
Property Value
Type: INamespaceCollection[2073].TDataType[2481].
ReadOnly collection of the namespaces.

Reference
ISymbolProvider.TNamespace, TDataType, TSymbol. Interface[2481]
TwinCAT.TypeSystem.Generic Namespace[2441]

6.12.4.1.3  ISymbolProvider.TNamespace, TDataType, TSymbol..RootNamespace Property

Gets the root (main) namespace of the Symbol provider.

Namespace:  TwinCAT.TypeSystem.Generic[2441]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
INamespace<TDataType> RootNamespace { get; }

Property Value
Type: INamespace[2458].TDataType[2481].
The root namespace.

Reference
ISymbolProvider.TNamespace, TDataType, TSymbol. Interface[2481]
TwinCAT.TypeSystem.Generic Namespace[2441]

6.12.4.1.4  ISymbolProvider.TNamespace, TDataType, TSymbol..RootNamespaceName Property

Gets the name of the root namespace

Namespace:  TwinCAT.TypeSystem.Generic[2441]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
string RootNamespaceName { get; }

Property Value
Type: String
The namespace.
6.12.4.1.5   ISymbolProvider.TNamespace, TDataType, TSymbol..Symbols Property

Gets the (root) symbols of the Symbol provider.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
ISymbolCollection<TSymbol> Symbols { get; }
```

**Property Value**

Type: ISymbolCollection[TSymbol], TSymbol

Read only collection of the Symbols

**Reference**

ISymbolProvider.TNamespace, TDataType, TSymbol. Interface

TwinCAT.TypeSystem.Generic Namespace

---

6.12.5   NamespaceCollection<T>. Class

Generic class for Namespace collections

**Inheritance Hierarchy**

System.Object  
TwinCAT.TypeSystem.Generic.NamespaceCollection<T>

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public class NamespaceCollection<T> : IList<INamespace<T>>,  
   ICollection<INamespace<T>>, IEnumerable<INamespace<T>>, IEnumerable  
where T : class, IDataType
```

**Type Parameters**

T

The NamespaceCollection<T> type exposes the following members.
### TwinCAT.Ads Namespaces

#### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NamespaceCollection.T.</td>
<td>Initializes a new instance of the NamespaceCollection.T. class.</td>
</tr>
</tbody>
</table>

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllTypes</td>
<td>Gets all types included in all namespaces.</td>
</tr>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>InnerAllTypes Dictionary FullPath -&gt; IDataType</td>
<td></td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T. is read-only.</td>
</tr>
<tr>
<td>Item.Int32.</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String.</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
</tbody>
</table>

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add</td>
<td>Adds an item to the ICollection.T.</td>
</tr>
<tr>
<td>Clear</td>
<td>Removes all items from the ICollection.T.</td>
</tr>
<tr>
<td>Contains</td>
<td>Determines whether the ICollection.T. contains a specific value.</td>
</tr>
<tr>
<td>ContainsNamespace</td>
<td>Determines whether the specified name contains namespace.</td>
</tr>
<tr>
<td>CopyTo</td>
<td>Copies to.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert</td>
<td>Inserts an item to the IList.T. at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove</td>
<td>Removes the first occurrence of a specific object from the ICollection.T.</td>
</tr>
<tr>
<td>RemoveAt</td>
<td>Removes the IList.T. item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>

#### 6.12.5.2 NamespaceCollection.T. Properties

The `NamespaceCollection.T` generic type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllTypes</td>
<td>Gets all types included in all namespaces.</td>
</tr>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ICollection.T.</td>
</tr>
<tr>
<td>InnerAllTypes</td>
<td>Dictionary FullPath -&gt; IDataType</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Gets a value indicating whether the ICollection.T. is read-only.</td>
</tr>
<tr>
<td>Item.Int32,</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
<tr>
<td>Item.String,</td>
<td>Gets or sets the element at the specified index.</td>
</tr>
</tbody>
</table>

**Reference**

NamespaceCollection.T. Class [2484]
6.12.5.2.1 NamespaceCollection.T..AllTypes Property

Gets all types included in all namespaces.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll)

Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IDataTypeCollection<T> AllTypes { get; }
```

**Property Value**

Type: `IDataTypeCollection<T>`

All types.

**Reference**

NamespaceCollection.T..Class

TwinCAT.TypeSystem.Generic Namespace

6.12.5.2.2 NamespaceCollection.T..Count Property

Gets the number of elements contained in the `ICollection<T>`.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll)

Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int Count { get; }
```

**Return Value**

Type: `Int32`

The number of elements contained in the `ICollection<T>`.

**Implements**

`ICollection<T.Count`

**Reference**

NamespaceCollection.T..Class

TwinCAT.TypeSystem.Generic Namespace
6.12.5.2.3 NamespaceCollection.T..InnerAllTypes Property

Dictionary FullPath -> IDataType

</table>

Reference

NamespaceCollection.T. Class [2484]

TwinCAT.TypeSystem.Generic Namespace [2441]

NamespaceCollection.T..Item Property (Int32)

Gets or sets the element at the specified index.

Namespace:  TwinCAT.TypeSystem.Generic [2441]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public INamespace<T> this[int index] { get; set; }
```

Parameters

index  Type: System.Int32
The index.

Return Value

Type: INamespace [2458].

Implements

IList<T>.Item.Int32.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

### NamespaceCollection.T..Item Property (String)

Gets or sets the element at the specified index.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public INamespace<T> this[string str] { get; }
```

#### Parameters

- **str**
  - **Type:** System.String
  - The STR.

#### Return Value

- **Type:** INamespace<T>
  - The STR.

#### Reference

- NamespaceCollection.T. Class
- Item Overload
- TwinCAT.TypeSystem.Generic Namespace

### 6.12.5.3 NamespaceCollection.T. Methods

The NamespaceCollection.T.[2484] generic type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [2491]</td>
<td>Adds an item to the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>Clear [2492]</td>
<td>Removes all items from the ICollection&lt;T&gt;.</td>
</tr>
<tr>
<td>Contains [2492]</td>
<td>Determines whether the ICollection&lt;T&gt; contains a specific value.</td>
</tr>
<tr>
<td>ContainsNamespace [2493]</td>
<td>Determines whether the specified name contains namespace.</td>
</tr>
<tr>
<td>CopyTo [2493]</td>
<td>Copies to.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>GetEnumerator</td>
<td>Returns an enumerator that iterates through the collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf [2494]</td>
<td>Determines the index of a specific item in the IList.T.</td>
</tr>
<tr>
<td>Insert [2495]</td>
<td>Inserts an item to the IList.T at the specified index.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Remove [2496]</td>
<td>Removes the first occurrence of a specific object from the ICollection.T.</td>
</tr>
<tr>
<td>RemoveAt [2496]</td>
<td>Removes the IList.T item at the specified index.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>TryGetNamespace</td>
<td>Tries to get the namespace object</td>
</tr>
<tr>
<td>TryGetType [2497]</td>
<td>Tries to get the specified type.</td>
</tr>
<tr>
<td>TryGetTypeByName [2498]</td>
<td>Tries to get the data type by full name.</td>
</tr>
</tbody>
</table>

Reference

NamespaceCollection.T..Class [2484]

TwinCAT.TypeSystem.Generic Namespace [2441]

### 6.12.5.3.1 NamespaceCollection.T..Add Method

Adds an item to the ICollection.T.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void Add(
    INamespace<T> item
)
```

**Parameters**

item

Type: TwinCAT.TypeSystem.Generic.INamespace [2458].T [2484].
The object to add to the ICollection.T.

**Implements**

ICollection.T.Add(T)
6.12.5.3.2 NamespaceCollection.T..Clear Method

Removes all items from the ICollection.T.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# public void Clear()

**Implements**

ICollection.T.Clear.

6.12.5.3.3 NamespaceCollection.T..Contains Method

Determines whether the ICollection.T contains a specific value.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# public bool Contains(
    INamespace<T> item
)

**Parameters**

item Type: TwinCAT.TypeSystem.Generic.INamespace

The object to locate in the ICollection.T.

**Return Value**

Type: Boolean
true if item is found in the ICollection.T; otherwise, false.
Implements

IEnumerator<T>

Reference

NamespaceCollection.T..Contains(T) Method

Determines whether the specified name contains namespace.

Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public bool ContainsNamespace(
    string name
) Parameters

name Type: System.String
The name.

Return Value

Type: Boolean
true if the specified name contains namespace; otherwise, false.

Reference

NamespaceCollection.T..CopyTo Method

Copies to.

Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public void CopyTo(
    INamespace<T>[] array,
    int arrayIndex
)
Parameters

array                   Type: TwinCAT.TypeSystem.Generic.INamespace[T].T
                        The array.
arrayIndex             Type: System.Int32
                        Index of the array.

Implements

ICollection.T.CopyTo(T, Int32)

Reference

NamespaceCollection.T..GetEnumerator Method

Returns an enumerator that iterates through the collection.

Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sh.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public IEnumerator<INamespace<T>> GetEnumerator()

Return Value

Type: IEnumerator<INamespace<T>>.T
A IEnumerator<T> that can be used to iterate through the collection.

Implements

IEnumerable.T.GetEnumerator.

Reference

NamespaceCollection.T..IndexOf Method

Determines the index of a specific item in the IList<T>.

Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sh.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int IndexOf(
    INamespace<T> item
)
```

Parameters

- **item**
  - Type: `TwinCAT.TypeSystem.Generic.INamespace<T>`. The object to locate in the `IList<T>`.

Return Value

- Type: `Int32`.
  - The index of item if found in the list; otherwise, -1.

Implements

- `IList<T>.IndexOf(T)`

Reference

- `NamespaceCollection.T.Class` [2484]
- `TwinCAT.TypeSystem.Generic.Namespace` [2441]

6.12.5.3.8 NamespaceCollection.T..Insert Method

Inserts an item to the `IList<T>` at the specified index.

Namespace: `TwinCAT.TypeSystem.Generic` [2441]

Assembly: `TwinCAT.Ads (in TwinCAT.Ads.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Insert(
    int index,
    INamespace<T> item
)
```

Parameters

- **index**
  - Type: `System.Int32`.
    - The zero-based index at which item should be inserted.

- **item**
  - Type: `TwinCAT.TypeSystem.Generic.INamespace<T>`.
    - The object to insert into the `IList<T>`.

Implements

- `IList<T>.Insert(Int32, T)`
6.12.5.3.9 NamespaceCollection.T..Remove Method

Removes the first occurrence of a specific object from the ICollection.T.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool Remove(
    INamespace<T> item
)
```

**Parameters**

`item` Type: TwinCAT.TypeSystem.Generic.INamespace [2458].T [2484]. The object to remove from the ICollection.T.

**Return Value**

Type: Boolean

true if item was successfully removed from the ICollection.T.; otherwise, false. This method also returns false if item is not found in the original ICollection.T.

**Implements**

ICollection.T..Remove(T)

Reference

NamespaceCollection.T. Class [2484]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.5.3.10 NamespaceCollection.T..RemoveAt Method

Removes the IList.T. item at the specified index.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void RemoveAt(
    int index
)
```
### NamespaceCollection.T..TryGetNamespace Method

Tries to get the namespace object

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public bool TryGetNamespace(
    string name,
    out INamespace<T> nspace
)
```

**Parameters**

- `name` Type: System.String
  The name.

- `nspace` Type: TwinCAT.TypeSystem.Generic.INamespace
  The namespace object (out-parameter)

**Return Value**

Type: Boolean
true if found, false if not contained.

---

**Reference**

NamespaceCollection.T. Class [2484]

TwinCAT.TypeSystem.Generic Namespace [2441]

---

### NamespaceCollection.T..TryGetType Method

Tries to get the specified type.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Parameters**

- `index` Type: System.Int32
  The zero-based index of the item to remove.

**Implements**

IList<T>.RemoveAt(Int32)

**Reference**

NamespaceCollection.T. Class [2484]

TwinCAT.TypeSystem.Generic Namespace [2441]
### TryGetType Method

- **Syntax**
  ```csharp
  public bool TryGetType(
    string typeName,
    out T dataType
  )
  ```

- **Parameters**
  - `typeName`: Type: `System.String`  
    Data type name.
  - `dataType`: Type: `T [2484]`.  
    The found data type (out-parameter).

- **Return Value**
  - Type: `Boolean`  
    true if found, false if not contained.

- **Exceptions**
<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td><code>typeName</code></td>
</tr>
<tr>
<td>ArgumentException</td>
<td></td>
</tr>
</tbody>
</table>

- **Reference**
  - `NamespaceCollection.T` Class [2484]
  - `TwinCAT.TypeSystem.Generic` Namespace [2441]

### TryGetTypeByFullName Method

- **Syntax**
  ```csharp
  public bool TryGetTypeByFullName(
    string fullname,
    out T dataType
  )
  ```

- **Parameters**
  - `fullname`: Type: `System.String`  
    DataTypes full name.
  - `dataType`: Type: `T [2484]`.  
    Found data type (out-parameter).
Return Value

Type: Boolean
true if found, false if not contained.

Reference

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.6 ReadOnlyDataTypeCollection.T. Class

ReadOnly Data Type collection

Inheritance Hierarchy

System.Object
    TwinCAT.TypeSystem.Generic.ReadOnlyDataTypeCollection.<T>
      TwinCAT.TypeSystem.ReadOnlyDataTypeCollection [2291]

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public class ReadOnlyDataTypeCollection<T> : ReadOnlyCollection<T>, IDataTypeCollection<T>, ICollection<T>, IEnumerable<T>, IEnumerable
where T : class, IDataType

Type Parameters

T

The ReadOnlyDataTypeCollection.T. type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ReadOnlyDataTypeCollection&lt;T&gt; (ReadOnlyCollection&lt;T&gt;)</td>
<td>Initializes a new instance of the ReadOnlyDataTypeCollection.T. class.</td>
</tr>
<tr>
<td>ReadOnlyDataTypeCollection&lt;T&gt; (ReadOnlyDataTypeCollection&lt;T&gt;)</td>
<td>Initializes a new instance of the ReadOnlyDataTypeCollection.T. class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ReadOnlyCollection.T. instance. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item.Int32</td>
<td>Gets the element at the specified index. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the element with the specified type name.</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the IList&lt;T&gt; that the ReadOnlyCollection&lt;T&gt; wraps. (Inherited from ReadOnlyCollection&lt;T&gt;..)</td>
</tr>
</tbody>
</table>

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains</td>
<td>Determines whether an element is in the ReadOnlyCollection&lt;T&gt;. (Inherited from ReadOnlyCollection&lt;T&gt;..)</td>
</tr>
<tr>
<td>ContainsType [2504]</td>
<td>Determines whether the specified name contains type.</td>

### 6.12.6.3.1 ReadOnlyDataTypeCollection.T..ContainsType Method

Determines whether the specified name contains type.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool ContainsType(
    string name
)
```

**Parameters**

- `name` Type: System.String
  
  The name.

**Return Value**

- Type: Boolean
  
  true if the specified name contains type; otherwise, false.

**Implements**

IDataTypeCollection.T..ContainsType(String) [1997]

**Reference**

ReadOnlyDataTypeCollection.T.. Class [2499]

TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.6.3.2  **ReadOnlyDataTypeCollection.T..TryGetType Method**

Tries to get the Type with the specified name out of the collection.

**Namespace:**  TwinCAT.TypeSystem.Generic [2441]

### Syntax

**C#**

```csharp
public bool TryGetType(
    string name,
    out T type
)
```

### Parameters

- **name**
  - **Type:** System.String
  - The name.

- **type**
  - **Type:** T [2499]
  - The type.

### Return Value

- **Type:** Boolean
  - true if found

### Implements

IDataTypeCollection.T..TryGetType(String, T.) [1998]

### Reference

TwinCAT.TypeSystem.Generic Namespace [2441]

#### 6.12.7.1 ReadOnlyInstanceCollection<T>. Constructor

Initializes a new instance of the ReadOnlyInstanceCollection<T> [2505] class.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public ReadOnlyInstanceCollection(
    IInstanceCollection<T> coll
)
```

### Parameters

- **coll**
  - Type: TwinCAT.TypeSystem.IInstanceCollection [2057].
  - The coll.

### Reference

ReadOnlyInstanceCollection<T>. Class [2505]

TwinCAT.TypeSystem.Generic Namespace [2441]

#### 6.12.7.2 ReadOnlyInstanceCollection<T>. Properties

The ReadOnlyInstanceCollection<T> [2505] generic type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the <code>ReadOnlyCollection&lt;T&gt;</code> instance. (Inherited from <code>ReadOnlyCollection&lt;T&gt;</code>.)</td>
</tr>
<tr>
<td>Item&lt;Int32&gt;</td>
<td>Gets the element at the specified index. (Inherited from <code>ReadOnlyCollection&lt;T&gt;</code>.)</td>
</tr>
<tr>
<td>Item&lt;String&gt;</td>
<td>Gets the element with the specified instance path.</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the <code>IList&lt;T&gt;</code> that the <code>ReadOnlyCollection&lt;T&gt;</code> wraps. (Inherited from <code>ReadOnlyCollection&lt;T&gt;</code>.)</td>
</tr>
<tr>
<td>Mode</td>
<td>Gets the <code>_InstanceCollectionMode</code> [2075].</td>
</tr>
</tbody>
</table>

`TwinCAT.TypeSystem.Generic Namespace [2441]`

6.12.7.2.1 `ReadOnlyInstanceCollection<T>..Item Property`

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item&lt;Int32&gt;</td>
<td>Gets the element at the specified index. (Inherited from <code>ReadOnlyCollection&lt;T&gt;</code>.)</td>
</tr>
<tr>
<td>Item&lt;String&gt;</td>
<td>Gets the element with the specified instance path.</td>
</tr>
</tbody>
</table>

Reference

`ReadOnlyInstanceCollection<T>. Class [2505]`

`TwinCAT.TypeSystem.Generic Namespace [2441]`

`ReadOnlyInstanceCollection<T>..Item Property (String)`

Gets the element with the specified instance path.

Namespace: `TwinCAT.TypeSystem.Generic [2441]`

Assembly: `TwinCAT.Ads (in TwinCAT.Ads.dll)` Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public T this[string instancePath] { get; }
```

Parameters

instancePath Type: `System.String`

The instance path.
Return Value

Type: `T` [2505]
The instance if contained.

Implements

`IInstanceCollection<T>.Item.String` [2059]

Reference

`ReadOnlyInstanceCollection<T>.Class` [2505]

`Item Overload` [2508]

`TwinCAT.TypeSystem.Generic Namespace` [2441]

6.12.7.2.2 `ReadOnlyInstanceCollection<T>.Mode` Property

Gets the `InstanceCollectionMode` [2075].

Namespace: `TwinCAT.TypeSystem.Generic` [2441]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public InstanceCollectionMode Mode { get; }
```

Property Value

Type: `InstanceCollectionMode` [2075]
The mode.

Implements

`IInstanceCollection<T>.Mode` [2060]

Reference

`ReadOnlyInstanceCollection<T>.Class` [2505]

`TwinCAT.TypeSystem.Generic Namespace` [2441]

6.12.7.3 `ReadOnlyInstanceCollection<T>.Methods`

The `ReadOnlyInstanceCollection<T>` [2505] generic type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>contain(T)</td>
<td>Determines whether an element is in the <code>ReadOnlyCollection&lt;T&gt;</code> (Inherited from <code>ReadOnlyCollection&lt;T&gt;</code> [2505]).</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

#### Contains(String)

**Description**
Determines whether the `ReadOnlyInstanceCollection.T. [2505]` contains an instance with the specified instance path.

#### ContainsName

**Description**
Determines whether the specified instance is contained.

#### CopyTo

**Description**
Copies the entire `ReadOnlyCollection.T.` to a compatible one-dimensional `Array`, starting at the specified index of the target array. (Inherited from `ReadOnlyCollection.T. [2505]`.)

#### Equals

**Description**
Determines whether the specified object is equal to the current object. (Inherited from `Object.`)

#### Finalize

**Description**
Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from `Object`.)

#### GetEnumerator

**Description**
Returns an enumerator that iterates through the `ReadOnlyCollection.T.`. (Inherited from `ReadOnlyCollection.T. [2505]`.)

#### GetHashCode

**Description**
Serves as the default hash function. (Inherited from `Object`.)

#### GetInstance

**Description**
Gets the `IInstance [2052]` by instance path.

#### GetInstanceByName

**Description**
Gets the `IInstance [2052]` by instance name.

#### GetType

**Description**
Gets the `Type` of the current instance. (Inherited from `Object`.)

#### IndexOf

**Description**
Searches for the specified object and returns the zero-based index of the first occurrence within the entire `ReadOnlyCollection.T.`. (Inherited from `ReadOnlyCollection.T. [2505]`.)

#### MemberwiseClone

**Description**
Creates a shallow copy of the current `Object`. (Inherited from `Object`.)

#### ToString

**Description**
Returns a string that represents the current object. (Inherited from `Object`.)

#### TryGetInstance

**Description**
Tries to get the instance with the specified instance path.

#### TryGetInstanceByName

**Description**
Tries to get the instance by name.

### Reference

- `ReadOnlyInstanceCollection.T. Class [2505]`

### 6.12.7.3.1 `ReadOnlyInstanceCollection.T..Contains Method`

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains(T)</td>
<td>Determines whether an element is in the <code>ReadOnlyCollection.T.</code>. (Inherited from <code>ReadOnlyCollection.T. [2505]</code>.)</td>
</tr>
<tr>
<td>Contains(String) [2511]</td>
<td>Determines whether the <code>ReadOnlyInstanceCollection.T. [2505]</code> contains an instance with the specified instance path.</td>
</tr>
</tbody>
</table>
ReadOnlyInstanceCollection.T..Contains Method (String)

Determines whether the `ReadOnlyInstanceCollection.T.` contains an instance with the specified instance path.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool Contains(
    string instancePath
)
```

**Parameters**

- **instancePath**: Type: `System.String`
  
  The instance path.

**Return Value**

Type: `Boolean`

true if contains the specified instance path; otherwise, false.

**Implements**

`IInstanceCollection.T..Contains(String)`

**Reference**

- `ReadOnlyInstanceCollection.T..Contains` ([2505](#))
- `Contains Overload` ([2510](#))
- `TwinCAT.TypeSystem.Generic Namespace` ([2441](#))

---

6.12.7.3.2  ReadOnlyInstanceCollection.T..ContainsName Method

Determines whether the specified instance is contained.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
```csharp
public bool ContainsName(
    string instanceName
)
```

Parameters

instanceName Type: System.String
Name of the instance.

Return Value

Type: Boolean
true, if instance name is found.

Implements

IInstanceCollection.T.ContainsName(String) [2062]

Reference

ReadOnlyInstanceCollection.T.Class [2505]
TwinCAT.TypeSystem.Generic.Namespace [2441]

6.12.7.3.3 ReadOnlyInstanceCollection.T..GetInstance Method

Gets the IInstance by instance path.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
```csharp
public T GetInstance(
    string instancePath
)
```

Parameters

instancePath Type: System.String
The instance path.

Return Value

Type: T [2505]
T.

Implements

IInstanceCollection.T.GetInstance(String) [2062]
6.12.7.3.4 **ReadOnlyInstanceCollection.T..GetInstanceByName Method**

Gets the `IInstance` by instance name.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public IList<T> GetInstanceByName(
    string instanceName
)
```

**Parameters**

- **instanceName**
  - Type: System.String
  - Name of the instance.

**Return Value**

Type: `IList<T>`, `IList<T>`.

**Implements**

`IInstanceCollection.T..GetInstanceByName(String)`

Reference

ReadOnlyInstanceCollection.T. Class [2505]

TwinCAT.TypeSystem.Generic Namespace [2441]

---

6.12.7.3.5 **ReadOnlyInstanceCollection.T..TryGetInstance Method**

Tries to get the instance with the specified instance path.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool TryGetInstance(
    string instancePath,
    out T instance
)
```

**Reference**

ReadOnlyInstanceCollection.T. Class [2505]

TwinCAT.TypeSystem.Generic Namespace [2441]
Parameters

instancePath
Type: System.String
The instance path.

instance
Type: T.2505
The instance.

Return Value

Type: Boolean
ture, if found, false if not contained.

Implements

IInstanceCollection.T.TryGetInstance(String, T.)2063

Reference

ReadOnlyInstanceCollection.T.Class2505
TwinCAT.TypeSystem.Generic Namespace2441

6.12.7.3.6 ReadOnlyInstanceCollection.T..TryGetInstanceByName Method

Tries to get the instance by name.

Namespace: TwinCAT.TypeSystem.Generic2441
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool TryGetInstanceByName(
    string instanceName,
    out IList<T> symbols
)

Parameters

instanceName
Type: System.String
Name of the instance.

symbols
Type: System.Collections.Generic.IList<T>.2505
The found symbols (out-parameter)

Return Value

Type: Boolean
ture, if found; false if not contained.

Implements

IInstanceCollection.T.TryGetInstanceByName(String, IList<T>).2064
Reference
ReadOnlyInstanceCollection.T. Class [2505]
TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.8 ReadOnlyNamespaceCollection.T. Class
Read Only namespace collection

Inheritance Hierarchy
System.Object
      TwinCAT.TypeSystem.Generic.ReadOnlyNamespaceCollection.T.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public class ReadOnlyNamespaceCollection<T> : ReadOnlyCollection<INamespace<T>>,
   INamespaceCollection<T>, ICollection<INamespace<T>>, IEnumerable<INamespace<T>>, IEnumerable
where T : class, IDataType

Type Parameters

T

The ReadOnlyNamespaceCollection.T. type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllTypes</td>
<td>Gets all types included in all namespaces.</td>
</tr>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ReadOnlyCollection.T. instance. (Inherited from ReadOnlyCollection.INamespace&lt;T&gt;.)</td>
</tr>
<tr>
<td>Item.Int32</td>
<td>Gets the element at the specified index. (Inherited from ReadOnlyCollection.INamespace&lt;T&gt;.)</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the element at the specified index.</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the IList&lt;T&gt; that the ReadOnlyCollection.T. wraps. (Inherited from ReadOnlyCollection.INamespace&lt;T&gt;.)</td>
</tr>
</tbody>
</table>
## Methods

<table>
<thead>
<tr>
<th>Method</th>
<th>Description</th>

## Reference

TwinCAT.TypeSystem.Generic Namespace.[2441]  

#### 6.12.8.1 `ReadOnlyNamespaceCollection<T>. Constructor`

Initializes a new instance of the `ReadOnlyNamespaceCollection<T>`.[2515] class.

**Namespace:** TwinCAT.TypeSystem.Generic.[2441]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934f6dca3e72b0ea15da1c14  

**Syntax**

C#  

```csharp
public ReadOnlyNamespaceCollection(
    NamespaceCollection<T> coll
)
```
Parameters

coll

The coll.

Reference

ReadOnlyNamespaceCollection.T. Class [2515]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.8.2 ReadOnlyNamespaceCollection.T. Properties

The ReadOnlyNamespaceCollection.T. [2515] generic type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllTypes [2517]</td>
<td>Gets all types included in all namespaces.</td>
</tr>
</tbody>
</table>
| Count               | Gets the number of elements contained in the ReadOnlyCollection.T. instance. (Inherited from ReadOnlyCollection.INamespace [2458] T [2515]...)
| Item.Int32          | Gets the element at the specified index. (Inherited from ReadOnlyCollection.INamespace [2458] T [2515]...)
| Item.String [2518]  | Gets the element at the specified index.         |
| Items               | Returns the IList.T. that the ReadOnlyCollection.T. wraps. (Inherited from ReadOnlyCollection.INamespace [2458] T [2515]...)

Reference

ReadOnlyNamespaceCollection.T. Class [2515]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.8.2.1 ReadOnlyNamespaceCollection.T..AllTypes Property

Gets all types included in all namespaces.

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public IDataTypeCollection<T> AllTypes { get; }

Property Value

Type: IDataTypeCollection [1995] T [2515].
All types.
### 6.12.8.2.2  ReadOnlyNamespaceCollection.T..Item Property

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item.Int32</td>
<td>Gets the element at the specified index. (Inherited from ReadOnlyCollection.INamespace[2458],[2515]...)</td>
</tr>
<tr>
<td>Item.String</td>
<td>Gets the element at the specified index.</td>
</tr>
</tbody>
</table>

**ReadOnlyNamespaceCollection.T..Item Property (String)**

Gets the element at the specified index.

**Namespace:**  TwinCAT.TypeSystem.Generic [2441]

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public INamespace<T> this[string name] { get; }
```

**Parameters**

- **name**  
  Type: System.String  
  The name.

**Return Value**

Type: INamespace[2458], T[2515].

**Reference**

- ReadOnlyNamespaceCollection.T.Class [2515]
- TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.8.3  **ReadOnlyNamespaceCollection.T. Methods**

The `ReadOnlyNamespaceCollection.T` [› 2515] generic type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains</td>
<td>Determines whether an element is in the <code>ReadOnlyCollection.T</code>. (Inherited from <code>ReadOnlyCollection_INamespace [› 2458] T [› 2515]</code> ...)</td>

Tries to get the namespace with the specified name.

Namespace:  TwinCAT.TypeSystem.Generic [2441]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```c#
public bool TryGetNamespace(
    string name,
    out INamespace<T> nspace
)
```

Parameters

name Type: System.String
Namespace name.

nspace Type: TwinCAT.TypeSystem.Generic.INamespace [2458].T [2515].
The found namespace (out-parameter).

Return Value

Type: Boolean
true if found, false if not contained.

Reference

ReadOnlyNamespaceCollection.T. Class [2515]
TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.8.3.3  ReadOnlyNamespaceCollection.T..TryGetType Method

Tries to get the specified data type.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool TryGetType(
    string typeName,
    out T dataType
)
```

**Parameters**

- **typeName**  
  Type: System.String  
  Name of the type.

- **dataType**  
  Type: T  
  Data Type (out-parameter).

**Return Value**

Type: Boolean  
true if found, false if not contained.

**Reference**

ReadOnlyNamespaceCollection.T. Class

TwinCAT.TypeSystem.Generic Namespace

6.12.8.3.4  ReadOnlyNamespaceCollection.T..TryGetTypeByFullName Method

Tries to get the specified type (by fullName)

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool TryGetTypeByFullName(
    string fullName,
    out T dataType
)
```

**Parameters**

- **fullName**  
  Type: System.String  
  FullName of the data type.

- **dataType**  
  Type: T  
  Found Data type (out-parameter).
Return Value

Type: Boolean
true if found, false if not contained.

Reference

ReadOnlyNamespaceCollection.T. Class [2515]
TwinCAT.TypeSystem.Generic.Namespace [2441]

6.12.9 ReadOnlySymbolCollection.T. Class

Read only symbol collection.

Inheritance Hierarchy

System.Object
    TwinCAT.TypeSystem.Generic.ReadOnlyInstanceCollection>T.
      TwinCAT.TypeSystem.Generic.ReadOnlySymbolCollection.T.
        TwinCAT.TypeSystem.ReadOnlySymbolCollection [2336]

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT Ads (in TwinCAT Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c4

Syntax

C#
public class ReadOnlySymbolCollection<T> : ReadOnlyInstanceCollection<T>
where T : class, ISymbol

Type Parameters

T

The ReadOnlySymbolCollection.T. type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ReadOnlySymbolCollection&lt;T&gt; [2524]</td>
<td>Initializes a new instance of the ReadOnlySymbolCollection.T. class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count</td>
<td>Gets the number of elements contained in the ReadOnlyCollection.T. instance. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
<tr>
<td>Item.String [2508]</td>
<td>Gets the element with the specified instance path. (Inherited from ReadOnlyInstanceCollection&lt;T&gt; [2505].)</td>
</tr>
<tr>
<td>Item.Int32.</td>
<td>Gets the element at the specified index. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
<tr>
<td>Items</td>
<td>Returns the IList.T. that the ReadOnlyCollection.T. wraps. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Mode</strong> [2509]</td>
<td>Gets the InstanceCollectionMode [2075]. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Contains(String)</strong> [2511]</td>
<td>Determines whether the ReadOnlyInstanceCollection.T. [2505] contains an instance with the specified instance path. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
<tr>
<td><strong>Contains(T)</strong></td>
<td>Determines whether an element is in the ReadOnlyCollection.T. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
<tr>
<td><strong>ContainsName</strong> [2511]</td>
<td>Determines whether the specified instance is contained. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
<tr>
<td><strong>CopyTo</strong></td>
<td>Copies the entire ReadOnlyCollection.T. to a compatible one-dimensional Array, starting at the specified index of the target array. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
<tr>
<td><strong>Empty</strong> [2525]</td>
<td>Returns an empty collection.</td>
</tr>
<tr>
<td><strong>Equals</strong></td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>Finalize</strong></td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>GetEnumerator</strong></td>
<td>Returns an enumerator that iterates through the ReadOnlyCollection.T.. (Inherited from ReadOnlyCollection.T..)</td>
</tr>
<tr>
<td><strong>GetHashCode</strong></td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>GetInstance</strong> [2512]</td>
<td>Gets the IInstance [2052] by instance path. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
<tr>
<td><strong>GetInstanceByName</strong> [2513]</td>
<td>Gets the IInstance [2052] by instance name. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
<tr>
<td><strong>GetType</strong></td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>IndexOf</strong></td>
<td>Searches for the specified object and returns the zero-based index of the first occurrence within the entire ReadOnlyCollection.T..</td>
</tr>
<tr>
<td><strong>MemberwiseClone</strong></td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>ToString</strong></td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td><strong>TryGetInstance</strong> [2513]</td>
<td>Tries to get the instance with the specified instance path. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
<tr>
<td><strong>TryGetInstanceByName</strong> [2514]</td>
<td>Tries to get the instance by name. (Inherited from ReadOnlyInstanceCollection.T. [2505].)</td>
</tr>
</tbody>
</table>

**Reference**

TwinCAT.TypeSystem.Generic Namespace [2441]
6.12.9.1  **ReadOnlySymbolCollection.T. Constructor**

Initializes a new instance of the `ReadOnlySymbolCollection.T.` class.

**Namespace:** TwinCAT.TypeSystem.Generic

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ReadOnlySymbolCollection(
    IInstanceCollection<T> coll
)
```

**Parameters**

`coll`  
Type: `TwinCAT.TypeSystem.IInstanceCollection`. The coll.

**Reference**

`ReadOnlySymbolCollection.T. Class`

</table>

Reference

ReadOnlySymbolCollection{T} Class [2522]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.9.3.1  ReadOnlySymbolCollection{T}..Empty Method

Returns an empty collection.
Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static ReadOnlySymbolCollection<T> Empty()
```

Return Value

Type: ReadOnlySymbolCollection[T].

Reference

ReadOnlySymbolCollection.T. Class [2522]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.10 SymbolCollection.T. Class

Interface represents a collection of ISymbol objects.

Inheritance Hierarchy

System.Object
  TwinCAT.TypeSystem.Generic.InstanceCollection[T].
  TwinCAT.TypeSystem.Generic.SymbolCollection.T.
  TwinCAT.TypeSystem.SymbolCollection[2396]

Namespace: TwinCAT.TypeSystem.Generic [2441]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public class SymbolCollection<T> : InstanceCollection<T>, ISymbolCollection<T>, IInstanceCollection<T>, IList<T>, ICollection<T>, IEnumerable<T>, IEnumerable
where T : class, ISymbol
```

Type Parameters

T

The SymbolCollection.T. type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Count [2464]</td>
<td>Gets the collection count. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>InnerList [2465]</td>
<td>Gets the List of instances. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>InnerPathDict [2465]</td>
<td>The Path dictionary (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsReadOnly [2465]</td>
<td>Gets a value indicating whether this instance is read only. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Item[Int32][2466]</td>
<td>Gets or sets the IInstance [2052] at the specified index. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Item[String][2467]</td>
<td>Gets the IInstance [2052] with the specified instance path. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Mode [2468]</td>
<td>The mode this InstanceCollection.T. [2460] is working in. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add [2469]</td>
<td>Adds the specified item. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>AddRange [2470]</td>
<td>Adds the specified items to this collection. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>AsReadOnly [2530]</td>
<td>Returns a Read only version of this collection (shallow copy).</td>
</tr>
<tr>
<td>Clear [2471]</td>
<td>Clears this instance. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Clone [2530]</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>Contains(String)[2472]</td>
<td>Determines whether this collection contains an IInstance [2052] with the specified InstanceName / InstancePath (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Contains(T)[2472]</td>
<td>Determines whether this collection contains the specified IInstance [2052] (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>ContainsName[2473]</td>
<td>Determines whether the specified instance name contains name. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>CopyTo [2474]</td>
<td>Copies this InstanceCollection.T. [2460] to the specified array. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Empty [2531]</td>
<td>Creates an Empty SymbolCollection.T.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetEnumerator[2474]</td>
<td>Gets the enumerator. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetInstance [2475]</td>
<td>Gets the IInstance [2052] by instance path. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>GetInstanceByName[2476]</td>
<td>Gets the name of the instance by. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IndexOf [2476]</td>
<td>Determines the index of the specified IInstance [2052]. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
<tr>
<td>Insert [2477]</td>
<td>Inserts the specified IInstance [2052] at the specified index. (Inherited from InstanceCollection.T. [2460].)</td>
</tr>
</tbody>
</table>
### SymbolCollection.T. Properties

The `SymbolCollection.T. [\ref{2526}]` generic type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Remove [\ref{2478}]</td>
<td>Removes the specified item. (Inherited from <code>InstanceCollection.T. [\ref{2460}]</code>.)</td>
</tr>
<tr>
<td>RemoveAt [\ref{2479}]</td>
<td>Removes the <code>IInstance [\ref{2052}]</code> at the specified index. (Inherited from <code>InstanceCollection.T. [\ref{2460}]</code>.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>TryGetInstance [\ref{2479}]</td>
<td>Tries to get the <code>IInstance [\ref{2052}]</code> of the specified path. (Inherited from <code>InstanceCollection.T. [\ref{2460}]</code>.)</td>
</tr>
<tr>
<td>TryGetInstanceByName [\ref{2480}]</td>
<td>Tries to get <code>IInstance</code> by name. (Inherited from <code>InstanceCollection.T. [\ref{2460}]</code>.)</td>
</tr>
<tr>
<td>TryGetInstances [\ref{2531}]</td>
<td>Try to get instances with predicate function</td>
</tr>
</tbody>
</table>

#### 6.12.10.2.1 SymbolCollection<T>.AsReadOnly Method

Returns a Read only version of this collection (shallow copy).

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public ReadOnlySymbolCollection<T> AsReadOnly()
```

**Return Value**

Type: `ReadOnlySymbolCollection<T>`. `SymbolCollection<T>.AsReadOnly()`.

**Reference**

- SymbolCollection<T> Class [2526]
- TwinCAT.TypeSystem.Generic Namespace [2441]

#### 6.12.10.2.2 SymbolCollection<T>.Clone Method

Clones this instance.

**Namespace:** TwinCAT.TypeSystem.Generic [2441]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public SymbolCollection<T> Clone()
```

**Return Value**

6.12.10.2.3 SymbolCollection.T..Empty Method

Creates an Empty SymbolCollection.T.

Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public static SymbolCollection<T> Empty()

Return Value

Type: SymbolCollection<T>, SymbolCollection<T>.

Reference

SymbolCollection.T..Empty Method
SymbolCollection.T..TryGetInstances Method

6.12.10.2.4 SymbolCollection.T..TryGetInstances Method

Try to get instances with predicate function

Namespace: TwinCAT.TypeSystem.Generic
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool TryGetInstances(
    Func<T, bool> predicate,
    bool recurse,
    out IList<T> instances
)

Parameters

predicate Type: System.Func<T, Boolean>
The predicate function

recurse Type: System.Boolean
if set to true the symbol hierarchy will be searched recursively.

instances Type: System.Collections.Generic.IList<T>
The instances.
Return Value

Type: Boolean
true if XXXX, false otherwise.

Syntax

C#

```csharp
public class SymbolIterator<T> : IEnumerable<T>,
    IEnumerable
where T : class, ISymbol
```

Type Parameters

T

Concrete `ISymbol` type.

The SymbolIterator.T type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mask [2538]</td>
<td>Gets or sets the <code>SymbolIterationMask</code> [2532]</td>
</tr>
<tr>
<td>SymbolRecursionDetection [2538]</td>
<td>Gets or sets a value indicating whether the iterator checks for Symbol recursions (true by default).</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetEnumerator [2539]</td>
<td>Gets the enumerator that enumerates through a collection</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>
TwinCAT.Ads Namespaces
Name

Description

ToString

Returns a string that represents the current object. (Inherited from Object.)

Remarks
This iterator class can be used to iterate over collections of symbol trees (root symbols + sub symbols). By
constructor the user can choose if the iterator works recursively within the symbol tree and optionally a filter
function to select only specific symbols (predicate).
Examples
The following example shows how to determine, browse and filter symbols.
Browsing and filtering Symbols
using (AdsClient client = new AdsClient())
{
CancellationToken cancel = CancellationToken.None;
uint valueToRead = 0;
uint valueToWrite = 42;
client.Connect(AmsNetId.Local, 851);
// Load all Symbols + DataTypes
ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
ResultSymbols resultSymbols

= await loader.GetSymbolsAsync(cancel);

if (resultSymbols.Succeeded)
{
Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];
// Works for ALL Primitive 'ANY TYPES' Symbols
ResultWriteAccess resultWrite = await symbol.WriteValueAsync(valueToWrite, cancel);
ResultReadValueAccess resultRead = await symbol.ReadValueAsync(cancel);
if (resultRead.Succeeded)
valueToRead = (uint)resultRead.Value;
// Simple filtering of Symbols
Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"
// FilterFunction that filters for the InstancePath
Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
SymbolIterator iterator = new SymbolIterator(symbols: resultSymbols.Symbols, recurse: true, pred
icate: filter);
foreach (ISymbol filteredSymbol in iterator)
{
Console.WriteLine(filteredSymbol.InstancePath);
}
}
}

## 6.12.12.1.1 SymbolIterator.T. Constructor (IInstanceCollection.T.)

### Namespace: TwinCAT.TypeSystem.Generic [2441]

### Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Shal.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public SymbolIterator(
    IInstanceCollection<T> symbols
)
```

### Parameters

- `symbols` Type: `TwinCAT.TypeSystem.IInstanceCollection<T> [2057], T [2532]`, The root symbols.

### Reference

- `SymbolIterator.T. Class [2532]`
- `SymbolIterator.T. Overload [2535]`

6.12.12.1.2 SymbolIterator.T. Constructor (IEnumerable.T., Boolean)

**Namespace:** TwinCAT.TypeSystem.Generic [2441]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public SymbolIterator(
    IEnumerable<T> symbols,
    bool recurse
)
```

**Parameters**

- **symbols**  
  Type: System.Collections.Generic.IEnumerable<T> [2532].  
  The root collection

- **recurse**  
  Type: System.Boolean  
  if set to true, the iterator works recursively over all subsymbols.

**Syntax**

C#  
```csharp
public SymbolIterator(
    IInstanceCollection<T> symbols,
    Func<T, bool> predicate
)
```

**Parameters**

- **symbols**  
  Type: TwinCAT.TypeSystem.IInstanceCollection [2057].  
  The root symbols.

- **predicate**  
  Type: System.Func<T> [2532].  
  Boolean.
  The predicate.

#### C#

```csharp
public SymbolIterator(
    IEnumerable<T> symbols,
    bool recurse,
    Func<T, bool> predicate
)
```

**Parameters**

- **symbols**
  - Type: System.Collections.Generic.IEnumerable<T> [2532]
  - Input collection (root objects).

- **recurse**
  - Type: System.Boolean
  - if set to true, the iterator works recursively over all subsymbols.

- **predicate**
  - Type: System.Func<T, Boolean> [2532]
  - The predicate.

### 6.12.12.2 SymbolIterator.T. Properties

The SymbolIterator.T. [2532] generic type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mask</td>
<td>Gets or sets the SymbolIterationMask [2532]</td>
</tr>
</tbody>
</table>
### SymbolRecursionDetection Property

Gets or sets a value indicating whether the iterator checks for Symbol recursions (true by default).

**Namespace**: TwinCAT.TypeSystem.Generic

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public bool SymbolRecursionDetection { get; set; }
```

#### Property Value

Type: `Boolean`

true if recursion checking, false switched off check.

**Reference**

SymbolIterator.T. Class [2532]

TwinCAT.TypeSystem.Generic Namespace [2441]

6.12.12.3.1 SymbolIterator.T..GetEnumerator Method

Gets the enumerator that enumerates through a collection

Namespace: TwinCAT.TypeSystem.Generic [2441]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public IEnumerator<T> GetEnumerator()
```

Return Value

Type: [IEnumerator.T] [2532].

A [IEnumerator.T] that can be used to iterate through the collection.

Implements

IEnumerator.T.GetEnumerator.
6.13 TwinCAT.ValueAccess Namespace

Namespace for the common (non ADS dependent) value access.

Classes

<table>

TwinCAT.ValueAccess Namespace [2540]

6.13.2.2.3 IAccessorRawValue.TryReadArrayElementRaw Method
Namespace: TwinCAT.ValueAccess [2540]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

**C#**

```csharp
int TryReadArrayElementRaw(
    IArrayInstance arrayInstance,
    int[] indices,
    Memory readBuffer,
    void timeStamp
)
```

**Parameters**

- `arrayInstance` Type: `TwinCAT.TypeSystem.IArrayInstance` [1964]
- `indices` Type: `System.Int32`
- `readBuffer` Type: `Memory`
- `timeStamp` Type: `System.Void`

**Return Value**

Type: `Int32`

**Reference**

- `IAccessorRawValue Interface` [2544]
- `TwinCAT.ValueAccess Namespace` [2540]

### 6.13.2.2.4 IAccessorRawValue.TryReadRaw Method

**Namespace:** `TwinCAT.ValueAccess` [2540]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
int TryReadRaw(
    ISymbol symbolInstance,
    Memory readBuffer,
    void timeStamp
)
```

**Parameters**

- `symbolInstance` Type: `TwinCAT.TypeSystem.ISymbol` [2176]
- `readBuffer` Type: `Memory`
- `timeStamp` Type: `System.Void`

**Return Value**

Type: `Int32`
Reference

IAccessorRawValue Interface [2544]
TwinCAT.ValueAccess Namespace [2540]

6.13.2.2.5 I_accessorRawValue.TryWriteArrayElementRaw Method

Namespace: TwinCAT.ValueAccess [2540]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C# int TryWriteArrayElementRaw( IArrayInstance arrayInstance, int[] indices, ReadOnlyMemory writeBuffer, void timeSignature )

Parameters

arrayInstance Type: TwinCAT.TypeSystem.IArrayInstance [1964]
indices Type: System.Int32
writeBuffer Type: ReadOnlyMemory
timeSignature Type: System.Void

Return Value

Type: Int32

Reference

IAccessorRawValue Interface [2544]

6.13.2.2.6 I_accessorRawValue.TryWriteRaw Method

Namespace: TwinCAT.ValueAccess [2540]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C# int TryWriteRaw(ISymbol symbolInstance, ReadOnlyMemory writeBuffer, void timeSignature)
### Parameters

- **symbolInstance**
  - Type: `TwinCAT.TypeSystem.ISymbol`

- **writeBuffer**
  - Type: `ReadOnlyMemory`

- **timeStamp**
  - Type: `System.Void`

### Return Value

- Type: `Int32`

### Reference

- `TwinCAT.ValueAccess Namespace`

---

### 6.13.2.2.7 `IAccessorRawValue.WriteArrayElementRawAsync Method`

#### Namespace

- `TwinCAT.ValueAccess`

#### Assembly

- `TwinCAT.Ads.Abstractions.dll` (Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14)

#### Syntax

**C#**

```csharp
Task<ResultWriteAccess> WriteArrayElementRawAsync(
    IArrayInstance arrayInstance,
    int[] indices,
    ReadOnlyMemory writeBuffer,
    void cancel
)
```

#### Parameters

- **arrayInstance**
  - Type: `TwinCAT.TypeSystem.IArrayInstance`

- **indices**
  - Type: `System.Int32`

- **writeBuffer**
  - Type: `ReadOnlyMemory`

- **cancel**
  - Type: `System.Void`

#### Return Value

- Type: `Task.ResultWriteAccess`

#### Reference

- `IAccessorRawValue Interface`
- `TwinCAT.ValueAccess Namespace`
### 6.13.2.8 IAccessorRawValue.WriteRawAsync Method

**Namespace:** TwinCAT.ValueAccess

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
Task<ResultWriteAccess> WriteRawAsync(
    ISymbol symbolInstance,
    ReadOnlyMemory writeBuffer,
    void cancel
)
```

**Parameters**

- **symbolInstance**
  - Type: TwinCAT.TypeSystem.ISymbol

- **writeBuffer**
  - Type: ReadOnlyMemory

- **cancel**
  - Type: System.Void

**Return Value**

- Type: Task<ResultWriteAccess>

**Reference**

IAccessorRawValue Interface

TwinCAT.ValueAccess Namespace

### 6.13.3 IAccessorValueFactory Interface

Factory interfaces for Accessor implementations.

**Namespace:** TwinCAT.ValueAccess

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public interface IAccessorValueFactory
```

The IAccessorValueFactory type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="CreatePrimitiveValue" alt="image" /></td>
<td>CreatePrimitiveValue</td>
</tr>
</tbody>
</table>

### Remarks

This interface is used by a custom Accessor class to create Value objects from memory representations.

### Reference

Syntax

C#

```csharp
Object CreateValue(
    ISymbol symbol,
    ReadOnlyMemory sourceData,
    void parent,
    byte timeStamp
)
```

Parameters

- **symbol**
  Type: TwinCAT.TypeSystem.ISymbol

- **sourceData**
  Type: ReadOnlyMemory

- **parent**
  Type: System.Void

- **timeStamp**
  Type: System.Byte

Return Value

Type: Object

6.13.4 ResultAccess Class
Result class for an asynchronous access operation.

Inheritance Hierarchy
System.Object
TwinCAT.ValueAccess.ResultAccess
  TwinCAT.ValueAccess.ResultWriteAccess [2575]

Namespace: TwinCAT.ValueAccess [2540]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public class ResultAccess

The ResultAccess type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ResultAccess(Int32)</td>
<td>Initializes a new instance of the ResultAccess class.</td>
</tr>
<tr>
<td>ResultAccess(Int32, DateTimeOffset)</td>
<td>Initializes a new instance of the ResultReadValueAccess struct.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DateTime</td>
<td>The Timestamp / the date time of the communication access.</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>The ErrorCode of the communication access</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether this ResultAccess represents a failed access.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether this ResultAccess represents a succeeded access.</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td><code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>SetError [2561]</td>
<td>Sets the error to this ResultAccess object.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from</td>
</tr>
<tr>
<td></td>
<td><code>Object</code>.)</td>
</tr>
</tbody>
</table>

Remarks

This result is independent of any used protocol and is used by the different protocol providers (ADS, OPC, IOT etc.)

### 6.13.4.2.2 ResultAccess.ErrorCode Property

The ErrorCode of the communication access

**Namespace:** TwinCAT.ValueAccess [2540]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public int ErrorCode { get; }
```

**Property Value**

Type: Int32
Remarks
A value of '0' represents success.

Reference
ResultAccess Class [2556]
TwinCAT.ValueAccess Namespace [2540]

6.13.4.2.3  ResultAccess.Failed Property

Gets a value indicating whether this ResultAccess [2556] represents a failed access.

Namespace:  TwinCAT.ValueAccess [2540]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool Failed { get; }

Property Value

Type: Boolean
true if failed; otherwise, false.

Reference
ResultAccess Class [2556]
TwinCAT.ValueAccess Namespace [2540]

6.13.4.2.4  ResultAccess.Succeeded Property

Gets a value indicating whether this ResultAccess [2556] represents a succeeded access.

Namespace:  TwinCAT.ValueAccess [2540]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool Succeeded { get; }

Property Value

Type: Boolean
true if succeeded; otherwise, false.

Reference

### 6.13.6.1.1 ResultReadRawAccess.Empty Property

Gets the empty ResultAnyValue [998] object.

**Namespace:** TwinCAT.ValueAccess [2540]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static ResultReadRawAccess Empty { get; }
```
Property Value

Type: ResultReadRawAccess
The empty / unprocessed result.

Reference

6.13.6.2 ResultReadRawAccess Methods

The ResultReadRawAccess type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td>gethashcode</td>
<td>Serves as the default hash function.</td>
</tr>
<tr>
<td>gettype</td>
<td>Gets the Type of the current instance.</td>
</tr>
<tr>
<td>memberwiseclone</td>
<td>Creates a shallow copy of the current Object.</td>
</tr>
<tr>
<td>seterror</td>
<td>Sets the error to this ResultAccess object.</td>
</tr>
<tr>
<td>tostring</td>
<td>Returns a string that represents the current object.</td>
</tr>
</tbody>
</table>

### 6.13.8 ResultReadValueAccess.T. Class

Result object of an asynchronous read of a specific value of type T. Implements the ResultAccess.
TwinCAT.ValueAccess Namespace \[2540\]
TwinCAT.ValueAccess.ResultReadValueAccess \[2556\]

Namespace: TwinCAT.ValueAccess \[2540\]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public class ResultReadValueAccess<T> : ResultAccess
```

Type Parameters

- **T**: The type of the value.

The `ResultReadValueAccess<T>` type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DateTime [2559]</td>
<td>The Timestamp / the date time of the communication access. (Inherited from <code>ResultAccess \[2556\].</code>)</td>
</tr>
<tr>
<td>ErrorCode [2559]</td>
<td>The ErrorCode of the communication access (Inherited from <code>ResultAccess \[2556\].</code>)</td>
</tr>
<tr>
<td>Failed [2560]</td>
<td>Gets a value indicating whether this <code>ResultAccess \[2556\]</code> represents a failed access. (Inherited from <code>ResultAccess \[2556\].</code>)</td>
</tr>
<tr>
<td>Succeeded [2560]</td>
<td>Gets a value indicating whether this <code>ResultAccess \[2556\]</code> represents a succeeded access. (Inherited from <code>ResultAccess \[2556\].</code>)</td>

</tbody>
</table>
6.13.10.1.1 ResultWriteAccess Constructor (Int32)

Initializes a new instance of the `ResultWriteAccess` class.

**Namespace**: TwinCAT.ValueAccess

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public ResultWriteAccess(int errorResult)
```

**Parameters**

- `errorResult`  
  Type: `System.Int32`  
  The result code of the communication access.

Reference

- ResultWriteAccess Class [2575]
- TwinCAT.ValueAccess Namespace [2540]

6.13.10.1.2 ResultWriteAccess Constructor (Int32, DateTimeOffset)

Initializes a new instance of the `ResultWriteAccess` struct.

**Namespace**: TwinCAT.ValueAccess

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public ResultWriteAccess(int errorResult, DateTimeOffset timeStamp)
```

**Parameters**

- `errorResult`  
  Type: `System.Int32`  
  The error result.
- `timeStamp`  
  Type: `System.DateTimeOffset`  
  The time stamp.
6.13.10.2 ResultWriteAccess Properties

The ResultWriteAccess [2575] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DateTime [2559]</td>
<td>The Timestamp / the date time of the communication access. (Inherited from ResultAccess [2556].)</td>

6.13.11  SymbolNotificationTypes Enumeration

Specifies the Notification type of ADS Notifications

Namespace: TwinCAT.ValueAccess
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
[FlagsAttribute]
public enum SymbolNotificationTypes
```

Members

<table>
<thead>
<tr>
<th>Member name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>0</td>
<td>None / Uninitialized</td>
</tr>
<tr>
<td>Value</td>
<td>1</td>
<td>ValueChanged notifications</td>
</tr>
<tr>
<td>RawValue</td>
<td>2</td>
<td>RawValueChanged notifications</td>
</tr>
<tr>
<td>Both</td>
<td>3</td>
<td>ValueChanged + RawValueChanged notifications</td>
</tr>
</tbody>
</table>
6.13.12 ValueCreationModes Enumeration

Creation mode for Values

**Namespace:** TwinCAT.ValueAccess Namespace 
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0e15da1c14

**Syntax**

C#

```csharp
[FlagsAttribute]
public enum ValueCreationModes
```

### Members

<table>
<thead>
<tr>
<th>Member name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>0</td>
<td>None / Uninitialized Mask</td>
</tr>
<tr>
<td>Primitives</td>
<td>1</td>
<td>Convert to .NET Primitives, wherever possible.</td>
</tr>
<tr>
<td>Enums</td>
<td>2</td>
<td>Use IEnumValue on EnumTypes instead of .NET Primitives</td>
</tr>
<tr>
<td>FullDynamics</td>
<td>4</td>
<td>Wraps all Primitives also in IValue Objects</td>
</tr>
<tr>
<td>PlcOpenTypes</td>
<td>8</td>
<td>Use PlcOpen Times (TIME, LTIME, DT, TOD, DATETIME) instead of .NET Primitives. They won't be wrapped into</td>
</tr>
<tr>
<td>Default</td>
<td>1</td>
<td>Default settings for the value creation mode (Translate to Primitives)</td>
</tr>
</tbody>
</table>

**Remarks**

This setting is used by the ValueFactory/ to create Read values. In default primitive mode all values will be transferred to Primitive .NET Symbols if possible. E.g PlcOpen.TIME --> TimeSpan, IEnumValue --> .NET Primitives. They won't be wrapped into
