1 Foreword .......................................................................................................................... 13  
   1.1 Notes on the documentation ....................................................................................... 13  
   1.2 Safety instructions ...................................................................................................... 14  
2 TwinCAT ADS .NET API Documentation ....................................................................... 15  
   2.1 Prerequisites ............................................................................................................... 16  
   2.2 Installation ................................................................................................................ 16  
3 Version History ................................................................................................................ 18  
   3.1 Version 5.0.X ............................................................................................................ 18  
4 Concepts ........................................................................................................................... 19  
   4.1 Access Data via IndexGroup/IndexOffset ..................................................................... 19  
   4.2 Async programming (async, await) ............................................................................ 20  
   4.3 Use of ADS Notifications ............................................................................................ 22  
   4.4 Access Data via Symbolic path .................................................................................. 25  
   4.5 Access Data via Symbol handles .............................................................................. 26  
   4.6 Value marshalling with ANYTYPE concept ................................................................. 27  
   4.7 Access Data via Symbol Loader ................................................................................ 31  
   4.8 Automatic dynamic marshalling of values .................................................................. 32  
   4.9 Reactive Extensions and ADS .................................................................................... 35  
5 HowTo Samples .................................................................................................................. 38  
   5.1 Read/Write primitive values ....................................................................................... 38  
   5.2 Read/Write string types ............................................................................................. 42  
   5.3 Read/Write PlcOpen types (DATE, TIME ...) .............................................................. 45  
   5.4 Event driven read with ADS Notifications .................................................................. 49  
   5.5 Reactive Read/Write with Reactive Extensions .......................................................... 50  
   5.6 Upgrading existing ADS Application code (Version 4.X --> 5.X) .................................. 52  
6 TwinCAT.Ads Namespaces ............................................................................................... 55  
   6.1 TwinCAT Namespace .................................................................................................. 55  
      6.1.1 AdsException Class ............................................................................................... 57  
      6.1.2 ClientNotConnectedException Class ................................................................. 63  
      6.1.3 ConnectionState Enumeration ............................................................................ 67  
      6.1.4 ConnectionStateChangedEventArgs Class .......................................................... 68  
      6.1.5 ConnectionStateChangedEventArgsReason Enumeration .............................. 73  
      6.1.6 IConnection Interface ........................................................................................ 74  
      6.1.7 IConnectionStateProvider Interface .................................................................. 80  
      6.1.8 IConnectionStateChangedEventArgs Class ....................................................... 84  
      6.1.9 IConnectionStateChangedEventArgsReason Enumeration ........................... 84  
      6.1.10 IConnectionFactory Interface ............................................................................ 89  
      6.1.11 IConnectionFactory.TSession, TAddress, TSettings, Interface ....................... 97  
      6.1.12 ISymbolLoaderSettings Interface ..................................................................... 99  
      6.1.13 ISymbolServerProvider Interface ..................................................................... 99  
      6.1.14 Session Class .................................................................................................... 101  
      6.1.15 SessionConnectionStateChangedEventArgs Class ......................................... 116  
      6.1.16 SessionException Class ..................................................................................... 122

1 Foreword

1.1 Notes on the documentation

This description is only intended for the use of trained specialists in control and automation engineering who are familiar with applicable national standards.
It is essential that the documentation and the following notes and explanations are followed when installing and commissioning the components.
It is the duty of the technical personnel to use the documentation published at the respective time of each installation and commissioning.

The responsible staff must ensure that the application or use of the products described satisfy all the requirements for safety, including all the relevant laws, regulations, guidelines and standards.

Disclaimer

The documentation has been prepared with care. The products described are, however, constantly under development.
We reserve the right to revise and change the documentation at any time and without prior announcement. No claims for the modification of products that have already been supplied may be made on the basis of the data, diagrams and descriptions in this documentation.

Trademarks

Beckhoff®, TwinCAT®, EtherCAT®, EtherCAT G®, EtherCAT G10®, EtherCAT P®, Safety over EtherCAT®, TwinSAFE®, XFC®, XTS® and XPlanar® are registered trademarks of and licensed by Beckhoff Automation GmbH.
Other designations used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owners.

Patent Pending

The EtherCAT Technology is covered, including but not limited to the following patent applications and patents:
with corresponding applications or registrations in various other countries.

EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany

Copyright

The reproduction, distribution and utilization of this document as well as the communication of its contents to others without express authorization are prohibited.
Offenders will be held liable for the payment of damages. All rights reserved in the event of the grant of a patent, utility model or design.
1.2 Safety instructions

Safety regulations

Please note the following safety instructions and explanations!
Product-specific safety instructions can be found on following pages or in the areas mounting, wiring, commissioning etc.

Exclusion of liability

All the components are supplied in particular hardware and software configurations appropriate for the application. Modifications to hardware or software configurations other than those described in the documentation are not permitted, and nullify the liability of Beckhoff Automation GmbH & Co. KG.

Personnel qualification

This description is only intended for trained specialists in control, automation and drive engineering who are familiar with the applicable national standards.

Description of symbols

In this documentation the following symbols are used with an accompanying safety instruction or note. The safety instructions must be read carefully and followed without fail!

<table>
<thead>

</tr>
</tbody>
</table>

Tip or pointer

This symbol indicates information that contributes to better understanding.
2 TwinCAT ADS .NET API Documentation

The TwinCAT .NET API implements support for the TwinCAT Automation Device specification (ADS). It can be used within .NET Framework programming languages and support ADS Client implementations. The ADS API interface permits:

- The Implementation of ADS Clients
- Browsing of (ADS) server side symbolic information.
- Reading and writing ProcessImage information in Raw or in type safe manner.
- Receiving ADS Notifications as events.

Getting Started

For getting started please have a look at the following documents:

- Prerequisites [16]
- Installation [16]
- Concepts [19]
- HowTo Samples [38]

Background information about the TwinCAT ADS protocol can be found here:

- ADS Introduction
- TwinCAT ADS Device concept

for common ADS information.

From the conceptual standpoint within this ADS .NET API reference documentation, the most important starting points for reading are the following Classes/Methods:

Main documentation entry points

<table>

</tr>
</tbody>
</table>

The ADS reactive extensions are only available for usage, when the corresponding Nuget package is downloaded from Nuget.org. Beckhoff.TwinCAT.Ads.Reactive package on Nuget.
2.1 Prerequisites

Preconditions for installing/Using the TwinCAT .NET ADS Communication API Version 5.X

To develop an application the TwinCAT .NET ADS Communication API the following software infrastructure must be available on the development system.

- An ADS/AMS Router (e.g. TwinCAT >= 4024.10) that is capable to Route the ADS/AMS Frames between systems.
- The .NET SDK to develop the application software.
- ADS Nuget packages referenced within the application project to develop TwinCAT ADS data exchange / communication.

**ADS/AMS Router**

- A TwinCAT installation Version >= 4024.10.
  
  Because the Beckhoff.TwinCAT.Ads Version 5.X uses internal interfaces that are available only from TwinCAT 4024.10 on, an appropriate version must be installed locally.
  
  The package doesn't work with older installations - the actually only alternative is the AdsRouterConsole.

- Or alternativly a running instance of the 'Beckhoff.TwinCAT.Ads.TcpRouter' for customized router implementations or the 'ready-out-of-the-box' router package 'Beckhoff.TwinCAT.Ads.AdsRouterConsole' for use on system without TwinCAT.

**A Software development kit for .NET (SDK)**

At least one of the following SDKs and target frameworks is necessary:

- .NET 5.0 or later
- .NET Core 3.1 or later
- .NET Framework 4.61 or later
- .NET Standard 2.0 compatible SDK or later

**The Beckhoff.TwinCAT.Ads components for the application.**

The following Nuget packages must be added to the application project as package references:

- The 'Beckhoff.TwinCAT.Ads Nuget' package.

2.2 Installation

The now preferred way to install the TwinCAT ADS .NET Communication API is to use the NuGet.org package manager.

**Beckhoff.TwinCAT.Ads package from Nuget.org repository.**

This is the main package implementing the ADS client functionality. This is needed to establish ADS connections to local and remote devices.

Please follow the install instructions on the Nuget.org site.
Beckhoff.TwinCAT.Ads Nuget Package

This package installs Reactive extensions on top of the Beckhoff.TwinCAT.Ads Nuget Package and installs additional extensions to map ADSNotifications to observable events.

Please follow the install instructions on the Nuget.org site.

Beckhoff.TwinCAT.Ads.Reactive Nuget Package
3 Version History

The topics in this section describe the various changes made to the 'TwinCAT.Ads .NET API' over the life of the project.

Version History

- Version 5.0.X

Other Resources

TwinCAT ADS .NET API Documentation

3.1 Version 5.0.X

Feature milestones of the version 5.X.X Series

Milestones of Version 5.0.0.0

- Target support for netstandard2.0, net461, netcoreapp3.1, net50
- Asynchronous programming model (support of the async/await statements, seealso Concept of async operation)
- Integrated support for implementing customized AdsServers (AdsServer)
- Optimized interfaces enhancing scalability and performance (see Span.T. and Memory.T.).

TwinCAT ADS .NET API Documentation [15]

4.1 Access Data via IndexGroup/IndexOffset

Reading/Writing values by Index/Group index offset are the most basic way to access data via ADS. This address combination directly links into the process image of virtual ADS Devices.

As long the process image is static this is unproblematic and a system near access, but if the content is more dynamic and the address changes over time the IndexGroup/IndexOffset can get invalid.

Examples about moving addresses could be:

- Changed Parametrization of IO (and Re-activation)
- The PLC Online change
- New Plc Downloads

In that case other access methods could be advantageous.

Another important point is that the data access is not type safe. The values are read or written to or from byte buffers and the proper marshalling/unmarshalling is the task of the application code.

Asynchronous access

Access ProcessImage Data by IndexGroup/IndexOffset

```csharp
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    UInt32 valueToRead = 0;
    UInt32 valueToWrite = 42;
```
client.Connect(AmsNetId.Local, 851);
byte[] writeData = new byte[sizeof(uint)];

// Write an UINT32 Value
MemoryStream writeStream = new MemoryStream(writeData);
BinaryWriter writer = new BinaryWriter(writeStream);
writer.Write(valueToWrite);
ResultWrite resultWrite = await client.WriteAsync(0x4020, 0x0, writeData.AsMemory(), cancel);

// Read an UINT32 Value
byte[] readData = new byte[sizeof(uint)];
ResultRead resultRead = await client.ReadAsync(0x4020, 0x0, readData.AsMemory(), cancel);

MemoryStream readStream = new MemoryStream(readData);
BinaryReader reader = new BinaryReader(readStream);
valueToRead = reader.ReadUInt32();
}

Synchronous access

Access ProcessImage Data by IndexGroup/IndexOffset

using (AdsClient client = new AdsClient())
{
    UInt32 valueToRead = 0;
    UInt32 valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    // Write an UINT32 Value
    byte[] writeData = new byte[sizeof(uint)];
    MemoryStream writeStream = new MemoryStream(writeData);
    BinaryWriter writer = new BinaryWriter(writeStream);
    writer.Write(valueToWrite);
    client.Write(0x4020, 0x0, writeData);
    // Read an UINT32 Value
    byte[] readData = new byte[sizeof(uint)];
    int readBytes = client.Read(0x4020, 0x0, readData);
    MemoryStream readStream = new MemoryStream(readData);
    readStream.Position = 0;
    BinaryReader reader = new BinaryReader(readStream);
    valueToRead = reader.ReadUInt32();
}

4.2 Async programming (async, await)

Since .Version 4.0, the .NET API supports concurrent operation in form of the compiler support of the async/await statements. This is a special code generation supported flavor of concurrency that uses so called 'futures'. A 'future' (or promise) is a type that represents an operation that will be completed in the future and is represented by the .NET type Task or Task<TResult> type. This ensures that the called asynchronous method is started on call and delivers its result later on, without blocking the calling thread. As consequence the calling thread is able to process other work in the meanwhile. The deep support level in the .NET framework and the underlying code generation makes asynchronous programming almost as easy as synchronous programming.

From version 5.0.0 on, the TwinCAT.Ads API also supports the async programming model.

The main advantages are:
- Remains responsiveness of GUI applications during ADS communication
- Asynchronous programming enables scalability (mainly on the Server side)
- Easy synchronization between threads, nearly as simple as asynchronous programming.
- Functional, stateless programming style seamlessly integrating with other concurrency techniques like parallel programming (.NET Task Parallel Library) or reactive programming (Reactive Extensions [35]).

More about asynchronous programming can be read here: Asynchronous programming
and here: The Task asynchronous programming model in C#

Example

Read/Write AnyType by IndexGroup/IndexOffset (asynchronously)

```csharp
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);
    ResultWrite resultWrite = await client.WriteAnyAsync(0x4020, 0x0, valueToWrite, cancel);
    bool succeeded = resultWrite.Succeeded;

    ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(0x4020, 0x0, cancel);
    if (resultRead.Succeeded)
    {
        valueToRead = (uint)resultRead.Value;
    }
}
```

Read/Write AnyType by variable handle (asynchronously)

```csharp
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);

    uint valueToRead = 0;
    uint valueToWrite = 42;

    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.nCounter", cancel);
    varHandle = resultHandle.Handle;

    if (resultHandle.Succeeded)
    {
        try
        {
            ResultWrite resultWrite = await client.WriteAnyAsync(varHandle, valueToWrite, cancel);
            ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(varHandle, cancel);

            if (resultRead.Succeeded)
            {
                valueToRead = resultRead.Value;
            }
        }
        finally
        {
            // Unregister VarHandle after Use
            ResultAds result = await client.DeleteVariableHandleAsync(varHandle, cancel);
        }
    }
}
```

Read/Write AnyType by SymbolBrowser (asynchronously)

```csharp
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;

    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    ResultSymbols resultSymbols = await loader.GetSymbolsAsync(cancel);
    if (resultSymbols.Succeeded)
    {
        Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];     
```
4.3 Use of ADS Notifications

If values from a PLC or NC are to be displayed continuously on a user interface, then it is very inefficient to use asynchronous read access, since this function must be called cyclically (polled triggered by a timer). Instead of using a pulling (read) model, ADS Notifications are implementing a push model. That means ADS Notifications are triggered by the sender and form a single or series of ADS messages/events. Together with these ADS Notifications, values can be transmitted. A distinction is drawn between whether the TwinCAT server is to transmit the values cyclically, or only when the values change.

In principle (raw mode) a notification is begun with the registration of the notification:[M:Twincat.Ads.AdsClient.AddDeviceNotificationAsync(System.UInt32,System.UInt32,int,Twincat.Ads.NotificationSettings,System.Object, System.Threading.CancellationToken)](asynchronous) or AddDeviceNotification(synchronous). After this, events are automatically fired by TwinCAT. DeleteDeviceNotificationAsync (asynchronous) or DeleteDeviceNotification (synchronous) is used to halt the notification again. Since the number of notifications is limited, you should ensure the notifications no longer required by your program are unregistered/deleted.

There exist several 'modes' for different type of ADS Notification triggers. For a complete list please consult AdsTransMode [639].

All the following examples demonstrate how to receive ADS Notifications. The .NET ADS API supports different information layers which different levels of ADS Notification support. All are using a PLC variable in the PLC and each time the value of the PLC variable changes, an ADS Notification message is sent and the registered callback method is invoked with event arguments that contain all the necessary information (value, time stamp, ...).

Hint: Don't use time intensive executions or ADS commands inside of your callback (not more than approx. 500). Remind to sync your callback in your main thread (typically the UI thread) if necessary, because the ADS Notifications appear on a background thread.

Using ADS Notifications with Symbolic information

C#

private void SymbolValueChanged()
{
    using (AdsClient client = new AdsClient())
    {
        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        Symbol symbol = null;
        try
        {
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
            // DINT Type (UINT32)
            symbol = (Symbol)loader.Symbols["MAIN.nCounter"];
            if (resultRead.Succeeded)
                valueToRead = (uint)resultRead.Value;
        }
    }
}
private void Symbol_ValueChanged(object sender, ValueChangedEventArgs e)
{
    Symbol symbol = (Symbol)e.Symbol;
    // Object Value can be cast to int automatically, because it is an Primitive Value (DINT -- > Int32).
    // The Symbol information is used internally to cast the value to its appropriate .NET Type.
    int iVal = (int)e.Value;
    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
    /*SynchronizationContext syncContext = SynchronizationContext.Current;
     _context.Post(status => someLabel.Text = iVal.ToString(), null); // Non-blocking post */
}

private void Client_AdsNotification(object sender, AdsNotificationExEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = (uint)e.Value;
    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
    /*SynchronizationContext syncContext = SynchronizationContext.Current;
     _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}
Asynchronous registering of Notifications

Trigger on changed values by ADS Notifications

```csharp
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);

        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.

            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }

        client.AdsNotification -= Client_AdsNotification2;
    }
}
```

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
    /*SynchronizationContext syncContext = SynchronizationContext.Current;
     _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}

Synchronous registering of Notifications

Trigger on changed values by ADS Notifications

```csharp
private void RegisterNotifications()
{
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        try
        {
            // Notification to a DINT Type (UINT32)
            // Check for change every 200 ms
            int size = sizeof(UInt32);
            byte[] notificationBuffer = new byte[sizeof(UInt32)];

            notificationHandle = client.AddDeviceNotification("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null);
            Thread.Sleep(5000); // Sleep the main thread to get some (asynchronous Notifications)
        }
        finally
    }
```
private void Client_AdsNotification(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);
    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
    /*SynchronizationContext syncContext = SynchronizationContext.Current;
     _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}

Using reactive ADS Notifications

C#

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInf o[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

4.4 Access Data via Symbolic path

The Read/Write Access by symbol path solves the issue of directly accessing the process image. With specifying the access path to the symbol, the symbol address can be found by a binary search (internally) and reading / writing symbols is independent of the location within the process image.

This access method can only be used, when the ADS device is supporting symbolic information like the TwinCAT PLC.

Because its indirect access, the performance is slightly worse than the direct access via IndexGroup/IndexOffset. However there are internal optimizations to cache handles to the already used symbols to accelerate repeated access.
Asynchronous access

Access symbolic data by instance/symbol path

```csharp
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    ResultWrite resultWrite = await client.WriteValueAsync("MAIN.nCounter", valueToWrite, cancel);
    ResultValue<uint> resultRead = await client.ReadValueAsync<uint>("MAIN.nCounter", cancel);
    if (resultRead.Succeeded)
    {
        valueToRead = resultRead.Value;
    }
}
```

Synchronous access

Access symbolic data by instance/symbol path

```csharp
using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    client.WriteValue("MAIN.nCounter", valueToWrite);
    valueToRead = (uint)client.ReadValue("MAIN.nCounter", typeof(uint));
}
```

4.5 Access Data via Symbol handles

The Read/Write Access by handle solves the issue of directly accessing the process image like the symbol path access. Because the address is accessed indirectly by the symbol path creating a variable handle, the read/write works also when the data object has changed its position within the process image.

However the cost for this are two extra ADS communication roundtrips by the 'CreateVariableHandle' and 'DeleteVariableHandle' calls compared to the IndexGroup/IndexOffset access methods. It is the responsibility of the application code to optimize these accesses.

Asynchronous access

Access symbolic values by handle

```csharp
CancellationToken cancelT = CancellationToken.None;
using (AdsClient client = new AdsClient())
{
    ushort valueToRead = 0; // System.UInt16
    ushort valueToWrite = 42; // System.UInt16

    // Create the Variable Handle
    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.testVar", cancel); // Test Var is defined as PLC INT
    if (resultHandle.Succeeded)
    {
        uint varHandle = 0;
        try
        {
            // Write an UINT16 Value
            byte[] writeData = new byte[sizeof(ushort)];
            MemoryStream writeStream = new MemoryStream(writeData);
            BinaryWriter writer = new BinaryWriter(writeStream);
            writer.Write(valueToWrite); // Marshal the Value
            ResultWrite resultWrite = await client.WriteAsync(varHandle, writeData.AsMemory(), cancelT);
```
bool succeeded = resultWrite.Succeeded;

// Read an UINT16 Value
byte[] readData = new byte[sizeof(ushort)];
ResultRead resultRead = await client.ReadAsync(varHandle, readData.AsMemory(), cancel);
if (resultRead.Succeeded)
{
    MemoryStream readStream = new MemoryStream(readData);
    BinaryReader reader = new BinaryReader(readStream);
    valueToRead = reader.ReadUInt16(); // Unmarshal the Value
}
finally
{
    // Unregister VarHandle after Use
    ResultAds result = await client.DeleteVariableHandleAsync(varHandle, cancel);
}
}

Synchronous access

Access symbolic values by handle
using (AdsClient client = new AdsClient())
{
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);
    try
    {
        UInt16 valueToRead = 0;
        UInt16 valueToWrite = 42;

        // Create the Variable Handle
        varHandle = client.CreateVariableHandle("MAIN.testVar"); // Test Var is defined as PLC INT

        // Write an UINT16 Value
        byte[] writeData = new byte[sizeof(ushort)];
        MemoryStream writeStream = new MemoryStream(writeData);
        BinaryWriter writer = new BinaryWriter(writeStream);
        writer.Write(valueToWrite); // Marshal the Value
        client.Write(varHandle, writeData.AsMemory());

        // Read an UINT16 Value
        byte[] readData = new byte[sizeof(ushort)];
        MemoryStream readStream = new MemoryStream(readData);
        client.Read(varHandle, readData.AsMemory());
        BinaryReader reader = new BinaryReader(readStream);
        valueToRead = reader.ReadUInt16(); // Unmarshal the Value
    }
    finally
    {
        // Unregister VarHandle after Use
        client.DeleteVariableHandle(varHandle);
    }
}

4.6 Value marshalling with ANYTYPE concept

This topic describes reading and writing variables/symbols of 'any' type with the help of the ReadAny and WriteAny (ReadSymbol, WriteSymbol) methods. The value will be marshalled / cast directly from/to its appropriate .NET type, what eases the value access.

'Any' types in this context are all types that are 'blittable' to the process image - what means that the memory layout on both sides of the data transfer is equal (e.g. some primitive types) or can be marshalled by the marshalling mechanisms of .NET (see 'PlcStruct' in the example below). The memory layout specification can be customized with the 'System.Runtime.InteropServices.StructLayoutAttribute' on the .NET side (see MSDN) and the 'pack_mode' attribute on the TwinCAT PLC Side (TwinCAT 3). TwinCAT 2 only supports a memory layout of PACK = 1.
The appropriate .NET type must be known during compile time and is passed to the methods as parameter. In case of a ReadAny call, the read data will be returned as a object. The type of the object is marshalled to the type specified as parameter type. Because the data size and the memory alignment is taken from this type specification, it is so important that this specification fits to the memory representation in the ADS device (e.g. the PLC).

Because some data types (arrays and strings) need additional information, an overload of the method ReadAny exists, that takes an additional parameter args. A full list of supported types can be found in the documentation of the overloaded method.

### Reading and writing of structures

To be able to read or write PLC structures the memory layout of the structure or class in .NET must be the same as in the PLC. The layout of a structure or class can be specified with the attribute StructLayoutAttribute. The LayoutKind must be set to LayoutKind.Sequential and the pack must be set to 1

If arrays, strings or boolean values are define the class, one has to specify how these fields should be marshalled. This is accomplished with help of the MarshalAs attribute. Because arrays and strings do not have a fixed length in .NET, the property SizeConst is necessary for arrays and strings.

### Marshalling values with ‘ANY_TYPES’ asynchronously

```csharp
using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851);
    // Bool value
    bool boolValue = false;
    ResultAnyValue resultBoolValue = await client.ReadValueAsync("MAIN.bool1", typeof(bool), cancel);
    boolValue = (bool)resultBoolValue.Value;
    ResultWrite resultWrite = await client.WriteValueAsync("MAIN.bool1", boolValue, cancel);
    // or
    ResultHandle resultHandleBool = await client.CreateVariableHandleAsync("MAIN.bool1", cancel); // BOOL
    resultHandleBool.ThrowOnError(); // or
    if (resultHandleBool.Succeeded)
    {
        ResultAnyValue resultReadBool = await client.ReadAnyAsync(resultHandleBool.Handle, typeof(bool), cancel);
        boolValue = (bool)resultReadBool.Value;
        ResultWrite resultWriteBool = await client.WriteAnyAsync(resultHandleBool.Handle, boolValue, cancel);
    }
    ResultAdS resultHandleDeleteBool = await client.DeleteVariableHandleAsync(resultHandleBool.Handle, cancel);
}

// RealValue
resultHandleReal.ThrowOnError(); // or
if (resultHandleReal.Succeeded)
{
    ResultAnyValue resultReadReal = await client.ReadAnyAsync(resultHandleReal.Handle, typeof(float), cancel); // REAL
    ResultWrite resultWriteReal = await client.WriteAnyAsync(resultHandleReal.Handle, resultReadReal.Value, cancel);
    ResultAdS resultHandleDeleteReal = await client.DeleteVariableHandleAsync(resultHandleReal.Handle, cancel);
}

// String
resultHandleString.ThrowOnError(); // or
if (resultHandleString.Succeeded)
{
    ResultAnyValue resultReadString = await client.ReadAnyAsync(resultHandleString.Handle, typeof(string), cancel); // STRING[80]
    ResultWrite resultWriteString = await client.WriteAnyAsync(resultHandleString.Handle, resultReadString.Value, new int[] { 80 }, cancel);
    ResultAdS resultHandleDeleteString = await client.DeleteVariableHandleAsync(resultHandleString.Handle, cancel);
}
```
```csharp
// ARRAY [0..9] OF UINT
ResultHandle resultHandleArray = await client.CreateVariableHandleAsync("MAIN.uint1Arr", cancel);

if (resultHandleArray.Succeeded)
{
    ResultAnyValue resultReadArray = await client.ReadAnyAsync(resultHandleArray.Handle, typeof(ushort[]), new int[] { 10 }, cancel);

    ushort[] arrayValue = (ushort[])resultReadArray.Value;

    ResultWrite resultWriteArray = await client.WriteAnyAsync(resultHandleArray.Handle, arrayValue, new int[] { 10 }, cancel);

    ResultAds resultHandleDeleteArray = await client.DeleteVariableHandleAsync(resultHandleArray.Handle, cancel);
}

// ARRAY [0..9] OF STRING[80]
ResultHandle resultHandleStringArray = await client.CreateVariableHandleAsync("MAIN.stringArr", cancel);

if (resultHandleStringArray.Succeeded)
{
    ResultAnyValue resultReadStringArray = await client.ReadAnyAsync(resultHandleStringArray.Handle, typeof(string[]), new int[] { 80, 10 }, cancel);

    string[] stringArrValue = (string[])resultReadStringArray.Value;

    ResultWrite resultWriteStringArray = await client.WriteAnyAsync(resultHandleStringArray.Handle, stringArrValue, new int[] { 80, 10 }, cancel);

    ResultAds resultHandleDeleteStringArray = await client.DeleteVariableHandleAsync(resultHandleStringArray.Handle, cancel);
}
```

### Defining Memory layout of struct type.

// Attention: Dependent of the System where the PLC runs, the StructLayout of the exchanged
// Structures must match. With the ANY_TYPE concept this is realized with 'blittable' objects,
// that match on .NET and PLC side.

// Default Pack Modes:
// TC3 I64/x86: Normal, in this case Pack = 8
// TC2 x86: Pack = 1

// On TC3 PLC side we can force the packing of structures with the attribute
// [attribute 'pack_mode' := '1'], see also 'pack_mode' attribute in Beckhoff InfoSystem
// For TC2 is the Pack setting Pack = 1 the only possible way, because it is not selectable.

// We have to ensure that the pack mode on both sides is equal!

[StructLayout(LayoutKind.Sequential, Pack = 1, CharSet = CharSet.Ansi)]
public struct PlcStruct
{
    // Type must be 'blittable' to the corresponding PLC Struct Type
    // See MSDN for MarshalAs and Default Marshalling.

    [MarshalAs(UnmanagedType.I1)]
    public bool boolVal; // BOOL
    public byte byteVal; // BYTE

    // Type must be 'blittable' to the corresponding PLC Struct Type
    // See MSDN for MarshalAs and Default Marshalling.

    [MarshalAs(UnmanagedType.I1)]
    public bool boolVal; // BOOL
    public byte byteVal; // BYTE
}
public ushort ushortVal; // UINT
public short shortVal; // INT
public uint uintVal; // UDINT
public int dintVal; // DINT
public uint uintVal; // UDINT
public float realVal; // REAL
public double lrealVal; // LREAL
[MarshalAs(UnmanagedType.ByValTStr, SizeConst = 81)]
public string stringVal; // STRING[80]
[MarshalAs(UnmanagedType.U4)]
public uint timeVal; // TIME
[MarshalAs(UnmanagedType.U4)]
public uint todVal; // TOD
[MarshalAs(UnmanagedType.U4)]
public uint dateVal; // DATE
[MarshalAs(UnmanagedType.U4)]
public uint dtVal; // DT
}

Marshalling values with 'ANY_TYPES' (synchronous)

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851);

    // Bool value
    bool boolValue = (bool)client.ReadValue("MAIN.bool1", typeof(bool));
    client.WriteValue("MAIN.bool1", boolValue);

    // or
    uint handleBool = client.CreateVariableHandle("MAIN.bool1"); // BOOL
    boolValue = (bool)client.ReadAny(handleBool, typeof(bool));
    client.WriteAny(handleBool, boolValue);
    client.DeleteVariableHandle(handleBool);

    // RealValue
    uint handleReal = client.CreateVariableHandle("MAIN.real1"); // REAL
    float realValue = (float)client.ReadAny(handleReal, typeof(float));
    client.WriteAny(handleReal, realValue);
    client.DeleteVariableHandle(handleReal);

    // String
    uint handleString = client.CreateVariableHandle("MAIN.string1"); // STRING[80]
    string stringValue = (string)client.ReadAny(handleString, typeof(string), new int[] { 80 }); // Needs additional para for strlen
    client.WriteAny(handleString, stringValue, new int[] { 80 });
    client.DeleteVariableHandle(handleString);

    // ushort[]
    uint handleArray = client.CreateVariableHandle("MAIN.uint1Arr"); // ARRAY [0..9] OF UINT
    ushort[] arrayValue = (ushort[])client.ReadAny(handleArray, typeof(ushort[]), new int[] { 10 });
    client.WriteAny(handleArray, arrayValue, new int[] { 10 });
    client.DeleteVariableHandle(handleArray);

    // Complex Struct Type
    // Take care the the corresponding .NET Type is blittable / marshallable to the PLC type
    PlcStruct structValue = (PlcStruct)client.ReadValue("MAIN.struct");
    client.WriteValue("MAIN.struct", structValue);
    client.DeleteVariableHandle(handleArray);

    // ARRAY [0..9] OF STRING[80]
    // args[0] --> Number of Characters
    // args[1] --> Number of Array Elements
    // Needs additional para for strlen and number of Elements in Array
    uint handleStringArr = client.CreateVariableHandle("MAIN.stringArr"); // ARRAY [0..9] OF STRING[80]
    string[] stringArr = (string[])client.ReadAny(handleStringArr, typeof(string[]), new int[] { 80, 10 });
    client.WriteAny(handleStringArr, stringArr, new int[] { 80, 10 });
    client.DeleteVariableHandle(handleStringArr);
}
**ADS Notifications with Type marshalling (AdsNotificationEx)**

The method AddDeviceNotificationEx is used to register notifications for a PLC variable. If the value of a variable changes the event AdsNotificationEx is fired. The difference to the event AdsNotification, is that the value of the variable is stored in an object instead of in an AdsStream. Therefore one has to pass the type of the object to the method AddDeviceNotificationEx.

**Notifications with 'ANY_TYPES' (asynchronous)**

```csharp
CancellationToken cancel = CancellationToken.None;
using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new NotificationSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint), null, cancel);
    await Task.Delay(5000, cancel); // Wait ....
    resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle, cancel); // Unregister Event
}
```

**Notifications with 'ANY_TYPES'**

```csharp
private void Client_AdsNotificationEx(object sender, AdsNotificationExEventArgs e)
{
    uint value = (uint)e.Value; // Marshalled value as .NET Type
}
```

**Notifications with 'ANY_TYPES' (synchronous)**

```csharp
using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    resultHandle = client.AddDeviceNotificationEx("MAIN.udint", new NotificationSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint));
    Thread.Sleep(5000); // ...
    client.DeleteDeviceNotification(notificationHandle); // Unregister Event
}
```

### 4.7 Access Data via Symbol Loader

Some ADS Devices (e.g. the TwinCAT PLC) provide symbolic information for download. That means all visible Symbols and DataTypes can be retrieved from the target system. While this need an extra effort to upload and hold the data, this feature helps to remove the dependency of the code/configuration running on the target device.

E.g. because the symbolic information can now be browsed and determined during runtime, the application can be written without knowing what's running on the target system. Even more having the Symbol information cached, the access of the process image data will be easier because the datasize and access (instance path) is stored in the symbol.

Dependent how it is parametrized, the symbol loader can work with 'ANY_TYPES' (marshallable Primitive types, Value marshalling with ANYTYPE concept [p. 27]) or full dynamic symbols (Automatic dynamic marshalling of values [p. 32]).

**Example**

**Accessing symbolic data by preloaded Symbolic information (asynchronous)**

```csharp
using (AdsClient client = new AdsClient())
{
    CancellationTokenToken cancel = CancellationToken.None;
```
Concepts
uint valueToRead = 0;
uint valueToWrite = 42;
client.Connect(AmsNetId.Local, 851);
// Load all Symbols + DataTypes
ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
ResultSymbols resultSymbols

= await loader.GetSymbolsAsync(cancel);

if (resultSymbols.Succeeded)
{
Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];
// Works for ALL Primitive 'ANY TYPES' Symbols
ResultWriteAccess resultWrite = await symbol.WriteValueAsync(valueToWrite, cancel);
ResultReadValueAccess resultRead = await symbol.ReadValueAsync(cancel);
if (resultRead.Succeeded)
valueToRead = (uint)resultRead.Value;
// Simple filtering of Symbols
Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"
// FilterFunction that filters for the InstancePath
Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
SymbolIterator iterator = new SymbolIterator(symbols: resultSymbols.Symbols, recurse: true, pred
icate: filter);
foreach (ISymbol filteredSymbol in iterator)
{
Console.WriteLine(filteredSymbol.InstancePath);
}
}
}

Accessing symbolic data by preloaded Symbolic information (synchronous)
using (AdsClient client = new AdsClient())
{
uint valueToRead = 0;
uint valueToWrite = 42;
client.Connect(AmsNetId.Local, 851);
// Load all Symbols + DataTypes
ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
Symbol symbol = (Symbol)loader.Symbols["MAIN.nCounter"];
// Works for ALL Primitive 'ANY TYPES' Symbols
symbol.WriteValue(valueToWrite);
valueToRead = (uint)symbol.ReadValue();
// Simple filtering of Symbols
Regex filterExpression = new Regex(pattern: @"^MAIN.*"); // Everything that starts with "MAIN"
// FilterFunction that filters for the InstancePath
Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
SymbolIterator iterator = new SymbolIterator(symbols: loader.Symbols, recurse: true, predicate:
filter);
foreach (ISymbol filteredSymbol in iterator)
{
Console.WriteLine(filteredSymbol.InstancePath);
}
}

4.8

Automatic dynamic marshalling of values

The 'Dynamic Symbol Loader' of the .NET ADS Communication API makes use of the .NET dynamic
language runtime (DLR). The dynamic language runtime is a runtime environment that adds a set of services
for dynamic languages to the common language runtime (CLR). The DLR makes it easier to develop
dynamic languages to run on the .NET Framework and to add dynamic features to statically typed
languages.

32

Version: 1.1

TC1000


Dynamic languages can identify the type of an object at run time, whereas in statically typed languages (without using the 'dynamic' keyword, specify object types at design time. The advantage here is - from the moment on the symbolic (and dataType) information is available from the ADS Device - Symbol/Variable values can be marshalled 'on-the-fly' during runtime in a type-safe manner.

This works not only with primitive types but also with complex types. This reduces the complexity of the written application code to access the values, because neither the type of the data must be known, nor how the value data must be marshalled from/to the process image. The price to be paid is simply that the full symbolic information and data types must be downloaded from the ADS Device by the symbol loader.

Example

**Automatic marshalling values with 'Dynamic Values' (asynchronous)**

```csharp
using (AdsClient client = new AdsClient())
{  
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);
    //dynamic symbols = loader.SymbolsDynamic;
    ResultDynamicSymbols resultSymbols = await loader.GetDynamicSymbolsAsync(cancel);
    if (resultSymbols.Succeeded)
    {
        dynamic symbols = resultSymbols.Symbols;
        dynamic main = symbols.Main;
        // Use typed object to use InfoTips
        DynamicSymbol nCounter = main.nCounter; // UDINT
        // or to be fullDynamic
        dynamic nCounter2 = main.nCounter;
        // Works for ALL sorts of types (not restricted to ANY_TYPE basing primitive types)
        ResultReadValueAccess resultRead = await nCounter.ReadValueAsync(cancel);
        if (resultRead.Succeeded)
        {
            valueToRead = (uint)resultRead.Value;
            // or
            var varValue = resultRead.Value;
            // or
            dynamic dynValue = resultRead.Value;
        }
        // Same for writing
        ResultWriteAccess resultWrite = await nCounter.WriteValueAsync(valueToWrite, cancel);
        // Or Notifications / Events (typed dynamically)
        nCounter.ValueChanged += NCounter_ValueChanged;
        //Reading complexTypes e.g. Struct
        DynamicSymbol myStructSymbol = main.plcStruct; // Dynamically created
        ResultReadValueAccess resultRead2 = await myStructSymbol.ReadValueAsync(cancel); // Takes an ADS Snapshot of the value
        if (resultRead2.Succeeded)
        {
            dynamic myStructVal = resultRead2.Value;
            dynamic int1Val = myStructVal.int1; // Value to an INT (short)
            dynamic valueNestedStruct = myStructVal.nestedStruct; //
            value to another complex type (here a nested Struct)
        }
    }
    //wait 5 seconds to get some events
```
Automatic marshalling values with 'Dynamic Values' (handler)

private void NCounter_ValueChanged(object sender, ValueChangedEventArgs e)
{
    var uintVal = e.Value;
}

private void MyStructSymbol_ValueChanged(object sender, ValueChangedEventArgs e)
{
    dynamic structValue = e.Value; // Snapshot of the whole Struct and all its contents
}

Automatic marshalling values with 'Dynamic Values' (synchronous)

using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);

    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);
    dynamic symbols = loader.SymbolsDynamic;
    dynamic main = symbols.Main;

    // Use typed object to use InfoTips
    DynamicSymbol nCounter = main.nCounter; // UDINT

    // or to be fullDynamic
    // dynamic nCounter = main.nCounter;

    // Works for ALL sorts of types (not restricted to ANY_TYPE basing primitive types)
    valueToRead = (uint)nCounter.ReadValue(); // or
    var varValue = nCounter.ReadValue(); // or
    dynamic dynValue = nCounter.ReadValue();

    // Same for writing
    nCounter.WriteValue(valueToWrite);

    // Or Notifications / Events
    nCounter.ValueChanged += new EventHandler<ValueChangedEventArgs>(NCounter_ValueChanged);

    //Reading complexTypes e.g. Struct
    DynamicSymbol myStructSymbol = main.plcStruct; // Dynamically created
    dynamic myStructVal = myStructSymbol.ReadValue(); // Takes an ADS Snapshot of the value
    dynamic int1Val = myStructVal.int1; // Value to an INT (short)
    dynamic valueNestedStruct = myStructVal.nestedStruct; // value to another complex type (here a nested Struct)

    myStructSymbol.ValueChanged += new EventHandler<ValueChangedEventArgs>(MyStructSymbol_ValueChanged);
    //wait for notifications for 5 seconds
    Thread.Sleep(5000);
}

Calling 'ReadValue'/ReadValueAsync' or the incoming 'ValueChanged' notification takes a full snapshot (with snapshot time) of the value. That means, when for example subelements of a struct value will be accessed, all subvalues will represent the value of that snapshot time consistently. The starting point (or the instance that caches the consistent data) is always the 'DynamicSymbol' object that called 'ReadValue'.

An update of the value can be done directly on the value with 'UpdateValue', or with reading a new Value on the 'DynamicSymbol' ('ReadValue').

The 'ValueChanged' event on the 'DynamicSymbol' assigns a Notification for just this symbol. The 'ValueChanged' handler will contain the value completely marshalled as dynamic object.
4.9 Reactive Extensions and ADS

The Reactive Extensions (Rx) is a .NET library for composing asynchronous and event-based programs using observable sequences and LINQ-style query operators. Using Rx, developers represent asynchronous data streams with Observables, query asynchronous data streams using LINQ operators, and parameterize the concurrency in the asynchronous data streams using Schedulers. Simply put, Rx = Observables + LINQ + Schedulers.

In ADS terms, not only the reading and writing data or symbol values can be put into reactive data streams, also ADS Notifications are a perfect fit for reactive code. This eases not only data binding to reactive frameworks (e.g. reactive UI) but also supports enhanced data manipulation via synchronous and asynchronous observers. Multithreaded and parallelized code paths that support multiple CPU cores can be written very easily without the burden of deadlock and synchronization issues.

More about .NET reactive extensions can be read here: Reactive extensions project site.

The TwinCAT ADS Reactive extensions are available via a supplement Nuget Package: Beckhoff.TwinCAT.Ads.Reactive Nuget Package

Example

Observe for Notifications

```csharp
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Reactive Notification Handler
    var valueObserver = Observer.Create<ushort>(val =>
    {
        Console.WriteLine(string.Format("Value: {0}", val.ToString()));
    });

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Observe for Symbol Notifications

```csharp
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}"..cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);
```
Observer for dynamic Symbol Notifications

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);
    dynamic symbols = symbolLoader.SymbolsDynamic;
    dynamic cycleCount = symbols.TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount;

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        // Value objects can be dynamically (on the fly) created objects here (e.g. structs)
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}\n", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransMode.OnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    // We have to give the 'hint' about IValueSymbol here, that the CLR finds the Extension Method 'WhenValueChanged' during runtime.
    IDisposable subscription = ((IValueSymbol)cycleCount).WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

Polling observer

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}\n", cycleCount.InstancePath, val.ToString()));
    });

    // Take 20 Values in an Interval of 500ms
    IDisposable subscription = cycleCount.PollValues(TimeSpan.FromMilliseconds(500)).Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

Writing values with observable subject

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
}
var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
IValueSymbol gvlIntSymbol = (IValueSymbol)symbolLoader.Symbols["GVL.i"]; // Produces object (short) Values 0,1,2,3 ... in seconds period
IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i => (object)(short)i);

// Take 10 Values (0..9) and write them to GVL.i
IDisposable dispose = gvlIntSymbol.WriteValues(timerObservable.Take(10));

Console.ReadKey(); // Wait for Key press
dispose.Dispose(); // Dispose the Subscription
5 HowTo Samples

The topics in this section describe the various changes made to the 'TwinCAT.Ads .NET API' over the life of the project.

TwinCAT ADS .NET API Documentation [15]

5.1 Read/Write primitive values

Reading writing Values from ADS Devices is the most essential part of the communication API. There are several options for communication with your application.

- Accessing by IndexGroup / IndexOffset
- Symbolic access by instance path and optionally use handles for the symbol
- Holding the overall Symbolic information in the SymbolLoader and use easy access via symbol objects.
- Usage the symbolic interface ITcAdsSymbol when complete SymbolLoading by SymbolLoaders is not appropriate.
- Reading / Writing values as .NET managed Types (primitive types or compound primitive types called ANY_TYPES), or complex dynamic types typesafe generated at runtime.

The following section shows the different scenarios as code snippets.

HowTo Read/Write Values

Read/Write AnyType by IndexGroup/IndexOffset (asynchronously)

```csharp
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    ResultWrite resultWrite = await client.WriteAnyAsync(0x4020, 0x0, valueToWrite, cancel);
    bool succeeded = resultWrite.Succeeded;
    ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(0x4020, 0x0, cancel);
    if(resultRead.Succeeded)
```
Read/Write AnyType by IndexGroup/IndexOffset (synchronously)
using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    adsClient.WriteAny(0x4020, 0x0, valueToWrite);
    valueToRead = (uint)adsClient.ReadAny(0x4020, 0x0, typeof(uint));
}

Read/Write AnyType by variable handle (asynchronously)
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);
    uint valueToRead = 0;
    uint valueToWrite = 42;
    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.nCounter", cancel);
    varHandle = resultHandle.Handle;
    if (resultHandle.Succeeded)
    {
        try
        {
            ResultWrite resultWrite = await client.WriteAnyAsync(varHandle, valueToWrite, cancel);
            ResultValue<uint> resultRead = await client.ReadAnyAsync<uint>(varHandle, cancel);
            if (resultRead.Succeeded)
            {
                valueToRead = resultRead.Value;
            }
        }
        finally
        {
            // Unregister VarHandle after Use
            ResultAds result = await client.DeleteVariableHandleAsync(varHandle, cancel);
        }
    }
}

Read/Write AnyType by variable handle (synchronously)
using (AdsClient client = new AdsClient())
{
    uint varHandle = 0;
    client.Connect(AmsNetId.Local, 851);
    try
    {
        uint valueToRead = 0;
        uint valueToWrite = 42;
        varHandle = client.CreateVariableHandle("MAIN.nCounter");
        adsClient.WriteAny(varHandle, valueToWrite);
        valueToRead = (uint)adsClient.ReadAny(varHandle, typeof(uint));
    }
    finally
    {
        // Unregister VarHandle after Use
        client.DeleteVariableHandle(varHandle);
    }
}

Read/Write AnyType by instance/symbol path (asynchronously)
using (AdsClient client = new AdsClient())
{
    CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;
}
client.Connect(AmsNetId.Local, 851);

resultWrite = await client.WriteValueAsync("MAIN.nCounter", valueToWrite, cancel);
resultRead = await client.ReadValueAsync<uint>("MAIN.nCounter", cancel);

if (resultRead.Succeeded)
  valueToRead = resultRead.Value;
}

**Read/Write AnyType by instance/symbol path (synchronously)**

```csharp
using (AdsClient client = new AdsClient())
{
  uint valueToRead = 0;
  uint valueToWrite = 42;

  client.Connect(AmsNetId.Local, 851);
  client.WriteValue("MAIN.nCounter", valueToWrite);
  valueToRead = (uint)client.ReadValue("MAIN.nCounter", typeof(uint));
}
```

**Read/Write AnyType by IAdsSymbol (asynchronously)**

```csharp
using (AdsClient client = new AdsClient())
{
  CancellationToken cancel = CancellationToken.None;
  uint valueToRead = 0;
  uint valueToWrite = 42;

  client.Connect(AmsNetId.Local, 851);
  ResultValue<IAdsSymbol> resultSymbol = await client.ReadSymbolAsync("MAIN.nCounter", cancel);
  if (resultSymbol.Succeeded)
  {
    ResultWrite resultWrite = await client.WriteValueAsync(resultSymbol.Value, valueToWrite, cancel);
    bool succeeded = resultWrite.Succeeded;

    ResultValue<uint> resultValue = await client.ReadValueAsync<uint>(resultSymbol.Value, cancel);
    if (resultValue.Succeeded)
      valueToRead = resultValue.Value;
  }
}
```

**Read/Write AnyType by IAdsSymbol (synchronously)**

```csharp
using (AdsClient client = new AdsClient())
{
  uint valueToRead = 0;
  uint valueToWrite = 42;

  IAdsSymbol symbol = client.ReadSymbol("MAIN.nCounter");
  client.WriteValue(symbol, valueToWrite);
  valueToRead = (uint)client.ReadValue(symbol);
}
```

**Read/Write AnyType by SymbolBrowser (asynchronously)**

```csharp
using (AdsClient client = new AdsClient())
{
  CancellationToken cancel = CancellationToken.None;
  uint valueToRead = 0;
  uint valueToWrite = 42;

  client.Connect(AmsNetId.Local, 851);
  // Load all Symbols + DataTypes
  ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
  ResultSymbols resultSymbols = await loader.GetSymbolsAsync(cancel);
```
if (resultSymbols.Succeeded)
{
Symbol symbol = (Symbol)resultSymbols.Symbols["MAIN.nCounter"];
// Works for ALL Primitive 'ANY TYPES' Symbols
ResultWriteAccess resultWrite = await symbol.WriteValueAsync(valueToWrite, cancel);
ResultReadValueAccess resultRead = await symbol.ReadValueAsync(cancel);
if (resultRead.Succeeded)
valueToRead = (uint)resultRead.Value;
// Simple filtering of Symbols
Regex filterExpression = new Regex(pattern: @"^ MAIN.*"); // Everything that starts with "MAIN"
// FilterFunction that filters for the InstancePath
Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
SymbolIterator iterator = new SymbolIterator(symbols: resultSymbols.Symbols, recurse: true, predicate: filter);
foreach (ISymbol filteredSymbol in iterator)
{
    Console.WriteLine(filteredSymbol.InstancePath);
}
}

Read/Write AnyType by SymbolBrowser (synchronously)
using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    // Load all Symbols + DataTypes
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    Symbol symbol = (Symbol)loader.Symbols["MAIN.nCounter"];
    // Works for ALL Primitive 'ANY TYPES' Symbols
    symbol.WriteValue(valueToWrite);
    valueToRead = (uint)symbol.ReadValue();
    // Simple filtering of Symbols
    Regex filterExpression = new Regex(pattern: @"^ MAIN.*"); // Everything that starts with "MAIN"
    // FilterFunction that filters for the InstancePath
    Func<ISymbol, bool> filter = s => filterExpression.IsMatch(s.InstancePath);
    SymbolIterator iterator = new SymbolIterator(symbols: loader.Symbols, recurse: true, predicate: filter);
    foreach (ISymbol filteredSymbol in iterator)
    {
        Console.WriteLine(filteredSymbol.InstancePath);
    }
}

Read/Write dynamic types by SymbolBrowser (asynchronously)
using (AdsClient client = new AdsClient())
{
CancellationToken cancel = CancellationToken.None;
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);
    //dynamic symbols = loader.SymbolsDynamic;
    ResultDynamicSymbols resultSymbols = await loader.GetDynamicSymbolsAsync(cancel);
    if (resultSymbols.Succeeded)
    {
        dynamic symbols = resultSymbols.Symbols; // Symbols collection with 'dynamic' access.
        dynamic main = symbols.Main; // Get the 'dynamic' main FB as Property
    }
Read/Write dynamic types by SymbolBrowser (synchronously)

```csharp
using (AdsClient client = new AdsClient())
{
    uint valueToRead = 0;
    uint valueToWrite = 42;
    client.Connect(AmsNetId.Local, 851);
    // Load all Symbols + DataTypes
    // Primitive Parts will be automatically resolved to .NET Primitive types.
    IDynamicSymbolLoader loader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);
    dynamic symbols = loader.SymbolsDynamic;
    dynamic main = symbols.Main;
    // Use typed object to use InfoTips
    DynamicSymbol nCounter = main.nCounter;
    // or to be fullDynamic
    //dynamic nCounter = main.nCounter;
    // Works for ALL sorts of types (not restricted to ANY_TYPE basing primitive types)
    nCounter.WriteValue(valueToWrite);
    valueToRead = (uint)nCounter.ReadValue();
}
```

5.2 Read/Write string types

ADS Server usually support strings in 2 flavors. The Default (ANSI) and the Unicode encoding (STRING vs. WSTRING) The ANSI encoding reserves 1 byte per character. Unicode reserves 2.

The strings are of fixed size and therefore the length of the the reserved space within the process image is important.

HowTo Read/Write string values

Reading writing ANSI Streams:

Read/Write ANSI Strings (async)

```csharp
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.string", cancel); // Symbol "string" in MAIN defined as string
    if (resultHandle.Succeeded)
    {
        try
        {
```
// Read ANSI String string[80]
int byteSize = 81; // Size of 80 ANSI chars + /0 (STRING[80])
PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(StringMarshaler.DefaultEncoding);
byte[] buffer = new byte[byteSize];

ResultRead resultRead = await client.ReadAsync(resultHandle.Handle, buffer.AsMemory(), cancel);
if (resultRead.Succeeded)
{
    string value = null;
    converter.Unmarshal<string>(buffer.AsSpan(), out value);
    byte[] writeBuffer = new byte[byteSize];
    // Write ANSI String string[80]
    value = "Changed";
    converter.Marshal(value, writeBuffer);
    ResultWrite resultWrite = await client.WriteAsync(resultHandle.Handle, writeBuffer, cancel);
}
finally
{
    ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandle.Handle, cancel);
}

Read/Write ANSI Strings (sync)

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    uint handle = client.CreateVariableHandle("MAIN.string"); // Symbol "string" in MAIN defined as string
    try
    {
        // Read ANSI String string[80]
        int byteSize = 81; // Size of 80 ANSI chars + /0 (STRING[80])
        PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(StringMarshaler.DefaultEncoding);
        byte[] buffer = new byte[byteSize];

        int readBytes = client.Read(handle, buffer.AsMemory());
        string value = null;
        converter.Unmarshal<string>(buffer.AsSpan(), out value);
        // Write ANSI String string[80]
        byte[] writeBuffer = new byte[byteSize];
        value = "Changed";
        converter.Marshal(value, writeBuffer);
        client.Write(handle, writeBuffer);
    }
    finally
    {
        client.DeleteVariableHandle(handle);
    }
}

Reading writing UNICODE Streams:

Read/Write Unicode Strings (async)

CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    ResultHandle resultHandle = await client.CreateVariableHandleAsync("MAIN.wstring", cancel); // Symbol "wstring" defined in MAIN as WSTRING
    if (resultHandle.Succeeded)
    {
        try
        {
            // Read UNICODE String wstring[80]
            PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(Encoding.Unicode);
            int byteSize = converter.MarshalSize(80); // Size of 80 UNICODE chars + /0 (WSTRING[80])
            byte[] buffer = new byte[byteSize];
            int readBytes = client.Read(handle, buffer.AsMemory());
            string value = null;
            converter.Unmarshal<string>(buffer.AsSpan(), out value);
            // Write UNICODE String wstring[80]
            byte[] writeBuffer = new byte[byteSize];
            value = "Changed";
            converter.Marshal(value, writeBuffer);
            client.Write(handle, writeBuffer);
        }
        finally
        {
            client.DeleteVariableHandle(handle);
        }
    }
}
byte[] readBuffer = new byte[byteSize];
ResultRead resultRead = await client.ReadAsync(resultHandle.Handle, readBuffer, cancel);
if (resultRead.Succeeded)
{
    string value = null;
    converter.Unmarshal(readBuffer.AsSpan(), out value);
    // Write Unicode String string[80]
    value = "Changed";
    byte[] writeBuffer = new byte[byteSize];
    converter.Marshal(value, writeBuffer.AsSpan());
    ResultWrite resultWrite = await client.WriteAsync(resultHandle.Handle, writeBuffer.AsMemory(canceled), cancel);
    // Write Unicode String string[80]
    value = "Changed";
    byte[] writeBuffer = new byte[byteSize];
    converter.Marshal(value, writeBuffer.AsSpan());
    ResultWrite resultWrite = await client.WriteAsync(resultHandle.Handle, writeBuffer.AsMemory(canceled), cancel);
}
finally
{
    ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandle.Handle, canceled);
}

Read/Write Unicode Strings (sync)

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    uint handle = client.CreateVariableHandle("MAIN.wstring"); // Symbol "wstring" defined in MAIN as WSTRING
    try
    {
        // Read UNICODE String wstr[80]
        PrimitiveTypeMarshaler converter = new PrimitiveTypeMarshaler(Encoding.Unicode);
        int byteSize = converter.MarshalSize(80); // Size of 80 UNICODE chars + /0 (WSTRING[80]) (162)
        byte[] readBuffer = new byte[byteSize];
        int readBytes = client.Read(handle, readBuffer);
        string value = null;
        converter.Unmarshal(readBuffer.AsSpan(), out value);
        // Write Unicode String string[80]
        value = "Changed";
        byte[] writeBuffer = new byte[byteSize];
        converter.Marshal(value, writeBuffer.AsSpan());
        client.Write(handle, writeBuffer.AsMemory());
    }
    finally
    {
        client.DeleteVariableHandle(handle);
    }
}

Reading writing strings with ReadAny/WriteAny group of methods:

Read/Write Anystring (async)

CancellationToken cancel = CancellationToken.None;
using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    ResultHandle resultHandleStr = await client.CreateVariableHandleAsync("MAIN.string", cancel); // Symbol "string" defined in MAIN as STRING
    ResultHandle resultHandleWStr = await client.CreateVariableHandleAsync("MAIN.wstring", cancel); // Symbol "wstring" defined in MAIN as WSTRING
    if (resultHandleStr.Succeeded && resultHandleWStr.Succeeded)
    {
        try
        {

        }
    }
}
```csharp
ResultAnyValue resultReadStr = await client.ReadAnyStringAsync(resultHandleStr.Handle, 80, StringMarshaler.DefaultEncoding, cancel);
ResultAnyValue resultReadWStr = await client.ReadAnyStringAsync(resultHandleWStr.Handle, 80, Encoding.Unicode, cancel);

string changedValue = "Changed";

// Attention, take care that the memory of the string in the process image is not exceeded!
ResultWrite resultWriteStr = await client.WriteAnyStringAsync(resultHandleStr.Handle, changedValue, 80, StringMarshaler.DefaultEncoding, cancel);
ResultWrite resultWriteWStr = await client.WriteAnyStringAsync(resultHandleWStr.Handle, changedValue, 80, Encoding.Unicode, cancel);
}
finally
{
    ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandleStr.Handle, cancel);
    ResultAds r2 = await client.DeleteVariableHandleAsync(resultHandleWStr.Handle, cancel);
}
}
```

### Read/Write Anystring (sync)

```csharp
using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local port 851 (PLC)
    uint stringHandle = client.CreateVariableHandle("MAIN.string"); // Symbol "string" defined in MAIN as STRING
    uint wStringHandle = client.CreateVariableHandle("MAIN.wstring"); // Symbol "string" defined in MAIN as WSTRING

    try
    {
        string str = client.ReadAnyString(stringHandle, 80, StringMarshaler.DefaultEncoding);
        string wStr = client.ReadAnyString(wStringHandle, 80, Encoding.Unicode);

        string changedValue = "Changed";

        // Attention, take care that the memory of the string in the process image is not exceeded!
        client.WriteAnyString(stringHandle, changedValue, 80, StringMarshaler.DefaultEncoding);
        client.WriteAnyString(wStringHandle, changedValue, 80, Encoding.Unicode);
    }
    finally
    {
        client.DeleteVariableHandle(stringHandle);
        client.DeleteVariableHandle(wStringHandle);
    }
}
```

### 5.3 Read/Write PlcOpen types (DATE, TIME ...)

The following PLCOpen types have specific representations within the TwinCAT.Ads Communication Library:

- **DT** [1570]
- **DATE** [1552]
- **TIME** [1598]
- **LTIME** [1581]
- **TOD** [1615]

The following section shows the different scenarios as code snippets.

### HowTo Read/Write PlcOpen values

Reading writing by streams:
Read/Write PlicOpen types (streamed, async)

CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc

    ResultHandle resultHandleTime = await client.CreateVariableHandleAsync("MAIN.time", cancel); // TIME
    ResultHandle resultHandleLTime = await client.CreateVariableHandleAsync("MAIN.lTime", cancel); // LTIME
    ResultHandle resultHandleDate = await client.CreateVariableHandleAsync("MAIN.date", cancel); // DATE

    if (resultHandleTime.Succeeded && resultHandleLTime.Succeeded && resultHandleDate.Succeeded)
    {
        try
        {
            byte[] readBuffer = new byte[LTIME.MarshalSize]; // Largest PlicOpen Type is 8 Bytes
            byte[] writeBuffer = new byte[LTIME.MarshalSize];

            // Reading raw value TIME
            await client.ReadAsync(resultHandleTime.Handle, readBuffer.AsMemory(0, TIME.MarshalSize), cancel);
            // Unmarshalling
            TIME plcTime = null;
            PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, TIME.MarshalSize), out plcTime);
            TimeSpan time = plcTime.Time;

            // Writing raw value TIME
            PrimitiveTypeMarshaler.Default.Marshal(time, writeBuffer.AsSpan());
            await client.WriteAsync(resultHandleTime.Handle, writeBuffer.AsMemory(0, TIME.MarshalSize), cancel);

            // Reading raw value LTIME
            await client.ReadAsync(resultHandleLTime.Handle, readBuffer.AsMemory(0, LTIME.MarshalSize), cancel);
            // Unmarshalling
            LTIME plcLTime = null;
            PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, LTIME.MarshalSize), out plcLTime);
            TimeSpan lTime = plcLTime.Time;

            // Writing raw value LTIME
            PrimitiveTypeMarshaler.Default.Marshal(lTime, writeBuffer.AsSpan());
            await client.WriteAsync(resultHandleLTime.Handle, writeBuffer.AsMemory(0, LTIME.MarshalSize), cancel);

            // Reading raw value DATE
            DATE plcDate = null;
            await client.ReadAsync(resultHandleDate.Handle, readBuffer.AsMemory(0, DATE.MarshalSize), cancel);
            // Unmarshalling
            PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, DATE.MarshalSize), out plcDate);
            DateTimeOffset dateTime = plcDate.Date;

            // Writing raw value DATE
            PrimitiveTypeMarshaler.Default.Marshal(plcDate, writeBuffer.AsSpan());
            await client.WriteAsync(resultHandleDate.Handle, writeBuffer.AsMemory(0, DATE.MarshalSize), cancel);
        }
        finally
        {
            ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandleLTime.Handle, cancel);
            ResultAds r2 = await client.DeleteVariableHandleAsync(resultHandleTime.Handle, cancel);
            ResultAds r3 = await client.DeleteVariableHandleAsync(resultHandleDate.Handle, cancel);
        }
    }
}
Read/Write PlcOpen types (streamed, sync)

```csharp
using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc

    uint handleTime = 0;
    uint handleLTime = 0;
    uint handleDate = 0;

    try
    {
        handleTime = client.CreateVariableHandle("MAIN.time"); // TIME
        handleLTime = client.CreateVariableHandle("MAIN.lTime"); // LTIME
        handleDate = client.CreateVariableHandle("MAIN.date"); // DATE

        byte[] readBuffer = new byte[LTIME.MarshalSize]; // Largest PlcOpen Type is 8 Bytes
        byte[] writeBuffer = new byte[LTIME.MarshalSize];

        // Reading raw value TIME
        client.Read(handleTime, readBuffer.AsMemory(0, TIME.MarshalSize));
        // Unmarshalling
        TIME plcTime = null;
        PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, TIME.MarshalSize), out plcTime);
        TimeSpan time = plcTime.Time;

        // Writing raw value TIME
        PrimitiveTypeMarshaler.Default.Marshal(time, writeBuffer.AsSpan());
        client.Write(handleTime, writeBuffer.AsMemory(0, TIME.MarshalSize));

        // Reading raw value LTIME
        client.Read(handleLTime, readBuffer.AsMemory(0, LTIME.MarshalSize));
        // Unmarshalling
        LTIME plcLTime = null;
        PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, LTIME.MarshalSize), out plcLTime);
        TimeSpan lTime = plcLTime.Time;

        // Writing raw value LTIME
        PrimitiveTypeMarshaler.Default.Marshal(lTime, writeBuffer.AsSpan());
        client.Write(handleLTime, writeBuffer.AsMemory(0, LTIME.MarshalSize));

        // Reading raw value DATE
        DATE plcDate = null;
        client.Read(handleDate, readBuffer.AsMemory(0, DATE.MarshalSize));
        // Unmarshalling
        PrimitiveTypeMarshaler.Default.Unmarshal(readBuffer.AsSpan(0, DATE.MarshalSize), out plcDate);
        DateTimeOffset dateTime = plcDate.Date;

        // Writing raw value DATE
        PrimitiveTypeMarshaler.Default.Marshal(plcDate, writeBuffer.AsSpan());
        client.Write(handleDate, writeBuffer.AsMemory(0, DATE.MarshalSize));
    }
    finally
    {
        client.DeleteVariableHandle(handleLTime);
        client.DeleteVariableHandle(handleTime);
        client.DeleteVariableHandle(handleDate);
    }
}
```

Reading writing by ANY type concept:

Read/Write PlcOpen types (ANY, async)

```csharp
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc

    ResultHandle resultHandleTime = await client.CreateVariableHandleAsync("MAIN.time", cancel); // TIME
    ResultHandle resultHandleDate = await client.CreateVariableHandleAsync("MAIN.date", cancel); // DATE
    ResultHandle resultHandleLTime = await client.CreateVariableHandleAsync("MAIN.lTime", cancel); // LTIME
```
if (resultHandleTime.Succeeded && resultHandleDate.Succeeded && resultHandleLTime.Succeeded)
{
    try
    {
        ResultAnyValue resultTime = await client.ReadAnyAsync(resultHandleTime.Handle, typeof(TIME), cancel); // TIME
        TIME time = (TIME)resultTime.Value;
        TimeSpan timeSpan = time.Time;
        await client.WriteAnyAsync(resultHandleTime.Handle, time, cancel);

        ResultAnyValue resultData = await client.ReadAnyAsync(resultHandleDate.Handle, typeof(DATE), cancel); // DATE
        DATE date = (DATE)resultData.Value;
        DateTimeOffset dateTime = date.Date;
        await client.WriteAnyAsync(resultHandleDate.Handle, date, cancel);

        ResultAnyValue resultLTime = await client.ReadAnyAsync(resultHandleLTime.Handle, typeof(LTIME), cancel); // LTIME
        LTIME lTime = (LTIME)resultLTime.Value;
        TimeSpan lTimeSpan = lTime.Time;
        await client.WriteAnyAsync(resultHandleLTime.Handle, lTime, cancel);
    }
    finally
    {
        ResultAds r1 = await client.DeleteVariableHandleAsync(resultHandleTime.Handle, cancel);
        ResultAds r2 = await client.DeleteVariableHandleAsync(resultHandleDate.Handle, cancel);
        ResultAds r3 = await client.DeleteVariableHandleAsync(resultHandleLTime.Handle, cancel);
    }
}

Read/Write PlcOpen types (ANY, sync)
using (AdsClient client = new AdsClient())
{
    client.Connect(AmsNetId.Local, 851); // Connect to local plc
    uint handleTime = 0;
    uint handleDate = 0;
    uint handleLTime = 0;
    try
    {
        handleTime = client.CreateVariableHandle("MAIN.time"); // TIME
        handleDate = client.CreateVariableHandle("MAIN.date"); // DATE
        handleLTime = client.CreateVariableHandle("MAIN.lTime"); // LTIME

        TIME time = (TIME)client.ReadAny(handleTime, typeof(TIME)); // TIME
        TimeSpan timeSpan = time.Time;
        client.WriteAny(handleTime, time);

        DATE date = (DATE)client.ReadAny(handleDate, typeof(DATE)); // DATE
        DateTimeOffset dateOffset = date.Date;
        client.WriteAny(handleDate, date);

        LTIME lTime = (LTIME)client.ReadAny(handleLTime, typeof(LTIME)); // LTIME
        TimeSpan lTimeSpan = lTime.Time;
        client.WriteAny(handleLTime, lTime);
    }
    finally
    {
        client.DeleteVariableHandle(handleTime);
        client.DeleteVariableHandle(handleDate);
        client.DeleteVariableHandle(handleLTime);
    }
5.4 Event driven read with ADS Notifications

Use of ADS Notifications (Async)

private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;
        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;
        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);
        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);
        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);
    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
    /*SynchronizationContext syncContext = SynchronizationContext.Current;
     _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}

Use of ADS Notifications (Synchronous)

Trigger on changed values by ADS Notifications

private void RegisterNotifications()
{
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification;
        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;
        try
        {
            // Notification to a DINT Type (UINT32)
            // Check for change every 200 ms
            int size = sizeof(UInt32);
            byte[] notificationBuffer = new byte[sizeof(UInt32)];
            notificationHandle = client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);
        }
    }
5.5 Reactive Read/Write with Reactive Extensions

Observation of Notifications

Notifications (address specified by InstancePath) will be received cyclically as defined in Default.[984] and put into the Observer pipeline for further processing. This example takes 20 Notification samples before returning.

Observe for Notifications

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Reactive Notification Handler
    var valueObserver = Observer.Create<ushort>(val =>
    {
        Console.WriteLine(string.Format("Value: {0}", val.ToString()));
    });

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values) and subscribe to them.
    IDisposable subscription = client.WhenNotification<ushort>("TwinCAT_SystemInfoVarList._TaskInfo.
    CycleCount", NotificationSettings.Default).Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

Observation of Symbolic Notifications

This example determines a symbol via Symbolloader and samples its values by Notifications with customized NotificationSettings.[979]. Again 20 samples are taken before the Observation finishes.

Observe for Symbol Notifications

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInf
Observation of dynamic Symbol Notifications

Here, the symbol is determined via Symbolloader again, but now the Notifications will be processed as 'dynamic' values.

Observer for dynamic Symbol Notifications

// To Test the Observer run a project on the local PLC System (Port 851) using {AdsClient client = new AdsClient()}
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = (IDynamicSymbolLoader)SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);
    dynamic symbols = symbolLoader.SymbolsDynamic;
    dynamic cycleCount = symbols.TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount;

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        // Value objects can be dynamically (on the fly) created objects here (e.g. structs)
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

Polling observer

A polling observer doesn't use ADS notifications, but instead the value read is triggered by a time interval (polling) or a customized trigger function (on request).

Polling observer

// To Test the Observer run a project on the local PLC System (Port 851) using {AdsClient client = new AdsClient()}
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));
// Create Symbol information
var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInf o.CycleCount"];  
// Reactive Notification Handler
var valueObserver = Observer.Create<object>(val =>
{
    Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
});
// Take 20 Values in an Interval of 500ms
IDisposable subscription = cycleCount.PollValues(TimeSpan.FromMilliseconds(500)).Take(20).Subscr ibe(valueObserver);
Console.ReadKey(); // Wait for Key press
subscription.Dispose(); // Dispose the Subscription

Writing values with observable subject

In this example, a symbolic value is written in a static time interval (1 second). The writing stops after 10 values. The WriteValues [1116] extension method can be used to seamlessly bind value writing into a reactive application.

Writing values with observable subject

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol gvlIntSymbol = (IValueSymbol)symbolLoader.Symbols["GVL.i"];  
    // Produces object (short) Values 0,1,2,3 ... in seconds period
    IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i =>
        (object)(short)i);

    // Take 10 Values (0..9) and write them to GVL.i
    IDisposable dispose = gvlIntSymbol.WriteValues(timerObservable.Take(10));

    Console.ReadKey(); // Wait for Key press
    dispose.Dispose(); // Dispose the Subscription
}

5.6 Upgrading existing ADS Application code (Version 4.X --&gt; 5.X)

Code migration path for application code Beckhoff.TwinCAT.Ads 4.X --&gt; 5.X

The Beckhoff.TwinCAT.Ads package Version 4.X implements the Beckhoff ADS API for the Microsoft .NET FullFramework (>= 4.0) / CompactFramework (>= 2.0). Newer .NET framework implementations are basing on '.NET Core' (e.g. .NET 5.0).

To support these newer flavours like .NET Core, .NET Standard together with its new features, a new Version 5.X of the Beckhoff.TwinCAT.Ads API is available.

Because new platform features need some breaking changes within the API for seamless support, the decision was taken to remove some legacy features and burdens in the reimplementation. Nevertheless most of the interfaces remained stable and only a few approaches changed.

The breaking changes and some guidelines will be discussed here.
Use ‘async’ wherever possible.

Internally, the Beckhoff.TwinCAT.Ads package are implemented asynchronously (Methodnames ending with ‘Async’). The synchronous counterparts of the async methods are implemented as thin wrapper around the async method with synchronization.

As consequence the synchronous method is less flexible (only usable in synchronous code paths) and less performant (blocking calls, more thread switches). Furthermore, with the ‘async’ keyword support of .NET they are also not easier to use. So take more than a thought about migrate to async code.

**Synchronous Read value**

```csharp
uint variableHandle = ...;
int value;
AdsErrorCode errorCode = adsClient.TryReadValue<int>(variableHandle, out int value);
```

**Asynchronous**

```csharp
uint variableHandle = ...;
ResultValue<int> result = await adsClient.ReadValueAsync(variableHandle, CancellationToken.None);
AdsErrorCode errorCode = result.ErrorCode;
int value = result.Value;
```

However in synchronous application code paths the await keyword is not allowed. Using the synchronous methods is the only option besides migrating the whole application code up to the main root. Further information can be found here: [Asynchronous programming with async and await](#)

**Name change TcAdsClient --> AdsClient**

This should simply document that there is another implementation. Just rename the class instance.

**Version 4.X**

```csharp
TcAdsClient client = new TcAdsClient()
```

**Version 5.X**

```csharp
AdsClient client = new AdsClient()
```

**Marshalling of byte[] and missing AdsStream class.**

Newer .NET implementations have more efficient possibilities to exchange memory data between software layers and classes (see [Memory- and span-related types](#)).

All API interface methods that use the combination of parameters (bytes, offset, length) or AdsStream

**Version 4.X**

```csharp
public int TcAdsClient.Read(uint indexGroup,uint indexOffset,AdsStream dataStream)
```

**Version 4.X**

```csharp
public int TcAdsClient.Write(uint indexGroup,uint indexOffset,AdsStream dataStream)
```

or

**Version 4.X**

```csharp
public int TcAdsClient.Read(uint indexGroup,uint indexOffset,byte[] bytes, int offset, length)
```

**Version 4.X**

```csharp
public int TcAdsClient.Write(uint indexGroup,uint indexOffset,byte[] bytes, int offset, length)
```

are changed like this:

**Version 5.X**

```csharp
public int AdsClient.Read(uint indexGroup,uint indexOffset,Memory<byte> buffer)
```
Version 5.X
public int AdsClient.Write(uint indexGroup, uint indexOffset, ReadOnlyMemory<byte> buffer)

With this change a lot of interfaces will look much cleaner and act more efficient because of less array copy operations.

Handles are defined as uint type.
Handles are now streamlined consistently as uint type instead of int.

Version 4.X
public int TcAdsClient.CreateVariableHandle(string symbolPath)

Version 5.X
public uint AdsClient.CreateVariableHandle(string symbolPath)

Notification parameters bundled in one settings class.

Version 4.X
public int AddDeviceNotification(string symbolPath, AdsStream dataStream, int offset, int length, AdsTransMode transMode, int cycleTime, int maxDelay, Object userData)

Version 4.X
public int TcAdsClient.AddDeviceNotification(string symbolPath, AdsStream dataStream, int offset, int length, AdsTransMode transMode, int cycleTime, int maxDelay, Object userData)

The new parameterset simply needs the (byte) size of the transferred data instead of AdsStream, offset and length. Furthermore transMode, cycleTime and maxDelay are bundled in the NotificationSettings object.

Version 5.X
public uint AdsClient.AddDeviceNotification(string symbolPath, int dataSize, NotificationSettings settings, object userData)
## 6 TwinCAT.Ads Namespaces

**TwinCAT ADS .NET API for .NET CORE**

### Namespaces

<table>
<thead>
<tr>
<th>Namespace</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TwinCAT</td>
<td>Common namespace for types that are not specific to ADS.</td>
</tr>
<tr>
<td>TwinCAT.Ads</td>
<td>ADS root namespace.</td>
</tr>
<tr>
<td>TwinCAT.Ads.SumCommand</td>
<td>ADS offers powerful and fast communication to exchange any kind of information. It's possible to read single variables or complete arrays and structures with each one single ADS-API call. ADS Sum-Commands offer to read/write with one single ADS call multiple variables which are not structured within a linear memory, effectively reducing roundtrips.</td>
</tr>

## 6.1.1 AdsException Class

Base class for all exceptions thrown by the TwinCAT.Ads component

### Inheritance Hierarchy

- System.Object
  - System.Exception
    - TwinCAT.AdsException

### Namespace

- Namespace: TwinCAT.Ads

### Assembly

- Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
[SerializableAttribute]
public class AdsException : Exception
```

The AdsException type exposes the following members.

### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsException</td>
<td>Initializes a new Instance of the AdsException class.</td>
</tr>
<tr>
<td>AdsException(String)</td>
<td>Initializes a new Instance of the AdsException class.</td>
</tr>
<tr>
<td>AdsException(SerializationInfo, StreamingContext)</td>
<td>Initializes a new instance of the AdsException class.</td>
</tr>
<tr>
<td>AdsException(String, Exception)</td>
<td>Initializes a new Instance of the AdsException class.</td>
</tr>
</tbody>
</table>
### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HResult</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SerializeObjectState</td>
<td>Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

AdsException Class

TwinCAT Namespace

6.1.1.1 AdsException Constructor

Initializes a new Instance of the AdsException class.

Namespace: TwinCAT
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsException()
```
6.1.1.1.2 AdsException Constructor (String)

Initializes a new Instance of the AdsException class.

**Namespace:** TwinCAT

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public AdsException(string message)
```

**Parameters**

- `message`  
  - *Type:* System.String  
  - A message that describes the error.

**Reference**

AdsException Class [57]

AdsException Overload [59]

TwinCAT Namespace [55]

6.1.1.1.3 AdsException Constructor (SerializationInfo, StreamingContext)

Initializes a new instance of the AdsException class.

**Namespace:** TwinCAT

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected AdsException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)
```

**Parameters**

- `serializationInfo`  
  - *Type:* System.Runtime.Serialization.SerializationInfo  
  - The serialization information.

- `streamingContext`  
  - *Type:* System.Runtime.Serialization.StreamingContext  
  - The streaming context.
6.1.1.1.4 AdsException Constructor (String, Exception)

Initializes a new Instance of the AdsException class.

**Namespace:** TwinCAT

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public AdsException(
    string message,
    Exception innerException
)
```

**Parameters**

- **message**
  - Type: `System.String`
  - The error message that explains the reason for the exception.

- **innerException**
  - Type: `System.Exception`
  - The exception that is the cause of the current exception. If the innerException parameter is not a null reference, the current exception is raised in a catch block that handles the inner exception.

**Reference**

- AdsException Class [57]
- AdsException Overload [59]

</tbody>
</table>

Reference

ConnectionStateChangedEventArgs Class [⑥8]

TwinCAT Namespace [⑤5]
6.1.4.1.1 ConnectionStateChangedEventArgs Constructor
(ConnectionStateChangedReason, ConnectionState, ConnectionState)

Constructs the ConnectionStateChangedEventArgs arguments.

Namespace: TwinCAT
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public ConnectionStateChangedEventArgs(
    ConnectionStateChangedReason reason,
    ConnectionState newState,
    ConnectionState oldState
)
```

Parameters

- **reason**
  - Type: TwinCAT.ConnectionStateChangedReason
  - The reason.

- **newState**
  - Type: TwinCAT.ConnectionState
  - The new state.

- **oldState**
  - Type: TwinCAT.ConnectionState
  - The old state.

6.1.4.1.2 ConnectionChangedEventArgs Constructor
(ConnectionStateChangedReason, ConnectionState, ConnectionState, Exception)

Constructs the ConnectionChangedEventArgs arguments.

Namespace: TwinCAT
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public ConnectionChangedEventArgs(
    ConnectionStateChangedReason reason,
    ConnectionState newState,
    ConnectionState oldState,
    Exception e
)
```

Parameters

- **reason**
  - Type: TwinCAT.ConnectionStateChangedReason
  - The reason.
newState
Type: TwinCAT.ConnectionState
The new state.

oldState
Type: TwinCAT.ConnectionState
The old state.

e
Type: System.Exception
The e.

6.1.6 IConnection Interface

Interface IConnection

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IConnection : IConnectionStateProvider
```

The IConnection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionState</td>
<td>Gets the current Connection state of the IConnectionStateProvider [84] (Inherited from IConnectionStateProvider [84].)</td>
</tr>
<tr>
<td>DefaultValueEncoding</td>
<td>Gets the default value encoding.</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the Connection Identifier .</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.</td>
</tr>
<tr>
<td>Session</td>
<td>Gets the session that initiated this IConnection</td>
</tr>
</tbody>
</table>

Syntax

C#

```csharp
ISession Session { get; }
```

Property Value

Type: ISession [88]
The session or NULL

Remarks

The Session can be null on standalone connections.

Reference

IConnection Interface [74]
TwinCAT Namespace [55]

6.1.6.1.5 IConnection.Timeout Property

Gets the timeout (in milliseconds)

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
int Timeout { get; set; }
```
Property Value

Type: Int32
The timeout.

```csharp
DateTimeOffset LastSucceededAccess { get; }
```

**Property Value**

**Type:** DateTimeOffset

**Reference**

IConnectionStateObserver Interface [80]

TwinCAT Namespace [55]

### 6.1.7.1.4 IConnectionStateObserver.Quality Property

Gets the quality of the current cached value (the age of the data)

**Namespace:** TwinCAT

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
TimeSpan Quality { get; }
```
6.1.7.1.5  IConnectionStateObserver.TotalCycles Property

Gets the number of successful reads / writes

Namespace:  TwinCAT
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
```csharp
int TotalCycles { get; }
```

6.1.7.1.6  IConnectionStateObserver.TotalErrors Property

Gets the error count of accesses

Namespace:  TwinCAT
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
```csharp
int TotalErrors { get; }
```
6.1.7.2 IConnectionStateObserver Events

The IConnectionStateObserver [80] type exposes the following members.

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionStateChanged [86]</td>
<td>Occurs when connection status of the IConnectionStateProvider [84] has been changed. (Inherited from IConnectionStateProvider [84].)</td>

IConnectionStateObserver Interface [80]

TwinCAT Namespace [55]

6.1.8 IConnectionStateProvider Interface

Interface IConnectionStateProvider

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public interface IConnectionStateProvider
```

The IConnectionStateProvider type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionState [85]</td>
<td>Gets the current Connection state of the IConnectionStateProvider</td>
</tr>
</tbody>
</table>

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionStateChanged [86]</td>

TwinCAT Namespace [55]

6.1.8.1 IConnectionStateProvider Properties

The IConnectionStateProvider [84] type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionState</td>
<td>Gets the current Connection state of the IConnectionStateProvider [84]</td>
</tr>
</tbody>
</table>

Reference

IConnectionStateProvider Interface [84]

TwinCAT Namespace [55]

6.1.8.1.1 IConnectionStateProvider.ConnectionState Property

Gets the current Connection state of the IConnectionStateProvider [84]

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1e3b60895934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
ConnectionState ConnectionState { get; }
```

Property Value

Type: ConnectionState [67]
The state of the connection.

Remarks

The Connection state changes only if the IConnection [74] is established / shut down or active communication is triggered by the User of the IConnection [74] object.

Examples

The following sample shows how to keep the ConnectionState updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```csharp
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;
    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
}
TwinCAT.Ads Namespaces

```csharp
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
```

### 6.1.8.2 IConnectionStateProvider Events

The [IConnectionStateProvider][84] type exposes the following members.

#### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![ConnectionStateChanged][86]</td>
<td>Occurs when connection status of the [IConnectionStateProvider][84] has been changed.</td>
</tr>
</tbody>
</table>

**Reference**

[ICConnectionStateProvider Interface][84]

[TwinCAT Namespace][55]

#### 6.1.8.2.1 IConnectionStateProvider.ConnectionStateChanged Event

Occurs when connection status of the [IConnectionStateProvider][84] has been changed.

**Namespace:** TwinCAT.[55]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
    event EventHandler<ConnectionStateChangedEventArgs> ConnectionStateChanged
```
Value

Type: `System.EventHandler<ConnectionStateChangedEventArgs>`

Remarks

The Connection state changes only if the `IConnection` is established / shut down or active communication is triggered by the User of the `IConnection` object.

Examples

The following sample shows how to keep the `ConnectionState` updated by triggering ADS Communication.

**Trigger ConnectionState changes in WPF Applications**

```csharp
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;
private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;
    _timer.Start();
}
private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}
private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}
private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
```

<td>Gets the current Connection state of the IConnectionStateProvider.</td>
</tr>
<tr>
<td>EstablishedAt</td>
<td>Gets the UTC time when the session was established.</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the Session Id</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether the session is connected.</td>
</tr>
<tr>
<td>Provider</td>
<td>Gets the Session Provider</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Close</td>
<td>Closes this ISession</td>
</tr>
<tr>
<td>Connect</td>
<td>Connects the session and returns the established IConnection object.</td>
</tr>
<tr>
<td>Disconnect</td>
<td>Disconnects the ISession</td>
</tr>
</tbody>
</table>

### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionStateChanged</td>
<td>Occurs when connection status of the IConnectionStateProvider has been changed.</td>
</tr>
</tbody>
</table>
6.1.9.1  ISession Properties

The ISession type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddressSpecifier</td>
<td>Gets the communication endpoint address string representation.</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the Connection object.</td>
</tr>
<tr>
<td>ConnectionState</td>
<td>Gets the current Connection state of the IConnectionStateProvider (Inherited from IConnectionStateProvider.)</td>
</tr>
<tr>
<td>EstablishedAt</td>
<td>Gets the UTC time when the session was established.</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the Session Id</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether the session is connected.</td>
</tr>
<tr>
<td>Provider</td>
<td>Gets the Session Provider</td>
</tr>
</tbody>
</table>

Syntax

C#

```csharp
void Close()
```

Remarks

Closes also the IConnection.

Reference

ISession Interface
### 6.1.9.2.2 ISession.Connect Method

Connects the session and returns the established [Connection](#) object.

**Namespace:** TwinCAT

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
IConnection Connect()
```

#### Return Value

**Type:** [Connection](#)

The [Connection](#) object.

#### Remarks

The [Connection](#) will be valid until the [Session](#) is disconnected via the Disconnect.[#] method or the Dispose method is called. Any possible resurrections after communication losses will be done transparently within the [Connection](#) so that the [Connection](#) instance and [Session](#) instance remains.

**Reference**

[Session Interface](#)

### 6.1.9.2.3 ISession.Disconnect Method

Disconnects the [Session](#)

**Namespace:** TwinCAT

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
bool Disconnect()
```

#### Return Value

**Type:** Boolean

true if Session was disconnected, false if the session was already closed.

#### Remarks

Disposes also the [Connection](#).
6.1.9.3 **ISession Events**

The **ISession** type exposes the following members.

**Events**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

6.1.13  ISymbolServerProvider Interface

Interface ISymbolServerProvider
The ISymbolServerProvider type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SymbolServer</td>
<td>Gets the symbol server.</td>
</tr>
</tbody>
</table>

The ISymbolServerProvider.SymbolServer Property

Gets the symbol server.

Syntax

C#

```csharp
ISymbolServer SymbolServer { get; }
```

Property Value

Type: ISymbolServer

The symbol server. To initially create this information the connection must be established.
6.1.14 Session Class

Abstract Session base class.

Inheritance Hierarchy

System.Object
  TwinCAT.Session
    TwinCAT.Ads.AdsSessionBase [614]

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

public abstract class Session : ISession, IConnectionStateProvider, ISymbolServerProvider, IDisposable

The Session type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddressSpecifier</td>
<td>Gets the communication endpoint address string representation.</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the (established) connection.</td>

<tr>
<td>ConnectionState</td>
<td>Gets the current Connection state of the Session</td>
</tr>
<tr>
<td>Disposed</td>
<td>Gets a value indicating whether this Session is disposed.</td>
</tr>
<tr>
<td>EstablishedAt</td>
<td>Gets the UTC time when the session was established.</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the Session Identifier</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether this instance is connected.</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the session</td>
</tr>
<tr>
<td>SymbolServer</td>
<td>Gets the symbol server.</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Close</td>
<td>Closes this ISession</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

**Name** | **Description**
--- | ---
![Connect](110) | Connects the session.
![Disconnect](111) | Disconnects the session from the target.
![Dispose](112) | Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.
![Dispose(Boolean)](112) | Releases unmanaged and - optionally - managed resources.
![Equals](112) | Determines whether the specified object is equal to the current object. (Inherited from `Object`.)
![Finalize](112) | Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from `Object`.)
![GetHashCode](112) | Serves as the default hash function. (Inherited from `Object`.)
![GetSessionName](112) | Gets the name/string identifier of the session.
![GetType](112) | Gets the `Type` of the current instance. (Inherited from `Object`.)
![MemberwiseClone](112) | Creates a shallow copy of the current `Object`. (Inherited from `Object`.)
![OnConnect](113) | Handler function connecting the Session.
![OnCreateSymbolServer](113) | Handler function creating the `ISymbolServer`.
![OnDisconnect](114) | Handler function disconnecting the session.
![OnGetAddress](114) | Handler function getting the address of the session.
![ToString](114) | Returns a string that represents the current object. (Inherited from `Object`.)

### Events

**Name** | **Description**
--- | ---
![ConnectionStateChanged](115) | Occurs when connection status of the `IConnectionStateProvider` has been changed.

- **Session Class** [101]
TwinCAT Namespace [55]

6.1.14.1.2 Session.Connection Property

Gets the (established) connection.

**Namespace:** TwinCAT [55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public IConnection Connection { get; protected set; }
```

**Property Value**

Type: [IConnection [74]]

The [IConnection [74]] if connection established, or null if not connected.

**Implements**

[ISession.Connection [90]]

**Reference**

Session Class [101]

TwinCAT Namespace [55]

6.1.14.1.3 Session.ConnectionState Property

Gets the current Connection state of the Session [101]

**Namespace:** TwinCAT [55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ConnectionState ConnectionState { get; }
```

**Property Value**

Type: [ConnectionState [67]]

The state of the connection.

**Implements**

[IConnectionStateProvider.ConnectionState [85]]
Remarks

The Connection state changes only if the IConnection is established / shut down or active communication is triggered by the User of the IConnection object.

Examples

The following sample shows how to keep the ConnectionState updated by triggering ADS Communication.

Trigger ConnectionState changes in WPF Applications

```csharp
private DispatcherTimer _timer = null;
private AdsSession _session = null;
private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;
    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;
    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
```

Reference

Session Class [101]
TwinCAT Namespace [55]
Session.ConnectionStateChanged [115]

6.1.14.1.4 Session.Disposed Property

Gets a value indicating whether this Session is disposed.
### Session.Disposed Property

**Namespace:** TwinCAT [55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public bool Disposed { get; }
```

**Property Value**

Type: Boolean
true if disposed; otherwise, false.

**Reference**

Session Class [101]
TwinCAT Namespace [55]

### Session.EstablishedAt Property

Gets the UTC time when the session was established.

**Namespace:** TwinCAT [55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public DateTimeOffset EstablishedAt { get; }
```

**Property Value**

Type: DateTimeOffset
The session established at.

**Implements**

I_Session.EstablishedAt [90]

**Reference**

Session Class [101]
TwinCAT Namespace [55]

### Session.Id Property

Gets the Session Identifier

**Namespace:** TwinCAT [55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
public int Id { get; }

Property Value
Type: Int32
The identifier.

Implements
[Session.Id] [91]

Reference
Session Class [101]
TwinCAT Namespace [55]

6.1.14.1.7 Session.IsConnected Property
Gets a value indicating whether this instance is connected.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsConnected { get; }

Property Value
Type: Boolean
true if this instance is connected; otherwise, false.

Implements
[Session.IsConnected] [91]

Reference
Session Class [101]
TwinCAT Namespace [55]

6.1.14.1.8 Session.Name Property
Gets the name of the session

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### TwinCAT.Ads Namespaces

#### Syntax

**C#**

```csharp
public string Name { get; }
```

#### Property Value

Type: `String`

The name.

#### Reference

- **TwinCAT Namespace** [▸ 55]

5.6.14.1.9 **Session.SymbolServer Property**

Gets the symbol server.

**Namespace:** TwinCAT [▸ 55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public ISymbolServer SymbolServer { get; }
```

#### Property Value

Type: `ISymbolServer` [▸ 2205]

The symbol server.

**Implements**

- `ISymbolServerProvider.SymbolServer` [▸ 100]

**Remarks**

The `Session` [▸ 101] object holds and caches the symbolic information. To initially create this information, the Connection must be established.

#### Reference

</tbody>
</table>

## Reference

Session Class ![101]

TwinCAT Namespace ![55]

### 6.1.14.2.1 Session.Close Method

Closes this ISession ![88]

**Namespace:** TwinCAT ![55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll)

Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void Close()
```
Implements

ISession.Close. [92]

Remarks

Closes also the IConnection. [74].

Reference

Session Class [101]
TwinCAT Namespace [55]

6.1.14.2.2 Session.Connect Method

Connects the session.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public IConnection Connect()

Return Value

Type: IConnection [74]
true if XXXX, false otherwise.

Implements

ISession.Connect. [93]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

The IConnection [74] will be valid until the ISession [88] is disconnected via the Disconnect. [111] method or the Dispose method is called. Any possible resurrections after communication losses will be done transparently within the IConnection [74] so that the IConnection [74] instance and ISession [88] instance remains.

Reference

Session Class [101]
TwinCAT Namespace [55]
6.1.14.2.3 Session.Disconnect Method

Disconnects the session from the target.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool Disconnect()

Return Value

Type: Boolean
true if XXXX, false otherwise.

Implements

ISession.Disconnect. [93]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

Closes (and disposes) the underlying IConnection [74]. The Session [101] itself will not be Disposed and can be reconnected.

Reference

Session Class [101]
TwinCAT Namespace [55]

6.1.14.3 Session Events

The Session [101] type exposes the following members.

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectionStateChanged</td>
<td>Occurs when connection status of the IConnectionStateProvider [84] has been changed.</td>
</tr>
</tbody>
</table>

Reference

Session Class [101]
TwinCAT Namespace [55]

6.1.14.3.1 Session.ConnectionStateChanged Event

Occurs when connection status of the IConnectionStateProvider [84] has been changed.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public event EventHandler<ConnectionStateChangedEventArgs> ConnectionStateChanged
```

Value

Type: System.EventHandler<ConnectionStateChangedEventArgs> [68].

Implements

IConnectionStateProvider.ConnectionStateChanged [86]
Remarks

The Connection state changes only if the `IConnection` is established / shut down or active communication is triggered by the User of the `IConnection` object.

Examples

The following sample shows how to keep the `ConnectionState` updated by triggering ADS Communication.

**Trigger ConnectionState changes in WPF Applications**

```csharp
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;
    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;
    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger ConnectionState periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
```

6.1.15.1.1 SessionConnectionStateChangedEventArgs Constructor (ConnectionStateChangedReason, ConnectionState, ConnectionState, ISession, IConnection)

Initializes a new instance of the SessionConnectionStateChangedEventArgs class.

**Namespace:** TwinCAT.[55]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public SessionConnectionStateChangedEventArgs(
    ConnectionStateChangedReason reason,
    ConnectionState newState,
    ConnectionState oldState,
    ISession session,
    IConnection connection
)
```

**Parameters**

- `reason` Type: TwinCAT.ConnectionStateChangedReason
  The reason.
- `newState` Type: TwinCAT.ConnectionState
  The new state.
- `oldState` Type: TwinCAT.ConnectionState
  The old state.
- `session` Type: TwinCAT.ISession
  The session.
- `connection` Type: TwinCAT.IConnection
  The connection.

6.1.15.1.2 SessionConnectionStateChangedEventArgs Constructor (ConnectionStateChangedReason, ConnectionState, ConnectionState, ISession, IConnection, Exception)

Initializes a new instance of the SessionConnectionStateChangedEventArgs class.

**Namespace:** TwinCAT.[55]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public SessionConnectionStateChangedEventArgs(
    ConnectionStateChangedReason reason,
    ConnectionState newState,
    ConnectionStateChangedReason oldReason
)```
Parameters

reason
Type: `TwinCAT.ConnectionStateChangedReason` [73]
The reason.

newState
Type: `TwinCAT.ConnectionState` [67]
The new state.

oldState
Type: `TwinCAT.ConnectionState` [67]
The old state.

session
Type: `TwinCAT.ISession` [88]
The session.

connection
Type: `TwinCAT.IConnection` [74]
The connection.

e
Type: `System.Exception`
The e.

### 6.1.16 SessionException Class

Session Exception

**Inheritance Hierarchy**

```
System.Object
    \ System.Exception
        \ TwinCAT.AdsException [57]
        \ TwinCAT.SessionException
            \ TwinCAT.SessionNotConnectedException [129]
```

**Namespace:** TwinCAT [55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
[SerializableAttribute]
public class SessionException : AdsException
```

The `SessionException` type exposes the following members.

**Constructors**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SessionException(.SerializationInfo, StreamingContext) [124]</td>
<td>Initializes a new instance of the <code>SessionException</code> class.</td>
</tr>
<tr>
<td>SessionException(String, ISession) [125]</td>
<td>Initializes a new instance of the <code>SessionException</code> class.</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SessionException(String, ISession, Exception)</td>
<td>Initializes a new instance of the SessionException class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HResult</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Session</td>
<td>Gets the session.</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>

Reference

SessionException Class [122]
TwinCAT Namespace [55]

6.1.16.1.1 SessionException Constructor (SerializationInfo, StreamingContext)

Initializes a new instance of the SessionException [122] class.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected SessionException(
    SerializationInfo serializationInfo,
    StreamingContext streamingContext
)
Parameters

- `serializationInfo` Type: `System.Runtime.Serialization.SerializationInfo`  
  The serialization information.
  The streaming context.

Reference

- `SessionException Class [122]`
- `SessionException Overload [124]`
- `TwinCAT Namespace [55]`

### 6.1.16.1.2 SessionException Constructor (String, ISession)

Initializes a new instance of the `SessionException [122]` class.

**Namespace:** TwinCAT [55]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public SessionException(
    string message,
    ISession session
)
```

**Parameters**

- `message` Type: `System.String`  
  The message.
- `session` Type: `TwinCAT.ISession [88]`  
  The session.

Reference

- `SessionException Class [122]`

### 6.1.16.1.3 SessionException Constructor (String, ISession, Exception)

Initializes a new instance of the `SessionException [122]` class.

**Namespace:** TwinCAT [55]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public SessionException(
    string message,
    ISession session,
    Exception innerException
)
```

Parameters

- **message**
  - **Type:** System.String
  - The message.

- **session**
  - **Type:** TwinCAT.ISession
  - The session.

- **innerException**
  - **Type:** System.Exception
  - The inner exception.

<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

Reference

SessionException Class [122]
### 6.1.16.3.1 SessionException.GetObjectObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

**Namespace:** TwinCAT [55]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context
)
```

**Parameters**

- `info` Type: System.Runtime.Serialization.SerializationInfo
  The SerializationInfo that holds the serialized object data about the exception being thrown.

- `context` Type: System.Runtime.Serialization.StreamingContext
  The StreamingContext that contains contextual information about the source or destination.

**Implements**

- ISerializable.GetObjectData(SerializationInfo, StreamingContext)
- Exception.GetObjectObjectData(SerializationInfo, StreamingContext)

**Exceptions**

Initializes a new instance of the SessionProvider.TSession, TAddress, TSettings. class.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

protected SessionProvider(
    SessionProviderCapabilities cap
)

Parameters

cap Type: TwinCAT.SessionProviderCapabilities [140]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exception</td>
<td>Session provider already instantiated!</td>
</tr>
</tbody>
</table>

Reference

SessionProvider.TSession, TAddress, TSettings. Class [134]

SessionProvider.TSession, TAddress, TSettings. Overload [136]

TwinCAT Namespace [55]

6.1.18.2 SessionProvider.TSession, TAddress, TSettings. Properties

The SessionProvider.TSession, TAddress, TSettings. [134] generic type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capabilities [137]</td>
<td>Gets the capabilities.</td>
</tr>
<tr>
<td>Name [138]</td>
<td>Gets the name of the SessionProvider</td>
</tr>
</tbody>
</table>

Reference

SessionProvider.TSession, TAddress, TSettings. Class [134]

TwinCAT Namespace [55]

6.1.18.2.1 SessionProvider.TSession, TAddress, TSettings..Capabilities Property

Gets the capabilities.

Namespace: TwinCAT [55]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

public SessionProviderCapabilities Capabilities { get; }
Property Value

Type: SessionProviderCapabilities [140]
The capabilities.

Implements

ISessionProvider.Capabilities [95]

Reference

SessionProvider.TSession, TAddress, TSettings. Class [134]
TwinCAT Namespace [55]

6.1.18.2.2 SessionProvider.TSession, TAddress, TSettings..Name Property

Gets the name of the SessionProvider

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public abstract string Name { get; }

Property Value

Type: String
The name.

Implements

ISessionProvider.Name [95]

Reference

SessionProvider.TSession, TAddress, TSettings. Class [134]
TwinCAT Namespace [55]

6.1.18.3 SessionProvider.TSession, TAddress, TSettings. Methods

The SessionProvider.TSession, TAddress, TSettings. [134] generic type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

SymbolLoaderSettings Class [140]

TwinCAT Namespace [55]
6.1.20.1.1 SymbolLoaderSettings Constructor (SymbolsLoadMode)

Initializes a new instance of the `SymbolLoaderSettings` class with `IndexGroupOffsetPreferred`.

**Namespace:** TwinCAT
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public SymbolLoaderSettings(
    SymbolsLoadMode loadMode
)
```

**Parameters**

- `loadMode` Type: `TwinCAT.SymbolsLoadMode`
  The load mode.

**Reference**

- `SymbolLoaderSettings Class`
- `SymbolLoaderSettings Overload`
- `TwinCAT Namespace`

6.1.20.1.2 SymbolLoaderSettings Constructor (SymbolsLoadMode, ValueAccessMode)

Initializes a new instance of the `SymbolLoaderSettings` class.

**Namespace:** TwinCAT
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public SymbolLoaderSettings(
    SymbolsLoadMode loadMode,
    ValueAccessMode valueAccess
)
```

**Parameters**

- `loadMode` Type: `TwinCAT.SymbolsLoadMode`
  The load mode.

  The value access.

**Reference**

- `SymbolLoaderSettings Class`
- `SymbolLoaderSettings Overload`
- `TwinCAT Namespace`
6.1.20.1.3 SymbolLoaderSettings Constructor (SymbolsLoadMode, ValueCreationModes, ValueAccessMode)

Initializes a new instance of the SymbolLoaderSettings class.

**Namespace:** TwinCAT
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 6.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

C#

```csharp
public SymbolLoaderSettings(
    SymbolsLoadMode loadMode,
    ValueCreationModes valueCreation,
    ValueAccessMode valueAccess
)
```

### Parameters

- **loadMode**
  - Type: TwinCAT.SymbolsLoadMode
  - The load mode.

- **valueCreation**
  - Type: TwinCAT.ValueAccess.ValueCreationModes
  - The dynamic value creation.

- **valueAccess**
  - The value access.

### Reference

- SymbolLoaderSettings Class
- SymbolLoaderSettings Overload

<td>Gets or sets the value update mode.</td>
</tr>
</tbody>
</table>

Reference

SymbolLoaderSettings Class [140]
TwinCAT Namespace [55]

6.1.20.2.1 SymbolLoaderSettings.AutomaticReconnection Property

Gets or sets a value indicating whether Disconnect connections can be reconnected.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool AutomaticReconnection { get; set; }
```

Property Value

Type: Boolean
true if Disconnect connections can be reconnecte; otherwise, false.

Reference

SymbolLoaderSettings Class [140]
TwinCAT Namespace [55]

6.1.20.2.2 SymbolLoaderSettings.Default Property

Gets the default settings object for standard symbols.

Namespace: TwinCAT [55]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static SymbolLoaderSettings Default { get; }
```

Property Value

Type: SymbolLoaderSettings [140]
The default settings object.
Remarks

The following defaults are set here:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symbols load mode (SymbolsLoadMode [147])</td>
<td>Create virtual tree (VirtualTree [149]).</td>
</tr>
<tr>
<td>Value access mode (ValueAccessMode [147])</td>
<td>Prefer Symbolic access of values (Symbolic [1542]).</td>
</tr>
<tr>
<td>Value creation mode ValueCreation [148]</td>
<td>Create .NET integral primitives if possible (Default [2580]).</td>
</tr>
</tbody>
</table>

Reference

Syntax

C#

```csharp
public static SymbolLoaderSettings DefaultDynamic { get; }
```

Property Value

Type: SymbolLoaderSettings [140]
The dynamic default settings object.

Remarks

The following defaults are set here:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Symbols load mode (SymbolsLoadMode [147])</td>
<td>Create dynamic tree (DynamicTree [149]).</td>

### 6.2.1 AdsClient Class

ADS Client / ADS Communication object.

**Inheritance Hierarchy**

System.Object
   TwinCAT.Ads.AdsClient

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public sealed class AdsClient : IAdsDisposableConnection,
    IAdsConnectAddress, IAdsConnection, IConnection, IConnectionServiceProvider, IAdsNotifications,
    IAdsStateProvider, IAdsStateControl, IAdsSymbolChangedProvider, IAdsRpcInvoke, IRouterNotificationProvider,
    IDisposable, IAdsSymbolTableProvider
```

The AdsClient type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [175]</td>
<td>Gets the target <code>AmsAddress [648]</code> of the established ADS connection (Destination side).</td>
</tr>
<tr>
<td>ClientAddress [176]</td>
<td>Gets the client <code>AmsAddress [648]</code> (Source side).</td>
</tr>
<tr>
<td>DefaultValueEncoding [176]</td>
<td>Gets the default value encoding.</td>
</tr>
<tr>
<td>Id [177]</td>
<td>Gets the AdsClient Identifier.</td>
</tr>
<tr>
<td>IsConnected [177]</td>
<td>Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method <code>ReadState</code> to determine if the target port is available.</td>
</tr>
<tr>
<td>IsDisposed [178]</td>
<td>Gets a value indicating whether this instance is disposed.</td>
</tr>
<tr>
<td>IsLocal [178]</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.</td>
</tr>
<tr>
<td>Session [179]</td>
<td>Gets the session that initiated this <code>IConnection [74]</code>.</td>
</tr>
<tr>
<td>SymbolEncoding [179]</td>
<td>Gets the symbol encoding.</td>
</tr>
<tr>
<td>Timeout [180]</td>
<td>Sets the timeout for the ads communication. Unit is in ms.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotification(String, Int32, NotificationSettings, Object) [195]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [338] event.</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [196]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) ![198]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification ![338] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) ![199]</td>
<td>Adds a device notification as an asynchronous operation.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type) ![201]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx ![340] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.) ![202]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx ![340] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) ![204]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx ![340] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.) ![205]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken) ![206]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx ![340] event.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32,UInt32,NotificationSettings,Object,Type,.Int32.,CancellationToken) [208]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [340] event.</td>
</tr>
<tr>
<td>CleanupSymbolTable [209]</td>
<td>Clears the internal symbol cache.</td>
</tr>
<tr>
<td>Close [210]</td>
<td>Closes this AdsClient</td>
</tr>
<tr>
<td>Connect(Int32) [211]</td>
<td>Connects to the local target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsAddress) [211]</td>
<td>Connects the target</td>
</tr>
<tr>
<td>Connect(AmsPort) [212]</td>
<td>Connects to the local target ADS Device.</td>
</tr>
<tr>
<td>Connect(String,Int32) [212]</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsNetId,Int32) [213]</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsNetId,AmsPort) [214]</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>ConnectAndWaitAsync [214]</td>
<td>Connects to the target address and waits until the AdsClient is disconnected asynchronously.</td>
</tr>
<tr>
<td>CreateVariableHandle [215]</td>
<td>Determines the Symbol handle by its instance path synchronously.</td>
</tr>
<tr>
<td>CreateVariableHandleAsync [216]</td>
<td>Determines the Symbol handle by its instance path asynchronously.</td>
</tr>
<tr>
<td>DeleteDeviceNotification [216]</td>
<td>Deletes a registered notification.</td>
</tr>
<tr>
<td>DeleteDeviceNotificationAsync [217]</td>
<td>Deletes a registered notification asynchronously.</td>
</tr>
<tr>
<td>DeleteVariableHandle [218]</td>
<td>Releases the specified symbol/variable handle synchronously.</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync [219]</td>
<td>Releases the specified symbol/variable handle asynchronously.</td>
</tr>
<tr>
<td>Disconnect [220]</td>
<td>Disconnects this AdsClient from the local ADS router.</td>
</tr>
<tr>
<td>Dispose [220]</td>
<td>Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Finalizes an instance of the AdsClient class. (Overrides <code>Object.Finalize</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>InvokeRpcMethod</code></td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td><code>InvokeRpcMethod</code></td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td><code>InvokeRpcMethod</code></td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td><code>InvokeRpcMethod</code></td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td><code>InvokeRpcMethod</code></td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td><code>InvokeRpcMethod</code></td>
<td>Invokes the specified RPC Method as an asynchronous operation.</td>
</tr>
<tr>
<td><code>Read</code></td>
<td></td>
</tr>
<tr>
<td><code>Read</code></td>
<td></td>
</tr>
</tbody>
</table>

**Note:** The `InvokeRpcMethod` and `Read` methods are provided with different parameter types to accommodate various use cases in communication and data handling within the Ads namespace.
<table>

</table>

**Remarks**

The class AdsClient enables synchronous/asynchronous access to data of an ADS Device.

**Examples**

The following sample shows how to instantiate and use the AdsClient class.

**AdsClient Demo (async)**

```csharp
using System;
using System.Buffers.Binary;
using System.Threading;
using System.Threading.Tasks;
using TwinCAT.Ads;
using TwinCAT.TypeSystem;

namespace Sample
{
    class ClientAsync
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            AmsAddress address = ArgParser.Parse(args);
            CancellationTokenSource cancelSource = new CancellationTokenSource();
            CancellationToken cancel = cancelSource.Token;

            using (AdsClient client = new AdsClient())
            {
                // Connect to Address
                client.Connect(address.NetId, address.Port); // Connect to Port (851, first PLC by default)

                // Read the identification and version number of the device
                ResultDeviceInfo resultDeviceInfo = await client.ReadDeviceInfoAsync(cancel);
                if (resultDeviceInfo.Succeeded)
                {
                    DeviceInfo deviceInfo = resultDeviceInfo.DeviceInfo;
                    Console.WriteLine(string.Format("DeviceName: {0}", deviceInfo.Name));
                    Console.WriteLine(string.Format("DeviceVersion: {0}", version.ToString(3)));
                }

                // Read the state of the device
                ResultReadDeviceState resultReadDeviceState = await client.ReadStateAsync(cancel);
            }
        }
    }
}
```
TwinCAT.Ads Namespaces

AdsState state = AdsState.Invalid;

if (resultReadDeviceState.Succeeded)
{
    StateInfo stateInfo = resultReadDeviceState.State;
    state = stateInfo.AdsState;
    short deviceState = stateInfo.DeviceState;

                Console.WriteLine(string.Format("DeviceVersion: {0}" , version.ToString(3)));

                // Read the state of the device
                StateInfo stateInfo = client.ReadState();
                AdsState state = AdsState.Invalid;
                state = stateInfo.AdsState;
                short deviceState = stateInfo.DeviceState;
                Console.WriteLine(string.Format("DeviceState: {0}" , deviceState));
                Console.WriteLine(string.Format("AdsState : {0}" , state));

                // Write ADS Commands (write state) to target
                // Set PLC to Run
                if (state == AdsState.Stop)
                {
                    client.WriteControl(new StateInfo(AdsState.Run, 0));
                }

                //create variable handle for Plc Project Name (automatic generated symbol in PLC)
                uint handleProjectName = client.CreateVariableHandle("TwinCAT_SystemInfoVarList._AppInfo.ProjectName");

                uint handleNotification = 0; // Notification Handle for Task1 CycleCount changes
                try
                {
                    // Read value from target and Marshal data into string
                    byte[] readData = new byte[256];
                    int readBytes = client.Read(handleProjectName, readData.AsMemory());
                    PrimitiveTypeMarshaler marasher = PrimitiveTypeMarshaler.Default;
                    string projectName = null;
                    int unmarshaledBytes = marasher.Unmarshal(readData, client.DefaultValueEncoding, out projectName);
                    Console.WriteLine(string.Format("ProjectName : {0}" , projectName));

                    //notificationBuffer = new byte[4]; // Sizeof UDINT
                    int size = sizeof(UInt32); // Sizeof UDINT
                    client.AdsNotification += client_NotificationEvent; // Register for Notification event
                    //Register Notification for Task1 CycleCount symbol (automatic generated symbol in PLC)
                    handleNotification = client.AddDeviceNotification("TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount", size, NotificationSettings.Default, null);
                    // Sleep 10 Seconds to receive events
                }
The following sample shows how to call (Remote Procedures / Methods) within the PLC directly from the 
AdsClient class.

**RPC Call Example (async)**

```csharp
namespace Sample
{
    using System;
    using System.Diagnostics;
    using System.Threading;
    using TwinCAT.Ads;
    using TwinCAT.TypeSystem;
    class RpcCallAsync
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            // Parse the AmsAddress from command-line arguments
            AmsAddress address = ArgParser.Parse(args);

            // Create the ADS Client
            using (AdsClient client = new AdsClient())
            {
                // Establish Connection
                client.Connect(address);

                // Call a Method that has the following signature (within MAIN Program)
                /*  {attribute 'TcRpcEnable'}
                METHOD PUBLIC M_Add : INT
                VAR_INPUT */
            }
        }
    }
}
```

**Argument Parser**

```csharp
public static class ArgParser
{
    /// <summary>
    /// Parses the arguments.
    /// </summary>
    /// <param name="args">The arguments.</param>
    /// <returns>AmsAddress.</returns>
    public static AmsAddress Parse(string[] args)
    {
        AmsNetId netId = AmsNetId.Local;
        int port = 851;
        if (args != null)
        {
            if (args.Length > 0 && args[0] != null)
                netId = AmsNetId.Parse(args[0]);
            if (args.Length > 1 && args[1] != null)
                port = int.Parse(args[1]);
        }
        return new AmsAddress(netId, port);
    }
}
```
**RPC Call Example (sync)**

```csharp
namespace Sample
{
    using System;
    using System.Diagnostics;
    using TwinCAT.Ads;
    using TwinCAT.TypeSystem;
    class RpcCall
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static void Main(string[] args)
        {
            //Parse the AmsAddress from command-line arguments
            AmsAddress address = ArgParser.Parse(args);
            // Create the ADS Client
            using (AdsClient client = new AdsClient())
            {
                // Establish Connection
                client.Connect(address);
                // Call a Method that has the following signature (within MAIN Program)
                /* {attribute 'TcRpcEnable'}
                METHOD PUBLIC M_Add : INT
                VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
                END_VAR
                */
                short result = (short)client.InvokeRpcMethod("MAIN", "M_Add", new object[] { (short)1, (short)4 }, CancellationToken.None);
                // Call a Method that has no parameter and returns VOID
                client.InvokeRpcMethod("MAIN", "M_Method1", new object[] { }, CancellationToken.None);
            }
        }
    }
}
```

### 6.2.1.1 AdsClient Properties

The AdsClient [154] type exposes the following members.
## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Gets the target \texttt{AmsAddress} of the established ADS connection.</td>
</tr>
<tr>
<td>ClientAddress</td>
<td>Gets the client \texttt{AmsAddress} (Source side).</td>
</tr>
<tr>
<td>DefaultValueEncoding</td>
<td>Gets the default value encoding.</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the identifier.</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether the local ADS port opened successfully.</td>
</tr>
<tr>
<td>IsDisposed</td>
<td>Gets a value indicating whether this instance is disposed.</td>
</tr>
<tr>
<td>IsLocal</td>
<td>Gets a value indicating whether the ADS client is connected to an ADS Server.</td>
</tr>
<tr>
<td>Session</td>
<td>Gets the session that initiated this \texttt{IConnection}.</td>
</tr>
<tr>
<td>SymbolEncoding</td>
<td>Gets the symbol encoding.</td>
</tr>
<tr>
<td>Timeout</td>
<td>Sets the timeout for the ads communication. Unit is in ms.</td>
</tr>
</tbody>
</table>

## Reference

\texttt{AdsClient Class} \[154\]

\texttt{TwinCAT.Ads Namespace} \[151\]

### 6.2.1.1 AdsClient.Address Property

Gets the target \texttt{AmsAddress} of the established ADS connection (Destination side).

**Namespace:** TwinCAT.Ads \[151\]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AmsAddress Address { get; }
```

**Property Value**

Type: \texttt{AmsAddress} \[648\]

The address.

**Implements**

\texttt{IAdsConnection.Address} \[781\]
6.2.1.1.2 AdsClient.ClientAddress Property

Get the client AmsAddress (Source side).

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public AmsAddress ClientAddress { get; }

Property Value

Type: AmsAddress
The client address.

Implements

IAdsConnection.ClientAddress

Reference

AdsClient Class
TwinCAT.Ads Namespace

6.2.1.1.3 AdsClient.DefaultValueEncoding Property

Gets the default value encoding.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public Encoding DefaultValueEncoding { get; }

Property Value

Type: Encoding
The default value encoding.

Implements

IConnection.DefaultValueEncoding

Reference

AdsClient Class
TwinCAT.Ads Namespace
6.2.1.1.4 AdsClient.Id Property

Gets the AdsClient Identifier.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int Id { get; }
```

**Property Value**

Type: Int32
The identifier.

**Implements**

IConnection.Id [76]

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]

6.2.1.1.5 AdsClient.IsConnected Property

Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsConnected { get; }
```

**Property Value**

Type: Boolean
true if this instance is connected; otherwise, false.
Implementes

IConnection.IsConnected [76]

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]

6.2.1.1.6 AdsClient.IsDisposed Property

Gets a value indicating whether this instance is disposed.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdaca3e72bc0ea15da1c14

Syntax

C#

public bool IsDisposed { get; }

Property Value

Type: Boolean
ture if this instance is disposed; otherwise, false.

Implementes

IAdsDisposableConnection.IsDisposed [812]

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]

6.2.1.1.7 AdsClient.IsLocal Property

Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdaca3e72bc0ea15da1c14

Syntax

C#

public bool IsLocal { get; }

Property Value

Type: Boolean
ture if this instance is local; otherwise, false.
Implements

IAdsConnection.IsLocal [782]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotImplementedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]

6.2.1.1.8 AdsClient.Session Property

Gets the session that initiated this IConnection [74]

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public ISession Session { get; }

Property Value

Type: ISession [88]
The session or NULL

Implements

IConnection.Session [77]

Remarks

The Session can be null on standalone connections.

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]

6.2.1.1.9 AdsClient.SymbolEncoding Property

Gets the symbol encoding.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public Encoding SymbolEncoding { get; }
```

Property Value

Type: Encoding
The symbol encoding.

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]

6.2.1.10 AdsClient.Timeout Property

Sets the timeout for the ads communication. Unit is in ms.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int Timeout { get; set; }
```

Property Value

Type: Int32

Implements

IConnection.Timeout [77]

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]

6.2.1.2 AdsClient Methods

The AdsClient [154] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![icon] AddDeviceNotification(String, Int32, NotificationSettings, Object) [195]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [338] event.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Adds a device notification as an asynchronous operation.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, Int32, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [340] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, Int32, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [340] event.</td>
</tr>
<tr>
<td>CleanupSymbolTable [209]</td>
<td>Clears the internal symbol cache.</td>
</tr>
<tr>
<td>Close [210]</td>
<td>Closes this AdsClient [154]</td>
</tr>
<tr>
<td>Connect(Int32) [211]</td>
<td>Connects to the local target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsAddress) [211]</td>
<td>Connects the target</td>
</tr>
<tr>
<td>Connect(AmsPort) [212]</td>
<td>Connects to the local target ADS Device.</td>
</tr>
<tr>
<td>Connect(String, Int32) [212]</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsNetId, Int32) [213]</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsNetId, AmsPort) [214]</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>ConnectAndWaitAsync [214]</td>
<td>Connects to the target address and waits until the AdsClient [154] is disconnected asynchronously.</td>
</tr>
<tr>
<td>CreateVariableHandle [215]</td>
<td>Determines the Symbol handle by its instance path synchronously.</td>
</tr>
<tr>
<td>CreateVariableHandleAsync [216]</td>
<td>Determines the Symbol handle by its instance path asynchronously.</td>
</tr>
<tr>
<td>DeleteDeviceNotification [216]</td>
<td>Deletes a registered notification.</td>
</tr>
<tr>
<td>DeleteDeviceNotificationAsync [217]</td>
<td>Deletes a registered notification asynchronously.</td>
</tr>
<tr>
<td>DeleteVariableHandle [218]</td>
<td>Releases the specified symbol/variable handle synchronously.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync</td>
<td>Releases the specified symbol/variable handle asynchronously.</td>
</tr>
<tr>
<td>Disconnect</td>
<td>Disconnects this AdsClient from the local ADS router.</td>
</tr>
<tr>
<td>Dispose</td>
<td>Performs application-defined tasks associated with freeing, releasing, or</td>
</tr>
<tr>
<td></td>
<td>resetting unmanaged resources.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Finalizes an instance of the AdsClient class.</td>
</tr>
<tr>
<td></td>
<td>(Overloads Object.Finalize.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String,</td>
<td>Invokes the specified RPC Method</td>

<tr>
<td>IRpcMethod, Objec t, .AnyTypeSpecifier</td>
<td></td>
</tr>
<tr>
<td>.AnyTypeSpecifier, CancellationToken)</td>
<td></td>
</tr>
<tr>
<td>Read(UInt32, Memory) [233]</td>
<td></td>
</tr>
<tr>
<td>Read(UInt32, UInt32, Memory) [233]</td>
<td></td>
</tr>
<tr>
<td>ReadAny(UInt32, Type) [236]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type, Int32.) [238]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32, Type) [240]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32, Type, Int32.) [241]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny.T.(UInt32) [235]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny.T.(UInt32, Int32.) [235]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny.T.(UInt32, UInt32) [237]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny.T.(UInt32, UInt32, Int32.) [239]</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, CancellationToken) [245]</td>
<td>Reads the value of an Anytype (Primitive type) asynchronously.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, Int32., CancellationToken)</td>
<td>Reads the value of an Anytype (Primitive type) asynchronously.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, Type, CancellationToken)</td>
<td>Reads the value of an Anytype (Primitive type) asynchronously.</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>

<tr>
<td><code>ReadAnyAsync(UInt32, UInt32, Type, Int32, CancellationToken)</code></td>
<td>Reads the value of an Anytype (Primitive type) asynchronously.</td>
</tr>
<tr>
<td><code>ReadAnyAsync.T.(UInt32, CancellationToken)</code></td>
<td>Reads data synchronously from an ADS device.</td>
</tr>
<tr>
<td><code>ReadAnyAsync.T.(UInt32, Int32, CancellationToken)</code></td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td><code>ReadAnyAsync.T.(UInt32, UInt32, Int32, CancellationToken)</code></td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td><code>ReadAnyAsync.T. (UInt32, UInt32, Int32, CancellationToken)</code></td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td><code>ReadAnyString(UInt32, Int32, Encoding)</code></td>
<td>Reads a string from the specified symbol/variable.</td>
</tr>
<tr>
<td><code>ReadAnyString(UInt32, UInt32, Int32, Encoding)</code></td>
<td>Reads a string from a specified address.</td>
</tr>
<tr>
<td><code>ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken)</code></td>
<td>Reads a string asynchronously from the specified symbol/variable.</td>
</tr>
<tr>
<td><code>ReadAnyStringAsync(UInt32, UInt32, Int32, Encoding, CancellationToken)</code></td>
<td>Reads a string from a specified address asynchronously.</td>
</tr>
<tr>
<td><code>ReadAsync(UInt32, Memory, Void)</code></td>
<td>Call this method to obtain information about the specified data type.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>ReadDataTypeAsync</td>
<td>read data type as an asynchronous operation.</td>
</tr>
<tr>
<td>ReadDeviceInfo</td>
<td>Reads the identification and version number of an ADS server.</td>
</tr>
<tr>
<td>ReadDeviceInfoAsync</td>
<td>Reads the identification and version number of an ADS server.</td>
</tr>
<tr>
<td>ReadState</td>
<td>Reads the ADS status and the device status from an ADS server.</td>
</tr>
<tr>
<td>ReadStateAsync</td>
<td>Reads the ADS status and the device status from an ADS server.</td>
</tr>
<tr>
<td>ReadSymbol</td>
<td>Call this method to obtain information about the individual symbols (variables) in ADS devices.</td>
</tr>
<tr>
<td>ReadSymbolAsync</td>
<td>Call this method to obtain information about the individual symbols (variables) in ADS devices.</td>
</tr>
<tr>
<td>ReadValue(ISymbol)</td>
<td>Reads the value of a symbol and returns it as an object.</td>
</tr>
<tr>
<td>ReadValue(String, Type)</td>
<td>Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.</td>
</tr>
<tr>
<td>ReadValue.T(String)</td>
<td>Reads the value of a symbol and returns the value. The parameter type must have the same layout as the ADS symbol.</td>
</tr>
<tr>
<td>ReadValue.T.(ISymbol)</td>
<td>Reads the value of a symbol and returns it as an object.</td>
</tr>
<tr>
<td>ReadValueAsync(ISymbol, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously and returns it as an object. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.</td>
</tr>
<tr>
<td>ReadValueAsync(String, Type, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously.</td>
</tr>
<tr>
<td>ReadValueAsync.TValue(String, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously.</td>
</tr>
<tr>
<td>ReadValueAsync.TValue(ISymbol, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously and returns it as an object.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ReadWriteAsync(UInt32, Memory, Void, Byte)</td>
<td>Registers for <code>AdsStateChanged</code> events as an asynchronous operation.</td>
</tr>
<tr>
<td>ReadWriteAsync(UInt32, UInt32, Memory, Void, Byte)</td>
<td></td>
</tr>
<tr>
<td>RegisterAdsStateChangedAsync</td>
<td>Registers for an <code>AdsSymbolVersionChanged</code> event as an asynchronous operation.</td>
</tr>
<tr>
<td>RegisterSymbolVersionChangedAsync</td>
<td></td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the <code>AdsNotification</code> event.</td>
</tr>
<tr>
<td>TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the <code>AdsNotification</code> event.</td>
</tr>
<tr>
<td>TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the <code>AdsNotificationEx</code> event.</td>
</tr>
<tr>
<td>TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the <code>AdsNotificationEx</code> event.</td>
</tr>
<tr>
<td>TryCreateVariableHandle</td>
<td>Determines the Symbol handle by its instance path synchronously.</td>
</tr>
<tr>
<td>TryDeleteDeviceNotification(UInt32)</td>
<td>Deletes a registered notification.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>TryDeleteDeviceNotification(UInt32, Int32)</td>
<td>Deletes a registered notification.</td>

<tr>
<td>TryWriteControl(StateInfo)</td>
<td></td>
</tr>
<tr>
<td>TryWriteValue(String, Object)</td>
<td>Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.</td>
</tr>
<tr>
<td>TryWriteValue(ISymbol, Object)</td>
<td>Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.</td>
</tr>
<tr>
<td>TryWriteValue(String, T.)</td>
<td>Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.</td>
</tr>
<tr>
<td>TryWriteValue(ISymbol, T.)</td>
<td>Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.</td>
</tr>
<tr>
<td>UnregisterAdsStateChangedAsync</td>
<td>unregister ads state changed as an asynchronous operation.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>UnregisterSymbolVersionChangedAsync</td>
<td>Unregisters from an AdsSymbolVersionChanged event as an asynchronous operation.</td>
</tr>
<tr>
<td>Write(UInt32, ReadOnlyMemory)</td>
<td>Triggers a 'Write' call to the ADS device at the specified address.</td>
</tr>
<tr>
<td>Write(UInt32, UInt32, ReadOnlyMemory)</td>
<td>Writes an object synchronously to an ADS device.</td>
</tr>
<tr>
<td>WriteAny(UInt32, Object)</td>
<td>Writes an object synchronously to an ADS device.</td>
</tr>
<tr>
<td>WriteAny(UInt32, Object, Int32.)</td>
<td>Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.</td>
</tr>
<tr>
<td>WriteAnyAsync(UInt32, Object, CancellationToken)</td>
<td>Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.</td>
</tr>
<tr>
<td>WriteAnyAsync(UInt32, UInt32, Object, CancellationToken)</td>
<td>Writes the value of an Anytype (Primitive type) asynchronously.</td>

### Extension Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PollAdsState(IObservable&lt;Unit&gt;) [1061]</td>
<td>Overloaded. Gets an observable sequence of AdsState [626]s via Polling. (Defined by AdsClientExtensions [1056].)</td>
</tr>
<tr>
<td>PollAdsStateAsync(IObservable&lt;Unit&gt;, CancellationToken) [1064]</td>
<td>Overloaded. Gets an observable sequence of AdsState [626]s via Polling. (Defined by AdsClientExtensions [1056].)</td>
</tr>
<tr>
<td>PollValues(String, Type, Observable&lt;Unit&gt;) [1089]</td>
<td>Overloaded. Polls the symbol values on timepoints where the polling observable streams data / triggers (Defined by AnyTypeExtensions [1075].)</td>
</tr>
<tr>
<td>PollValues(String, Type, TimeSpan) [1090]</td>
<td>Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [1075].)</td>
</tr>
<tr>
<td>PollValues(String, Type, Int32, TimeSpan) [1093]</td>
<td>Overloaded. Polls the symbol as value sequence of object values with a specified period time. (Defined by AnyTypeExtensions [1075].)</td>

#### Reference

- AdsClient Class [154]
- TwinCAT.Ads Namespace [151]

### AdsClient.AddDeviceNotification Method (String, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public uint AddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object userData
)
```

**Parameters**

- **symbolPath**
  - Type: System.String
  - Symbol / Instance path of the ADS variable.

- **dataSize**
  - Type: System.Int32
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: TwinCAT.Ads.NotificationSettings [979]
  - The settings.
userData

Type: System.Object

This object can be used to store user specific data (tag data)

Return Value

Type: UInt32

The notification handle.

Implements

IAdsNotifications.AddDeviceNotification(String, Int32, NotificationSettings, Object) [844]

Remarks

The dataSize Parameter defines the amount of bytes, that will be attached to the AdsNotification [338] as value. Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotification(UInt32) [216] should always called when the notification is not used anymore.

TryAddDeviceNotification Overload [859]

AdsClient.AddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint AddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData
)
```
Parameters

- **indexGroup**
  - Type: System.UInt32
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: System.UInt32
  - Contains the index offset number of the requested ADS service.

- **dataSize**
  - Type: System.Int32
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: TwinCAT.Ads.NotificationSettings
  - The Notification settings.

- **userData**
  - Type: System.Object
  - This object can be used to store user specific data (tag data)

Return Value

- Type: UInt32
  - The notification handle.

Implements

- IAdsNotifications.AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)

Remarks

- The `dataSize` Parameter defines the amount of bytes, that will be attached to the AdsNotification as value. Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotification(UInt32) should always called when the notification is not used anymore.

6.2.1.2.2 AdsClient.AddDeviceNotificationAsync Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [198]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [338] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [199]</td>
<td>Adds a device notification as an asynchronous operation.</td>
</tr>
</tbody>
</table>

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]

AdsClient.AddDeviceNotificationAsync Method (String, Int32, NotificationSettings, Object, CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [338] event.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultHandle> AddDeviceNotificationAsync(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    CancellationToken cancel
)
```

Parameters

symbolPath
Type: System.String
The symbol/instance path of the ADS variable.

dataSize
Type: System.Int32
Maximum amount of data in bytes to receive with this ADS Notification.

settings
Type: TwinCAT.Ads.NotificationSettings [979]
The notification settings.
userData

Type: System.Object
This object can be used to store user specific data (tag data)

cancel

Type: System.Threading.CancellationToken
The Cancellation token.

Return Value
Type: Task.ResultHandle [1005]
A task that represents the asynchronous 'AddDeviceNotification' operation. The ResultHandle [1005] type parameter contains the created handle (Handle [1007]) and the ErrorCode [992] after execution.

Implements
IAdsNotifications.AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [847]

Remarks
The

dataSize

Parameter defines the amount of bytes, that will be attached to the AdsNotification [338] as value. Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotificationAsync(UInt32, CancellationToken) [217] should always be called when the notification is not used anymore.

Reference

AdsClient.DeleteDeviceNotificationAsync(UInt32, CancellationToken) [217]
AddDeviceNotification Overload [844]
AddDeviceNotificationAsync Overload [847]
TryAddDeviceNotification Overload [859]

AdsClient.AddDeviceNotificationAsync Method (UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)

Adds a device notification as an asynchronous operation.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public Task<ResultHandle> AddDeviceNotificationAsync(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    CancellationToken cancel
)
```

**Parameters**

- **indexGroup**
  - Type: `System.UInt32`
  - The index group number of the requested ADS service.

- **indexOffset**
  - Type: `System.UInt32`
  - The index offset number of the requested ADS service.

- **dataSize**
  - Type: `System.Int32`
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings`
  - The notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data)

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The Cancellation token.

**Return Value**

Type: `Task<ResultHandle>`

A task that represents the asynchronous 'AddDeviceNotification' operation. The `ResultHandle` type parameter contains the created handle (Handle) and the `ErrorCode` after execution.

**Implements**

`IAdsNotifications.AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)`

**Remarks**

The `dataSize` parameter defines the amount of bytes, that will be attached to the `AdsNotification` as value. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always be called when the notification is not used anymore.

### AdsClient.AddDeviceNotificationEx Method (String, NotificationSettings, Object, Type)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type
)
```

**Parameters**

- **symbolPath**
  - Type: `System.String`
  - Symbol/Instance path of the ADS variable.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings`
  - The Notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data)

- **type**
  - Type: `System.Type`
  - Type of the object stored in the event argument ('AnyType')

**Return Value**

- Type: `UInt32`
  - The notification handle.

**Implements**

- `IAdsNotifications.AddDeviceNotificationEx(String, NotificationSettings, Object, Type)`

**Remarks**

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)` should always be called when the notification is not used anymore.

**AdsClient.AddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32.)**

Connects a variable to the ADS client. The ADS client will be notified by the `AdsNotificationEx` event.
Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args
)
```

Parameters

- **symbolPath**: Type: System.String
  Symbol/Instance path of the ADS variable.
- **settings**: Type: TwinCAT.Ads.NotificationSettings
  The Notification settings.
- **userData**: Type: System.Object
  This object can be used to store user specific data (tag data)
- **type**: Type: System.Type
  Type of the object stored in the event argument ('AnyType')
- **args**: Type: System.Int32
  Additional arguments (for 'AnyType')

Return Value

Type: UInt32
The notification handle.

Implements

IAdsNotifications.AddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32.)

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotification(UInt32) should always called when the notification is not used anymore.

AdsClient.AddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [340] event.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint AddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type type
)
```

Parameters

- **indexGroup**
  - Type: System.UInt32
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: System.UInt32
  - Contains the index offset number of the requested ADS service.

- **settings**
  - Type: TwinCAT.Ads.NotificationSettings [979]
  - The Notification settings.

- **userData**
  - Type: System.Object
  - This object can be used to store user specific data (tag data)

- **type**
  - Type: System.Type
  - Type of the object stored in the event argument ('AnyType')

Return Value

Type: UInt32
The notification handle.

Implements

|AdsNotifications.AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [852]

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotification(UInt32) [216] should always called when the notification is not used anymore.

</tr>
</tbody>
</table>

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]

AdsClient.AddDeviceNotificationExAsync Method (String, NotificationSettings, Object, Type, .Int32., CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [340] event.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd72bc0ea15da1c14
Syntax

C#

```csharp
public Task<ResultHandle> AddDeviceNotificationExAsync(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    CancellationToken cancel
)
```

Parameters

- **symbolPath**
  Type: `System.String`
  The symbol/instance path of the ADS variable.

- **settings**
  Type: `TwinCAT.Ads.NotificationSettings` *(979)*
  The notification settings.

- **userData**
  Type: `System.Object`
  This object can be used to store user specific data (tag data)

- **type**
  Type: `System.Type`
  Type of the object stored in the event argument ('AnyType')

- **args**
  Type: `System.Int32`
  Additional arguments (for 'AnyType')

- **cancel**
  Type: `System.Threading.CancellationToken`
  The Cancellation token.

Return Value

Type: `Task<ResultHandle>` *(1005)*
A task that represents the asynchronous 'AddDeviceNotification' operation. The `ResultHandle` *(1005)* type parameter contains the created handle (`Handle` *(1007)*) and the `ErrorCode` *(992)* after execution.

Implements

`IAdsNotifications.AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, Int32, CancellationToken)` *(855)*

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` *(217)* should always be called when the notification is not used anymore.

Reference

- `AddDeviceNotificationEx Overload` *(850)*
- `AddDeviceNotificationExAsync Overload` *(855)*
TryAddDeviceNotificationEx Overload [862]

**AdsClient.AddDeviceNotificationExAsync Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken)**

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [340] event.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultHandle> AddDeviceNotificationExAsync(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type anyType,
    int[] args,
    CancellationToken cancel)
```

**Parameters**

- **indexGroup**
  - **Type:** System.UInt32
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - **Type:** System.UInt32
  - Contains the index offset number of the requested ADS service.

- **settings**
  - **Type:** TwinCAT.Ads.NotificationSettings [979]
  - The settings.

- **userData**
  - **Type:** System.Object
  - This object can be used to store user specific data.

- **anyType**
  - **Type:** System.Type
  - Type of the object stored in the event argument, only Primitive 'AnyTypes' allowed.

- **args**
  - **Type:** System.Int32
  - Additional arguments (for 'AnyType')

- **cancel**
  - **Type:** System.Threading.CancellationToken
  - The Cancellation token.

**Return Value**

- **Type:** Task<ResultHandle> [1005]
  - A task that represents the asynchronous 'AddDeviceNotification' operation. The ResultHandle [1005] type parameter contains the created handle (Handle [1007]) and the ErrorCode [992] after execution.

**Implements**

- AdsNotifications.AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [856]
Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always be called when the notification is not used anymore.

6.2.1.2.5 AdsClient.CleanupSymbolTable Method

Clears the internal symbol cache.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void CleanupSymbolTable()
```

Implements

`IAdsSymbolicAccess.CleanupSymbolTable` [942]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ObjectDisposedException</code></td>
<td></td>
</tr>
<tr>
<td><code>ClientNotConnectedException</code></td>
<td>[63]</td>
</tr>
</tbody>
</table>

Remarks

Previously stored symbol information is cleared. As a consequence the symbol information must be obtained from the ADS server again if accessed, which which needs an extra ADS round trip.
6.2.1.2.6 AdsClient.Close Method

Closes this AdsClient.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public void Close()

Implements

IConnection.Close

Reference

**Reference**

AdsClient Class [154]

Connect Overload [210]

TwinCAT.Ads Namespace [151]

---

**AdsClient.Connect Method (AmsAddress)**

Connects the target

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public void Connect(
    AmsAddress address
)
```

**Parameters**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>address</td>
<td>TwinCAT.Ads.AmsAddress</td>
<td>The address.</td>
</tr>
</tbody>
</table>

**Implements**

IAdsConnectAddress.Connect(AmsAddress) [763]
Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

AdsClient Class [154]

Connect Overload [210]

TwinCAT.Ads Namespace [151]

**AdsClient.Connect Method (AmsPort)**

Connects to the local target ADS Device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void Connect(
    AmsPort port
)
```

**Parameters**

- **port**
  - Type: TwinCAT.Ads.AmsPort [693]
  - The port number of the local ADS target device to connect to.

Reference

AdsClient Class [154]

Connect Overload [210]

TwinCAT.Ads Namespace [151]

**AdsClient.Connect Method (String, Int32)**

Connects to the target ADS Device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public void Connect(
    string netId,
    int port
)
```
Parameters

netId
Type: System.String
The AmsNetId of the ADS target device specified as string.

port
Type: System.Int32
The port number of the ADS target device.

Implements

IAdsConnectAddress.Connect(String, Int32)

Reference

AdsClient Class
Connect Overload
TwinCAT.Ads Namespace

AdsClient.Connect Method (AmsNetId, Int32)

Connects to the target ADS Device.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public void Connect(
    AmsNetId netId,
    int port
)

Parameters

netId
Type: TwinCAT.Ads.AmsNetId
The AmsNetId of the target device.

port
Type: System.Int32
The Ams Port number on the target device to connect to.

Implements

IAdsConnectAddress.Connect(AmsNetId, Int32)

Reference

AdsClient Class
Connect Overload
TwinCAT.Ads Namespace
**AdsClient.Connect Method (AmsNetId, AmsPort)**

Connects to the target ADS Device.

**Parameters**

- `netId` Type: `TwinCAT.Ads.AmsNetId` [665]
  The `AmsNetId` [665] of the ADS target device specified as string.

- `port` Type: `TwinCAT.Ads.AmsPort` [693]
  The port number of the ADS target device.

**Reference**

- `AdsClient Class` [154]

### 6.2.1.2.8 AdsClient.ConnectAndWaitAsync Method

Connects to the target address and waits until the `AdsClient` [154] is disconnected asynchronously.

**Parameters**

- `address` Type: `TwinCAT.Ads.AmsAddress` [648]
  The target address.

- `cancel` Type: `System.Threading.CancellationToken`
  Cancellation Token.

**Return Value**

Type: `Task`

Returns a task object that represents the ConnectAndWaitAsync(AmsAddress, CancellationToken) operation as result.
Remarks

This method is used for scenarios, where the AdsClient disconnects from other code asynchronously. When this method returns, the connection is already terminated and only additional cleanup code should be processed.

Reference

AdsClient Class

TwinCAT.Ads Namespace

6.2.1.2.9 AdsClient.CreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public uint CreateVariableHandle(  string symbolPath  )

Parameters

symbolPath Type: System.String SymbolName / InstancePath.

Return Value

Type: UInt32 The symbols/variable handle

Implements

IAdsHandle.CreateVariableHandle(String)

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this CreateVariableHandle(String) is the DeleteVariableHandle(UInt32)

Reference

AdsClient Class

TwinCAT.Ads Namespace

AdsClient.DeleteVariableHandle(UInt32)
AdsClient.CreateVariableHandleAsync(String, CancellationToken)
AdsClient.TryCreateVariableHandle(String, UInt32.)
6.2.1.2.10 AdsClient.CreateVariableHandleAsync Method

Determines the Symbol handle by its instance path asynchronously.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Task<ResultHandle> CreateVariableHandleAsync(
    string symbolPath,
    CancellationToken cancel
)
```

**Parameters**

- `symbolPath`  
  Type: System.String  
  SymbolName / InstancePath.

- `cancel`  
  Type: System.Threading.CancellationToken  
  The cancellation token.

**Return Value**

Type: Task<ResultHandle>  
A task that represents the asynchronous 'CreateVariableHandle' operation. The ResultHandle parameter contains the variable handle (Handle) and the ErrorCode after execution.

**Implements**

IAdsHandle.CreateVariableHandleAsync(String, CancellationToken)

**Remarks**

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this CreateVariableHandleAsync(String, CancellationToken) is the DeleteVariableHandleAsync(UInt32, CancellationToken).

**Reference**

AdsClient Class

AdsClient.DeleteVariableHandleAsync(UInt32, CancellationToken)

AdsClient.TryCreateVariableHandle(String, UInt32.)

AdsClient.CreateVariableHandle(String)

6.2.1.2.11 AdsClient.DeleteDeviceNotification Method

Deletes a registered notification.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public void DeleteDeviceNotification(
    uint notificationHandle
)
```

Parameters

- **notificationHandle**
  - Type: `System.UInt32`
  - Notification handle.

Implements

- `IAdsNotifications.DeleteDeviceNotification(UInt32)`

Remarks

This is the complementary method to `AddDeviceNotification Overload` overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

Reference

- `AdsClient Class` [857]

6.2.1.2.12  AdsClient.DeleteDeviceNotificationAsync Method

Deletes a registered notification asynchronously.

Namespace:  `TwinCAT.Ads` [151]
Assembly:  `TwinCAT.Ads` (in `TwinCAT.Ads.dll`) Version:  5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAds> DeleteDeviceNotificationAsync(
    uint notificationHandle,
    CancellationToken cancel
)
```

Parameters

- **notificationHandle**
  - Type: `System.UInt32`
  - Notification handle.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.
Return Value

Type: Task.ResultAds [989].
A task that represents the asynchronous 'DeleteDeviceNotification' operation. The ErrorCode [992] property contains the ADS error code after execution.

Implements

IAdsNotifications.DeleteDeviceNotificationAsync(UInt32, CancellationToken) [858]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException [63]</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

This is the complementary method to AddDeviceNotificationAsync Overload [847] overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

6.2.1.2.13 AdsClient.DeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void DeleteVariableHandle(
    uint variableHandle
)
```

Parameters

variableHandle Type: System.UInt32
Handle of the ADS variable
Return Value
Type: The ADS error code.

Implements
| AdsHandle.DeleteVariableHandle(UInt32) [158]

Remarks
It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this TryDeleteVariableHandle(UInt32) [154] is the TryCreateVariableHandle(String, UInt32) [151].

Reference

AdsClient.TryDeleteVariableHandle(UInt32) [285]
AdsClient.DeleteVariableHandleAsync(UInt32, CancellationToken) [219]

6.2.1.2.14 AdsClient.DeleteVariableHandleAsync Method
Releases the specified symbol/variable handle asynchronously.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public Task<ResultAds> DeleteVariableHandleAsync(
    uint variableHandle,
    CancellationToken cancel
)

Parameters
variableHandle Type: System.UInt32
Handle of the ADS variable
cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value
Type: Task<ResultAds> [989].
A task that represents the asynchronous ‘DeleteVariableHandle’ operation. The ResultAds [989] parameter contains the ErrorCode [992] after execution.
Implements

IAdsHandle.DeleteVariableHandleAsync(UInt32, CancellationToken) [831]

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this DeleteVariableHandleAsync(UInt32, CancellationToken) is the CreateVariableHandleAsync(String, CancellationToken) [216]

Reference

AdsClient.DeleteVariableHandle(UInt32) [218]

6.2.1.2.15 AdsClient.Disconnect Method

Disconnects this AdsClient [154] from the local ADS router.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public bool Disconnect()

Return Value

Type: Boolean
ture if disconnected, false otherwise.

Implements

IConnection.Disconnect [79]

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]

6.2.1.2.16 AdsClient.Dispose Method

Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
6.2.1.2.17 AdsClient.Finalize Method

Finalizes an instance of the AdsClient [154] class.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected override void Finalize()
```

Implements

Object.Finalize.

Reference

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]

**AdsClient.InvokeRpcMethod Method (String, String, .Object.)**

Invokes the specified RPC Method

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters
)
```

**Parameters**

- **symbolPath**  
  Type: System.String  
  The symbol path.

- **methodName**  
  Type: System.String  
  The method name.

- **inParameters**  
  Type: System.Object  
  The input parameters or NULL

**Return Value**

Type: Object  
The return value of the Method (as object).

**Implements**

IAdsRpcInvoke.InvokeRpcMethod(String, String, Object) [890]

**Remarks**

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.
Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

```csharp
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;

            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
               METHOD PUBLIC M_Add : INT
               VAR_INPUT
               l1 : INT := 0;
               l2 : INT := 0;
               END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
```

Reference

AdsClient Class [▲ 154]
InvokeRpcMethod Overload [▲ 221]
TwinCAT.Ads Namespace [▲ 151]

AdsClient.InvokeRpcMethod Method (String, String, .Object., .Object..)
Invokes the specified RPC Method
Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object[] outParameters
)
```

Parameters

- **symbolPath**: Type: System.String
  The symbol path.
- **methodName**: Type: System.String
  The method name.
- **inParameters**: Type: System.Object
  The input parameters or NULL
- **outParameters**: Type: System.Object
  The output parameters.

Return Value

Type: Object
The return value of the Method (as object).

Implements

IAdsRpcInvoke.InvokeRpcMethod(String, String, Object, Object) [891]

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

**Dynamic Tree Mode**

```csharp
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
```
SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

// Get the Symbols (Dynamic Symbols)
IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

// Call a Method that has the following signature (within MAIN Program)
/* (attribute 'TcRpcEnable')
METHOD PUBLIC M_Add : INT
VAR_INPUT
  i1 : INT := 0;
  i2 : INT := 0;
END_VAR
*/
short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});;

// Call a Method that has no parameter and returns VOID
main.InvokeRpcMethod("M_Method1", new object[]{});;

// Browsing RpcMethods
foreach(IRpcMethod method in main.RpcMethods)
{
  string methodName = method.Name;
  foreach(IRpcMethodParameter parameter in method.Parameters)
  {
    string parameterName = parameter.Name;
    string parameterType = parameter.TypeName;
  }
}

Reference

AdsClient Class [154]
InvokeRpcMethod Overload [221]

TwinCAT.Ads Namespace [151]

AdsClient.InvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..)

Invokes the specified RPC Method

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

public Object InvokeRpcMethod(
  string symbolPath,
  string methodName,
  Object[] inParameters,
  AnyTypeSpecifier[] outSpecifiers,
  AnyTypeSpecifier retSpecifier,
  out Object[] outParameters
)
Parameters

symbolPath
Type: System.String
The symbol path.

methodName
Type: System.String
The method name.

inParameters
Type: System.Object
The parameters.

outSpecifiers
Type: TwinCAT.TypeSystem.AnyTypeSpecifier
The out specifiers (specifying the out types) or NULL.

retSpecifier
Type: TwinCAT.TypeSystem.AnyTypeSpecifier
The ret specifier (specifying the return value) or NULL.

outParameters
Type: System.Object
The out parameters.

Return Value

Type: Object
The return value of the Method (as object).

Implements

IAdsRpcInvoke.InvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object)

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>

### Reference

- **AdsClient Class** [154]
- **TwinCAT.Ads Namespace** [151]

### AdsClient.InvokeRpcMethodAsync Method (String, String, .Object., CancellationToken)

Invokes the specified RPC Method asynchronously

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

#### Syntax

C#

```csharp
public Task<ResultRpcMethod> InvokeRpcMethodAsync(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    CancellationToken cancel
)
```

#### Parameters

- **symbolPath**
  - Type: `System.String`
  - The symbol/Instance path of the symbol.

- **methodName**
  - Type: `System.String`
  - The method name.

- **inParameters**
  - Type: `.System.Object`
  - The parameters.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token

#### Return Value

- Type: `Task<ResultRpcMethod>` [1025]
  - A task that represents the asynchronous 'InvokeRpcMethod' operation. The `ResultRpcMethod` [1025] results contains the return value together with the output parameters.

#### Implements

- `IAdsRpcInvoke.InvokeRpcMethodAsync(String, String, .Object., CancellationToken)` [895]
Remarks

Because this overload doesn't provide any AnyTypeSpecifier \[1633\] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

**Dynamic Tree Mode**

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);

            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
            i1 : INT := 0;
            i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[]{});

            // Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}

Reference

- AdsClient Class [154]
- InvokeRpcMethodAsync Overload [227]
- TwinCAT.Ads Namespace [151]
AdsClient.InvokeRpcMethodAsync Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultRpcMethod> InvokeRpcMethodAsync(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    CancellationToken cancel
)
```

**Parameters**

- **symbolPath**
  - Type: System.String
  - The symbol/Instance path of the symbol.

- **methodName**
  - Type: System.String
  - The method name.

- **inParameters**
  - Type: System.Object
  - The parameters.

- **outSpecifiers**
  - Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  - The out specifiers (specifying the out types) or NULL.

- **retSpecifier**
  - Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  - The ret specifier (specifying the return value) or NULL.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token

**Return Value**

Type: Task<ResultRpcMethod>

A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethod results contains the return value together with the output parameters.

**Remarks**

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set. ReturnValue and the ErrorCode of the ADS communication after execution.

**Implements**

IAdsRpcInvoke.InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [897]

**Examples**

The following sample shows how to call (Remote Procedures / Methods) within the PLC.
Dynamic Tree Mode

class RpcCallVirtualProgram
{
/// <summary>
/// Defines the entry point of the application.
/// </summary>
/// <param name="args">The arguments.</param>
static void Main(string[] args)
{
  // Get the AdsAddress from command-line arguments
  AmsAddress address = ArgParser.Parse(args);
  using (AdsClient client = new AdsClient())
  {
    //client.Synchronize = false;
    // Connect to the target device
    client.Connect(address);
    SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
    ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
    // Get the Symbols (Dynamic Symbols)
    IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
    // Call a Method that has the following signature (within MAIN Program)
    /*
     * {attribute 'TcRpcEnable'}
     METHOD PUBLIC M_Add : INT
     VAR_INPUT
      i1 : INT := 0;
      i2 : INT := 0;
     END_VAR
     */
    short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});
    // Call a Method that has no parameter and returns VOID
    main.InvokeRpcMethod("M_Method1", new object[]{});
    //Browsing RpcMethods
    foreach(IRpcMethod method in main.RpcMethods)
    {
      string methodName = method.Name;
      foreach(IRpcMethodParameter parameter in method.Parameters)
      {
        string parameterName = parameter.Name;
        string parameterType = parameter.TypeName;
      }
    }
  }
}

Reference

InvokeRpcMethodAsync Overload [227]
TwinCAT.Ads Namespace [151]

AdsClient.InvokeRpcMethodAsync Method (IRpcCallableInstance, IRpcMethod, .Object., .AnyTypeSpecifier., .AnyTypeSpecifier, CancellationToken)

invoke RPC method as an asynchronous operation.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public Task<ResultRpcMethod> InvokeRpcMethodAsync(
    IRpcCallableInstance symbol,
    IRpcMethod rpcMethod,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpec,
    AnyTypeSpecifier returnSpec,
    CancellationToken cancel)
```

Parameters

symbol Type: TwinCAT.TypeSystem.IRpcCallableInstance
The symbol.

rpcMethod Type: TwinCAT.TypeSystem.IRpcMethod
The RPC method.

inParameters Type: System.Object
The in parameters.

outSpec Type: TwinCAT.TypeSystem.AnyTypeSpecifier
The out spec.

returnSpec Type: TwinCAT.TypeSystem.AnyTypeSpecifier
The return spec.

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultRpcMethod>
Task<ResultRpcMethod>.

Implements

IAdsRpcInvoke.InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)

</tbody>
</table>
## AdsClient.ReadAny<T>.T. Method (UInt32)

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** [TwinCAT.Ads](#)

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**
```csharp
public T ReadAny<T>(
    uint variableHandle
)
```

### Parameters

- **variableHandle**
  - Type: System.UInt32
  - Handle of the ADS variable.

### Type Parameters

- **T**
  - The type of the value to read.

### Return Value

- **Type:** T
  - The value of the read symbol.

### Implements

- [IAdsAnyAccess.ReadAny.T.(UInt32)](#)

### Reference

- [AdsClient Class](#)

---

### AdsClient.ReadAny<T>.T. Method (UInt32, .Int32.)

Reads data synchronously from an ADS device and writes it to an object.
Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public T ReadAny<T>(
    uint variableHandle,
    int[] args
)
```

Parameters

variableHandle Type: System.UInt32
Handle of the ADS variable.

args Type: System.Int32
Additional arguments.

Type Parameters

T The type of the value to read.

Return Value

Type: T
The value of the read symbol.

Implements

IAdsAnyAccess.ReadAny.T.(UInt32, .Int32.)

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

<table>
<thead>
<tr>
<th>Type of value Parameter</th>

</tr>
</tbody>
</table>

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]

**AdsClient.ReadAnyAsync.T. Method (UInt32, CancellationToken)**

Reads data synchronously from an ADS device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint variableHandle,
    CancellationToken cancel
)
```

**Parameters**

- **variableHandle**
  - Type: `System.UInt32`
  - The variable/symbol handle.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

**Type Parameters**

- **T**
  - The Type of the value to be read.

**Return Value**

Type: `Task<ResultValue<T>>`

A task that represents the asynchronous read operation. The `ResultAnyValue` parameter contains the read value (Value [1000]) and the `ErrorCode` after execution.
Implements
IAdsAnyAccess.ReadAnyAsync<T).(UInt32, CancellationToken) [715]

Remarks
As object types only primitive types are supported.

Reference
AdsClient Class [154]
ReadAnyAsync Overload [242]
TwinCAT.Ads Namespace [151]

AdsClient.ReadAnyAsync<T>. Method (UInt32, Int32, CancellationToken)
Reads data asynchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax
C#
public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint variableHandle,
    int[] args,
    CancellationToken cancel
)

Parameters
variableHandle Type: System.UInt32
The variable handle.
args Type: System.Int32
Additional arguments.
cancel Type: System.Threading.CancellationToken
The cancellation token.

Type Parameters
T Type of the object to be read

Return Value
Type: Task<ResultValue<T>>.T..
A task that represents the asynchronous read operation. The ResultValue.TValue. [1029] parameter contains the read value (Value [1032]) and the ErrorCode [992] after execution.

Implements
IAdsAnyAccess.ReadAnyAsync<T>(UInt32, Int32, CancellationToken) [715]
Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

Reference

AdsClient Class [154]

ReadAnyAsync Overload [242]

TwinCAT.Ads Namespace [151]

**AdsClient.ReadAnyAsync Method (UInt32, Type, CancellationToken)**

Reads the value of an Anytype (Primitive type) asynchronously.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public Task<ResultAnyValue> ReadAnyAsync(  
    uint variableHandle,  
    Type type,  
    CancellationToken cancel
)
```

**Parameters**

- **variableHandle**  
  Type: System.UInt32  
  The variable handle.

- **type**  
  Type: System.Type  
  The type as AnyType (primitive types).

- **cancel**  
  Type: System.Threading.CancellationToken  
  The cancellation token.

**Return Value**

Type: Task<ResultAnyValue>[998].  
A task that represents the asynchronous ‘ReadState’ operation. The ResultAnyValue [998] parameter contains the value Value [1000] and the ErrorCode [992] of the ADS communication after execution.

**Implements**

IAdsAnyAccess.ReadAnyAsync(UInt32, Type, CancellationToken) [716]
AdsClient.ReadAnyAsync.T. Method (UInt32, UInt32, CancellationToken)

Reads data asynchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint indexGroup,
    uint indexOffset,
    CancellationToken cancel
)
```

**Parameters**

- **indexGroup**
  - Type: System.UInt32
  - Index group of the ADS variable.

- **indexOffset**
  - Type: System.UInt32
  - Index offset of the ADS variable.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Type Parameters**

- **T**

**Return Value**

- **Type:** Task<ResultValue<T>>
  - The asynchronous result.

**Return Value**

- **Type:** Task<ResultValue<T>>
  - A task that represents the asynchronous read operation. The ResultValue.TValue parameter contains the read value (Value) and the ErrorCode parameter contains the error code (Error) after execution.

**Implements**

- IAdsAnyAccess.ReadAnyAsync.T.(UInt32, UInt32, CancellationToken)

**Reference**

**Syntax**

C#

```csharp
public Task<ResultAnyValue> ReadAnyAsync(
    uint variableHandle,
    Type type,
    int[] args,
    CancellationToken cancel
)
```

**Parameters**

- **variableHandle**
  - Type: System.UInt32
  - The variable handle.

- **type**
  - Type: System.Type
  - The type as AnyType (primitive types).

- **args**
  - Type: System.Int32.
  - The type arguments (AnyType)

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Return Value**

Type: Task<ResultAnyValue> [› 998].

A task that represents the asynchronous 'ReadState' operation. The ResultAnyValue [› 998] parameter contains the value Value [› 1000] and the ErrorCode [› 992] of the ADS communication after execution.

**Implements**

IAdsAnyAccess.ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [› 718]

**Reference**

- AdsClient Class [› 154]

- TwinCAT.Ads Namespace [› 151]

**AdsClient.ReadAnyAsync.T. Method (UInt32, UInt32, .Int32., CancellationToken)**

Reads data asynchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads [› 151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint indexGroup,
    uint indexOffset,
    int[] args,
    CancellationToken cancel)
```

Parameters

indexGroup  
Type: System.UInt32  
Index group of the ADS variable.

indexOffset  
Type: System.UInt32  
Index offset of the ADS variable.

args  
Type: System.Int32.  
Additional arguments.

cancel  
Type: System.Threading.CancellationToken  
The cancellation token.

Type Parameters

T  
The type of the result value.

Return Value

Type: Task<ResultValue<T>>.  
A task that represents the asynchronous read operation. The ResultValue.TValue parameter contains the read value (Value) and the ErrorCode after execution.

Implements

IAdsAnyAccess.ReadAnyAsync<T>(UInt32, UInt32, Int32, CancellationToken)

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

AdsClient.ReadAnyAsync Method (UInt32, UInt32, Type, CancellationToken)

Reads the value of an Anytype (Primitive type) asynchronously.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
public Task<ResultAnyValue> ReadAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Type type,
    CancellationToken cancel
)
```

**Parameters**

- **indexGroup**
  - Type: System.UInt32
  - The index group.

- **indexOffset**
  - Type: System.UInt32
  - The index offset.

- **type**
  - Type: System.Type
  - The type as AnyType (primitive types).

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Return Value**

- **Type:** Task<ResultAnyValue>

  A task that represents the asynchronous 'ReadState' operation. The ResultAnyValue parameter contains the value Value and the ErrorCode of the ADS communication after execution.

**Implements**

IAdsAnyAccess.ReadAnyAsync(UInt32, UInt32, Type, CancellationToken)

ReadAnyAsync Overload

TwinCAT.Ads Namespace

---

**AdsClient.ReadAnyAsync Method (UInt32, UInt32, Type, .Int32., CancellationToken)**

Reads the value of an Anytype (Primitive type) asynchronously.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[] args,
    CancellationToken cancel)
```

Parameters

- **indexGroup**
  - Type: `System.UInt32`
  - The index group.
- **indexOffset**
  - Type: `System.UInt32`
  - The index offset.
- **type**
  - Type: `System.Type`
  - The type as AnyType (primitive types).
- **args**
  - Type: `System.Int32`
  - The type arguments (AnyType)
- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

Return Value

Type: `Task<ResultAnyValue>`.

A task that represents the asynchronous 'ReadState' operation. The `ResultAnyValue` parameter contains the value `Value` and the `ErrorCode` of the ADS communication after execution.

Implements

`IAdsAnyAccess.ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken)`

</tbody>
</table>
**AdsClient.ReadAnyString Method (UInt32, Int32, Encoding)**

Reads a string from the specified symbol/variable.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

C#

```csharp
public string ReadAnyString(
    uint variableHandle,
    int len,
    Encoding encoding
)
```

### Parameters

- **variableHandle**
  - Type: System.UInt32
  - The variable handle.

- **len**
  - Type: System.Int32
  - The length.

- **encoding**
  - Type: System.Text.Encoding
  - The encoding.

### Return Value

Type: String

The string value.

### Implements

ADSAnyAccess.ReadAnyString(UInt32, Int32, Encoding) [722]

### AdsClient.ReadAnyStringAsync Method (UInt32, Int32, Encoding, CancellationToken)

Reads a string asynchronously from the specified symbol/variable.

**Namespace:** TwinCAT.Ads ([151])

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public Task<ResultAnyValue> ReadAnyStringAsync( 
    uint variableHandle,
    int len,
    Encoding encoding,
    CancellationToken cancel
)
```

**Parameters**

- `variableHandle` Type: System.UInt32
  - The variable handle.
- `len` Type: System.Int32
  - The length.
- `encoding` Type: System.Text.Encoding
  - The encoding.
- `cancel` Type: System.Threading.CancellationToken
  - The cancellation token.
Return Value

Type: Task<ResultAnyValue> [998].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read string (Value [1000]) and the ErrorCode [992] after execution.

Implements

IAdsAnyAccess.ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken) [724]

Reference

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadAnyStringAsync(
    uint indexGroup,
    uint indexOffset,
    int len,
    Encoding encoding,
    CancellationToken cancel)
```

Parameters

indexGroup
Type: System.UInt32
The index group.

indexOffset
Type: System.UInt32
The index offset.

len
Type: System.Int32
The string length to be read.

encoding
Type: System.Text.Encoding
The encoding.

cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultAnyValue> [998].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value [1000]) and the ErrorCode [992] after execution.
Implement

Call this method to obtain information about the specified data type.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
# TwinCAT.Ads Namespaces

## C#

```csharp
public IDataType ReadDataType(
    string typeName
)
```

### Parameters

- **typeName**
  - Type: `System.String`
  - Name of the data type (without namespace)

### Return Value

- Type: `IDataType`
  - An containing the requested type.

### Implements

- `IAdsSymbolicAccess.ReadDataType(String)`

### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ArgumentOutOfRangeException</code></td>
<td>typeName</td>

### 6.2.1.2.27 AdsClient.ReadDataTypeAsync Method

Read data type as an asynchronous operation.

### Namespace: TwinCAT.Ads [151]

### Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

## Syntax

```csharp
public Task<ResultValue<IDataType>> ReadDataTypeAsync(
    string typeName,
    CancellationToken cancel
)
```
Parameters

typeName                      Type: System.String  
Name of the data type.

cancel                       Type: System.Threading.CancellationToken  
The cancel token.

Return Value

Type: Task.ResultValue[1029]!IDataType[1986].
A task that represents the asynchronous 'ReadDataType' operation. The ResultValue.TValue parameter contains the read value (Value[1032]) and the ErrorCode[992] after execution.

Implements

IAdsSymbolicAccess.ReadDataTypeAsync(String, CancellationToken)[943]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultDeviceInfo> ReadDeviceInfoAsync(
    CancellationToken cancel
)
```

Parameters

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultDeviceInfo> [1001].

Implements

IAdsConnection.ReadDeviceInfoAsync(CancellationToken). [796]

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]
6.2.1.2.30 AdsClient.ReadState Method

Reads the ADS status and the device status from an ADS server.

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public StateInfo ReadState()
```

**Return Value**

Type: StateInfo

The ADS statue and device status.

**Implements**

IAdsStateProvider.ReadState.

**Reference**

AdsClient Class

TwinCAT.Ads Namespace

6.2.1.2.31 AdsClient.ReadStateAsync Method

Reads the ADS status and the device status from an ADS server.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Task<ResultReadDeviceState> ReadStateAsync(
    CancellationToken cancel
)
```

**Parameters**

cancel Type: System.Threading.CancellationToken

The cancellation token

**Return Value**

Type: Task<ResultReadDeviceState>

A task that represents the asynchronous 'ReadState' operation. The ResultReadDeviceState parameter contains the state (State) as long as the ErrorCode of the ADS communication after execution.
6.2.1.2.32 AdsClient.ReadSymbol Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public IAdsSymbol ReadSymbol(
    string name
)

Parameters

name Type: System.String
Name of the symbol.

Return Value

Type: IAdsSymbol
A IAdsSymbol2 containing the requested symbol information or null if symbol could not be found.

Implements

IAdsSymbolicAccess.ReadSymbol(String) [943]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsErrorException [583]</td>
<td>Thrown when the ADS call fails.</td>
</tr>
</tbody>

6.2.1.2.33 AdsClient.ReadSymbolAsync Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.
TwinCAT.Ads Namespaces

Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultValue<IAdsSymbol>> ReadSymbolAsync(string name, CancellationToken cancel)
```

Parameters

- **name**
  - Type: `System.String`
  - Name of the symbol.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancel token.

Return Value

Type: `Task<ResultValue<IAdsSymbol>>`

A task that represents the asynchronous 'ReadSymbolInfo' operation. The `ResultValue.TValue` parameter contains the read value (Value) and the `ErrorCode` after execution.

Implements

- `IAdsSymbolicAccess.ReadSymbolAsync(String, CancellationToken)`

Reference

- AdsClient Class
- TwinCAT.Ads Namespace

6.2.1.2.34 AdsClient.ReadValue Method

Overload List

</tr>
</tbody>
</table>

Reference

- AdsClient Class
- TwinCAT.Ads Namespace
**AdsClient.ReadValue<T>. Method (String)**

Reads the value of a symbol and returns the value. The parameter type must have the same layout as the ADS symbol.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public T ReadValue<T>(
    string name
)
```

**Parameters**

- **name**
  - Type: System.String
  - Name of the ADS symbol.

**Type Parameters**

- **T**
  - The value type

**Return Value**

- **Type:** T
  - Value of the symbol

**Implements**

- IAdsSymbolicAccess.ReadValue<T>(String)

**Reference**

- AdsClient Class

- TwinCAT.Ads Namespace

**AdsClient.ReadValue Method (ISymbol)**

Reads the value of a symbol and returns it as an object.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Object ReadValue(
    ISymbol symbol
)
```
Parameters

symbol Type: TwinCAT.TypeSystem.ISymbol [2176]
The symbol that should be read.

Return Value

Type: Object
The value of the symbol as an object.

Implements

IAdsSymbolicAccess.ReadValue(ISymbol) [946]

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'. Structs are not supported.

Syntax

C#

```csharp
public T ReadValue<T>(
    ISymbol symbol
)
```

Parameters

symbol Type: TwinCAT.TypeSystem.ISymbol [2176]
The symbol that should be read.

Type Parameters

T The value type.

Return Value

Type: T
The value of the symbol.
Implements
IAdsSymbolicAccess.ReadValue.T.(ISymbol) [946]

Remarks
Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

### AdsClient.ReadValueAsync.TValue. Method (String, CancellationToken)

Reads the value of a symbol asynchronously.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public Task<ResultValue<TValue>> ReadValueAsync<TValue>(
    string name,
    CancellationToken cancel
)
```

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>System.String</td>
<td>Name of the ADS symbol.</td>
</tr>
<tr>
<td>cancel</td>
<td>System.Threading.CancellationToken</td>
<td>The cancel token.</td>
</tr>
</tbody>
</table>

Type Parameters

| TValue | The value type.                           |

Return Value

Type: Task<ResultValue[TValue].TValue>
A task that represents the asynchronous read operation. The ResultAnyValue.ErrorCode parameter contains the read value (Value) and the ErrorCode after execution.

Remarks

The parameter type must have the same layout as the ADS symbol.

**AdsClient.ReadValueAsync Method (ISymbol, CancellationToken)**

Reads the value of a symbol asynchronously and returns it as an object. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadValueAsync(
    ISymbol symbol,
    CancellationToken cancel
)
```

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>symbol</td>
<td>TwinCAT.TypeSystem.ISymbol [2176]</td>
<td>The symbol that should be read.</td>
</tr>
</tbody>
</table>
cancel  
Type: System.Threading.CancellationToken  
The cancel token.

Return Value
Type: Task<ResultAnyValue>.  
The ResultAnyValue as customized task object.

Implements
IAdsSymbolicAccess.ReadValueAsync(ISymbol, CancellationToken).  
Reference
AdsClient Class.  
ReadValueAsync Overload.  
TwinCAT.Ads Namespace.

AdsClient.ReadValueAsync.TValue. Method (ISymbol, CancellationToken)
Reads the value of a symbol asynchronously and returns it as an object.

Namespace: TwinCAT.Ads.  
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#  
public Task<ResultValue<TValue>> ReadValueAsync<TValue>(  
    ISymbol symbol,  
    CancellationToken cancel  
)

Parameters
symbol  
Type: TwinCAT.TypeSystem.ISymbol.  
The symbol that should be read.
cancel  
Type: System.Threading.CancellationToken.  
The cancel token.

Type Parameters
TValue  
The value type.

Return Value
Type: Task<ResultValue>.  
A task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read value (Value) and the ErrorCode after execution.
TwinCAT.Ads Namespaces

Exceptions

<table>

ReadValueAsync Overload [266]
TwinCAT.Ads Namespace [151]

AdsClient.ReadValueAsync Method (String, Type, CancellationToken)

Reads the value of a symbol asynchronously.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadValueAsync(
    string name,
    Type type,
    CancellationToken cancel
)
```

Parameters

name Type: System.String
Name of the ADS symbol.

type Type: System.Type
Managed type of the ADS symbol.

cancel Type: System.Threading.CancellationToken
The cancel token.

Return Value

Type: Task<ResultAnyValue> [998].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value) and the ErrorCode [992] after execution.

Implements

IAdsSymbolicAccess.ReadValueAsync(String, Type, CancellationToken) [951]
**Remarks**
The parameter type must have the same layout as the ADS symbol.

### 6.2.1.2.38 AdsClient.RegisterAdsStateChangedAsync Method

Registers for AdsStateChanged events as an asynchronous operation.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### Syntax

**C#**

```csharp
public Task<ResultAds> RegisterAdsStateChangedAsync(
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel)
```

### Parameters

- **handler**
  Type: `System.EventHandler<AdsStateChangedEventArgs>`. The handler function to be registered for AdsStateChanged calls.

- **cancel**

### Return Value

Type: `Task<ResultAds>`. A task that represents the asynchronous 'RegisterAdsStateChanged' operation. The `ResultAds` parameter contains the state the `ErrorCode` of the ADS communication after execution.

### Implements

`IAdsStateProvider.RegisterAdsStateChangedAsync(EventHandler<AdsStateChangedEventArgs>, CancellationToken)`

### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>

  [151]

### 6.2.1.2.39 AdsClient/RegisterSymbolVersionChangedAsync Method

Registers an `AdsSymbolVersionChanged` event as an asynchronous operation.

**Namespace:** `TwinCAT.Ads` [151]

**Assembly:** `TwinCAT.Ads.dll` (in `TwinCAT.Ads`)

**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public Task<ResultAds> RegisterSymbolVersionChangedAsync(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler,
    CancellationToken cancel)
```

### Parameters

- **handler**
cancel

Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task.ResultAds [989].
A task that represents the asynchronous 'RegisterSymbolVersionChanged' operation. The ResultAds [989] parameter contains the value ErrorCode [992] of the ADS communication after execution.

Implements

IAdsSymbolChangedProvider.RegisterSymbolVersionChangedAsync(EventHandler.AdsSymbolVersionChangeEventArgs., CancellationToken) [935]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]

6.2.1.2.40 AdsClient.TryAddDeviceNotification Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [338] event.</td>
</tr>
<tr>
<td></td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [866] event.</td>
</tr>
</tbody>
</table>

Reference

AdsClient Class [154]

TwinCAT.Ads Namespace [151]
AdsClient.TryAddDeviceNotification Method (String, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

**Namespace:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public AdsErrorCode TryAddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    out uint handle
)
```

**Parameters**

- **symbolPath**
  - Type: System.String
  - The symbol/instance path of the ADS variable.

- **dataSize**
  - Type: System.Int32
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: TwinCAT.Ads.NotificationSettings
  - The notification settings.

- **userData**
  - Type: System.Object
  - This object can be used to store user specific data.

- **handle**
  - Type: System.UInt32
  - The notification handle.

**Return Value**

Type: AdsErrorCode

The ADS ErrorCode.

**Implements**

IAdsNotifications.TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.)

**Remarks**

The `dataSize` parameter defines the amount of bytes, that will be attached to the AdsNotification event as value. Because notifications allocate TwinCAT system resources, a complementary call to `TryDeleteDeviceNotification(UInt32)` should always be called when the notification is not used anymore.

**Reference**

- AdsClient Class
- TryAddDeviceNotification Overload
AdsClient.TryAddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AdsErrorCode TryAddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    out uint handle
)
```

**Parameters**

- **indexGroup**
  Type: `System.UInt32`
  The index group number of the requested ADS service.

- **indexOffset**
  Type: `System.UInt32`
  The index offset number of the requested ADS service.

- **dataSize**
  Type: `System.Int32`
  Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  Type: `TwinCAT.Ads.NotificationSettings` [979]
  The Notification settings.

- **userData**
  Type: `System.Object`
  This object can be used to store user specific data (tag data)

- **handle**
  Type: `System.UInt32`
  The notification handle.

**Return Value**

Type: `AdsErrorCode` [575]
The ADS error code.

**Implements**

`IAdsNotifications.TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)` [861]
### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException [63]</td>
<td></td>
</tr>
</tbody>
</table>

### Remarks

The `dataSize` parameter defines the amount of bytes, that will be attached to the `AdsNotification` [338] as value. Because notifications allocate TwinCAT system resources, a complementary call to `TryDeleteDeviceNotification(UInt32) [864]` should always called when the notification is not used anymore.

### 6.2.1.2.41 AdsClient.TryAddDeviceNotificationEx Method

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32,, UInt32) [279]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the <code>AdsNotificationEx[340]</code> event.</td>
</tr>
<tr>
<td>TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32,, UInt32) [280]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the <code>AdsNotificationEx[868]</code> event.</td>
</tr>
</tbody>
</table>
AdsClient.TryAddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32., UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [154] event.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryAddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    out uint handle)
```

Parameters

- **symbolPath**
  Type: `System.String`
  Symbol/Instance path of the ADS variable.

- **settings**
  Type: `TwinCAT.Ads.NotificationSettings [283]`
  The Notification settings.

- **userData**
  Type: `System.Object`
  This object can be used to store user specific data (tag data)

- **type**
  Type: `System.Type`
  Type of the object stored in the event argument (‘AnyType’)

- **args**
  Type: `System.Int32`
  Additional arguments (for ‘AnyType’)

- **handle**
  Type: `System.UInt32`
  The notification handle

Return Value

Type: `AdsErrorCode [154]`

The ADS error code.

Implements

`IAdsNotifications.TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32., UInt32.) [283]`

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to `TryDeleteDeviceNotification(UInt32) [283]` should always called when the notification is not used anymore.

**Syntax**

**C#**

```csharp
public AdsErrorCode TryAddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type anyType,
    int[] args,
    out uint handle
)
```

**Parameters**

- **indexGroup**
  Type: `System.UInt32`
  Contains the index group number of the requested ADS service.

- **indexOffset**
  Type: `System.UInt32`
  Contains the index offset number of the requested ADS service.

- **settings**
  Type: `TwinCAT.Ads.NotificationSettings` [979]
  The Notification settings.

- **userData**
  Type: `System.Object`
  This object can be used to store user specific data (tag data)

- **anyType**
  Type: `System.Type`
  Type of the object stored in the event argument ('AnyType')

- **args**
  Type: `.System.Int32.`
  The 'AnyType' arguments.

- **handle**
  Type: `System.UInt32`
  The notification handle.
Return Value

Type: AdsErrorCode [575]
The ADS Error code.

Implements

IAdsNotifications.TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, _Int32_,
UInt32.) [863]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException [63]</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotification(UInt32) [857] should always called when the notification is not used anymore.

6.2.1.2.42 AdsClient.TryCreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public AdsErrorCode TryCreateVariableHandle(
    string symbolPath,
    out uint variableHandle
)
```

Parameters

- `symbolPath` Type: `System.String`  
  SymbolName / InstancePath.
- `variableHandle` Type: `System.UInt32`  
  The symbols handle.

Return Value

Type: `AdsErrorCode` [575]  
The ADS error code.

Implements

- `IAdsHandle.TryCreateVariableHandle(String, UInt32.)` [834]

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this `TryCreateVariableHandle(String, UInt32.)` is the `TryDeleteVariableHandle(UInt32)` [285].

6.2.1.2.44  AdsClient.TryDeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.

Namespace:  TwinCAT.Ads [151]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryDeleteVariableHandle(
    uint variableHandle
)
```

Parameters

variableHandle  Type: System.UInt32
Handle of the ADS variable

Return Value

Type: AdsErrorCode [575]
The ADS error code.

Implements

IAdsHandle.TryDeleteVariableHandle(UInt32) [835]

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this TryDeleteVariableHandle(UInt32) is the TryCreateVariableHandle(String, UInt32.) [281]

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]

AdsClient.TryInvokeRpcMethod Method (String, String, Object, Object.)

Invokes the specified RPC Method

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```c#
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object retValue
)
```

Parameters

- **symbolPath**
  - Type: `System.String`
  - The symbol path.
- **methodName**
  - Type: `System.String`
  - The method name.
inParameters
Type: System.Object.
The parameters.

retValue
Type: System.Object.
The return value of the RPC method as object.

Return Value
Type: AdsErrorCode
The ADS Error Code.

Implements
IAdsRpcInvoke.TryInvokeRpcMethod(String, String, Object, Object) [901]

Remarks
Because this overload doesn't provide any AnyTypeSpecifier specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples
The following sample shows how to call (Remote Procedures / Methods) within the PLC.

dynamic Tree Mode
class RpcCallIVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});
            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});
            //Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
            }
        }
    }
}
foreach(IRpcMethodParameter parameter in method.Parameters)
{
    string parameterName = parameter.Name;
    string parameterType = parameter.TypeName;
    }
}}

Reference

AdsClient Class [154]

TryInvokeRpcMethod Overload [285]

TwinCAT.Ads Namespace [151]

AdsClient.TryInvokeRpcMethod Method (String, String, .Object., .Object.., Object.)

Invokes the specified RPC Method

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object[] outParameters,
    out Object retValue)

Parameters

symbolPath Type: System.String
The symbol path.

methodName Type: System.String
The method name.

inParameters Type: System.Object
The parameters.

outParameters Type: System.Object
The out parameters.

retValue Type: System.Object
The return value of the RPC method as object.

Return Value

Type: AdsErrorCode [575]
The ADS Error Code.

Implements

IAdsRpcInvoke.TryInvokeRpcMethod(String, String, .Object., .Object.., Object.) [903]
Remarks

Because this overload doesn't provide any AnyTypeSpecifier[1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
            // Call a Method that has the following signature (within MAIN Program)
            /*
             * {attribute 'TcRpcEnable'}
             * METHOD PUBLIC M_Add : INT
             * VAR_INPUT
             *     i1 : INT := 0;
             *     i2 : INT := 0;
             * END_VAR
             *
             * short result = (short)main.InvokeRpcMethod("M_Add", new object[] {{short) 3, (short) 4}});
             * // Call a Method that has no parameter and returns VOID
             * main.InvokeRpcMethod("M_Method1", new object[] {});
             * //Browsing RpcMethods
             * foreach(IRpcMethod method in main.RpcMethods)
             * {
             *     string methodName = method.Name;
             *     foreach(IRpcMethodParameter parameter in method.Parameters)
             *     {
             *         string parameterName = parameter.Name;
             *         string parameterType = parameter.TypeName;
             *     }
             * }
            */
    }
}

Reference

AdsClient Class[154]
TryInvokeRpcMethod Overload[285]
TwinCAT.Ads Namespace[151]
**AdsClient.TryInvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object.., Object.)**

Invokes the rpc method.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd6ca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters,
    out Object retValue
)
```

**Parameters**

- `symbolPath` Type: System.String
  The symbol.
- `methodName` Type: System.String
  Name of the method.
- `inParameters` Type: System.Object
  The parameters.
- `outSpecifiers` Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  The out specifiers (specifying the out types) or NULL.
- `retSpecifier` Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  The ret specifier (specifying the return value) or NULL.
- `outParameters` Type: System.Object
  The out parameters.
- `retValue` Type: System.Object
  The return value of the RPC method.

**Return Value**

Type: AdsErrorCode

AdsErrorCode.

**Implements**

IAdsRpcInvoke.TryInvokeRpcMethod(String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object.. Object.)

**Remarks**

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.
Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

### Dynamic Tree Mode

```csharp
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.

**AdsClient.TryInvokeRpcMethod Method**

`IRpcCallableInstance, IRpcMethod, .Object, .AnyTypeSpecifier, AnyTypeSpecifier, .Object.., Object.)`

Tries the invoke RPC method.
Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryInvokeRpcMethod(
    IRpcCallableInstance symbol,
    IRpcMethod rpcMethod,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpec,
    AnyTypeSpecifier returnSpec,
    out Object[] outParameters,
    out Object returnValue
)
```

Parameters

- **symbol**
  - Type: TwinCAT.TypeSystem.IRpcCallableInstance
  - The symbol.

- **rpcMethod**
  - Type: TwinCAT.TypeSystem.IRpcMethod
  - The RPC method.

- **inParameters**
  - Type: System.Object
  - The in parameters.

- **outSpec**
  - Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  - The out spec.

- **returnSpec**
  - Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  - The return spec.

- **outParameters**
  - Type: System.Object
  - The out parameters.

- **returnValue**
  - Type: System.Object
  - The return value.

Return Value

Type: AdsErrorCode

AdSErrorCode.

**6.2.1.2.48 AdsClient.TryReadState Method**

Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an `AdsErrorCode` is returned. If the return value is equal to `AdsErrorCode.NoError` the call was successful.

**Namespace:** `TwinCAT.Ads`  
**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll)`  
Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public AdsErrorCode TryReadState(
    out StateInfo stateInfo
)
```

Parameters

`stateInfo` Type: `TwinCAT.Ads.StateInfo` [1041]. The ADS statue and device status.

Return Value

Type: `AdsErrorCode` [575]. `AdsErrorCode` [575] of the ADS read state call. Check for `NoError` [575] to see if call was successful.

Implements

`IAdsStateProvider.TryReadState(StateInfo.)` [932]

Reference

`AdsClient Class` [154]

`TwinCAT.Ads Namespace` [151]

6.2.1.2.49 AdsClient.TryReadSymbol Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

Namespace: `TwinCAT.Ads` [151]
Assembly: `TwinCAT.Ads (in TwinCAT.Ads.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryReadSymbol(
    string name,
    out IAdsSymbol symbol
)
```

Parameters

`name` Type: `System.String` Name of the symbol.

`symbol` Type: `TwinCAT.Ads.TypeSystem.IAdsSymbol` [1379]. The symbol.

Return Value

Type: `AdsErrorCode` [575]. A `IAdsSymbol` [1379] containing the requested symbol information or null if symbol could not be found.
Implements

IAdsSymbolicAccess.TryReadSymbol(String, IAdsSymbol) [» 953]

Syntax

C#

```csharp
public AdsErrorCode TryReadValue<T>(
    string name,
    out T value
)
```

Parameters

name Type: System.String
   Name of the ADS symbol.

value Type: T
    The read value of the Symbol.
Type Parameters

T  The value type.

Return Value

Type: AdsErrorCode [575]
The AdsErrorCode [575].

Implements

IAdsSymbolicAccess.TryReadValue(T,(String, T.) [954]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>

Syntax

C#

class Ads

public AdsErrorCode TryWriteValue(ISymbol symbol,
    Object val
)
Parameters

symbol
  Type: TwinCAT.TypeSystem.ISymbol [2176]
  The symbol the value is written to.

val
  Type: System.Object
  The value to write.

Return Value

Type: AdsErrorCode [575]
AdsErrorCode.

Implements

IAdsSymbolicAccess.TryWriteValue(ISymbol, Object) [959]

Reference

AdsClient Class [154]
TryWriteValue Overload [306]
TwinCAT.Ads Namespace [151]

AdsClient.TryWriteValue<T>. Method (ISymbol, T)

Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryWriteValue<T>(
    ISymbol symbol,
    T val
)
```

Parameters

symbol
  Type: TwinCAT.TypeSystem.ISymbol [2176]
  The symbol the value is written to.

val
  Type: T
  The value to write.

Type Parameters

T
  The value type.

Return Value

Type: AdsErrorCode [575]
AdsErrorCode.
6.2.1.2.56 AdsClient.UnregisterAdsStateChangedAsync Method

Unregister ads state changed as an asynchronous operation.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAds> UnregisterAdsStateChangedAsync(
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel)
```

Parameters

- **handler**
  Type: `System.EventHandler<AdsStateChangedEventArgs>`
  The handler function to be unregistered.

- **cancel**
  Type: `System.Threading.CancellationToken`
  The cancellation token.

Return Value

Type: `Task<ResultAds>`
A task that represents the asynchronous 'UnregisterAdsStateChanged' operation. The `ResultAds` parameter contains the state the `ErrorCode` of the ADS communication after execution.

Implements

- `IAdsStateProvider.UnregisterAdsStateChangedAsync(EventHandler<AdsStateChangedEventArgs>, CancellationToken)`

Exceptions

6.2.1.2.57 AdsClient.UnregisterSymbolVersionChangedAsync Method

Unregisters from an AdsSymbolVersionChanged event as an asynchronous operation.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAds> UnregisterSymbolVersionChangedAsync(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler,
    CancellationToken cancel)
```

Parameters

- **handler**
  Type: System.EventHandler<AdsSymbolVersionChangedEventArgs>
  The handler function to unregister.

- **cancel**
  Type: System.Threading.CancellationToken
  The cancellation token.

Return Value

Type: Task<ResultAds>
A task that represents the asynchronous 'UnregisterSymbolVersionChangedAsync' operation. The ResultAds parameter contains the value ErrorCode of the ADS communication after execution.

*AdsClient Class [154]*

*TwinCAT.Ads Namespace [151]*

### AdsClient.WriteAny Method (UInt32, Object)

写的对象同步地写入 ADS 设备。

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public void WriteAny(  
    uint variableHandle,  
    Object value  
)
```

**Parameters**

- **variableHandle**  
  Type: System.UInt32  
  Handle of the ADS variable.

- **value**  
  Type: System.Object  
  Object to write to the ADS device.

**Implements**

*IAdsAnyAccess.WriteAny(UInt32, Object) [726]*

**Reference**

*AdsClient Class [154]*
AdsClient.WriteAny Method (UInt32, Object, Int32.)

Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void WriteAny(
    uint variableHandle,
    Object value,
    int[] args
)
```

Parameters

- **variableHandle**: Type: System.UInt32
  Handle of the ADS variable.
- **value**: Type: System.Object
  Object to write to the ADS device.
- **args**: Type: System.Int32.
  Additional arguments.

Implements

IAdsAnyAccess.WriteAny(UInt32, Object, Int32.)

Remarks

<table>
<thead>
<tr>
<th>Type of value Parameter</th>
<th>Necessary Arguments (args)</th>
</tr>
</thead>
<tbody>
<tr>
<td>string</td>
<td>args[0]: Number of characters in the string typed as FixedLengthZeroTerminated [2395].</td>
</tr>
<tr>
<td>string[]</td>
<td></td>
</tr>

- TwinCAT.Ads Namespace

AdsClient.WriteAny Method (UInt32, UInt32, Object)

Writes an object synchronously to an ADS device.
### AdsClient.WriteAny Method (UInt32, UInt32, Object, .Int32.)

Writes an object synchronously to an ADS device.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c14

**Syntax**

```csharp
public void WriteAny(
    uint indexGroup,
    uint indexOffset,
    Object value,
    int[] args
)
```

**Parameters**

- **indexGroup**
  - Type: System.UInt32
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: System.UInt32
  - Contains the index offset number of the requested ADS service.

- **value**
  - Type: System.Object
  - Object to write to the ADS device.

- **args**
  - Type: System.Int32
  - Arguments for the method.

**Implements**

IAdsAnyAccess.WriteAny(UInt32, UInt32, Object)
value

Type: System.Object
Object to write to the ADS device.

args

Type: System.Int32
Additional arguments.

**Implements**

IAdsAnyAccess.WriteAny(UInt32, UInt32, Object, Int32.) [728]

**Remarks**

If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

**Remarks**

<table>
<thead>
<tr>
<th>Type of value Parameter</th>

**AdsClient.WriteAnyAsync Method (UInt32, Object, Int32., CancellationToken)**

Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public Task<ResultWrite> WriteAnyAsync(
    uint variableHandle,
    Object value,
    int[] args,
    CancellationToken cancel)
```

**Parameters**

variableHandle

Type: System.UInt32  
Handle of the ADS variable.

value

Type: System.Object  
Object to write to the ADS device.

args

Type: System.Int32  
Additional arguments.

cancel

Type: System.Threading.CancellationToken  
The cancellation token.

**Return Value**

Type: Task<ResultWrite> [1032].  
Task<ResultWrite>.

**Return Value**

Type: Task<ResultWrite> [1032].  
A task that represents the asynchronous task operation. The result parameter ResultWrite [1032] of the write operation contains the ErrorCode [992].

**Implements**

IAdsAnyAccess.WriteAnyAsync(UInt32, Object, Int32., CancellationToken) [731]
Remarks

WriteAnyAsync Overload [317]

TwinCAT.Ads Namespace [151]

**AdsClient.WriteAnyAsync Method (UInt32, UInt32, Object, CancellationToken)**

Write the value of an Anytype (Primitive type) asynchronously.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Task<ResultWrite> WriteAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Object value,
    CancellationToken cancel
)
```

**Parameters**

- **indexGroup**
  - Type: System.UInt32
  - The index group.

- **indexOffset**
  - Type: System.UInt32
  - The index offset.

- **value**
  - Type: System.Object
  - The value.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Return Value**

Type: Task<ResultWrite> [1032].

A task that represents the asynchronous 'ReadState' operation. The ResultWrite [1032] parameter contains the value the ErrorCode [992] of the ADS communication after execution.

**Implements**

IAdsAnyAccess.WriteAnyAsync(UInt32, UInt32, Object, CancellationToken) [732]
AdsClient.WriteAnyAsync Method (UInt32, UInt32, Object, .Int32., CancellationToken)

Write the value of an Anytype (Primitive type) asynchronously.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultWrite> WriteAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Object value,
    int[] args,
    CancellationToken cancel)
```

Parameters

- **indexGroup**
  Type: System.UInt32
  The index group.

- **indexOffset**
  Type: System.UInt32
  The index offset.

- **value**
  Type: System.Object
  The value.

- **args**
  Type: System.Int32
  The type arguments (AnyType)

- **cancel**
  Type: System.Threading.CancellationToken
  The cancellation token.

Return Value

Type: Task<ResultWrite>
A task that represents the asynchronous 'ReadState' operation. The ResultWrite parameter contains the value the ErrorCode of the ADS communication after execution.

Implements

- IAdsAnyAccess.WriteAnyAsync(UInt32, UInt32, Object, .Int32., CancellationToken)

<tr>
<td><code>WriteAnyStringAsync(UInt32, String, Int32, Encoding, CancellationToken)</code></td>
<td>Writes the string (Potentially unsafe!)</td>
</tr>
</tbody>
</table>

#### Reference

- **AdsClient Class** [154]
- **TwinCAT.Ads Namespace** [151]

**AdsClient.WriteAnyStringAsync Method (String, String, Int32, Encoding, CancellationToken)**

Writes the string (Potentially unsafe!)

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultWrite> WriteAnyStringAsync(
    string symbolPath,
    string value,
    int length,
    Encoding encoding,
    CancellationToken cancel
)
```

**Parameters**

- **symbolPath**
  - Type: `System.String`
  - The symbol path.
- **value**
  - Type: `System.String`
  - The value.
- **length**
  - Type: `System.Int32`
  - The length of the string to write
- **encoding**
  - Type: `System.Text.Encoding`
  - The encoding.
- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.
Return Value

Type: Task<ResultWrite>.
Task<ResultWrite>.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException</td>
<td>[63]</td>
</tr>
</tbody>
</table>

Remarks

ATTENTION: Potentially this method is unsafe because following data can be overwritten after the string symbol. Please be sure to specify the string length lower than the string size reserved within the process image! The String is written with the specified encoding.

WriteValue Overload [331]

TwinCAT.Ads Namespace [151]

**AdsClient.WriteValue.T. Method (String, T)**

Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public void WriteValue<T>(
    string name,
    T value
)
```

**Parameters**

- **name**  
  Type: System.String  
  Name of the ADS symbol.

- **value**  
  Type: T  
  Object holding the value to be written to the ADS symbol

**Type Parameters**

- **T**  
  the value type.

**Implements**

IAdsSymbolicAccess.WriteValue.T.(String, T) [961]

**Reference**

AdsClient Class [154]

WriteValue Overload [331]

TwinCAT.Ads Namespace [151]

**AdsClient.WriteValue Method (ISymbol, Object)**

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.
**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void WriteValue(
    ISymbol symbol,
    Object val
)
```

**Parameters**

- **symbol**
  - Type: TwinCAT.TypeSystem.ISymbol
  - The symbol the value is written to.

- **val**
  - Type: System.Object
  - The value to write.

**Implements**

- IAdsSymbolicAccess.WriteValue(ISymbol, Object) [962]

**Reference**

- AdsClient Class [154]
- WriteValue Overload [331]

**AdsClient.WriteValue.T. Method (ISymbol, T)**

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public void WriteValue<T>(
    ISymbol symbol,
    T val
)
```

**Parameters**

- **symbol**
  - Type: TwinCAT.TypeSystem.ISymbol
  - The symbol the value is written to.

- **val**
  - Type: T
  - The value to write.
Type Parameters
T The value type.

Implements
IAdsSymbolicAccess.WriteValue.T.ISymbol, T [963]

Reference
AdsClient Class [154]

AdsClient.WriteValueAsync.T. Method (String, T, CancellationToken)

Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public Task<ResultWrite> WriteValueAsync<T>(
    string name,
    T value,
    CancellationToken cancel
)
```

Parameters

- name
  - Type: System.String
  - Name of the ADS symbol.
- value
  - Type: T
  - Object holding the value to be written to the ADS symbol.
- cancel
  - Type: System.Threading.CancellationToken
  - The cancel token.

Type Parameters

- T
  - The value type.

Return Value

- Type: Task<ResultWrite>
- A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite parameter contains the ErrorCode after execution.

Implements

- AdsSymbolicAccess.WriteValueAsync<T>(String, T, CancellationToken) [964]

Reference

- AdsClient Class [154]
- WriteValueAsync Overload [334]

**AdsClient.WriteValueAsync Method (ISymbol, Object, CancellationToken)**

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. Array and structures are not supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0e15da1c14

Syntax

C#

```csharp
public Task<ResultWrite> WriteValueAsync(
    ISymbol symbol,
    Object val,
    CancellationToken cancel
)
```
Parameters

symbol
Type: TwinCAT.TypeSystem.ISymbol
The symbol the value is written to.

val
Type: System.Object
The value to write.

cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultWrite>
A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite parameter contains the ErrorCode after execution.

Implements

IAdsSymbolicAccess.WriteValueAsync(ISymbol, Object, CancellationToken)

Reference

AdsClient Class
WriteValueAsync Overload
TwinCAT.Ads Namespace

AdsClient.WriteValueAsync<T>. Method (ISymbol, T, CancellationToken)

Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public Task<ResultWrite> WriteValueAsync<T>(
    ISymbol symbol,
    T val,
    CancellationToken cancel
)

Parameters

symbol
Type: TwinCAT.TypeSystem.ISymbol
The symbol the value is written to.

val
Type: T
The value to write.

cancel
Type: System.Threading.CancellationToken
The cancellation token.
Type Parameters

T  The value type.

Return Value

Type: Task<ResultWrite[1032]>
A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite[1032] parameter contains the ErrorCode[992] after execution.

Implements

6.2.1.3 AdsClient Events

The AdsClient[154] type exposes the following members.

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsNotification</td>
<td>Occurs when the ADS device sends a notification to the client.</td>
</tr>
<tr>
<td>AdsNotificationError</td>
<td>Occurs when an exception has occurred during notification management.</td>
</tr>
<tr>
<td>AdsNotificationEx</td>
<td>Occurs when the ADS device sends a notification to the client.</td>
</tr>
<tr>
<td>AdsStateChanged</td>
<td>Occurs when the ADS state changes.</td>
</tr>
<tr>
<td>AdsSumNotification</td>
<td>Occurs when Notifications are send (bundled notifications)</td>
</tr>
<tr>
<td>AdsSymbolVersionChanged</td>
<td>Occurs when the symbol version has been changed changes.</td>
</tr>
<tr>
<td>ConnectionStateChanged</td>
<td>Occurs when the connection state has been changed.</td>
</tr>
<tr>
<td>RouterStateChanged</td>
<td>Occurs when the state of the local Router has changed.</td>
</tr>
</tbody>
</table>
6.2.1.3.1 AdsClient.AdsNotification Event

Occurs when the ADS device sends a notification to the client.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# public event EventHandler<AdsNotificationEventArgs> AdsNotification

**Value**

Type: System.EventHandler<AdsNotificationEventArgs>

**Implements**

IAdsNotifications.AdsNotification

**Remarks**

The Event Argument contains the raw data value of the notification, not marshalled to .NET types.

**Examples**

Example of receiving AdsNotification events.

**Trigger on changed values by ADS Notifications**

```csharp
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;
        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;
        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);
        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransModeOnChange, 200, 0), null, cancel);
        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
    }
}
```
public event EventHandler<AdsNotificationErrorEventArgs> AdsNotificationError

Value

Type: System.EventHandler<AdsNotificationErrorEventArgs> [595].

Implements

IAdsNotifications.AdsNotificationError [867]

Remarks

The occurrence of this event can have two different reasons:

1. Indicates an internal error occurred during Notification management.
2. The registered notification becomes invalid on the server, eg. after a PLC Download / Online Change. If the ADS Server detects that the (still registered) Notification Sender is getting invalid, it sends an error notification so that the client will be informed about detached notifications. The event arguments contains the AdsInvalidNotificationException [591] which describes the invalid notification handle by its Handle [593] property.

Reference

TwinCAT.Ads Namespace [151]

TwinCAT.Ads Namespace [151]

6.2.1.3.2 AdsClient.AdsNotificationError Event

Occurs when a exception has occurred during notification management.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public event EventHandler<AdsNotificationErrorEventArgs> AdsNotificationError

Value

Type: System.EventHandler<AdsNotificationErrorEventArgs> [595].

Implements

IAdsNotifications.AdsNotificationError [867]

Remarks

The occurrence of this event can have two different reasons:

1. Indicates an internal error occurred during Notification management.
2. The registered notification becomes invalid on the server, eg. after a PLC Download / Online Change. If the ADS Server detects that the (still registered) Notification Sender is getting invalid, it sends an error notification so that the client will be informed about detached notifications. The event arguments contains the AdsInvalidNotificationException [591] which describes the invalid notification handle by its Handle [593] property.

Reference

AdsClient Class [154]
TwinCAT.Ads Namespace [151]
TwinCAT.Ads.AdsInvalidNotificationException [591]
6.2.1.3.3 AdsClient.AdsNotificationEx Event

Occurs when the ADS devices sends a notification to the client.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public event EventHandler<AdsNotificationExEventArgs> AdsNotificationEx
```

**Value**

Type: System.EventHandler<AdsNotificationExEventArgs>

**Implements**

IAdsNotifications.AdsNotificationEx

**Remarks**

The Notification event arguments marshals the data value automatically to the specified .NET Type with ANY_TYPE marshellers.

**Examples**

Example of receiving AdsNotificationEx events.

**Trigger on changed values by ADS Notifications**

CancellationToken cancel = CancellationToken.None;

```csharp
using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    client.Connect(AmsNetId.Local, 851);
    // Add UDINT
    ResultHandle resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new NotificationSettings(AdsTransModeOnChange, 200, 200), null, typeof(uint),null, cancel);
    await Task.Delay(5000, cancel); // Wait ....
    ResultAds resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle, cancel); // Unregister Event
}
```

6.2.1.3.4 AdsClient.AdsStateChanged Event

Occurs when the ADS state changes.
**Namespace**: TwinCAT.Ads

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public event EventHandler<AdsStateChangedEventArgs> AdsStateChanged
```

**Value**

Type: System.EventHandler<AdsStateChangedEventArgs>.

**Implements**

IAdsStateProvider.AdsStateChanged

### Remarks

This works only for ports that support Notifications (e.g. Port 851 but not Port 10000). In case of

**Reference**

AdsClient Class

TwinCAT.Ads Namespace

#### 6.2.1.3.5 AdsClient.AdsSumNotification Event

Occurs when Notifications are send (bundled notifications)

**Namespace**: TwinCAT.Ads

**Assembly**: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public event EventHandler<AdsSumNotificationEventArgs> AdsSumNotification
```

**Value**

Type: System.EventHandler<AdsSumNotificationEventArgs>.

**Implements**

IAdsNotifications.AdsSumNotification

**Remarks**

As an optimization, this event receives all ADS Notifications that occurred at one point in time together. As consequence, the overhead of handler code is reduced, what can be important if notifications are triggered in a high frequency and the event has to be synchronized to the UI thread context. Because multiple notifications are bound together, less thread synchronization is necessary. The AdsNotification and
AdsNotificationEx [340] events shouldn't be used when SumNotifications are registered, because they have an performance side effect to this AdsSumNotification event. The full performance is reached only, when all notifications are handled on this event.

Examples

Example of receiving AdsSumNotification events.

Trigger on changed values by ADS Notifications

```csharp
private async Task RegisterSumNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsSumNotification += Client_SumNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", sizeof(UInt32), new NotificationSettings(AdsTransMode.OnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_SumNotification(object sender, AdsSumNotificationEventArgs e)
{
    // Timestamp of the Notification List
    DateTimeOffset dateTime = e.TimeStamp;

    // List of Raw ADS Notifications
    IList<Notification> notifications = e.Notifications;

    foreach(Notification notification in notifications)
    {
        // Notifications can be handled more efficiently, because they occur togeterh
        // handler and can be transformed/synchronized in one step compared to AdsClient.AdsNotification events.
    }
}
```

Reference

### AdsClientSettings Constructor

Creates a Default settings AdsClientSettings object with custom timeout.

**Namespace:** TwinCAT.Ads
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public AdsClientSettings(
    int timeout
)
```

Parameters

timeout Type: System.Int32
The timeout of the AdsClient [154] in milliseconds.

Reference

AdsClientSettings Class [344]
TwinCAT.Ads Namespace [151]

6.2.2.2 AdsClientSettings Properties

The AdsClientSettings [344] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![CompatibilityDefault] [346]</td>

</tr>
</tbody>
</table>

Reference

AdsClientSettings Class [344]
TwinCAT.Ads Namespace [151]

6.2.2.2.1 AdsClientSettings.CompatibilityDefault Property

Compatibility settings object

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static AdsClientSettings CompatibilityDefault { get; }
```
Property Value

Type: `AdsClientSettings`[344]
The settings object.

Remarks

The compatibility settings initialize the AdsClient the same way as it is done in earlier versions of the TwinCAT.Ads.dll (earlier than Version 4.2)

- **All**[1053]
  - No FailFastHandlerInterceptor active.
  - Default communication timeout 5000ms.
  - Synchronized Notifications.

Reference

`AdsClientSettings Class`[344]

TwinCAT.Ads Namespace[151]

6.2.2.2.2 AdsClientSettings.Default Property

Gets the default settings (Default Interceptors, Timeout 5000 ms)

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

**C#**

```csharp
public static AdsClientSettings Default { get; }
```

Property Value

Type: `AdsClientSettings`[344]
The default.

Remarks

Creates an settings object, with specification for **All**[1053] and FailFastHandlerInterceptor.

- **All**[1053]
  - FailFastHandlerInterceptor is active.
  - Default communication timeout 5000ms.
  - Not synchronized Notifications.

Reference

`AdsClientSettings Class`[344]

TwinCAT.Ads Namespace[151]

6.2.2.2.3 AdsClientSettings.FastWriteThrough Property

Gets a Settings object that configures the AdsClient for FastWriteThrough
Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static AdsClientSettings FastWriteThrough { get; }
```

Property Value

Type: AdsClientSettings

Client settings for a fast write through (with 200 ms Timeout).

Remarks

The settings typically can be used for polling clients, where the "FailFast" feature will be bypassed. That means, that communication fails doesn't trigger the FailFast interceptor and every Request will go out via ADS. This has the Drawback that communication Timeouts are longer and subsequent timeouts block the ADS mailbox (with the danger of overflows). So use this setting with care for specific purposes and should not be used for standard communication.

- No FailFastHandlerInterceptor active.
- Default communicationtimeout 200ms.
- Not synchronized Notifications.

AdsClientSettings Class

TwinCAT.Ads Namespace

6.2.2.4 AdsClientSettings.Timeout Property

The communication Timeout that is set initially on the AdsClient

Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int Timeout { get; }
```

Property Value

Type: Int32

The timeout.

6.2.2.3 AdsClientSettings Methods

The AdsClientSettings [344] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection.</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object.</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object.</td>
</tr>
</tbody>
</table>

</table>
6.2.4 AdsCommunicationStatistics Class

ADS Communication statistics

Inheritance Hierarchy

System.Object
  TwinCAT.Ads.AdsCommunicationStatistics

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public class AdsCommunicationStatistics

The AdsCommunicationStatistics type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AccessWaitTime</td>
<td>Gets the wait time for the next access (Resurrection time) if in Lost.</td>
</tr>
<tr>
<td>ConnectionActiveSince</td>
<td>Gets the UTC time of the last connection activation.</td>
</tr>
<tr>
<td>ConnectionEstablishedAt</td>
<td>Gets the UTC time when the current connection was established.</td>
</tr>
<tr>
<td>ConnectionLostCount</td>
<td>Gets the connection lost count.</td>
</tr>
<tr>
<td>ConnectionLostTime</td>
<td>Gets the UTC connection lost time.</td>
</tr>
<tr>
<td>ConnectionResurrections</td>
<td>Gets the number of resurrections on the AdsConnection.</td>
</tr>
<tr>
<td>ErrorsSinceLastSucceeded</td>
<td>Gets the error count since last access (UTC).</td>
</tr>
<tr>
<td>LastSucceededAccess</td>
<td>Gets the UTC time of the last succeeded access.</td>
</tr>
<tr>
<td>Resurrections</td>
<td>Gets the number of Resurrections of this Session.</td>
</tr>
<tr>
<td>SessionEstablishedAt</td>
<td>Gets the UTC time when the session was established.</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

### TC1000 Version: 1.1

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TotalCycles</td>
<td>Gets the total cycles.</td>
</tr>
<tr>
<td>TotalErrors</td>
<td>Gets the total error count.</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>

<tbody>
<tr>
<td>AccessWaitTime</td>
<td>Gets the wait time for the next access (Resurrection time) if in Lost.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from AdsConnection.)</td>
</tr>
<tr>
<td>ConnectionActiveSince</td>
<td>Gets the UTC time of the last connection activation.</td>
</tr>
<tr>
<td>ConnectionEstablishedAt</td>
<td>Gets the UTC time when the current connection was established.</td>
</tr>
<tr>
<td>ConnectionLostCount</td>
<td>Gets the connection lost count.</td>
</tr>
<tr>
<td>ConnectionLostTime</td>
<td>Gets the UTC connection lost time.</td>
</tr>
<tr>
<td>ConnectionResurrections</td>
<td>Gets the number of resurrections on the AdsConnection.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-------------------------------------------------------</td>
</tr>
<tr>
<td>ErrorsSinceLastSucceeded</td>
<td>Gets the error count since last access (UTC)</td>
</tr>
<tr>
<td>LastSucceededAccess</td>
<td>Gets the UTC time of the last succeeded access.</td>
</tr>
<tr>
<td>Resurrections</td>
<td>Gets the number of Resurrections of this Session.</td>
</tr>
<tr>
<td>SessionEstablishedAt</td>
<td>Gets the UTC time when the session was established.</td>
</tr>
<tr>
<td>TotalCycles</td>
<td>Gets the total cycles.</td>
</tr>
<tr>
<td>TotalErrors</td>
<td>Gets the total error count.</td>
</tr>
</tbody>
</table>

*AdsCommunicationStatistics Class [350]*  
TwinCAT.Ads Namespace [151]

### 6.2.4.1.1 AdsCommunicationStatistics.AccessWaitTime Property

Gets the wait time for the next access (Resurrection time) if in Lost [67].

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public TimeSpan AccessWaitTime { get; }
```

**Property Value**

Type: TimeSpan  
The wait time if in Lost [67] otherwise **TimeSpan.Zero**.

**Reference**

*AdsCommunicationStatistics Class [350]*  
TwinCAT.Ads Namespace [151]

### 6.2.4.1.2 AdsCommunicationStatistics.ConnectionActiveSince Property

Gets the UTC time of the last conenction activation.

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
6.2.4.1.3 AdsCommunicationStatistics.ConnectionEstablishedAt Property

Gets the UTC time when the current connection was established.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Nullable<DateTimeOffset> ConnectionEstablishedAt { get; }
```

**Property Value**

Type: Nullable DateTimeOffset.
The connection established at.

**Reference**

AdsCommunicationStatistics Class [350]

TwinCAT.Ads Namespace [151]

6.2.4.1.4 AdsCommunicationStatistics.ConnectionLostCount Property

Gets the connection lost count.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public int ConnectionLostCount { get; }
```

**Property Value**

Type: Int32
The connection lost count.
6.2.4.1.5 AdsCommunicationStatistics.ConnectionLostTime Property

Gets the UTC connection lost time.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

public Nullable<DateTimeOffset> ConnectionLostTime { get; }

**Property Value**

Type: Nullable DateTimeOffset
The connection lost time.

**Reference**

AdsCommunicationStatistics Class [350]
TwinCAT.Ads Namespace [151]

6.2.4.1.6 AdsCommunicationStatistics.ConnectionResurrections Property

Gets the number of resurrections on the AdsConnection [357]

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

public int ConnectionResurrections { get; }

**Property Value**

Type: Int32
The resurrections.

**Reference**

AdsCommunicationStatistics Class [350]
TwinCAT.Ads Namespace [151]

6.2.4.1.7 AdsCommunicationStatistics.ErrorsSinceLastSucceeded Property

Gets the error count since last access (UTC)
### AdsCommunicationStatistics.ErrorsSinceLastSucceeded Property

Gets the error count since last access.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**C#**
```csharp
public int ErrorsSinceLastSucceeded { get; }
```

**Property Value**

Type: `Int32`

The error count since last access.

**Reference**

AdsCommunicationStatistics Class [350]

TwinCAT.Ads Namespace [151]

### AdsCommunicationStatistics.LastSucceededAccess Property

Gets the UTC time of the last succeeded access.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**C#**
```csharp
public Nullable<DateTimeOffset> LastSucceededAccess { get; }
```

**Property Value**

Type: `Nullable DateTimeOffset`

The last succeeded access.

**Reference**

AdsCommunicationStatistics Class [350]

TwinCAT.Ads Namespace [151]

### AdsCommunicationStatistics.Resurrections Property

Gets the number of Resurrections of this Session.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**C#**
```csharp
public int Resurrections { get; }
```
6.2.4.1.10 AdsCommunicationStatistics.SessionEstablishedAt Property

Gets the UTC time when the session was established.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public DateTimeOffset SessionEstablishedAt { get; }

Property Value

Type: DateTimeOffset
The session established at.

Reference

AdsCommunicationStatistics Class [350]
TwinCAT.Ads Namespace [151]

6.2.4.1.11 AdsCommunicationStatistics.TotalCycles Property

 Gets the total cycles.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public int TotalCycles { get; }

Property Value

Type: Int32
The total cycles.

Reference

AdsCommunicationStatistics Class [350]
TwinCAT.Ads Namespace [151]
6.2.4.1.12 AdsCommunicationStatistics.TotalErrors Property

Gets the total error count.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```c#
public int TotalErrors { get; }
```

**Property Value**

Type: Int32
The total error count.

6.2.5 AdsConnection Class

ADS Connection class
Inheritance Hierarchy

System.Object
   TwinCAT.Ads.AdsConnection

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public sealed class AdsConnection : IAdsConnection,
   IConnection, IConnectionStateProvider, IAdsNotifications, IAdsSymbolicAccess, IAdsAnyAccess,
   IAdsHandle, IAdsReadWrite2, IAdsReadWrite, IAdsStateProvider, IAdsStateControl,
   IAdsSymbolChangedProvider, IAdsRpcInvoke, IAdsReadWriteTimeoutAccess, IAdsStateControlTimeout, I
Disposable

The AdsConnection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AccessWaitTime</td>
<td>Gets the access wait time.</td>
</tr>
<tr>
<td>ActiveSince</td>
<td>Gets the UTC time when the last active/resurrected Connection was established</td>
</tr>
<tr>
<td>Address</td>
<td>Gets the AmsAddress of the ADS server.</td>
</tr>
<tr>
<td>ClientAddress</td>
<td>Get the AmsAddress of the ADS client.</td>
</tr>
<tr>
<td>ConnectionEstablishedAt</td>
<td>Gets the UTC time when the Connection was originally established.</td>
</tr>
<tr>
<td>ConnectionLostCount</td>
<td>Gets the connection lost count.</td>
</tr>
<tr>
<td>ConnectionLostTime</td>
<td>Gets the connection lost time.</td>
</tr>
<tr>
<td>ConnectionState</td>
<td>Gets the current Connection state of the AdsConnection</td>
</tr>
<tr>
<td>DefaultValueEncoding</td>
<td>Gets the default value encoding.</td>
</tr>
<tr>
<td>Disposed</td>
<td>Gets a value indicating whether this AdsConnection is disposed.</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the AdsConnection identifier.</td>
</tr>
<tr>
<td>IsActive</td>
<td>Gets a value indicating whether communication is in active state</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether the local ADS port was opened successfully.</td>
</tr>
<tr>
<td>IsLocal</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsLost</td>
<td>Gets a value indicating whether the communication is in lost / open state</td>
</tr>
<tr>
<td>IsReconnecting</td>
<td>Gets a value indicating whether communication is ready for reconnecting</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of this AdsConnection.</td>
</tr>
<tr>
<td>ResurrectingTries</td>
<td>Gets the number of tries to resurrect the AdsConnection.</td>
</tr>
<tr>
<td>Resurrections</td>
<td>Gets the number of succeeded connection resurrections.</td>
</tr>
<tr>
<td>Session</td>
<td>Gets the Session object of the AdsConnection object.</td>
</tr>
<tr>
<td>State</td>
<td>Gets the current ConnectionState.</td>
</tr>
<tr>
<td>Timeout</td>
<td>Gets the timeout (in milliseconds)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotification(String, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>

<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type) [411]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [566] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32.) [412]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, Int32., CancellationToken) [413]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [566] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, Int32., CancellationToken) [415]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [566] event.</td>
</tr>
<tr>
<td>CleanupSymbolTable [416]</td>
<td>Clears the internal symbol cache.</td>
</tr>
<tr>
<td>Close [417]</td>
<td>Closes the AdsConnection</td>
</tr>
<tr>
<td>Connect [417]</td>
<td>(Re)Connects the IConnection [74] when disconnected.</td>
</tr>
<tr>
<td>CreateSymbolLoader [417]</td>
<td>Creates a new instance of the Symbol loader [1383] with the specified mode.</td>
</tr>
<tr>
<td>CreateVariableHandle [429]</td>
<td>Generates a unique handle for an ADS variable.</td>
</tr>
<tr>
<td>CreateVariableHandleAsync [429]</td>
<td>Determines the Symbol handle by its instance path asynchronously.</td>
</tr>
<tr>
<td>DeleteDeviceNotification [430]</td>
<td>Deletes an existing notification.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>DeleteDeviceNotificationAsync</td>
<td>Deletes a registered notification asynchronously.</td>
</tr>
<tr>
<td>DeleteVariableHandle</td>
<td>Releases the handle of a ADS variable again.</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync</td>
<td>Releases the handle of a ADS variable again (asynchronously)</td>
</tr>
<tr>
<td>Disconnect</td>
<td>Disconnects this IConnection.</td>
</tr>
<tr>
<td>Dispose</td>
<td>Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object.)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object.)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object.)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, String, Object, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td>Read(UInt32, Memory)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>Read(UInt32, UInt32, Memory)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>Read(UInt32, UInt32, Memory, Void)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type, Int32)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32, Type)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32, Type, Int32)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type, CancellationToken)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type, Int32, CancellationToken)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, CancellationToken)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, Int32, CancellationToken)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, Type, CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, Type, Int32, CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, CancellationToken)</td>
<td>Reads data synchronously from an ADS device.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Int32, CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, Int32, CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, Int32, CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Int32, Encoding)</td>
<td>Reads a string from the specified symbol/variable.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, Int32, Encoding, CancellationToken)</td>
<td>Reads a string asynchronously from the specified symbol/variable</td>
</tr>
<tr>
<td>ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken)</td>
<td>Reads any string as an asynchronous operation.</td>
</tr>
<tr>
<td>ReadAsync(UInt32, Memory, Void)</td>
<td></td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ReadAsync(UInt32, UInt32, Memory, Void)</td>
<td>Call this method to obtain information about the specified data type.</td>
</tr>
<tr>
<td>ReadDataType</td>
<td>read data type as an asynchronous operation.</td>
</tr>
<tr>
<td>ReadDeviceInfo</td>
<td>Reads the identification and version number of an ADS server.</td>
</tr>
<tr>
<td>ReadDeviceInfoAsync</td>
<td>Reads the identification and version number of an ADS server.</td>
</tr>
<tr>
<td>ReadState</td>
<td>Reads the ADS status and the device status from an ADS server.</td>
</tr>
<tr>
<td>ReadStateAsync</td>
<td>Reads the ADS State asynchronously</td>
</tr>
<tr>
<td>ReadSymbol</td>

### AdsConnection Properties

The `AdsConnection` type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>WhenNotification(String, Type, NotificationSettings)</code></td>
<td>Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by <code>AnyTypeExtensions</code>.)</td>
</tr>
<tr>
<td><code>WhenNotification.T.(String, NotificationSettings)</code></td>
<td>Overloaded. Creates an observable sequence of values that are created by ADS Notifications. (Defined by <code>AnyTypeExtensions</code>.)</td>
</tr>
<tr>
<td><code>WhenSymbolVersionChanges()</code></td>
<td>Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by <code>AdsClientExtensions</code>.)</td>
</tr>
<tr>
<td><code>WhenSymbolVersionChanges(IScheduler)</code></td>
<td>Overloaded. Gets an observable sequence of SymbolVersion changed counts. (Defined by <code>AdsClientExtensions</code>.)</td>
</tr>
<tr>
<td><code>WhenValueChanged()</code></td>
<td>Observable sequence of Values driven by ADS Notifications on the specified symbol. (Defined by <code>ValueSymbolExtensions</code>.)</td>
</tr>
<tr>
<td><code>WriteValues.T.(String, IObservable.T.)</code></td>
<td>Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by <code>AnyTypeExtensions</code>.)</td>
</tr>
<tr>
<td><code>WriteValues.T.(String, IObservable.T., Action.Exception.)</code></td>
<td>Overloaded. Writes the sequence of values to the symbol specified by the instance path. (Defined by <code>AnyTypeExtensions</code>.)</td>
</tr>
</tbody>
</table>

### Remarks

The ADS Connection class represents an ADS Point-to-Point Connection between client and server. It is established by using the Connect method of the `AdsSession` object. An ADS Connection can have different `ConnectionStates`, which represent the state of the logical ADS connection.

### Reference

- TwinCAT.Ads Namespace
- TwinCAT.Ads.AdsSession
- TwinCAT.Ads.IAdsConnection
- System.IDisposable

#### 6.2.5.1 AdsConnection Properties

The `AdsConnection` type exposes the following members.
## TwinCAT.Ads Namespaces

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActiveSince [376]</td>
<td>Gets the UTC time when the last active/resurrected Connection was established</td>
</tr>
<tr>
<td>Address [377]</td>
<td>Gets the AmsAddress [648] of the ADS server.</td>
</tr>
<tr>
<td>ConnectionEstablishedAt [378]</td>
<td>Gets the UTC time when the Connection was originally established.</td>
</tr>
<tr>
<td>ConnectionLostCount [378]</td>
<td>Gets the connection lost count.</td>
</tr>
<tr>
<td>ConnectionLostTime [378]</td>
<td>Gets the connection lost time.</td>
</tr>
<tr>
<td>ConnectionState [379]</td>
<td>Gets the current Connection state of the AdsConnection [357]</td>
</tr>
<tr>
<td>DefaultValueEncoding [380]</td>
<td>Gets the default value encoding.</td>
</tr>
<tr>
<td>Disposed [381]</td>
<td>Gets a value indicating whether this AdsConnection [357] is disposed.</td>
</tr>
<tr>
<td>Id [381]</td>
<td>Gets the AdsConnection [357] identifier.</td>
</tr>
<tr>
<td>IsActive [382]</td>
<td>Gets a value indicating whether communication is in active state</td>
</tr>
<tr>
<td>IsConnected [382]</td>
<td>Gets a value indicating whether the local ADS port was opened successfully.</td>
</tr>
<tr>
<td>IsLocal [383]</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server</td>
</tr>
<tr>
<td>IsLost [383]</td>
<td>Gets a value indicating whether the communication is in lost / open state</td>
</tr>
<tr>
<td>IsReconnecting [384]</td>
<td>Gets a value indicating whether communication is ready for reconnecting</td>
</tr>
<tr>
<td>Name [384]</td>
<td>Gets the name of this AdsConnection [357].</td>
</tr>
<tr>
<td>ResurrectingTries [384]</td>
<td>Gets the number of tries to resurrect the AdsConnection [357].</td>
</tr>
<tr>
<td>Resurrections [384]</td>
<td>Gets the number of succeeded connection resurrections.</td>
</tr>
<tr>
<td>Timeout [386]</td>
<td>Gets the timeout (in milliseconds)</td>
</tr>
</tbody>
</table>
6.2.5.1.1 AdsConnection.AccessWaitTime Property

Gets the access wait time.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public TimeSpan AccessWaitTime { get; }
```

**Property Value**

**Type:** TimeSpan

The access wait time.

**Remarks**

Gets the Wait Time until the next communication try will be done. This time is calculated as follows:

\[\text{ResurrectionTime} - (\text{DateTime.Now} - \text{ConnectionLostTime})\]

**Reference**

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

AdsConnection.ConnectionLostTime [378]

SessionSettings.ResurrectionTime [1039]

6.2.5.1.2 AdsConnection.ActiveSince Property

Gets the UTC time when the last active/resurrected Connection was established

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Nullable<DateTimeOffset> ActiveSince { get; }
```

**Property Value**

**Type:** Nullable DateTimeOffset

The active since.
6.2.5.1.3  AdsConnection.Address Property

Gets the AmsAddress [648] of the ADS server.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public AmsAddress Address { get; }

Property Value

Type: AmsAddress [648]
The server address.

Implements

IAdsConnection.Address [781]

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

6.2.5.1.4  AdsConnection.ClientAddress Property

Get the AmsAddress [648] of the ADS client.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public AmsAddress ClientAddress { get; }

Property Value

Type: AmsAddress [648]
The client address.

Implements

IAdsConnection.ClientAddress [781]
6.2.5.1.5  AdsConnection.ConnectionEstablishedAt Property

Gets the UTC time when the Connection was originally established.

**Namespace:**  TwinCAT.Ads

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public Nullable<DateTimeOffset> ConnectionEstablishedAt { get; }
```

**Property Value**

Type: Nullable DateTimeOffset

The connection established at.

**Reference**

AdsConnection Class [ 357 ]

TwinCAT.Ads Namespace [ 151 ]

6.2.5.1.6  AdsConnection.ConnectionLostCount Property

Gets the connection lost count.

**Namespace:**  TwinCAT.Ads

**Assembly:**  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public int ConnectionLostCount { get; }
```

**Property Value**

Type: Int32

The connection lost count.

**Reference**

AdsConnection Class [ 357 ]

TwinCAT.Ads Namespace [ 151 ]

6.2.5.1.7  AdsConnection.ConnectionLostTime Property

Gets the connection lost time.
**Property Value**

**Type:** Nullable\(\)\ DosDateTime\(\)\ .
The connection lost time.

**Reference**

AdsConnection Class \[357\]

TwinCAT.Ads Namespace \[151\]

**6.2.5.1.8 AdsConnection\(\)\ .ConnectionState Property**

Gets the current Connection state of the AdsConnection \[357\]

**Namespace:** TwinCAT.Ads \[151\]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

public ConnectionState ConnectionState { get; }  

**Property Value**

**Type:** ConnectionState \[67\]
The state of the connection.

**Implements**

IConnectionStateProvider\(\)\ .ConnectionState \[85\]

**Remarks**

The Connection state changes only if the IConnection \[74\] is established / shut down or active communication is triggered by the User of the IConnection \[74\] object.

**Examples**

The following sample shows how to keep the ConnectionState updated by triggering ADS Communication.

**Trigger ConnectionState changes in WPF Applications**

```csharp
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e) {

```
```csharp
_session = new AdsSession(AmsNetId.Local, 10000);
IConnection connection = _session.Connect();
tbConnectionState.Text = connection.ConnectionState.ToString();
_session.ConnectionStateChanged += _session_ConnectionStateChanged;
_timer = new DispatcherTimer();
_timer.Interval = TimeSpan.FromMilliseconds(200);
_timer.Tick += TimerOnTick;
_timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
```

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]
AdsConnection.ConnectionStateChanged [570]

6.2.5.1.9 AdsConnection.DefaultValueEncoding Property

Gets the default value encoding.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public Encoding DefaultValueEncoding { get; }
```

Property Value

Type: Encoding
The default value encoding.
6.2.5.1.10  AdsConnection.Disposed Property

Gets a value indicating whether this AdsConnection is disposed.

Namespace:  TwinCAT.Ads
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool Disposed { get; }

Property Value

Type:  Boolean
true if disposed; otherwise, false.

Reference

AdsConnection Class[357]
TwinCAT.Ads Namespace[151]

6.2.5.1.11  AdsConnection.Id Property

Gets the AdsConnection identifier.

Namespace:  TwinCAT.Ads
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public int Id { get; }

Property Value

Type:  Int32
The identifier.

Reference

AdsConnection Class[357]
TwinCAT.Ads Namespace[151]
6.2.5.1.12 AdsConnection.IsActive Property

Gets a value indicating whether communication is in active state

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsActive { get; }
```

**Property Value**

Type: Boolean  
true if this instance is active; otherwise, false.

**Reference**

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

6.2.5.1.13 AdsConnection.IsConnected Property

Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsConnected { get; }
```

**Property Value**

Type: Boolean  
true if this instance is connected; otherwise, false.

**Implements**

IConnection.IsConnected [76]

**Reference**

AdsConnection Class [357]
6.2.5.1.14 AdsConnection.IsLocal Property

Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.

**Namespace:** TwinCAT.Ads [▸ 151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsLocal { get; }
```

**Property Value**

Type: Boolean
true if this instance is local; otherwise, false.

**Implements**

IAdsConnection.IsLocal [▸ 782]

**Reference**

AdsConnection Class [▸ 357]
TwinCAT.Ads Namespace [▸ 151]

6.2.5.1.15 AdsConnection.IsLost Property

Gets a value indicating whether the communication is in lost / open state

**Namespace:** TwinCAT.Ads [▸ 151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public bool IsLost { get; }
```

**Property Value**

Type: Boolean
true if this instance is lost; otherwise, false.

**Reference**

AdsConnection Class [▸ 357]
TwinCAT.Ads Namespace [▸ 151]
6.2.5.1.16 AdsConnection.IsReconnecting Property

Gets a value indicating whether communication is ready for reconnecting

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public bool IsReconnecting { get; }
```

**Property Value**

Type: **Boolean**

ture if this instance is reconnecting; otherwise, false.

**Reference**

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

---

6.2.5.1.17 AdsConnection.Name Property

Gets the name of this AdsConnection [357].

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public string Name { get; }
```

**Property Value**

Type: **String**

The name.

**Reference**

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

---

6.2.5.1.18 AdsConnection.ResurrectingTries Property

Gets the number of tries to resurrect the AdsConnection [357].

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int ResurrectingTries { get; }
```

Property Value

Type: Int32
The number of tried resurrections of the [Connection](#74).

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

6.2.5.1.19 AdsConnection.Resurrections Property

Gets the number of succeeded connection resurrections.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int Resurrections { get; }
```

Property Value

Type: Int32
The resurrection count.

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

6.2.5.1.20 AdsConnection.Session Property

Gets the Session object of the AdsConnection [357] object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public ISession Session { get; }
```

Property Value

Type: ISession [88]
The client.
Implements

IConnection.Session

Reference

AdsConnection Class

TwinCAT.Ads Namespace

6.2.5.1.21 AdsConnection.State Property

Gets the current ConnectionState

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdcca3e72bc0ea15da1c14

Syntax

C#

public ConnectionState State { get; }

Property Value

Type: ConnectionState
The state.

Reference

AdsConnection Class

TwinCAT.Ads Namespace

6.2.5.1.22 AdsConnection.Timeout Property

Gets the timeout (in milliseconds)

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdcca3e72bc0ea15da1c14

Syntax

C#

public int Timeout { get; set; }

Property Value

Type: Int32
The timeout.

Implements

IConnection.Timeout
6.2.5.2 AdsConnection Methods

The AdsConnection type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotification(String, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td><strong>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type)</strong></td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx[566] event.</td>
</tr>
<tr>
<td><strong>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32.)</strong></td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.</td>
</tr>
<tr>
<td><strong>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, Int32., CancellationToken)</strong></td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx[566] event.</td>
</tr>
<tr>
<td><strong>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, Int32., CancellationToken)</strong></td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx[566] event.</td>
</tr>
<tr>
<td><strong>CleanupSymbolTable</strong></td>
<td>Clears the internal symbol cache.</td>
</tr>
<tr>
<td><strong>Close</strong></td>
<td>Closes the AdsConnection[357]</td>
</tr>
<tr>
<td><strong>Connect</strong></td>
<td>(Re)Connects the IConnection[74] when disconnected.</td>
</tr>
<tr>
<td><strong>CreateSymbolLoader</strong></td>
<td>Creates a new instance of the Symbol loader[1383] with the specified mode.</td>
</tr>
<tr>
<td><strong>CreateVariableHandle</strong></td>
<td>Generates a unique handle for an ADS variable.</td>
</tr>
<tr>
<td><strong>CreateVariableHandleAsync</strong></td>
<td>Determines the Symbol handle by its instance path asynchronously.</td>
</tr>
<tr>
<td><strong>DeleteDeviceNotification</strong></td>
<td>Deletes an existing notification.</td>
</tr>
<tr>
<td><strong>DeleteDeviceNotificationAsync</strong></td>
<td>Deletes a registered notification asynchronously.</td>
</tr>
<tr>
<td><strong>DeleteVariableHandle</strong></td>
<td>Releases the handle of a ADS variable again.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync</td>
<td>Releases the handle of a ADS variable again (asynchronously)</td>
</tr>
<tr>
<td>Disconnect</td>
<td>Disconnects this IConnection</td>
</tr>
<tr>
<td>Dispose</td>
<td>Performs application-defined tasks associated with freeing, releasing, or</td>
</tr>
<tr>
<td></td>
<td>resetting unmanaged resources.</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object, Any TypeSpecifier, AnyTypeSpecifier, Object)</td>
<td>Invokes the specified RPC Method</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, String, Object, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, String, Object, Any TypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously</td>
</tr>
<tr>

### 6.2.5.2.1 AdsConnection.AddDeviceNotification Method

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="https://www.beckhoff.com" alt="AddDeviceNotification(String, Int32, NotificationSettings, Object)" /> ![402]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td><img src="https://www.beckhoff.com" alt="AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)" /> ![403]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
</tbody>
</table>

#### Reference

- AdsConnection Class [357]
- TwinCAT.Ads Namespace [151]

#### AdsConnection.AddDeviceNotification Method (String, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public uint AddDeviceNotification(
    string variableName,
    int dataSize,
    NotificationSettings settings,
    Object userData
)
```

#### Parameters

- **variableName**
  - Type: `System.String`
  - Name of the variable.

- **dataSize**
  - Type: `System.Int32`
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings` [979]
  - The settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data)

#### Return Value

- Type: `UInt32`
  - The notification handle.
Implements

IAdsNotifications.AddDeviceNotification(String, Int32, NotificationSettings, Object) [844]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException</td>
<td>[63]</td>
</tr>
</tbody>
</table>

Remarks

The dataSize Parameter defines the amount of bytes, that will be attached to the AdsNotification [564] as value. Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotification(UInt32) [430] should always called when the notification is not used anymore.

**AdsConnection.AddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object)**

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint AddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData
)
```
Parameters

- indexGroup: Type: `System.UInt32`
  Contains the index group number of the requested ADS service.

- indexOffset: Type: `System.UInt32`
  Contains the index offset number of the requested ADS service.

- dataSize: Type: `System.Int32`
  Maximum amount of data in bytes to receive with this ADS Notification.

- settings: Type: `TwinCAT.Ads.NotificationSettings`[979]
  The Notification settings.

- userData: Type: `System.Object`
  This object can be used to store user specific data (tag data)

Return Value

Type: `UInt32`
The notification handle.

Implements

- `IAdsNotifications.AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)`[845]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException</td>
<td>[63]</td>
</tr>
</tbody>
</table>

Remarks

The `dataSize` Parameter defines the amount of bytes, that will be attached to the `AdsNotification`[564] as value. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)`[430] should always called when the notification is not used anymore.

<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event.</td>
</tr>
</tbody>
</table>

### Reference

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]
userData

Type: System.Object
This object can be used to store user specific data (tag data)

cancel

Type: System.Threading.CancellationToken
The Cancellation token.

Return Value

Type: Task.ResultHandle
A task that represents the asynchronous 'AddDeviceNotification' operation. The ResultHandle type parameter contains the created handle (Handle) and the ErrorCode after execution.

Implements

IAdsNotifications.AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken)

Remarks

The dataSize Parameter defines the amount of bytes, that will be attached to the AdsNotification as value. Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotificationAsync(UInt32, CancellationToken) should always be called when the notification is not used anymore.

AddDeviceNotification Overload
AddDeviceNotificationAsync Overload
TryAddDeviceNotification Overload

AdsConnection.AddDeviceNotificationAsync Method (UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
## Syntax

**C#**

```csharp
public Task<ResultHandle> AddDeviceNotificationAsync(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    CancellationToken cancel
)
```

### Parameters

- **indexGroup**
  - Type: `System.UInt32`
  - The index group number of the requested ADS service.

- **indexOffset**
  - Type: `System.UInt32`
  - The index offset number of the requested ADS service.

- **dataSize**
  - Type: `System.Int32`
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings`
  - The notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data)

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The Cancellation token.

### Return Value

- Type: `Task<ResultHandle>`
  - A task that represents the asynchronous 'AddDeviceNotification' operation. The `ResultHandle` type parameter contains the created handle (Handle) and the `ErrorCode` after execution.

### Implements

- `IAdsNotifications.AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)`

### Remarks

The `dataSize` parameter defines the amount of bytes, that will be attached to the `AdsNotification` as value. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always be called when the notification is not used anymore.

TwinCAT.Ads Namespace [151]

**AdsConnection.AddDeviceNotificationEx Method (String, NotificationSettings, Object, Type)**

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [566] event.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type
)
```

Parameters

- **symbolPath**
  - Type: `System.String`
  - Symbol/Instance path of the ADS variable.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings` [\[.979\]}
  - The Notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data).

- **type**
  - Type: `System.Type`
  - Type of the object stored in the event argument ('AnyType')

Return Value

- Type: `UInt32`
- The notification handle.

Implements

- `IAdsNotifications.AddDeviceNotificationEx(String, NotificationSettings, Object, Type)` [\[.850\]}

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)` [\[.430\] should always called when the notification is not used anymore.

**AdsConnection.AddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32.)**

Connects a variable to the ADS client. The ADS client will be notified by the `AdsNotificationEx` [\[.566\] event.
Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args
)
```

Parameters

- **symbolPath**
  - Type: `System.String`
  - Symbol/Instance path of the ADS variable.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings`[
  - The Notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data)

- **type**
  - Type: `System.Type`
  - Type of the object stored in the event argument ('AnyType')

- **args**
  - Type: `.System.Int32`
  - Additional arguments (for 'AnyType')

Return Value

Type: `UInt32`

The notification handle.

Implements

`IAdsNotifications.AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.)`[

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)`[

AdsConnection Class [357]

AddDeviceNotificationEx Overload [408]

TwinCAT.Ads Namespace [151]

AdsConnection.DeleteDeviceNotification(UInt32) [430]

AdsConnection.AdsNotificationEx [566]
AdsConnection.AddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type, Int32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b436095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public uint AddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args
)
```

Parameters

- **indexGroup**
  Type: System.UInt32
  Contains the index group number of the requested ADS service.

- **indexOffset**
  Type: System.UInt32
  Contains the index offset number of the requested ADS service.

- **settings**
  Type: TwinCAT.Ads.NotificationSettings
  The Notification settings.

- **userData**
  Type: System.Object
  This object can be used to store user specific data.

- **type**
  Type: System.Type
  Type of the object stored in the event argument.

- **args**
  Type: System.Int32.
  Additional arguments for 'AnyType' types.

Return Value

Type: UInt32
The notification handle.

Implements

IAdsNotifications.AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32.)
Remarks

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)` should always be called when the notification is not used anymore.

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

AdsConnection.AddDeviceNotificationExAsync Method (String, NotificationSettings, Object, Type, _Int32_, CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx event.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public Task<ResultHandle> AddDeviceNotificationExAsync(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    CancellationToken cancel
)
```

Parameters

- **symbolPath**: Type: `System.String`
The symbol/instance path of the ADS variable.

- **settings**: Type: `TwinCAT.Ads.NotificationSettings`[979]
The notification settings.

- **userData**: Type: `System.Object`
This object can be used to store user specific data (tag data)

- **type**: Type: `System.Type`
Type of the object stored in the event argument ('AnyType')

- **args**: Type: `System.Int32`
Additional arguments (for 'AnyType')

- **cancel**: Type: `System.Threading.CancellationToken`
The Cancellation token.

Return Value

Type: `Task<ResultHandle>`[1005]
A task that represents the asynchronous 'AddDeviceNotification' operation. The `ResultHandle`[1005] type parameter contains the created handle (`Handle`[1007]) and the `ErrorCode`[992] after execution.

Implements

- `IAdsNotifications.AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, Int32., CancellationToken)`[855]

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)`[431] should always be called when the notification is not used anymore.

TryAddDeviceNotificationEx Overload [862]

**AdsConnection.AddDeviceNotificationExAsync Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken)**

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [566] event.

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultHandle> AddDeviceNotificationExAsync(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    CancellationToken cancel)
```

**Parameters**

- **indexGroup**  
  Type: System.UInt32  
  Contains the index group number of the requested ADS service.

- **indexOffset**  
  Type: System.UInt32  
  Contains the index offset number of the requested ADS service.

- **settings**  
  Type: TwinCAT.Ads.NotificationSettings [979]  
  The settings.

- **userData**  
  Type: System.Object  
  This object can be used to store user specific data.

- **type**  
  Type: System.Type  
  Type of the object stored in the event argument, only Primitive 'AnyTypes' allowed.

- **args**  
  Type: .System.Int32.  
  Additional arguments (for 'AnyType')

- **cancel**  
  Type: System.Threading.CancellationToken  
  The Cancellation token.

**Return Value**

Type: Task<ResultHandle> [1005].  
A task that represents the asynchronous 'AddDeviceNotification' operation. The ResultHandle [1005] type parameter contains the created handle (Handle) and the ErrorCode [992] after execution.

**Implements**

|AdsNotifications.AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [856]|
Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always called when the notification is not used anymore.

6.2.5.2.5 AdsConnection.CleanupSymbolTable Method

Clears the internal symbol cache.

Namespace: TwinCAT.Ads [▸ 151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void CleanupSymbolTable()
```

Implements

IAdsSymbolicAccess.CleanupSymbolTable [▸ 942]

Remarks

Previously stored symbol information is cleared. As a consequence the symbol information must be obtained from the ADS server again if accessed, which which needs an extra ADS round trip.

6.2.5.2.8 AdsConnection.CreateSymbolLoader Method

Creates a new instance of the Symbol loader [138] with the specified mode.
Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads.dll

Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public IAdsSymbolLoader CreateSymbolLoader(IAds SymbolLoader, ISymbolLoaderSettings settings)

Parameters

- **session**
  - Type: **TwinCAT.ISession**
  - The session (for session orientated loads/symbols). Can be NULL if not present.

- **settings**
  - Type: **TwinCAT.ISymbolLoaderSettings**
  - The settings.

Return Value

- Type: **IAdsSymbolLoader**
  - The interface of the Symbol loader.

Exceptions

- **ObjectDisposedException**
- **ObjectDisposedException**

Remarks

The Symbol Loader (V2) supports the following modes. The flat mode organizes the Symbols in a flat list. At the beginning this List caches only the root symbol objects, which can be enumerated. To access the sub elements like structure fields or array elements use the SubSymbols collection. The property get accessor generates the subsymbols lazy on the fly (performance optimized) and stores them internally as weak reference (memory optimized). This mode is available in all .NET versions. The virtual tree mode organizes the Symbols hierarchically with parent-child relationships. That eases the access to the hierarchical structure but needs slightly more preprocessing of the data. This mode is available in all .NET Versions. The Dynamic tree mode organizes the Symbols hierarchically and (dynamically) creates struct members, array elements and enum fields on the fly. 'Dynamically' means here not only lazy creation like in Flat, but furthermore real creation of type safe .NET complex types/instances as representatives of the TwinCAT Symbol objects/types. This feature is only available on platforms that support the Dynamic Language Runtime (DLR); actually all .NET Framework Version larger than 4.0. Virtual instances means, that all Symbols are ordered within a tree structure. For that symbol nodes that are not located on a fixed address, a Virtual Symbol will be created. Setting the virtualInstance parameter to 'false' means, that the located symbols will be returned in a flattened list.

Examples

The following sample shows how to create a dynamic version of the SymbolLoader V2. The dynamic symbol loader makes use of the Dynamic Language Runtime (DLR) of the .NET Framework. That means Structures, Arrays and Enumeration types and instances are generated 'on-the-fly' during symbol Browsing. These created dynamic objects are a one to one representation of the Symbol Server target objects (e.g. the IEC61131 types on the PLC). Dynamic language features are only available from .NET4 upwards.

// Using Default Notification settings
symCycleCount.ValueChanged += new EventHandler<ValueChangedEventArgs>(cycleCount_ValueChanged);

// Override default notification settings
symTaskInfo1.NotificationSettings = new NotificationSettings(AdsTransMode.Cyclic, 500, 0);

// Register for ValueChanged event.
symTaskInfo1.ValueChanged += new EventHandler<ValueChangedEventArgs>(taskInfo1ValueChanged);

Thread.Sleep(10000); // Sleep main thread for 10 Seconds
}

Console.WriteLine("CycleCount Changed events received: {0}", _cycleCountEvents);
Console.WriteLine("TaskInfo1 Value Changed events received: {0}", _taskInfo1Events);

Console.WriteLine("Press [Enter] for leave:");
Console.ReadLine();

static object _notificationSynchronizer = new object();
static int _cycleCountEvents = 0;

/// <summary>
/// Handler function for the CycleCount ValueChanged event.
/// </summary>
/// <param name="sender">The sender.</param>
/// <param name="e">The e.</param>
static void cycleCount_ValueChanged(object sender, ValueChangedEventArgs e)
{
    lock (_notificationSynchronizer)
    {
        Interlocked.Increment(ref _cycleCountEvents);
        // val is a type safe value of int!
        dynamic val = e.Value;
        uint intVal = val;

        DateTimeOffset changedTime = e.DateTime.ToLocalTime(); // Convert UTC to local time
        Console.WriteLine("CycleCount changed to: {0}, TimeStamp: {1}", intVal, changedTime.ToString("HH:mm:ss:fff");
    }
}

static int _taskInfo1Events = 0;

/// <summary>
/// Handler function for the TaskInfo ValueChanged event.
/// </summary>
/// <param name="sender">The sender.</param>
/// <param name="e">The e.</param>
static void taskInfo1ValueChanged(object sender, ValueChangedEventArgs e)
{
    lock (_notificationSynchronizer)
    {
        Interlocked.Increment(ref _taskInfo1Events);
        dynamic val = e.Value;
        DateTimeOffset changedTime = e.DateTime.ToLocalTime(); // Convert to local time

        // Val is a during Runtime created struct type and contains
        // the same Properties as related PLC object.
        int cycleTime = val.CycleTime;
        Console.WriteLine("TaskInfo1Value changed TimeStamp: {0}", changedTime.ToString("HH:mm:ss:ff"));
    }
}
The following sample shows how to create a static (non dynamic) version of the SymbolLoader V2. The static symbol loader in version 2 is a nearly code compatible version of the Dynamic Loader, only the dynamic creation of objects is not available. The reason for supporting this mode is that .NET Framework Versions lower than Version 4.0 (CLR2) doesn't support the Dynamic Language Runtime (DLR). The SymbolLoader V2 static object is supported from .NET 2.0 on.

Virtual Tree Mode

```csharp
using System;
using System.Threading;
using System.Diagnostics;
using TwinCAT;
using TwinCAT.Ads;
using TwinCAT.TypeSystem;
using TwinCAT.Ads.ValueAccess;
using TwinCAT.Ads.TypeSystem;

namespace Sample
{
    class SymbolBrowserProgramV2VirtualTree
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static void Main(string[] args)
        {
            ConsoleLogger logger = new ConsoleLogger();
            Console.WriteLine("\n");
            Console.WriteLine("Press [Enter] for start: ");
            Console.ReadLine();
            Stopwatch stopper = new Stopwatch();
            // logger.Active = false;
            stopper.Start();
            using (AdsClient client = new AdsClient())
            {
                //client.Synchronize = false;
                // Connect the AdsClient to the device target.
                client.Connect(address);
                // Creates the Symbol Objects as hierarchical tree
                SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree, ValueAccessMode.IndexGroupOffsetPreferred);
                ISymbolLoader symbolLoader = SymbolLoaderFactory.Create(client, settings);
                // Dump Datatypes from Target Device
                Console.WriteLine("Dumping '{0}' DataTypes:", symbolLoader.DataTypes.Count);
                foreach (IDataType type in symbolLoader.DataTypes)
                {
                    logger.DumpType(type);
                }
                Console.WriteLine("\n");
                // Dump Symbols from target device
                Console.WriteLine("Dumping '{0}' Symbols:", symbolLoader.Symbols.Count);
                foreach (ISymbol symbol in symbolLoader.Symbols)
                {
                    logger.DumpSymbol(symbol, 0);
                }
                stopper.Stop();
                TimeSpan elapsed = stopper.Elapsed;
            }
        }
    }
}
```
Examples

The SymbolLoader V2 static object is supported from .NET 2.0 on.

Flat Mode

using System;
using System.Diagnostics;
using System.Threading;
using TwinCAT;
using TwinCAT.Ads;
using TwinCAT.Ads.TypeSystem;
using TwinCAT.Ads.ValueAccess;
using TwinCAT.TypeSystem;
using TwinCAT.TypeSystem.Generic;

namespace Sample
{
    class SymbolBrowserProgramV2Flat
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static void Main(string[] args)
        {
            ConsoleLogger logger = new ConsoleLogger();
            Console.WriteLine(""');
            Console.WriteLine("Press [Enter] for start:");
            Console.ReadLine();
            //logger.Active = false;
            Stopwatch stopper = new Stopwatch();
            // Parse the command line arguments
            AmsAddress address = ArgParser.Parse(args);
            stopper.Start();
            // Create the ADS Client
            using (AdsClient client = new AdsClient())
            {
                //client.Synchronize = false;
                // Connect to Address
                client.Timeout = 30000;
                client.Connect(address);

                SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoadMode.Flat, ValueAccessMode.IndexGroupOffsetPreferred);

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]
TwinCAT.Ads.TypeSystem.SymbolLoaderFactory [1523]

### 6.2.5.2.9 AdsConnection.CreateVariableHandle Method

Generates a unique handle for an ADS variable.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```c#
public uint CreateVariableHandle(
    string variableName
)
```

**Parameters**

**variableName**

Type: System.String
Name of the ADS variable

**Return Value**

Type: UInt32
The handle of the ADS Variable.

**Implements**

[AdsHandle.CreateVariableHandle(String) [829]]

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

### 6.2.5.2.10 AdsConnection.CreateVariableHandleAsync Method

Determines the Symbol handle by its instance path asynchronously.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public Task<ResultHandle> CreateVariableHandleAsync(
    string variableName,
    CancellationToken cancel
)
```

**Parameters**

- **variableName**
  - Type: `System.String`
  - Name of the variable.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

**Return Value**

Type: `Task<ResultHandle>`

A task that represents the asynchronous 'CreateVariableHandle' operation. The `ResultHandle` parameter contains the variable handle (`Handle`) and the `ErrorCode` after execution.

**Implements**

`IAdsHandle.CreateVariableHandleAsync(String, CancellationToken) [830]`

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException</td>
<td></td>
</tr>
</tbody>
</table>

**Remarks**

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this `CreateVariableHandleAsync(String, CancellationToken)` is the `DeleteVariableHandleAsync(UInt32, CancellationToken) [432]`.

**Reference**

- AdsConnection Class [357]

- AdsConnection.TryCreateVariableHandle(String, UInt32.) [499]
- AdsConnection.CreateVariableHandle(String) [429]

**6.2.5.2.11 AdsConnection.DeleteDeviceNotification Method**

Deletes an existing notification.
namespace: TwinCAT.Ads
assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public void DeleteDeviceNotification(
    uint notificationHandle
) Parameters

notificationHandle Type: System.UInt32
Handle of the notification.

Implements

IAdsNotifications.DeleteDeviceNotification(UInt32) [857]

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

6.2.5.2.12 AdsConnection.DeleteDeviceNotificationAsync Method

Deletes a registered notification asynchronously.

namespace: TwinCAT.Ads
assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public Task<ResultAds> DeleteDeviceNotificationAsync(
    uint notificationHandle,
    CancellationToken cancel
) Parameters

notificationHandle Type: System.UInt32
Notification handle.

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultAds> [989].
A task that represents the asynchronous 'DeleteDeviceNotification' operation. The ErrorCode [992] property contains the ADS error code after execution.
Implements

IAdSnNotifications.DeleteDeviceNotificationAsync(UInt32, CancellationToken) [➤ 858]

Remarks

This is the complementary method to AddDeviceNotificationAsync Overload [➤ 847] overloads and should be
called when the notification is not needed anymore the free TwinCAT realtime resources.

IAdSnNotifications.AdsNotification [➤ 866]
TryAddDeviceNotification Overload [➤ 859]
AddDeviceNotification Overload [➤ 844]

6.2.5.2.13 AdsConnection.DeleteVariableHandle Method

Releases the handle of a ADS variable again.

Namespace: TwinCAT.Ads [➤ 151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.99b9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public void DeleteVariableHandle(
    uint variableHandle
)

Parameters

variableHandle Type: System.UInt32
Handle of the ADS variable

Implements

IAdSnHandle.DeleteVariableHandle(UInt32) [➤ 830]

Reference

AdsConnection Class [➤ 357]
TwinCAT.Ads Namespace [➤ 151]

6.2.5.2.14 AdsConnection.DeleteVariableHandleAsync Method

Releases the handle of a ADS variable again (asynchronously)
Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAds> DeleteVariableHandleAsync(
    uint variableHandle,
    CancellationToken cancel
)
```

Parameters

- **variableHandle**
  - Type: `System.UInt32`
  - Handle of the ADS variable

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

Return Value

Type: `Task<ResultAds>`.

A task that represents the asynchronous 'ReadState' operation. The `ResultAds` parameter contains the `ErrorCode` of the ADS communication after execution.

Implements

- `IAdsHandle.DeleteVariableHandleAsync(UInt32, CancellationToken)`

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ObjectDisposedException</code></td>
<td></td>
</tr>
<tr>
<td><code>ClientNotConnectedException</code></td>
<td>[63]</td>
</tr>
</tbody>
</table>

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this `DeleteVariableHandleAsync(UInt32, CancellationToken)` is the `CreateVariableHandleAsync(String, CancellationToken)`.

Reference

- `AdsConnection Class` [357]

- `AdsConnection.TryDeleteVariableHandle(UInt32)` [501]
- `AdsConnection.DeleteVariableHandle(UInt32)` [432]
6.2.5.2.15 AdsConnection.Disconnect Method

Disconnects this IConnection.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd6ca3e72bc0ea15da1c14

Syntax

C#

```csharp
public bool Disconnect()
```

Return Value

Type: Boolean
true if XXXX, false otherwise.

Implements

IConnection.Disconnect.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Reference

AdsConnection Class
TwinCAT.Ads Namespace

6.2.5.2.16 AdsConnection.Dispose Method

Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd6ca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Dispose()
```

Implements

IDisposable.Dispose.

Reference

AdsConnection Class
TwinCAT.Ads Namespace
6.2.5.2.17 AdsConnection.InvokeRpcMethod Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>

<td>Invokes the specified RPC Method</td>
</tr>
</tbody>
</table>

Reference

AdsConnection Class ![357]
TwinCAT.Ads Namespace ![151]

AdsConnection.InvokeRpcMethod Method (String, String, .Object.)

Invokes the specified RPC Method

**Namespace:** TwinCAT.Ads ![151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters
)
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>symbolPath</td>
<td>System.String</td>
<td>The symbol path.</td>
</tr>
<tr>
<td>methodName</td>
<td>System.String</td>
<td>The method name.</td>
</tr>
<tr>
<td>inParameters</td>
<td>System.Object</td>
<td>The input parameters or NULL</td>
</tr>
</tbody>
</table>
Return Value

Type: Object
The return value of the Method (as object).

Implements

IAdsRpcInvoke.InvokeRpcMethod(String, String, .Object.) [890]

Remarks

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"];  // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* (attribute 'TcRpcEnable')
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
            i1 : INT := 0;
i2 : INT := 0;
            END_VAR
            */
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] { (short)3, (short)4 });

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] { });

            // Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}
Reference

AdsConnection Class [357]
InvokeRpcMethod Overload [435]
TwinCAT.Ads Namespace [151]

AdsConnection.InvokeRpcMethod Method (String, String, .Object., .Object..)

Invokes the specified RPC Method

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object[] outParameters
)
```

Parameters

symbolPath Type: System.String
The symbol path.

methodName Type: System.String
The method name.

inParameters Type: .System.Object
The input parameters or NULL

outParameters Type: .System.Object..
The output parameters.

Return Value

Type: Object
The return value of the Method (as object).

Implements

IAdsRpcInvoke.InvokeRpcMethod(String, String, .Object., .Object..) [891]

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.
**Dynamic Tree Mode**

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
            // Call a Method that has the following signature (within MAIN Program)
            /*
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short)3, (short)4});
            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});
            // Browsing RpcMethods
            foreach (IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
                foreach (IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}

**Reference**

AdsConnection Class [151]

InvokeRpcMethod Overload [435]

TwinCAT.Ads Namespace [151]

**AdsConnection.InvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..)**

Invokes the specified RPC Method

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#  
public Object InvokeRpcMethod(  
    string symbolPath,  
    string methodName,  
    Object[] inParameters,  
    AnyTypeSpecifier[] outSpecifiers,  
    AnyTypeSpecifier retSpecifier,  
    out Object[] outParameters  
)

Parameters

symbolPath  
Type: System.String  
The symbol path.

methodName  
Type: System.String  
The method name.

inParameters  
Type: System.Object  
The parameters.

outSpecifiers  
Type: TwinCAT.TypeSystem.AnyTypeSpecifier[]  
The out specifiers (specifying the out types) or NULL.

retSpecifier  
Type: TwinCAT.TypeSystem.AnyTypeSpecifier[]  
The ret specifier (specifying the return value) or NULL.

outParameters  
Type: System.Object  
The out parameters.

Return Value

Type: Object  
The return value of the Method (as object).

Implements

IAdsRpcInvoke.InvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object)  
[893]

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCall1VirtualProgram  
{  
    /// <summary>  
    /// Defines the entry point of the application.  
    /// </summary>  
    static void Main(string[] args)  
    {  
        // Get the AdsAddress from command-line arguments  
        AdsAddress address = ArgParser.Parse(args);  
        using (AdsClient client = new AdsClient())  
        {  
            // Some code to call the method...  
        }  
    }  
}
```csharp
// client.Synchronize = false;

// Connect to the target device
client.Connect(address);

SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolLoaderSettings.VirtualTree);
ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

// Get the Symbols (Dynamic Symbols)
IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

// Call a Method that has the following signature (within MAIN Program)
METHOD PUBLIC M_Add : INT
VAR_INPUT
  i1 : INT := 0;
  i2 : INT := 0;
END_VAR
*/
short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});

// Call a Method that has no parameter and returns VOID
main.InvokeRpcMethod("M_Method1", new object[]{});

// Browsing RpcMethods
foreach(IRpcMethod method in main.RpcMethods)
{
  string methodName = method.Name;
  foreach(IRpcMethodParameter parameter in method.Parameters)
  {
    string parameterName = parameter.Name;
    string parameterType = parameter.TypeName;
  }
}
```

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

**AdsConnection.InvokeRpcMethodAsync Method (String, String, .Object., CancellationToken)**

Invokes the specified RPC Method asynchronously

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultRpcMethod> InvokeRpcMethodAsync(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    CancellationToken cancel
)
```

**Parameters**

- **symbolPath**: Type: `System.String`
  The symbol/Instance path of the symbol.

- **methodName**: Type: `System.String`
  The method name.

- **inParameters**: Type: `System.Object`
  The parameters.

- **cancel**: Type: `System.Threading.CancellationToken`
  The cancellation token.
Return Value

Type: Task.ResultRpcMethod[1025].

A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethod[1025] results contain the return value together with the output parameters.

Implements

IAdsRpcInvoke.InvokeRpcMethodAsync(String, String, Object, CancellationToken)[895]

Remarks

Because this overload doesn't provide any AnyTypeSpecifier[1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

AdsConnection Class [357]
InvokeRpcMethodAsync Overload [440]
TwinCAT.Ads Namespace [151]

AdsConnection.InvokeRpcMethodAsync Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultRpcMethod> InvokeRpcMethodAsync(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    CancellationToken cancel)
```

Parameters

- **symbolPath**
  - Type: System.String
  - The symbol/Instance path of the symbol.

- **methodName**
  - Type: System.String
  - The method name.

- **inParameters**
  - Type: .System.Object
  - The parameters.

- **outSpecifiers**
  - Type: .TwinCAT.TypeSystem.AnyTypeSpecifier
  - The out specifiers (specifying the out types) or NULL.

- **retSpecifier**
  - Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  - The ret specifier (specifying the return value) or NULL.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token

Return Value

Type: Task<ResultRpcMethod> [1025]

A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethod [1025] results contains the return value together with the output parameters.
Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set. ReturnValue [1028] and the ErrorCode [992] of the ADS communication after execution.

Implements

IAdsRpcInvoke.InvokeRpcMethodAsync(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) [897]

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram

AdsConnection Class [357]
InvokeRpcMethodAsync Overload [440]
TwinCAT.Ads Namespace [151]

AdsConnection.InvokeRpcMethodAsync Method (IRpcCallableInstance, IRpcMethod, Object[], AnyTypeSpecifier[], AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultRpcMethod> InvokeRpcMethodAsync(
    IRpcCallableInstance symbol,
    IRpcMethod method,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    CancellationToken cancel
)
```

Parameters

symbol Type: TwinCAT.TypeSystem.IRpcCallableInstance [2104]
The RPC callable symbol.

method Type: TwinCAT.TypeSystem.IRpcMethod [2123]
The method.

inParameters Type: System.Object
The parameters.

outSpecifiers Type: TwinCAT.TypeSystem.AnyTypeSpecifier [1633]
The out specifiers (specifying the out types) or NULL.

retSpecifier Type: TwinCAT.TypeSystem.AnyTypeSpecifier [1633]
The ret specifier (specifying the return value) or NULL.

cancel Type: System.Threading.CancellationToken
The cancellation token

Return Value

Type: Task.ResultRpcMethod [1025].
A task that represents the asynchronous ‘InvokeRpcMethod’ operation. The ResultRpcMethod [1025] results contains the return value together with the output parameters.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.ReturnValue [1028] and the ErrorCode [992] of the ADS communication after execution.

</tr>
</tbody>
</table>
AdsConnection.ReadAny<T>. Method (UInt32)

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch/releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public T ReadAny<T>(
    uint variableHandle
)
```

**Parameters**

<table>
<thead>
<tr>
<th>variableHandle</th>
<th>Type: System.UInt32</th>
</tr>
</thead>
<tbody>
<tr>
<td>Handle of the ADS variable.</td>
<td></td>
</tr>
</tbody>
</table>

**Type Parameters**

<table>
<thead>
<tr>
<th>T</th>
</tr>
</thead>
<tbody>
<tr>
<td>The type of the value to read.</td>
</tr>
</tbody>
</table>

**Return Value**

Type: T
The value of the read symbol.

**Implements**

IAdsAnyAccess.ReadAny<T>(UInt32) [707]

Reference

AdsConnection Class [357]

ReadAny Overload [449]

TwinCAT.Ads Namespace [151]

AdsConnection.ReadAny<T>. Method (UInt32, .Int32.)

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch/releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Reference

AdsConnection Class [357]

ReadAny Overload [449]

TwinCAT.Ads Namespace [151]
Syntax

C#

```csharp
public T ReadAny<T>(
    uint variableHandle,
    int[] args
)
```

Parameters

- **variableHandle**
  - Type: `System.UInt32`
  - Handle of the ADS variable.

- **args**
  - Type: `System.Int32`
  - Additional arguments.

Type Parameters

- **T**
  - The type of the value to read.

Return Value

- Type: `T`
  - The value of the read symbol.

Implements

- `IAdsAnyAccess.ReadAny<T>(UInt32, Int32)` [708]

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter `args` specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter `args`.

<table>
<thead>
<tr>
<th>Type of value Parameter</th>
<th>Necessary Arguments (args)</th>
</tr>
</thead>
<tbody>
<tr>
<td>string</td>
<td><code>args[0]</code>: Number of characters in the string typed as FixedLengthZeroTerminated [2395]</td>
</tr>
<tr>
<td>string[]</td>
<td></td>
</tr>
<tr>
<td>Array</td>
<td></td>
</tr>
</tbody>
</table>

**AdsConnection.ReadAny Method (UInt32, Type)**

Reads data synchronously from an ADS device and writes it to an object.

- **Namespace:** TwinCAT.Ads [151]
- **Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public Object ReadAny(
    uint variableHandle,
    Type type
)
```

Parameters

- **variableHandle**
  - Type: System.UInt32
  - Handle of the ADS variable.

- **type**
  - Type: System.Type
  - Type of the object to be read.

Return Value

Type: Object

The read object.

Implements

IAdsAnyAccess.ReadAny(UInt32, Type) [709]

Reference

AdsConnection Class [357]

ReadAny Overload [449]

TwinCAT.Ads Namespace [151]

**AdsConnection.ReadAny.T. Method (UInt32, UInt32)**

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public T ReadAny<T>(
    uint indexGroup,
    uint indexOffset
)
```

Parameters

- **indexGroup**
  - Type: System.UInt32
  - Index group of the ADS variable.

- **indexOffset**
  - Type: System.UInt32
  - Index offset of the ADS variable.

Type Parameters

- **T**
  - The type of the object to be read.
Return Value
Type: T
The read value.

Implements

`IAdsAnyAccess.ReadAny(T(UInt32, UInt32))` [710]

Reference

### AdsConnection.ReadAny Method (UInt32, UInt32, Type, .Int32., Int32)

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Object ReadAny(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[] args,
    int timeout
)
```

**Parameters**

- **indexGroup**
  - Type: System.UInt32
  - Index group of the ADS variable.

- **indexOffset**
  - Type: System.UInt32
  - Index offset of the ADS variable.

- **type**
  - Type: System.Type
  - Type of the object to be read.

- **args**
  - Type: System.Int32
  - Additional arguments.

- **timeout**
  - Type: System.Int32
  - The timeout.

**Return Value**

- Type: Object
  - The Value of the data marshalled to the specified type.

**Implements**

- IAdsReadWriteTimeoutAccess.ReadAny(UInt32, UInt32, Type, .Int32., Int32) [880]
## Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException</td>
<td>[63]</td>
</tr>
</tbody>
</table>

## Remarks

If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args. The type is limited to Primitive types ('AnyType').

</table>

**Reference**

*AdsConnection Class [357]*

*TwinCAT.Ads Namespace [151]*

**AdsConnection.ReadAnyAsync<T>. Method (UInt32, CancellationToken)**

Reads data synchronously from an ADS device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Shah.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C# public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint variableHandle,
    CancellationToken cancel
)

**Parameters**

- **variableHandle**
  - Type: System.UInt32
  - The variable/symbol handle.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Type Parameters**

- **T**
  - The Type of the value to be read.

**Return Value**

Type: Task<ResultValue<T>>. A task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read value (Value) and the ErrorCode after execution.
Implements

IAdsAnyAccess.ReadAnyAsync<T>(UInt32, CancellationToken) [715]

Remarks

As object types only primitive types are supported.

Reference

AdsConnection Class [357]

ReadAnyAsync Overload [458]

TwinCAT.Ads Namespace [151]

**AdsConnection.ReadAnyAsync<T> Method (UInt32, .Int32., CancellationToken)**

Reads data asynchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

**C#**

```csharp
public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint variableHandle,
    int[] args,
    CancellationToken cancel)
```

Parameters

- **variableHandle**
  Type: System.UInt32
  The variable handle.

- **args**
  Type: System.Int32.
  Additional arguments.

- **cancel**
  Type: System.Threading.CancellationToken
  The cancellation token.

Type Parameters

- **T**
  Type of the object to be read

Return Value

Type: Task<ResultValue<T>>

A task that represents the asynchronous read operation. The ResultValue<T>.Value parameter contains the read value (Value [1032]) and the ErrorCode [992] after execution.

Implements

IAdsAnyAccess.ReadAnyAsync<T>(UInt32, .Int32., CancellationToken) [715]
Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

AdsConnection Class [357]
ReadAnyAsync Overload [458]
TwinCAT.Ads Namespace [151]

AdsConnection.ReadAnyAsync Method (UInt32, Type, CancellationToken)

Reads data synchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadAnyAsync(
    uint variableHandle,
    Type type,
    CancellationToken cancel
)
```

Parameters

- `variableHandle`: Type: `System.UInt32`
The variable/symbol handle.
- `type`: Type: `System.Type`
The type of the object to be read.
- `cancel`: Type: `System.Threading.CancellationToken`
The cancellation token.

Return Value

Type: `Task<ResultAnyValue> [998]`
A task that represents the asynchronous read operation. The `ResultAnyValue [998]` parameter contains the read value (Value [1000]) and the `ErrorCode [992]` after execution.

Implements

`IAdsAnyAccess.ReadAnyAsync(UInt32, Type, CancellationToken) [716]`
Remarks
As object types only primitive types are supported.

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#

```csharp
public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint indexGroup,
    uint indexOffset,
    CancellationToken cancel
)
```

Parameters

- **indexGroup**
  Type: System.UInt32
  Index group of the ADS variable.

- **indexOffset**
  Type: System.UInt32
  Index offset of the ADS variable.

- **cancel**
  Type: System.Threading.CancellationToken
  The cancellation token.

Type Parameters

- **T**

Return Value

Type: Task<ResultValue<T>>[1029].T.
The asynchronous result.

Return Value

Type: Task<ResultValue<T>>[1029].T.
A task that represents the asynchronous read operation. The ResultValue.TValue[1029] parameter contains the read value (Value[1032]) and the ErrorCode[992] after execution.

Implements

IAdsAnyAccess.ReadAnyAsync<T>(UInt32, UInt32, CancellationToken)[717]
AdsConnection.ReadAnyAsync Method (UInt32, Type, .Int32., CancellationToken)

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Task<ResultAnyValue> ReadAnyAsync(
    uint variableHandle,
    Type type,
    int[] args,
    CancellationToken cancel)
```

**Parameters**

- `variableHandle`  
  Type: System.UInt32  
  The variable handle.

- `type`  
  Type: System.Type  
  Type of the object to be read.

- `args`  
  Type: System.Int32  
  Additional arguments.

- `cancel`  
  Type: System.Threading.CancellationToken  
  The cancellation token.

**Return Value**

Type: Task<ResultAnyValue> [998].  
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value [1000]) and the ErrorCode [992] after execution.

**Implements**

IAdsAnyAccess.ReadAnyAsync(UInt32, Type, .Int32., CancellationToken) [718]

**Remarks**

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

<tbody>
<tr>
<td>string</td>
<td>args[0]: Number of characters in the string typed as FixedLengthZeroTerminated [2395].</td>
</tr>
</tbody>
</table>
### AdsConnection.ReadAnyAsync.T. Method (UInt32, UInt32, Int32, CancellationToken)

Reads data asynchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public Task<ResultValue<T>> ReadAnyAsync<T>(
    uint indexGroup,
    uint indexOffset,
    int[] args,
    CancellationToken cancel)
```

#### Parameters

- **indexGroup**
  - Type: `System.UInt32`
  - Index group of the ADS variable.

- **indexOffset**
  - Type: `System.UInt32`
  - Index offset of the ADS variable.

- **args**
  - Type: `System.Int32`
  - Additional arguments.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

#### Type Parameters

- **T**
  - The type of the result value.

#### Return Value

- Type: `Task<ResultValue<T>>`
  - A task that represents the asynchronous read operation. The `ResultValue.TValue` parameter contains the read value (`Value`) and the `ErrorCode` after execution.

#### Implements

- `IAdsAnyAccess.ReadAnyAsync<T>(UInt32, UInt32, Int32, CancellationToken)`
Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

Reference

AdsConnection Class [357]

ReadAnyAsync Overload [458]

TwinCAT.Ads Namespace [151]

AdsConnection.ReadAnyAsync Method (UInt32, UInt32, Type, CancellationToken)

Reads data asynchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#  
public Task<ResultAnyValue> ReadAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Type type,
    CancellationToken cancel
)

Parameters

indexGroup Type: System.UInt32
Index group of the ADS variable.

indexOffset Type: System.UInt32
Index offset of the ADS variable.

type Type: System.Type
Type of the object to be read.

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultAnyValue> [998].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value [1000]) and the ErrorCode [992] after execution.
TwinCAT.Ads Namespaces

Implements

IAdsAnyAccess.ReadAnyAsync(UInt32, UInt32, Type, CancellationToken) [720]

Reference

AdsConnection Class [357]

ReadAnyAsync Overload [458]

TwinCAT.Ads Namespace [151]

AdsConnection.ReadAnyAsync Method (UInt32, UInt32, Type, .Int32., CancellationToken)

Reads data asynchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd2ca3e72bc0ea15da1c14

Syntax

C#

public Task<ResultAnyValue> ReadAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[] args,
    CancellationToken cancel
)

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>indexGroup</td>
<td>System.UInt32</td>
<td>Index group of the ADS variable.</td>
</tr>
<tr>
<td>indexOffset</td>
<td>System.UInt32</td>
<td>Index offset of the ADS variable.</td>
</tr>
<tr>
<td>type</td>
<td>System.Type</td>
<td>Type of the object to be read.</td>
</tr>
<tr>
<td>cancel</td>
<td>System.Threading.CancellationToken</td>
<td>The cancellation token.</td>
</tr>
</tbody>
</table>

Return Value

Type: Task<ResultAnyValue> [998].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value [1000]) and the ErrorCode [992] after execution.

Implements

IAdsAnyAccess.ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken) [721]
Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

**AdsConnection.ReadAnyString Method (UInt32, UInt32, Int32, Encoding)**

Reads as string from a specified address.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public string ReadAnyString(
    uint indexGroup,
    uint indexOffset,
    int len,
    Encoding encoding
)
```

Parameters

indexGroup Type: System.UInt32
The index group.
indexOffset  Type: System.UInt32
The index offset.

len  Type: System.Int32
The string length to be read.

encoding  Type: System.Text.Encoding
The encoding.

Return Value
Type: String
System.String.

Implements
IAdsAnyAccess.ReadAnyString(UInt32, UInt32, Int32, Encoding) [723]

Exceptions

<table>

AdsConnection.ReadAnyStringAsync Method (UInt32, Int32, Encoding, CancellationToken)

Reads a string asynchronously from the specified symbol/variable

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadAnyStringAsync(
    uint variableHandle,
    int len,
    Encoding encoding,
    CancellationToken cancel
)
```

Parameters

- `variableHandle`: Type: System.UInt32
  The variable handle.
- `len`: Type: System.Int32
  The length.
- `encoding`: Type: System.Text.Encoding
  The encoding.
- `cancel`: Type: System.Threading.CancellationToken
  The cancellation token.

Return Value

Type: Task<ResultAnyValue>
A task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read string (Value) and the ErrorCode after execution.

Implements

- AdsAnyAccess.ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken)

Exceptions

<table>
<thead>

TwinCAT.Ads Namespace
TwinCAT.Ads Namespace [151]

AdsConnection.ReadAnyStringAsync Method (UInt32, UInt32, Int32, Encoding, CancellationToken)

read any string as an asynchronous operation.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdcd3a3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadAnyStringAsync(
    uint indexGroup,
    uint indexOffset,
    int len,
    Encoding encoding,
    CancellationToken cancel
)
```

Parameters

- **indexGroup**
  - Type: System.UInt32
  - The index group.
- **indexOffset**
  - Type: System.UInt32
  - The index offset.
- **len**
  - Type: System.Int32
  - The string length to be read.
- **encoding**
  - Type: System.Text.Encoding
  - The encoding.
- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

Return Value

Type: Task<ResultAnyValue> [998].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value) and the ErrorCode [992] after execution.

Implements

IAdsAnyAccess.ReadAnyStringAsync(UInt32, UInt32, Int32, Encoding, CancellationToken) [725]

Exceptions

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
```csharp
public IDataType ReadDataType(
    string typeName
)
```
Parameters

typeName
  Type: System.String
  Name of the data type (without namespace)

Return Value

Type: IDataType [1986]
An containing the requested type.

Implements

IAdsSymbolicAccess.ReadDataType(String) [942]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

6.2.5.2.27 AdsConnection.ReadDeviceInfo Method

Reads the identification and version number of an ADS server.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public DeviceInfo ReadDeviceInfo()
```

Return Value

Type: DeviceInfo [698]
DeviceInfo struct containing the name of the device and the version information.

Implements

IAdsConnection.ReadDeviceInfo. [795]
### 6.2.5.2.28 AdsConnection.ReadDeviceInfoAsync Method

Reads the identification and version number of an ADS server.

**Namespace:** TwinCAT.Ads
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public Task<ResultDeviceInfo> ReadDeviceInfoAsync(
    CancellationToken cancel
)
```

#### Parameters

- `cancel`  
  **Type:** System.Threading.CancellationToken  
  The cancellation token.

#### Return Value

**Type:** Task<ResultDeviceInfo>

A task that represents the asynchronous 'ReadDeviceState' operation. The ResultDeviceInfo parameter contains the valueDeviceInfo and the ErrorCode of the ADS communication after execution.

**Implements**

|Task, ReadDeviceInfoAsync(CancellationToken)| 796 |

#### Exceptions

<table>
<thead>
<tr>

---

**AdsConnection.ReadValue Method (ISymbol)**

Reads the value of a symbol and returns it as an object. Strings and all primitive datatypes(UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Object ReadValue(
    ISymbol symbol
)
```
Parameters

symbol
Type: TwinCAT.TypeSystem.ISymbol
The symbol that should be read.

Return Value

Type: Object
The value of the symbol as an object.

Implements

IAdsSymbolicAccess.ReadValue(ISymbol)

Reference

AdsConnection Class
ReadValue Overload
TwinCAT.Ads Namespace

AdsConnection.ReadValue.T Method (ISymbol)

Reads the value of a symbol and returns it as an object.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public T ReadValue<T>(
    ISymbol symbol
)
```

Parameters

symbol
Type: TwinCAT.TypeSystem.ISymbol
The symbol that should be read.

Type Parameters

T The value type.

Return Value

Type: T
The value of the symbol.

Implements

IAdsSymbolicAccess.ReadValue.T.(ISymbol)
Remarks
Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

Reference

```

Parameters

name Type: System.String
Name of the ADS symbol.

type Type: System.Type
Managed type of the ADS symbol.

Return Value

Type: Object
Value of the symbol

Implements

[AdsSymbolicAccess.ReadValue(String, Type)] [947]

Reference

AdsConnection Class [357]

Reference

AdsConnection Class [➤ 357]

TwinCAT.Ads Namespace [➤ 151]

AdsConnection.ReadValueAsync.T. Method (String, CancellationToken)

Reads the value of a symbol asynchronously.

Namespace: TwinCAT.Ads [➤ 151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultValue<T>> ReadValueAsync<T>(
    string name,
    CancellationToken cancel)
```

Parameters

| name | Type: System.String |
| cancel | Type: System.Threading.CancellationToken |

Type Parameters

T The value type.
TwinCAT.Ads Namespaces

Return Value

Type: Task<ResultValue [1029].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value [1032]) and the ErrorCode [992] after execution.

Implements

| AdsSymbolicAccess.ReadValueAsync<T>(String, CancellationToken) [948] |

Remarks

The parameter type must have the same layout as the ADS symbol.

Reference

AdsConnection Class [357]
ReadValueAsync Overload [484]
TwinCAT.Ads Namespace [151]

AdsConnection.ReadValueAsync Method (ISymbol, CancellationToken)

Reads the value of a symbol and returns it as an object. Strings and all primitive datatypes (UInt32, Int32, Bool etc.) are supported. Arrays and structures cannot be read.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public Task<ResultAnyValue> ReadValueAsync(
    ISymbol symbol,
    CancellationToken cancel
)

Parameters

| symbol | Type: TwinCAT.TypeSystem.ISymbol [2176] |
|        | The symbol that should be read. |
| cancel | Type: System.Threading.CancellationToken |
|        | The cancel token. |

Return Value

Type: Task<ResultAnyValue [998].
The value of the symbol as an object.

Implements

| AdsSymbolicAccess.ReadValueAsync<T(ISymbol, CancellationToken) [949] |
 Exceptions

<table>
<thead>
<tr>
<th>Exception</th>

 AdsConnection Class [357]
 ReadValueAsync Overload [484]
 TwinCAT.Ads Namespace [151]

 AdsConnection.ReadValueAsync.T. Method (ISymbol, CancellationToken)

 Reads the value of a symbol asynchronously and returns it as an object.

 Namespace: TwinCAT.Ads [151]
 Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

 Syntax

 C#

 ```csharp
 public Task<ResultValue<T>> ReadValueAsync<T>(
     ISymbol symbol,
     CancellationToken cancel
 )
 ```

 Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>symbol</td>
<td>TwinCAT.TypeSystem.ISymbol</td>
<td>The symbol that should be read.</td>
</tr>
<tr>
<td>cancel</td>
<td>System.Threading.CancellationToken</td>
<td>The cancel token.</td>
</tr>
</tbody>
</table>

 Type Parameters

 T The value type.

 Return Value

 Type: Task<ResultValue<T>> The task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read value (Value) and the ErrorCode after execution.

 Implements

 IAdsSymbolicAccess.ReadValueAsync.T.ISymbol, CancellationToken) [950]

 Remarks

 Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.
AdsConnection.ReadValueAsync Method (String, Type, CancellationToken)

Reads the value of a symbol asynchronously.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultAnyValue> ReadValueAsync(
    string name,
    Type type,
    CancellationToken cancel
)
```

Parameters

- **name**: Type: System.String
  Name of the ADS symbol.
- **type**: Type: System.Type
  Managed type of the ADS symbol.
- **cancel**: Type: System.Threading.CancellationToken
  The cancel token.

Return Value

Type: Task<ResultAnyValue>
A task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read value (Value) and the ErrorCode after execution.

Implements

IAdsSymbolicAccess.ReadValueAsync(String, Type, CancellationToken)

Exceptions

)
```
6.2.5.2.37 AdsConnection.RegisterAdsStateChangedAsync Method

Registers for AdsStateChanged [➤ 567] events as an asynchronous operation.

**Namespace:** TwinCAT.Ads [➤ 151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<ResultAds> RegisterAdsStateChangedAsync(
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel)
```

**Parameters**

- **handler**
  Type: System.EventHandler<AdsStateChangedEventArgs> [➤ 627].
  The handler function to be registered for AdsStateChanged calls.

- **cancel**
  Type: System.Threading.CancellationToken
  The cancellation token.

**Return Value**

Type: Task<ResultAds> [➤ 989].
A task that represents the asynchronous 'RegisterAdsStateChanged' operation. The ResultAds [➤ 989] parameter contains the state the ErrorCode [➤ 992] of the ADS communication after execution.
6.2.5.2.38   AdsConnection.RegisterSymbolVersionChangedAsync Method

Registers the symbol version changed asynchronously.

Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public Task<ResultAds> RegisterSymbolVersionChangedAsync(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler,
    CancellationToken cancel)

Parameters

handler
Type: System.EventHandler<AdsSymbolVersionChangedEventArgs>
The handler function to register.

cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultAds>
A task that represents the asynchronous 'RegisterSymbolVersionChanged' operation. The ResultAds parameter contains the value ErrorCode of the ADS communication after execution.

Implements

IAdsSymbolChangedProvider.RegisterSymbolVersionChangedAsync(EventHandler<AdsSymbolVersionChangedEventArgs, CancellationToken>) [935]

Exceptions

<table>

### AdsConnection.TryAddDeviceNotification Method

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="494" alt="TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.)." /></td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
<tr>
<td><img src="495" alt="TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)." /></td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.</td>
</tr>
</tbody>
</table>

#### Reference

- AdsConnection Class [357]
- TwinCAT.Ads Namespace [151]

### AdsConnection.TryAddDeviceNotification Method (String, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public AdsErrorCode TryAddDeviceNotification(
    string variableName,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    out uint handle
)
```

#### Parameters

- **variableName**
  - Type: `System.String`
  - Name of the variable.

- **dataSize**
  - Type: `System.Int32`
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings` [979]
  - The notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data.
handle  

Type: System.UInt32
The notification handle.

Return Value

Type: AdsErrorCode [575]
The ADS ErrorCode.

Implements

IAdsNotifications.TryAddDeviceNotification(String, Int32, NotificationSettings, Object, UInt32.) [859]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

The 

dataSize

Parameter defines the amount of bytes, that will be attached to the AdsNotification [564] as value. Because notifications allocate TwinCAT system resources, a complementary call to TryDeleteDeviceNotification(UInt32) [500] should always be called when the notification is not used anymore.

AdsConnection.TryAddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [564] event.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public AdsErrorCode TryAddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    out uint handle
)
```

Parameters

- **indexGroup**
  - Type: System.UInt32
  - The index group number of the requested ADS service.

- **indexOffset**
  - Type: System.UInt32
  - The index offset number of the requested ADS service.

- **dataSize**
  - Type: System.Int32
  - Maximum amount of data in bytes to receive with this ADS Notification.

- **settings**
  - Type: TwinCAT.Ads.NotificationSettings
  - The Notification settings.

- **userData**
  - Type: System.Object
  - This object can be used to store user specific data (tag data)

- **handle**
  - Type: System.UInt32
  - The notification handle.

Return Value

Type: AdsErrorCode
- The ADS error code.

Implements

IAdsNotifications.TryAddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object, UInt32)

Remarks

The `dataSize` Parameter defines the amount of bytes, that will be attached to the AdsNotification as value.
Because notifications allocate TwinCAT system resources, a complementary call to TryDeleteDeviceNotification(UInt32) should always called when the notification is not used anymore.

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

**AdsConnection.TryAddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, .Int32., UInt32.)**

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AdsErrorCode TryAddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    out uint handle
)
```

**Parameters**

**symbolPath**

Type: System.String

The symbol path..
settings

Type: TwinCAT.Ads.NotificationSettings
The settings.

userData

Type: System.Object
This object can be used to store user specific data.

type

Type: System.Type
Type of the object stored in the event argument.

args

Type: System.Int32
Additional arguments.

handle

Type: System.UInt32
The handle.

Return Value

Type: AdsErrorCode
The handle of the notification.

Implements

IAdsNotifications.TryAddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32., UInt32.)

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>

</tr>
</tbody>
</table>

Reference

AdsConnection Class

TryAddDeviceNotificationEx Overload

TwinCAT.Ads Namespace

AdsConnection.TryAddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C# public AdsErrorCode TryAddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    out uint handle
)
**Parameters**

- **indexGroup**
  - Type: `System.UInt32`
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: `System.UInt32`
  - Contains the index offset number of the requested ADS service.

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings`
  - The Notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data)

- **type**
  - Type: `System.Type`
  - Type of the object stored in the event argument ('AnyType')

- **args**
  - Type: `System.Int32`
  - The 'AnyType' arguments.

- **handle**
  - Type: `System.UInt32`
  - The notification handle.

**Return Value**

- Type: `AdsErrorCode`
  - The ADS Error code.

**Implements**

- `IAdsNotifications.TryAddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., UInt32.)`

**Remarks**

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)` should always be called when the notification is not used anymore.

### 6.2.5.2.42 AdsConnection.TryDeleteDeviceNotification Method

Deletes a registered notification.

**Namespace:** [TwinCAT.Ads](#151)  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public AdsErrorCode TryDeleteDeviceNotification(
    uint notificationHandle
)
```

#### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type: System.UInt32</th>
</tr>
</thead>
<tbody>
<tr>
<td>notificationHandle</td>
<td>Notification handle.</td>
</tr>
</tbody>
</table>
Return Value

Type: AdsErrorCode [575]
The ADS error code.

Implements

IAdsNotifications.TryDeleteDeviceNotification(UInt32) [864]

Remarks

This is the complementary method to TryAddDeviceNotification Overload [859] overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

TryAddDeviceNotification Overload [859]
AddDeviceNotificationAsync Overload [847]

6.2.5.2.43 AdsConnection.TryDeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryDeleteVariableHandle(
    uint variableHandle
);
```

Parameters

variableHandle Type: System.UInt32
Handle of the ADS variable

Return Value

Type: AdsErrorCode [575]
The ADS error code.

Implements

IAdsHandle.TryDeleteVariableHandle(UInt32) [835]
Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException</td>
<td>[63]</td>
</tr>
</tbody>
</table>

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this TryDeleteVariableHandle(UInt32) is the TryCreateVariableHandle(String, UInt32) [499]

</tbody>
</table>

**Reference**

AdsConnection Class [► 357]

TwinCAT.Ads Namespace [► 151]

**AdsConnection.TryInvokeRpcMethod Method (String, String, Object., Object.)**

Invokes the specified RPC Method

**Namespace:** TwinCAT.Ads [► 151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object retValue
)
```

**Parameters**

- **symbolPath**
  Type: `System.String`
  The symbol path.

- **methodName**
  Type: `System.String`
  The method name.

- **inParameters**
  Type: `System.Object`
  The parameters.

- **retValue**
  Type: `System.Object`
  The return value of the RPC method as object.

**Return Value**

Type: `AdsErrorCode` [► 575]

The ADS Error Code.

**Implements**

`IAdsRpcInvoke.TryInvokeRpcMethod(String, String, Object., Object.)` [► 901]
Remarks

Because this overload doesn’t provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /*
             * {attribute 'ToRpcEnable'}
             * METHOD PUBLIC M_Add : INT
             * VAR_INPUT
             *   11 : INT := 0;
             *   12 : INT := 0;
             * END_VAR
             *
             */
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});

            // Browsing RpcMethods
            foreach(IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach(IRpcMethodParameter parameter in method.Parameters)

        foreach (IRpcMethodParameter parameter in method.Parameters)
        {
            string parameterName = parameter.Name;
            string parameterType = parameter.TypeName;
        }
    }
}

Reference

AdsConnection Class [» 357]

TryInvokeRpcMethod Overload [» 502]

TwinCAT.Ads Namespace [» 151]

AdsConnection.TryInvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object.., Object.)

Invokes the rpc method.

Namespace: TwinCAT.Ads [» 151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
Parameters

symbolPath Type: System.String
The symbol.

methodName Type: System.String
Name of the method.

inParameters Type: System.Object
The parameters.

outSpecifiers Type: TwinCAT.TypeSystem.AnyTypeSpecifier[]
The out specifiers (specifying the out types) or NULL.

retSpecifier Type: TwinCAT.TypeSystem.AnyTypeSpecifier[]
The ret specifier (specifying the return value) or NULL.

outParameters Type: System.Object
The out parameters.

retValue Type: System.Object
The return value of the RPC method.

Return Value

Type: AdsErrorCode[]
AdsErrorCode.

Implements

IAdsRpcInvoke.TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object)[]

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            client.Connect(address);
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
        }
    }
}
SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

// Get the Symbols (Dynamic Symbols)
IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

// Call a method that has the following signature (within MAIN Program)
/* {attribute 'TcRpcEnable'}
METHOD PUBLIC M_Add : INT
VAR_INPUT
   i1 : INT := 0;
   i2 : INT := 0;
END_VAR
*/
short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});

// Call a method that has no parameter and returns VOID
main.InvokeRpcMethod("M_Method1", new object[]{});

// Browsing RpcMethods

      string parameterType = parameter.TypeName;
   }
}

Reference

AdsConnection Class [357]

TryInvokeRpcMethod Overload [502]

TwinCAT.Ads Namespace [151]

Invokes the rpc method.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public AdsErrorCode TryInvokeRpcMethod(
   IRpcCallableInstance symbol,
   IRpcMethod method,
   Object[] inParameters,
   AnyTypeSpecifier[] outSpecifiers,
   AnyTypeSpecifier retSpecifier,
   out Object[] outParameters,
   out Object retValue
)
Parameters

- **symbol**: Type: `TwinCAT.TypeSystem.IRpcCallableInstance` [2104]
The RPC callable symbol.
- **method**: Type: `TwinCAT.TypeSystem.IRpcMethod` [2123]
The method.
- **inParameters**: Type: `System.Object`
The parameters.
- **outSpecifiers**: Type: `TwinCAT.TypeSystem.AnyTypeSpecifier` [1633]
The out specifiers (specifying the out types) or NULL.
- **retSpecifier**: Type: `TwinCAT.TypeSystem.AnyTypeSpecifier` [1633]
The ret specifier (specifying the return value) or NULL.
- **outParameters**: Type: `System.Object`
The out parameters.
- **retValue**: Type: `System.Object`
The return value of the RPC method.

Return Value

Type: `AdsErrorCode` [575]
`AdsErrorCode`.

Implements

`IAdsRpcInvoke.TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object)` [906]

readBuffer Type: Memory
timeout Type: System.Void
readBytes Type: System.Byte

Return Value

Type: AdsErrorCode [575]
6.2.5.2.46  AdsConnection.TryReadDataType Method

Call this method to obtain information about the specified data type.

Namespace:  TwinCAT.Ads [151]
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public AdsErrorCode TryReadDataType(
    string typeName,
    out IDataType dataType
)

Parameters

typeName               Type: System.String
                        Name of the symbol.

dataType               Type: TwinCAT.TypeSystem.IDataType [1986],
                        The symbol.

Return Value

Type: AdsErrorCode [575]
A IDataType [1986] containing the requested symbol information or null if symbol could not be found.

Implements

IAdsSymbolicAccess.TryReadDataType(String, IDataType.) [952]

Exceptions

6.2.5.2.48 AdsConnection.TryReadSymbol Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.
### Namespace

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public AdsErrorCode TryReadSymbol(
    string symbolPath,
    out IAdsSymbol symbol
)
```

### Parameters

- **symbolPath**
  - Type: System.String
  - Name of the symbol.

- **symbol**
  - Type: TwinCAT.Ads.TypeSystem.IAdsSymbol [1379]
  - The symbol.

### Return Value

- Type: AdsErrorCode [575]

A IAdsSymbol [1379] containing the requested symbol information or null if symbol could not be found.

### Implements

IAdsSymbolicAccess.TryReadSymbol(String, IAdsSymbol) [953]

### Reference

- AdsConnection Class [357]

### TwinCAT.Ads Namespace [151]

#### 6.2.5.2.49 AdsConnection.TryReadValue Method

TwinCAT.Ads Namespaces

**AdsConnection.TryReadValue<T>. Method (String, T.)**

Reads the value of a symbol and returns the value as object.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll)

Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public AdsErrorCode TryReadValue<T>(
    string name,
    out T value
)
```

**Parameters**

- **name**
  - Type: System.String
  - Name of the ADS symbol.

- **value**
  - Type: T.
  - The read value of the Symbol.

**Type Parameters**

- **T**
  - The value type.

**Return Value**

- Type: AdsErrorCode

The AdsErrorCode.

**Implements**

IAdsSymbolicAccess.TryReadValue<T>(String, T.)

**Remarks**

The parameter type must have the same layout as the ADS symbol.

**Reference**

- AdsConnection Class
- TryReadValue Overload
- TwinCAT.Ads Namespace

**AdsConnection.TryReadValue Method (ISymbol, Object.)**

Reads the value of a symbol and returns the value as object. The parameter type must have the same layout as the ADS symbol.
Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AdsErrorCode TryReadValue(
    ISymbol symbol,
    out Object value
)
```

Parameters

symbol Type: TwinCAT.TypeSystem.ISymbol [2176]
The symbol that should be read.

value Type: System.Object.
The value.

Return Value

Type: AdsErrorCode [575]
Value of the symbol

Implements

IAdsSymbolicAccess.TryReadValue(ISymbol, Object.) [954]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
<tr>
<td>ClientNotConnectedException [63]</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'. Structs are not supported.

Reference

AdsConnection Class [357]

TryReadValue Overload [516]

TwinCAT.Ads Namespace [151]

AdsConnection.TryReadValue.T. Method (ISymbol, T.)

Reads the value of a symbol and returns it as an object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C# public AdsErrorCode TryReadValue<T>(
    ISymbol symbol,
    out T value
)

Parameters

symbol Type: TwinCAT.TypeSystem.ISymbol
    The symbol that should be read.
value Type: T.
    The value.

Type Parameters

T The value type.

Return Value

Type: AdsErrorCode
    The ADS Error Code

Implements

IAdsSymbolicAccess.TryReadValue.T.(ISymbol, T.)

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

Reference

AdsConnection.TryReadValue Method (String, Type, Object.)

Reads the value of a symbol and returns the value as object.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public AdsErrorCode TryReadValue(
    string name,
    Type type,
    out Object value
)
Parameters

- **name**
  - Type: System.String
  - Name of the ADS symbol.

- **type**
  - Type: System.Type
  - Managed type of the ADS symbol.

- **value**
  - Type: System.Object
  - The read value of the Symbol.

Return Value

Type: AdsErrorCode [575]
The AdsErrorCode [575].

Implements

IASymbolicAccess.TryReadValue(String, Type, Object) [956]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>

Syntax

C#

public AdsErrorCode TryWriteValue<T>(
    ISymbol symbol,
    T val
)

Parameters

symbol

Type: TwinCAT.TypeSystem.ISymbol [p. 2176]
The symbol the value is written to.

val

Type: T
The value to write.

Type Parameters

T

The value type.

Return Value

Type: AdsErrorCode [p. 575]
AdsErrorCode.

Implements

IAdsSymbolicAccess.TryWriteValue<T>(ISymbol, T) [p. 960]

6.2.5.2.54  AdsConnection.UnregisterAdsStateChangedAsync Method

Registers for AdsStateChanged [67] events as an asynchronous operation.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
public Task<ResultAds> UnregisterAdsStateChangedAsync(
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel
)
```

**Parameters**

- **handler**
  Type: `System.EventHandler<AdsStateChangedEventArgs>` [627]
  The handler function to be unregistered.

- **cancel**
  Type: `System.Threading.CancellationToken`
  The cancellation token.

**Return Value**

Type: `Task<ResultAds>` [989]
A task that represents the asynchronous 'UnregisterAdsStateChanged' operation. The `ResultAds` [989] parameter contains the state the `ErrorCode` [992] of the ADS communication after execution.

**Implements**

`IAdsStateProvider.UnregisterAdsStateChangedAsync(EventHandler<AdsStateChangedEventArgs>, CancellationToken)` [933]

**Reference**

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

6.2.5.2.55  AdsConnection.UnregisterSymbolVersionChangedAsync Method

Unregisters the symbol version changed asynchronous.

**Syntax**

```csharp
public Task<ResultAds> UnregisterSymbolVersionChangedAsync(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler,
    CancellationToken cancel
)
```

**Parameters**

- **handler**
  Type: `System.EventHandler<AdsSymbolVersionChangedEventArgs>` [627]
  The handler function to be unregistered.

- **cancel**
  Type: `System.Threading.CancellationToken`
  The cancellation token.

**Implements**

`IAdsStateProvider.UnregisterSymbolVersionChangedAsync(EventHandler<AdsSymbolVersionChangedEventArgs>, CancellationToken)` [933]

**Reference**

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]
Parameters

**handler**
Type: `System.EventHandler<AdsSymbolVersionChangedEventArgs>`
The handler function to unregister.

**cancel**
Type: `System.Threading.CancellationToken`
The cancellation token.

Return Value

Type: `Task<ResultAds>`
A task that represents the asynchronous 'UnregisterSymbolVersionChangedAsync' operation. The `ResultAds` parameter contains the value `ErrorCode` of the ADS communication after execution.

Implements

`IAdsSymbolChangedProvider.UnregisterSymbolVersionChangedAsync(EventHandler<AdsSymbolVersionChangedEventArgs>, CancellationToken)`

AdsConnection.Write Method (UInt32, ReadOnlyMemory`1)

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Write(
    uint variableHandle,
    ReadOnlyMemory writeBuffer
)
```

Parameters

- `variableHandle` Type: System.UInt32
- `writeBuffer` Type: ReadOnlyMemory

Reference

AdsConnection Class [357]

AdsConnection.Write Method (UInt32, UInt32)

Trigger Client Method/Command.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Write(
    uint indexGroup,
    uint indexOffset
)
```

Parameters

- `indexGroup` Type: System.UInt32
  Contains the index group number of the requested ADS service.
- `indexOffset` Type: System.UInt32
  Contains the index offset number of the requested ADS service.
**Implements**

IAdsReadWrite2.Write(UInt32, UInt32) [878]

**Remarks**

This method is used to trigger Client Methods/Commands without parameters.

AdsConnection.WriteAnyAsync Method (UInt32, Object, CancellationToken)

Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public Task<ResultWrite> WriteAnyAsync(
    uint variableHandle,
    Object value,
    CancellationToken cancel
)
```

### Parameters

- **variableHandle**
  - Type: System.UInt32
  - Handle of the ADS variable.

- **value**
  - Type: System.Object
  - Object to write to the ADS device.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

### Return Value

- Type: Task<ResultWrite>
  - A task that represents the asynchronous task operation. The result parameter ResultWrite of the write operation contains the ErrorCode.

### Implements

- IAdsAnyAccess.WriteAnyAsync(UInt32, Object, CancellationToken)

### Remarks

<table>

**AdsConnection.WriteAnyAsync Method (UInt32, Object, .Int32., CancellationToken)**

Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.
Syntax

C#

```csharp
public Task<ResultWrite> WriteAnyAsync(
    uint variableHandle,
    Object value,
    int[] args,
    CancellationToken cancel
)
```

Parameters

- variableHandle  
  Type: System.UInt32  
  Handle of the ADS variable.

- value  
  Type: System.Object  
  Object to write to the ADS device.

- args  
  Type: System.Int32  
  Additional arguments.

- cancel  
  Type: System.Threading.CancellationToken  
  The cancellation token.

Return Value

<td>write any string as an asynchronous operation.</td>
</tr>
</tbody>
</table>

Reference

AdsConnection Class [357]
TwinCAT.Ads Namespace [151]

AdsConnection.WriteAnyStringAsync Method (String, String, Int32, Encoding, CancellationToken)

write any string as an asynchronous operation.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public Task<ResultWrite> WriteAnyStringAsync(
    string symbolPath,
    string value,
    int length,
    Encoding encoding,
    CancellationToken cancel
)

Parameters

- symbolPath: Type: System.String
  The symbol path.
- value: Type: System.String
  The value.
- length: Type: System.Int32
  The length of the string to write
- encoding: Type: System.Text.Encoding
  The encoding.
- cancel: Type: System.Threading.CancellationToken
  The cancellation token.
Return Value

Type: Task<ResultWrite>
Task<ResultWrite>.

Remarks

ATTENTION: Potentially this method is unsafe because following data can be overwritten after the string symbol. Please be sure to specify the string length lower than the string size reserved within the process image! The String is written with the specified encoding.

  New ADS status and device status.

**Implements**

IAdsStateControl.WriteControl(StateInfo) [918]

**Reference**

AdsConnection Class [357]

WriteControl Overload [551]

TwinCAT.Ads Namespace [151]

**AdsConnection.WriteControl Method (StateInfo, Int32)**

Changes the ADS status and the device status of an ADS server.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public void WriteControl(
    StateInfo stateInfo,
    int timeout
)
```

Parameters

- `stateInfo` Type: TwinCAT.Ads.StateInfo
  New ADS status and device status.
- `timeout` Type: System.Int32
  The timeout.

Implements

- IAdsStateControlTimeout.WriteControl(StateInfo, Int32)

Exceptions

<td></td>
</tr>
</tbody>
</table>

**Reference**

- AdsConnection Class [357]
AdsConnection.WriteControlAsync Method (AdsState, UInt16, CancellationToken)

Changes the ADS status and device status of the ADS server asynchronously.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public Task<ResultAds> WriteControlAsync(
    AdsState state,
    ushort deviceState,
    CancellationToken cancel
)
```

**Parameters**

- **state**
  
  Type: TwinCAT.Ads.AdsState
  
  The ADS state.

- **deviceState**
  
  Type: System.UInt16
  
  The device state.

- **cancel**
  
  Type: System.Threading.CancellationToken
  
  The cancellation token.

**Return Value**

Type: Task<ResultAds>

A task that represents the asynchronous 'WriteControl' operation. The ResultAds parameter contains the state the ErrorCode of the ADS communication after execution.

**Implements**

IAdsStateControl.WriteControlAsync(AdsState, UInt16, CancellationToken)

**Reference**

- AdsConnection Class
- WriteControlAsync Overload
- TwinCAT.Ads Namespace

AdsConnection.WriteControlAsync Method (AdsState, UInt16, ReadOnlyMemory`1, Void)

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
6.2.5.2.63  AdsConnection.WriteSymbolAsync Method

Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol.

Namespace:  TwinCAT.Ads
Assembly:  TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Task<ResultWrite> WriteSymbolAsync(
    string name,
    Object value,
    CancellationToken cancel
)
```

Parameters

name Type: System.String
Name of the ADS symbol.

value Type: System.Object
Object holding the value to be written to the ADS symbol.

cancel Type: System.Threading.CancellationToken
The cancel token.
Return Value

Type: Task.ResultWrite [1032].
A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite [1032] parameter contains the ErrorCode [992] after execution.

Exceptions

WriteValueAsync Overload [560]

TwinCAT.Ads Namespace [151]
AdsConnection.WriteValueAsync.<T>. Method (ISymbol, T, CancellationToken)

Wrote a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public Task<ResultWrite> WriteValueAsync<T>(
    ISymbol symbol,
    T val,
    CancellationToken cancel
)

Parameters

symbol 
Type: TwinCAT.TypeSystem.ISymbol 
The symbol the value is written to.

val 
Type: T 
The value to write.

cancel 
Type: System.Threading.CancellationToken 
The cancellation token.

Type Parameters

T 
The value type.

Return Value

Type: Task<ResultWrite> 
A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite parameter contains the ErrorCode after execution.

Implements

IAdsSymbolicAccess.WriteValueAsync.<T>.(ISymbol, T, CancellationToken)

Reference

AdsConnection Class

6.2.5.3 AdsConnection Events

The AdsConnection type exposes the following members.
Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsNotification [564]</td>
<td>Occurs when the ADS device sends a notification to the client.</td>
</tr>
<tr>
<td>AdsNotificationError [565]</td>
<td>Occurs when a exception has occurred during notification management.</td>
</tr>
<tr>
<td>AdsNotificationEx [566]</td>
<td>Occurs when the ADS devices sends a notification to the client.</td>
</tr>
<tr>
<td>AdsStateChanged [567]</td>
<td>Occurs when ADS State has been changed.</td>
</tr>
<tr>
<td>AdsSumNotification [568]</td>
<td>Occurs when Notifications are send (bundled notifications)</td>
</tr>
<tr>
<td>AdsSymbolVersionChanged</td>
<td>Occurs when the symbol version has been changed.</td>
</tr>
<tr>
<td>ConnectionStateChanged</td>
<td>Occurs when connection status of the AdsConnection [357] has been changed.</td>
</tr>
<tr>
<td>RouterStateChanged</td>
<td>Occurs when [router state changed].</td>
</tr>
</tbody>
</table>

Reference

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

6.2.5.3.1 AdsConnection.AdsNotification Event

Occurs when the ADS device sends a notification to the client.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934f07da3e72bc0ea15da1c14

Syntax

C#

```csharp
public event EventHandler<AdsNotificationEventArgs> AdsNotification
```

Value

Type: System.EventHandler<AdsNotificationEventArgs> [597].

Implements

IAdsNotifications.AdsNotification [866]
Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

The Event Argument contains the raw data value of the notification, not marshalled to .NET types.

Examples

Example of receiving AdsNotification [866] events.

Trigger on changed values by ADS Notifications

```csharp
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);

        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransModeOnChange, 200, 0), null, cancel);

        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }

        client.AdsNotification -= Client_AdsNotification2;
    }
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);

    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
    /*SynchronizationContext syncContext = SynchronizationContext.Current;
     _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}
```

Reference

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

6.2.5.3.2 AdsConnection.AdsNotificationError Event

Occurs when a exception has occurred during notification management.
**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public event EventHandler<AdsNotificationErrorEventArgs> AdsNotificationError
```

### Value

**Type:** System.EventHandler<AdsNotificationErrorEventArgs> [595]

### Implements

IAdsNotifications.AdsNotificationError [867]

### Remarks

The occurrence of this event can have two different reasons:

1. Indicates an internal error occurred during Notification management.
2. The registered notification becomes invalid on the server, eg. after a PLC Download / Online Change. If the ADS Server detects that the (still registered) Notification Sender is getting invalid, it sends an error notification so that the client will be informed about detached notifications. The event arguments contains the AdsInvalidNotificationException which describes the invalid notification handle by its Handle property.

### Reference

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

TwinCAT.Ads.AdsInvalidNotificationException [591]

AdsConnection.AdsNotification [564]

AdsConnection.AdsNotificationEx [566]

---

### 6.2.5.3.3 AdsConnection.AdsNotificationEx Event

Occurs when the ADS devices sends a notification to the client.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public event EventHandler<AdsNotificationExEventArgs> AdsNotificationEx
```

### Value

**Type:** System.EventHandler<AdsNotificationExEventArgs> [601]
TwinCAT.Ads Namespaces

**Implements**

IAdsNotifications.AdsNotificationEx [868]

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

**Remarks**

The Notification event arguments marshals the data value automatically to the specified .NET Type with ANY_TYPE marshellers.

**Examples**

Example of receiving AdsNotificationEx [868] events.

**Trigger on changed values by ADS Notifications**

```csharp
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
    client.AdsNotificationEx += Client_AdsNotificationEx;
    client.Connect(AmsNetId.Local, 851);

    // Add UDINT
    ResultHandle resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new NotificationSettings(AdsTransModeOnChange, 200, 200), null, typeof(uint), null, cancel);
    await Task.Delay(5000, cancel); // Wait ....
    ResultAds resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle, cancel); // Unregister Event
}
```

**Reference**

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

### 6.2.5.3.4 AdsConnection.AdsStateChanged Event

Occurs when ADS State has been changed.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public event EventHandler<AdsStateChangedEventArgs> AdsStateChanged
```

**Value**

Type: System.EventHandler<AdsStateChangedEventArgs> [627].
Implements

IAdsStateProvider.AdsStateChanged [› 934]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

This event occurs asynchronously if the synchronized flag is not set.

Reference

AdsConnection Class [› 357]
TwinCAT.Ads Namespace [› 151]

### 6.2.5.3.5 AdsConnection.AdsSumNotification Event

Occurs when Notifications are send (bundled notifications)

Namespace: TwinCAT.Ads [› 151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public event EventHandler<AdsSumNotificationEventArgs> AdsSumNotification
```

Value

Type: System.EventHandler<AdsSumNotificationEventArgs>.

Implements

IAdsNotifications.AdsSumNotification [› 868]

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ObjectDisposedException</td>
<td></td>
</tr>
</tbody>
</table>

Remarks

As an optimization, this event receives all ADS Notifications that occurred at one point in time together. As consequence, the overhead of handler code is reduced, what can be important if notifications are triggered in a high frequency and the event has to be synchronized to the UI thread context. Because multiple notifications are bound together, less thread synchronization is necessary. The AdsNotification [› 866] and AdsNotificationEx [› 868] events shouldn't be used when SumNotifications are registered, because they have an performance side effect to this AdsSumNotification [› 868] event. The full performance is reached only, when all notifications are handled on this event.
Examples

Example of receiving AdsSumNotification [868] events.

Trigger on changed values by ADS Notifications

```csharp
private async Task RegisterSumNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsSumNotification += Client_SumNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", sizeof(UInt32), new NotificationSettings(AdsTransModeOnChange, 200, 0), null, cancel);
        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
            ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
        }
    }

    client.AdsNotification -= Client_AdsNotification2;
}

private void Client_SumNotification(object sender, AdsSumNotificationEventArgs e)
{
    // Timestamp of the Notification List
    DateTimeOffset dateTime = e.TimeStamp;

    // List of Raw ADS Notifications
    IList<Notification> notifications = e.Notifications;
    foreach (Notification notification in notifications)
    {
        // Notifications can be handled more efficiently, because they occur together
        // handler and can be transformed/synchronized in one step compared to AdsClient.AdsNotification events.
    }
}
```

Reference

AdsConnection Class [357]

TwinCAT.Ads Namespace [151]

IAdsNotifications.AdsNotification [866]

6.2.5.3.6 AdsConnection.AdsSymbolVersionChanged Event

Occurs when the symbol version has been changed.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public event EventHandler<AdsSymbolVersionChangedEventArgs> AdsSymbolVersionChanged
```

Value

Type: `System.EventHandler<AdsSymbolVersionChangedEventArgs>`

Implements

`IAdsSymbolChangedProvider.AdsSymbolVersionChanged`

Remarks

This is the case when the connected ADS server restarts. This invalidates all actual opened symbol handles. The SymbolVersion counter doesn't trigger, when an online change is made on the PLC (ports 801, ..., 851 ...)

6.2.5.3.7 AdsConnection.ConnectionStateChanged Event

Occurs when connection status of the `AdsConnection` has been changed.

Namespace: `TwinCAT.Ads`

Assembly: `TwinCAT.Ads (in TwinCAT.Ads.dll)`

Version: 5.0.294+Branch.releases-5.0.A.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public event EventHandler<ConnectionStateChangedEventArgs> ConnectionStateChanged
```

Value

Type: `System.EventHandler<ConnectionStateChangedEventArgs>`

Implements

`IConnectionStateProvider.ConnectionStateChanged`

Remarks

The Connection state changes only if the `IConnection` is established / shut down or active communication is triggered by the User of the `IConnection` object.

Examples

The following sample shows how to keep the `ConnectionState` updated by triggering ADS Communication.
Trigger ConnectionState changes in WPF Applications

```csharp
private DispatcherTimer _timer = null;
private AdsSession _session = null;
//private AdsConnection _connection = null;

private void Window_Loaded(object sender, RoutedEventArgs e)
{
    _session = new AdsSession(AmsNetId.Local, 10000);
    IConnection connection = _session.Connect();
    tbConnectionState.Text = connection.ConnectionState.ToString();
    _session.ConnectionStateChanged += _session_ConnectionStateChanged;

    _timer = new DispatcherTimer();
    _timer.Interval = TimeSpan.FromMilliseconds(200);
    _timer.Tick += TimerOnTick;
    _timer.Start();
}

private void Window_Unloaded(object sender, RoutedEventArgs e)
{
    _timer.Stop();
    _session.Dispose();
}

private void _session_ConnectionStateChanged(object sender, TwinCAT.ConnectionStateChangedEventArgs e)
{
    // ConnectionStateChanged will be triggered by communication Invokes
    tbConnectionState.Text = e.NewState.ToString();
}

private void TimerOnTick(object sender, EventArgs eventArgs)
{
    // The Timer Event will occur here in the UI thread because its an DispatcherTimer event!
    // An active ADS request will trigger Connection State periodically!
    StateInfo stateInfo;
    if (_session.Connection.TryReadState(out stateInfo) == AdsErrorCode.NoError)
    {
        tbAdsState.Text = stateInfo.AdsState.ToString();
    }
    else
    {
        tbAdsState.Text = "Invalid";
    }
}
```

### 6.2.6 AdsDataTypeArrayInfo Class

Array definition for a single dimension.

**Inheritance Hierarchy**

- `System.Object`
- TwinCAT.Ads.AdsDataTypeArrayInfo

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public class AdsDataTypeArrayInfo
```

The `AdsDataTypeArrayInfo` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements [573]</td>
<td>Gets the number of elements.</td>
</tr>
<tr>
<td>LowerBound [573]</td>
<td>Gets the lower bound.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>
6.2.6.1 AdsDataTypeArrayInfo Properties

The AdsDataTypeArrayInfo [572] type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements</td>
<td>Gets the number of elements.</td>
</tr>
<tr>
<td>LowerBound</td>
<td>Gets the lower bound.</td>
</tr>
</tbody>
</table>

### AdsDataTypeArrayInfo.Elements Property

Gets the number of elements.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int Elements { get; }
```

**Property Value**

Type: Int32

### AdsDataTypeArrayInfo.LowerBound Property

Gets the lower bound.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int LowerBound { get; }
```

Property Value

Type: Int32

Reference

TwinCAT.Ads Namespace [151]
6.2.9 AdsErrorCodeExtensions Class

Class AdsErrorCodeExtensions.

Inheritance Hierarchy

System.Object
  TwinCAT.Ads.AdsErrorCodeExtensions

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static class AdsErrorCodeExtensions
```

The AdsErrorCodeExtensions type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failed</td>
<td>Indicates, that the communication failed with AdsErrorCode.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Indicates, that the communication doesn't show an error.</td>
</tr>
</tbody>
</table>

Remarks

This class extends the AdsErrorCode by Succeeded(AdsErrorCode) and Failed(AdsErrorCode) methods.

Reference

TwinCAT.Ads Namespace

6.2.9.1 AdsErrorCodeExtensions Methods

The AdsErrorCodeExtensions type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failed</td>
<td>Indicates, that the communication failed with AdsErrorCode.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Indicates, that the communication doesn't show an error.</td>
</tr>
</tbody>
</table>

Reference

AdsErrorCodeExtensions Class
6.2.9.1.1 AdsErrorCodeExtensions.Failed Method

Indicates, that the communication failed with AdsErrorCode [575].

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```c#
public static bool Failed(
    this AdsErrorCode errorCode
)
```

Parameters

errorCode Type: TwinCAT.Ads.AdsErrorCode [575]
The error code.

Return Value

Type: Boolean
true if XXXX, false otherwise.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type AdsErrorCode [575]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Reference

AdsErrorCodeExtensions Class [581]
TwinCAT.Ads Namespace [151]

6.2.9.1.2 AdsErrorCodeExtensions.Succeeded Method

Indicates, that the communication / AdsErrorCode [575] doesn't show an error.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```c#
public static bool Succeeded(
    this AdsErrorCode errorCode
)
```
Parameters

errorCode

Type: TwinCAT.Ads.AdsErrorCode [575]
The error code.

Return Value

Type: Boolean
true if the AdsErrorCode [575] is NoError [575], false otherwise.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type AdsErrorCode [575]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets the error code of the Exception.</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HResult</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Create(AdsErrorCode)</td>
<td>Creates the AdsErrorException</td>
</tr>
<tr>
<td>Create(String, AdsErrorCode)</td>
<td>Creates the AdsErrorException</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides Exception.GetObjectData(SerializationInfo, StreamingContext).)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

6.2.10.1.3 AdsErrorException Constructor (String, AdsErrorCode)

Initializes a new instance of the AdsErrorException class.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AdsErrorException(
    string message,
    AdsErrorCode errorCode
)
```

**Parameters**

- `message`: Type: System.String
  The message.
- `errorCode`: Type: TwinCAT.Ads.AdsErrorCode
  The error code.
6.2.10.2 AdsErrorException Properties

The `AdsErrorException` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from <code>Exception</code>.)</td>

6.2.10.3.2 AdsErrorException.GetObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context
)
```

Parameters

- **info**
  - Type: System.Runtime.Serialization.SerializationInfo
  - The SerializationInfo that holds the serialized object data about the exception being thrown.

- **context**
  - Type: System.Runtime.Serialization.StreamingContext
  - The StreamingContext that contains contextual information about the source or destination.
## TwinsCAT.Ads Namespaces

### 6.2.10.4 AdsErrorException Events

The `AdsErrorException` type exposes the following members.

#### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SerializeObjectState</td>
<td>Occurs when an exception is serialized to create an exception state object</td>
</tr>
<tr>
<td></td>
<td>that contains serialized data about the exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### 6.2.11 AdsInvalidNotificationException Class

This `AdsInvalidNotificationException` is created if the length of the notification data is 0. This indicates that the notification handle is not valid any more. This exception is passed to the `AdsNotificationErrorEvent`.

#### Inheritance Hierarchy

- System.Object
  - System.Exception
    - `TwinCAT.AdsException` ![57](57)
      - `TwinCAT.Ads.AdsInvalidNotificationException`

#### Syntax

C#  

```csharp
[SerializableAttribute]
public sealed class AdsInvalidNotificationException : AdsException
```

The `AdsInvalidNotificationException` type exposes the following members.

</table>

Reference

AdsInvalidNotificationException Class [591]
TwinCAT.Ads Namespace [151]

6.2.11.2.1 AdsInvalidNotificationException.GetObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context)
```

Parameters

- `info` Type: `System.Runtime.Serialization.SerializationInfo`
  The `SerializationInfo` that holds the serialized object data about the exception being thrown.

- `context` Type: `System.Runtime.Serialization.StreamingContext`
  The `StreamingContext` that contains contextual information about the source or destination.

Implements

`ISerializable.GetObjectData(SerializationInfo, StreamingContext)`
`Exception.GetObjectData(SerializationInfo, StreamingContext)`

Exceptions

<tr>
<td>UserData [600]</td>
<td>Gets the user object. This object is passed by to AddDeviceNotification and can be used to store data.</td>
</tr>
</tbody>
</table>

#### Reference

AdsNotificationEventArgs Class [597]

TwinCAT.Ads Namespace [151]

#### 6.2.13.1.1 AdsNotificationEventArgs.Data Property

Memory object holding the Notification Data/Value.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
### Syntax

**C#**

```csharp
public ReadOnlyMemory Data { get; }
```

### Property Value

**Type:** `ReadOnlyMemory`

**Implements**

`INotification.Data` [970]

### Remarks

This Memory object can be seen as binary 'View' to the value object. It represents exactly the data that corresponds to the `Handle` [599].

### Reference

`AdsNotificationEventArgs Class` [597]

`TwinCAT.Ads Namespace` [151]

### 6.2.13.1.2 AdsNotificationEventArgs.Handle Property

**Gets the Notification handle.**

**Namespace:** `TwinCAT.Ads` [151]

**Assembly:** `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

**Syntax**

**C#**

```csharp
public uint Handle { get; }
```

### Property Value

**Type:** `UInt32`

**Implements**

`INotification.Handle` [970]

### Remarks

The Notification Handle is the handle that is created during ADS Notification registration (`AddDeviceNotificationAsync Overload` [847], `AddDeviceNotification Overload` [844]) and used for deregistration (`DeleteDeviceNotificationAsync(UInt32, CancellationToken)` [858], `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` [858]).

</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [618]</td>
<td>Gets the target address of the AdsSessionBase [614] (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>AddressSpecifier [103]</td>
<td>Gets the communication endpoint address string representation. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Connection [618]</td>
<td>Gets the connection. (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>ConnectionState [104]</td>
<td>Gets the current Connection state of the Session [101] (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Disposed [105]</td>
<td>Gets a value indicating whether this Session [101] is disposed. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>EstablishedAt [106]</td>
<td>Gets the UTC time when the session was established. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Id [106]</td>
<td>Gets the Session Identifier (Inherited from Session [101].)</td>
</tr>
<tr>
<td>IsConnected [107]</td>
<td>Gets a value indicating whether this instance is connected. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Name [107]</td>
<td>Gets the name of the session (Inherited from Session [101].)</td>
</tr>
<tr>
<td>NetId [619]</td>
<td>Gets the NetId of the Session (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>Owner [619]</td>
<td>Gets the Session owner. (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>Port [620]</td>
<td>Gets the Ams Port of the Session (Inherited from AdsSessionBase [614].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

**Name** | **Description**
--- | ---
Settings [620] | Gets the settings of the connection. (Inherited from AdsSessionBase[614].)
SymbolServer [108] | Gets the symbol server. (Inherited from Session[101].)

### Methods

**Name** | **Description**
--- | ---
Close [109] | Closes this ISession [88] (Inherited from Session[101].)
Connect [110] | Connects the session. (Inherited from Session[101].)
Disconnect [111] | Disconnects the session from the target. (Inherited from Session[101].)
Dispose. [112] | Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from Session[101].)
Dispose(Boolean) [622] | Releases unmanaged and - optionally - managed resources. (Inherited from AdsSessionBase[614].)
Equals | Determines whether the specified object is equal to the current object. (Inherited from Object.)
GetHashCode | Serves as the default hash function. (Inherited from Object.)
GetSessionName [623] | Gets the name/string identifier of the session. (Inherited from AdsSessionBase[614].)
GetType | Gets the Type of the current instance. (Inherited from Object.)
MemberwiseClone | Creates a shallow copy of the current Object. (Inherited from Object.)
OnConnect [624] | Handler function connecting the Session. (Inherited from AdsSessionBase[614].)
OnCreateSymbolServer [624] | Handler function creating the symbol server object. (Inherited from AdsSessionBase[614].)
OnDisconnect [625] | Called when [disconnect]. (Inherited from AdsSessionBase[614].)
OnGetAddress [625] | Handler function getting the address of the session. (Inherited from AdsSessionBase[614].)
ToString | Returns a string that represents the current object. (Inherited from Object.)

### Events

**Name** | **Description**
--- | ---
ConnectionStateChanged [115] | Occurs when connection status of the IConnectionStateProvider [84] has been changed. (Inherited from Session[101].)
Remarks

On top of the well known AdsClient [154] class that is used traditionally for ADS communication, the AdsSessionBase [614] class provides the following additionally abilities out of the box: These are used to provide more stable connections to ADS Servers than the AdsClient [154] can provide. The main issues are Resurrection / Self-Healing after communication timeouts, faster and less error prone reaction to communication errors (not necessarily waiting for communication timeouts) und enhanced communication diagnosis. These enhanced features are provided by the following additions to the TwinCAT.Ads API:

- AdsConnection [357] class.
- Enhanced diagnosis in form of communication statistics Statistics [621]
- (semi-automatic) Resurrectable client communication with AdsConnection [357] objects.
- Symbol caching SymbolServer [108]
- Fail fast handler for connection stabilization IFailFastHandler

The AdsConnection [357] is established by calling the Connect [110] method. The returned AdsConnection [357] can be used as long the AdsSessionBase [614] exists.

Examples

The following sample shows a simple use of the AdsSessionBase [614] object. The AdsSession object (and the dynamic SymbolLoader features) are only available from .NET 4 and upwards.

Use Session (async)

```csharp
using System;
using System.Diagnostics;
using System.Threading;
using TwinCAT;
using TwinCAT.Ads;
using TwinCAT.Ads.TypeSystem;
using TwinCAT.TypeSystem;
using TwinCAT.TypeSystem.Generic;
namespace Sample
{
    class SessionAsync
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static async void Main(string[] args)
        {
            AmsAddress address = ArgParser.Parse(args);
            CancellationTokenSource cancelSource = new CancellationTokenSource();
            CancellationToken cancel = cancelSource.Token;
            SessionSettings settings = SessionSettings.Default; // Default settings are Async access with Timeout 5 sec
            // Async access is necessary for Console applications!
            using (AdsSession session = new AdsSession(address, settings))
            {
                AdsConnection connection = (AdsConnection) session.Connect(); // Establish the connection
                ConnectionStateChanged += Connection_ConnectionStateChanged;
                ConnectionState connectionState = connection.ConnectionState; // The actual connection state
                // Read the identification and version number of the device
                var result = await connection.ReadDeviceInfoAsync(cancel);
                result.ThrowOnError(); // Throws exception if failed.
                DeviceInfo deviceInfo = result.DeviceInfo;
                Version version = deviceInfo.Version(ConvertToStandard());
                Console.WriteLine(string.Format("DeviceName: {0}\r\nDeviceVersion: {1}\n", deviceInfo.Name, version.ToString(3)));
            }
        }
    }
}```
/// Read the state of the device
var resultReadState = await connection.ReadStateAsync(cancel);
resultReadState.ThrowOnError();

StateInfo stateInfo = resultReadState.State;
AdsState adsState = stateInfo.AdsState;
short deviceState = stateInfo.DeviceState;

Console.WriteLine(string.Format("DeviceState: {0}", deviceState));
Console.WriteLine(string.Format("AdsState : {0}", adsState));

// Other ADS methods (as formerly used on AdsClient) can be used also on connection object:
// connection.ReadAsync(...)
// connection.WriteAsync(...)
// connection.AddDeviceNotificationEx += ...

// Session communication Diagnostic:

int resurrectionTries = connection.ResurrectingTries;
int succeededResurrections = connection.Resurrections;

AdsCommunicationStatistics statistics = session.Statistics; // The communication statistics

// Symbol access:
// The Session holds and Caches the Symbolic data information
var resultDataTypes = await session.SymbolServer.GetDataTypesAsync(cancel);
var resultSymbols = await session.SymbolServer.GetSymbolsAsync(cancel);

if (resultDataTypes.Succeeded && resultSymbols.Succeeded) // Check for succeed
{
    IDataTypeCollection<IDataType> types = resultDataTypes.DataTypes;
    ISymbolCollection<ISymbol> symbols = resultSymbols.Symbols;

    Symbol projectNameSymbol = (Symbol)symbols["TwinCAT_SystemInfoVarList._AppInfo.ProjectName"];  
    var resultReadProjectName = await projectNameSymbol.ReadValueAsync(cancel);
    string projectName = (string)resultReadProjectName.Value;

    // Or use dynamic objects
    dynamic appInfo = symbols["TwinCAT_SystemInfoVarList._AppInfo"];  
    string projectName2 = appInfo.ProjectName; // Property dynamically created (synchronous call)!
    }

Console.WriteLine("" );
Console.WriteLine("Press [Enter] for leave:" );
Console.ReadLine();
}  
}  

private static void Connection_ConnectionStateChanged(object sender, ConnectionStateChangedEventArgs e) { Console.WriteLine("Connection State changed (NewState: {0}, OldState: {1}" , e.NewState , e.OldState); }  

Use Session (sync)

using System;
using System.Diagnostics;
using System.Threading;
using TwinCAT;
using TwinCAT.Ads;
using TwinCAT.Ads.TypeSystem;
using TwinCAT.TypeSystem;
using TwinCAT.TypeSystem.Generic;

namespace Sample
{
    class Session
    {
        /// <summary>
        /// Defines the entry point of the application.
        /// </summary>
        /// <param name="args">The arguments.</param>
        static void Main(string[] args) {  

AmsAddress address = ArgParser.Parse(args);
SessionSettings settings = SessionSettings.Default; // Default settings are Async access with Timeout 5 sec

// Async access is necessary for Console applications!

### 6.2.15.1.1 AdsSession Constructor (AmsAddress)

Initializes a new instance of the AdsSessionBase [614] class.

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public AdsSession(
    AmsAddress address
)
```

**Parameters**

- **address**  
  Type: TwinCAT.Ads.AmsAddress [648]  
  The address.
6.2.15.1.2 AdsSession Constructor (AmsAddress, SessionSettings)

Initializes a new instance of the AdsSessionBase [614] class.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public AdsSession(
    AmsAddress address,
    SessionSettings settings
)
```

**Parameters**

- `address`  
  Type: TwinCAT.Ads.AmsAddress [648]  
  The address.

- `settings`  
  Type: TwinCAT.Ads.SessionSettings [1035]  
  The settings.

6.2.15.1.3 AdsSession Constructor (AmsNetId, Int32)

Initializes a new instance of the AdsSessionBase [614] class.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public AdsSession(
    AmsNetId netId,
    int port
)
```
Parameters

netId
Type: TwinCAT.Ads.AmsNetId [665]
The net identifier.

port
Type: System.Int32
The port.

Reference

6.2.15.1.4 AdsSession Constructor (AmsAddress, SessionSettings, Object)

Initializes a new instance of the AdsSessionBase [614] class.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public AdsSession(
    AmsAddress address,
    SessionSettings settings,
    Object owner
)

Parameters

address
Type: TwinCAT.Ads.AmsAddress [648]
The address.

settings
Type: TwinCAT.Ads.SessionSettings [1035]
The settings.

owner
Type: System.Object
The session owner

6.2.15.2 AdsSession Properties

The AdsSession [603] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Gets the target address of the AdsSessionBase [614] (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>AddressSpecifier</td>
<td>Gets the communication endpoint address string representation. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Connection</td>
<td>Gets the connection. (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>ConnectionState</td>
<td>Gets the current Connection state of the Session [101] (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Disposed</td>
<td>Gets a value indicating whether this Session [101] is disposed. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>EstablishedAt</td>
<td>Gets the UTC time when the session was established. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Id</td>
<td>Gets the Session Identifier (Inherited from Session [101].)</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether this instance is connected. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Name</td>
<td>Gets the name of the session (Inherited from Session [101].)</td>
</tr>
<tr>
<td>NetId</td>
<td>Gets the NetId of the Session (Inherited from AdsSessionBase [614].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>

### 6.2.15.3 AdsSession Methods

The AdsSession [603] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Close [109]</td>
<td>Closes this ISession [88] (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Connect [110]</td>
<td>Connects the session. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Disconnect [111]</td>
<td>Disconnects the session from the target. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Dispose [112]</td>
<td>Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from Session [101].)</td>
</tr>
<tr>
<td>Dispose(Boolean) [622]</td>
<td>Releases unmanaged and - optionally - managed resources. (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetSessionName [623]</td>
<td>Gets the name/string identifier of the session. (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>OnConnect [624]</td>
<td>Handler function connecting the Session. (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>OnCreateSymbolSever [624]</td>
<td>Handler function creating the symbol server object. (Inherited from AdsSessionBase [614].)</td>
</tr>
<tr>
<td>On Disconnect [625]</td>
<td>Called when [disconnect]. (Inherited from AdsSessionBase [614].)</td>
</tr>
</tbody>
</table>
### 6.2.15.4 AdsSession Events

The `AdsSession` type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ConnectionStateChanged</strong></td>
<td>Occurs when connection status of the <code>IConnectionStateProvider</code> has been changed. (Inherited from <code>Session</code>.)</td>
</tr>
</tbody>
</table>

### 6.2.16 AdsSessionBase Class

Abstract base class for ADS Sessions.

**Inheritance Hierarchy**

- `System.Object`
  - TwinCAT.Session [101]
    - TwinCAT.Ads.AdsSessionBase
      - TwinCAT.Ads.AdsSession [603]

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
public abstract class AdsSessionBase : Session, IAdsSession, ISession, IConnectionStateProvider, ISymbolServerProvider
```

The `AdsSessionBase` type exposes the following members.
### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsSessionBase</td>
<td>Initializes a new instance of the AdsSessionBase class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Gets the target address of the AdsSessionBase</td>
</tr>

#### 6.2.16.1 AdsSessionBase Constructor

Initializes a new instance of the AdsSessionBase [614] class.

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected AdsSessionBase(
    AmsAddress address,
    SessionSettings settings,
    IAdsClientFactory factory,
    Object owner
)
```
### Parameters

**address**  
Type: `TwinCAT.Ads.AmsAddress`  
The address.

**settings**  
Type: `TwinCAT.Ads.SessionSettings`  
The settings.

**factory**  
Type: `IAdsClientFactory`  
The client factory

**owner**  
Type: `System.Object`  
The session owner

### 6.2.16.2 AdsSessionBase Properties

The `AdsSessionBase` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address <code>[618]</code></td>
<td>Gets the target address of the <code>AdsSessionBase</code> <code>[614]</code></td>
</tr>
<tr>
<td>AddressSpecifier</td>
<td>Gets the communication endpoint address string representation. (Inherited from <code>Session</code> <code>[101]</code>.)</td>
</tr>
<tr>
<td>Connection <code>[618]</code></td>
<td>Gets the connection.</td>
</tr>
<tr>
<td>ConnectionState</td>
<td>Gets the current Connection state of the <code>Session</code> <code>[101]</code> (Inherited from <code>Session</code> <code>[101]</code>.)</td>
</tr>
<tr>
<td>Disposed <code>[105]</code></td>
<td>Gets a value indicating whether this <code>Session</code> <code>[101]</code> is disposed. (Inherited from <code>Session</code> <code>[101]</code>.)</td>
</tr>
<tr>
<td>EstablishedAt</td>
<td>Gets the UTC time when the session was established. (Inherited from <code>Session</code> <code>[101]</code>.)</td>
</tr>
<tr>
<td>Id <code>[106]</code></td>
<td>Gets the Session Identifier (Inherited from <code>Session</code> <code>[101]</code>.)</td>
</tr>
<tr>
<td>IsConnected <code>[107]</code></td>
<td>Gets a value indicating whether this instance is connected. (Inherited from <code>Session</code> <code>[101]</code>.)</td>
</tr>
<tr>
<td>Name <code>[107]</code></td>
<td>Gets the name of the session (Inherited from <code>Session</code> <code>[101]</code>.)</td>
</tr>
<tr>
<td>NetId <code>[619]</code></td>
<td>Gets the NetId of the Session</td>
</tr>
<tr>
<td>Owner <code>[619]</code></td>
<td>Gets the Session owner.</td>

#### 6.2.16.2.1 AdsSessionBase.Address Property

Gets the target address of the AdsSessionBase [614]

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdDca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public AmsAddress Address { get; }
```

**Property Value**

Type: AmsAddress [648]

The address.

**Implements**

IAdsSession.Address [910]

**Reference**

AdsSessionBase Class [614]

TwinCAT.Ads Namespace [151]

#### 6.2.16.2.2 AdsSessionBase.Connection Property

Gets the connection.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdDca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public AdsConnection Connection { get; protected set; }
```

**Property Value**

Type: AdsConnection [357]

The connection.
6.2.16.2.3  AdsSessionBase.NetId Property

Gets the NetId of the Session

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public AmsNetId NetId { get; }
```

**Property Value**

Type: **AmsNetId**

The net identifier.

**Implements**

IAdsSession.NetId

**Reference**

AdsSessionBase Class [614]

TwinCAT.Ads Namespace [151]

6.2.16.2.4  AdsSessionBase.Owner Property

Gets the Session owner.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public Object Owner { get; }
```

**Property Value**

Type: **Object**

The owner or NULL

**Implements**

IAdsSession.Owner

**Reference**

AdsSessionBase Class [614]

TwinCAT.Ads Namespace [151]
6.2.16.2.5 AdsSessionBase.Port Property

Gets the Ams Port of the Session

**Namespace:** TwinCAT.Ads
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public int Port { get; }
```

**Property Value**

Type: `Int32`
The port.

**Implements**

IAdsSession.Port[911]

6.2.16.2.6 AdsSessionBase.Settings Property

Gets the settings of the connection.

**Namespace:** TwinCAT.Ads
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public SessionSettings Settings { get; }
```

**Property Value**

Type: `SessionSettings`[1035]
The settings.
6.2.16.2.7 AdsSessionBase.Statistics Property

 Gets the Communication / Session statistics.

 Namespace: TwinCAT.Ads [151]
 Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

 Syntax

 C#

 public AdsCommunicationStatistics Statistics { get; }

 Property Value

 Type: AdsCommunicationStatistics [350]
 The communication / Session statistics.

 Reference

TwinCAT.Ads Namespace ![151]

**AdsSessionBase.Dispose Method (Boolean)**

Releases unmanaged and - optionally - managed resources.

**Namespace:** TwinCAT.Ads ![151]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected override void Dispose(
    bool disposing
)
```

**Parameters**

- **disposing**
  - Type: System.Boolean
  - true to release both managed and unmanaged resources; false to release only unmanaged resources.
6.2.16.3.2 AdsSessionBase.Finalize Method

Finalizes an instance of the AdsSessionBase class.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
protected override void Finalize()

Implements

Object.Finalize.

Reference

AdsSessionBase Class [614]

TwinCAT.Ads Namespace [151]

6.2.16.3.3 AdsSessionBase.GetSessionName Method

Gets the name/string identifier of the session.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
protected override string GetSessionName()

**Return Value**

Type: String  
System.String.

Reference

AdsSessionBase Class [614]

TwinCAT.Ads Namespace [151]
### 6.2.16.3.4 AdsSessionBase.OnConnect Method

Handler function connecting the Session.

**Namespace:** TwinCAT.Ads  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected override IConnection OnConnect(
    bool reconnect
)
```

**Parameters**

- **reconnect**  
  Type: System.Boolean

**Return Value**

Type: IConnection

IConnection.

**Reference**

- AdsSessionBase Class  
- TwinCAT.Ads Namespace

### 6.2.16.3.5 AdsSessionBase.OnCreateSymbolServer Method

Handler function creating the symbol server object.

**Namespace:** TwinCAT.Ads  
**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected override ISymbolServer OnCreateSymbolServer()
```

**Return Value**

Type: ISymbolServer

ISymbolServer.

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>SessionNotConnectedException</td>
<td>The connection is not established!</td>
</tr>
</tbody>
</table>
6.2.16.3.6  AdsSessionBase.OnDisconnect Method

Called when [disconnect].

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected override bool OnDisconnect()
```

**Return Value**

Type: Boolean
true if XXXX, false otherwise.

**Reference**

AdsSessionBase Class [614]

TwinCAT.Ads Namespace [151]

6.2.16.3.7  AdsSessionBase.OnGetAddress Method

Handler function getting the address of the session.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
protected override string OnGetAddress()
```

**Return Value**

Type: String
System.String.

<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.Ads Namespace [151]

6.2.18.1 AdsStateChangedEventArgs Constructor

Initializes a new instance of the AdsStateChangedEventArgs class.
**Syntax**

C#

```csharp
public AdsStateChangedEventArgs(
    StateInfo value
)
```

**Parameters**

value  
Type: TwinCAT.Ads.StateInfo  
Current state of the ADS device.

**Reference**

AdsStateChangedEventArgs Class [627]

### 6.2.18.2.1 AdsStateChangedEventArgs.State Property

Current state of the ADS device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public StateInfo State { get; }
```

**Property Value**

Type: StateInfo [1041]  
The state.
6.2.18.3 AdsStateChangedEventArgs Methods

The AdsStateChangedEventArgs type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>

6.2.19.1.4 AdsStateChangedEventArgs2.Session Property

The session

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public ISession Session { get; }
```

**Property Value**

**Type:** ISession [88]

**Reference**

AdsStateChangedEventArgs2 Class [629]

TwinCAT.Ads Namespace [151]

6.2.19.2 AdsStateChangedEventArgs2 Methods

The AdsStateChangedEventArgs2 [629] type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>

<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

**Reference**

AdsStateChangedEventArgs2 Class [629]

TwinCAT.Ads Namespace [151]

6.2.20 AdsSumCommandException Class

The exception that is thrown when an ADS SumCommandBase error occurs.

**Inheritance Hierarchy**

System.Object

  System.Exception

    TwinCAT.AdsException [57]

      TwinCAT.Ads.AdsErrorException [583]

      TwinCAT.Ads.AdsSumCommandException
Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
[SerializableAttribute]
public sealed class AdsSumCommandException : AdsErrorException
```

The AdsSumCommandException type exposes the following members.

### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsSumCommandException</td>
<td>Initializes a new Instance of the AdsErrorException class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets the error code of the Exception. (Inherited from AdsErrorException.)</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HResult</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>SumCommand</td>
<td>Gets the sum command.</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides AdsErrorException.GetObjectData(SerializationInfo, StreamingContext) [590].)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### 6.2.20.3 AdsSumCommandException Methods

The AdsSumCommandException [632] type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
</tbody>
</table>

(Inherited from Object.)
<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Exception.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides AdsErrorException.GetObjectData(SerializationInfo, StreamingContext) [636])</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

Reference

AdsSumCommandException Class [632]

TwinCAT.Ads Namespace [151]

6.2.20.3.1 AdsSumCommandException.GetObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context
)
```

Parameters

- **info**
  - Type: System.Runtime.Serialization.SerializationInfo
  - The SerializationInfo that holds the serialized object data about the exception being thrown.

- **context**
  - Type: System.Runtime.Serialization.StreamingContext
  - The StreamingContext that contains contextual information about the source or destination.

Implements

- ISerializable.GetObjectData(SerializationInfo, StreamingContext)
- Exception.GetObjectData(SerializationInfo, StreamingContext)

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td>info</td>
</tr>
</tbody>
</table>
6.2.21 AdsSymbolVersionChangedEventArgs Class

Arguments for the AdsSymbolVersionChanged [637] event.

Inheritance Hierarchy

System.Object
  System.EventArgs
    TwinCAT.Ads.AdsSymbolVersionChangedEventArgs

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public sealed class AdsSymbolVersionChangedEventArgs : EventArgs
```

The AdsSymbolVersionChangedEventArgs type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>

Reference

AdsSymbolVersionChangedEventArgs Class [637]
TwinCAT.Ads Namespace [151]
6.2.22 AdsTransMode Enumeration

ADS Transmission Mode for ADS Notifications.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public enum AdsTransMode
```

**Members**

<table>
<thead>
<tr>
<th>Member name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>0</td>
<td>None / Uninitialized transport mode. No AdsNotification event is fired.</td>
</tr>
</tbody>
</table>
| ClientCycle      | 1     | Client triggered cyclic AdsNotification event. The AdsNotification event is fired cyclically triggered from the client side. Polling is used from the User Application to read values, before they are fired as Notifications. Client side triggering has the following consequences:  
  - The realtime environment on the server side will be less stressed (especially the mailbox queue).  
  - Value requests are serialized one after another and are handled slower (synchronously, not asynchronously)  
  - Implicit synchronization of the events into the UI Thread. |
| ClientOnChange   | 2     | The AdsNotification event is fired when data changes triggered by the client. The AdsNotification event is fired on-change triggered from the client side. Polling is used from the User Application to read values, before they are fired as Notifications. Client side triggering has the following consequences:  
  - The realtime environment on the server side will be less stressed (especially the mailbox queue).  
  - Value requests are serialized one after another and are handled slower (synchronously, not asynchronously)  
  - Implicit synchronization of the events into the UI Thread. |

<tbody>
<tr>
<td>Cyclic</td>
<td>3</td>
<td>The <code>AdsNotification</code> [866] event is fired cyclically. The Notification will be registered on the ADS Server side for a cyclical trigger (dependant on time parameter) and is bound to the 'default' task of the addressed target. In case of the PLC target (e.g. Port 851) the default task is the first configured task. Each time the 'default' task has finished its cycle the realtime system will check for the expired cycle time and sends the <code>AdsNotification</code> [866] message on expiry. The used ContextMask for the 'default' task is 0. <strong>Please be aware, that server side 'Change' notifications stress the realtime system and should be handled with care. Therefore, dependent of the cycle time of the task and the capabilities of the system only a limited set of Cyclic Notifications should be used!</strong> A system limit for server side notification registrations is 1024.</td>
</tr>
<tr>
<td>OnChange</td>
<td>4</td>
<td>On-Change <code>AdsNotification</code> [866] event. The Notification will be registered on the ADS Server side for an on-change and optional cyclical trigger (dependant on parameters) and is bound to the 'default' task of the addressed target. In case of the PLC target (e.g. Port 851) the default task is the first configured task. Each time this task has finished its cycle the realtime system will check for the changed value and an optional expired cycle time and sends the <code>AdsNotification</code> [866] message on change or expiry. The used ContextMask for the 'default' task is 0. <strong>Please be aware, that server side 'OnChange' notifications stress the realtime system / the default task with value comparisons. Therefore, dependent of the cycle time of the task and the capabilities of the system a higher amount of notification registrations should be handled with care!</strong> A system limit for server side notification registrations is 1024.</td>
</tr>

<td>Please be aware, that server side 'OnChange' notifications stress the realtime system / the default task with value comparisons. Therefore, dependent of the cycle time of the task and the capabilities of the system only a limited set of OnChange Notifications should be used!</td>
</tr>
</tbody>
</table>
Remarks

The AdsTransMode configures the registration of the AdsNotification [866] at the server system and how the parameters of the AddDeviceNotification(String, Int32, NotificationSettings, Object) [844] are interpreted. The following general scenarios are addressed:

- Cyclic notifications.
- Notifications on value change.
- Server side and Client side notifications.
- Binding of notifications to specific tasks.

In the default case the OnChange or the Cyclic (Server cycle) should be used. All other modes are side cases for special purposes.

More about the AdsNotifications: ADS Notification concept [22].

<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Gets an Empty Address.</td>
</tr>
<tr>
<td>NetId</td>
<td>Gets the NetId</td>
</tr>
<tr>
<td>Port</td>
<td>Gets the Port number</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clone</td>
<td>Clones this instance.</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals [659]</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse [660]</td>
<td>Parses a string to an AmsAddress object.</td>
</tr>
<tr>
<td>SetNetId [661]</td>
<td>Sets the net identifier.</td>
</tr>
<tr>
<td>SetPort [662]</td>
<td>Sets the port.</td>
</tr>
<tr>
<td>ToString [662]</td>
<td>Converts the Address to String 'NetId:Port' (Overrides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse [662]</td>
<td>Tries to parse the AmsAddress from string.</td>
</tr>
</tbody>
</table>

### Operators

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equality [663]</td>
<td>Operator==</td>
</tr>
<tr>
<td>Inequality [664]</td>
<td>Implements the != operator.</td>
</tr>
</tbody>
</table>

### Remarks

The AmsAddress consists of NetId [657] and Port [658] information and once it is constructed is immutable.

Constructor

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AmsAddress(
    string netId,
    AmsPort port
)
```

Parameters

- **netId**
  - Type: System.String
  - The net identifier.

- **port**
  - Type: TwinCAT.Ads.AmsPort
  - The port.

Reference

- AmsAddress Class
- AmsAddress Overload
### 6.2.24.1.10 AmsAddress Constructor (AmsNetId, Int32)

Constructor

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AmsAddress(
    AmsNetId netId,
    int port
)
```

**Parameters**

- **netId**
  - Type: TwinCAT.Ads.AmsNetId
  - Net Id

- **port**
  - Type: System.Int32
  - Port

**Reference**

- AmsAddress Class [648]
- AmsAddress Overload [650]
- TwinCAT.Ads Namespace [151]

### 6.2.24.1.11 AmsAddress Constructor (AmsNetId, AmsPort)

Constructor

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public AmsAddress(
    AmsNetId netId,
    AmsPort port
)
```

**Parameters**

- **netId**
  - Type: TwinCAT.Ads.AmsNetId
  - The net identifier.

- **port**
  - Type: TwinCAT.Ads.AmsPort
  - The port.
6.2.24.2 AmsAddress Properties

The *AmsAddress* [648] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Gets an Empty Address.</td>
</tr>
<tr>
<td>NetId</td>
<td>Gets the NetId</td>
</tr>
<tr>
<td>Port</td>
<td>Gets the Port number</td>
</tr>
</tbody>
</table>

6.2.24.2.1 AmsAddress.Empty Property

Gets an Empty Address.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public static AmsAddress Empty { get; }
```

**Property Value**

Type: *AmsAddress* [648]
The empty.

Reference

*AmsAddress Class* [648]
*TwinCAT.Ads Namespace* [151]

6.2.24.2.2 AmsAddress.NetId Property

Gets the NetId
**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public AmsNetId NetId { get; }
```

### Property Value

**Type:** AmsNetId

The net identifier.

**Reference**

AmsAddress Class [648]

TwinCAT.Ads Namespace [151]

### 6.2.24.2.3 AmsAddress.Port Property

Gets the Port number

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int Port { get; }
```

### Property Value

**Type:** Int32

The port.

**Reference**

AmsAddress Class [648]

TwinCAT.Ads Namespace [151]

### 6.2.24.3 AmsAddress Methods

The AmsAddress class type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Clone][659]</td>
<td>Clones this instance.</td>
</tr>
<tr>
<td>![Equals][659]</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Gets the HashCode of the Address (Overrides Object.GetHashCode.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Parse</td>
<td>Parses a string to an AmsAddress object.</td>
</tr>
<tr>
<td>SetNetId</td>
<td>Sets the net identifier.</td>
</tr>
<tr>
<td>SetPort</td>
<td>Sets the port.</td>
</tr>
<tr>
<td>ToString</td>
<td>Converts the Address to String 'NetId:Port' (Overrides Object.ToString.)</td>
</tr>
<tr>
<td>TryParse</td>
<td>Tries to parse the AmsAddress from string.</td>
</tr>
</tbody>
</table>

Reference

AmsAddress Class [648]
TwinCAT.Ads Namespace [151]

### 6.2.24.3.1 AmsAddress.Clone Method

Clones this instance.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public AmsAddress Clone()
```

**Return Value**

Type: AmsAddress [648]
AmsAddress.

Reference

AmsAddress Class [648]
TwinCAT.Ads Namespace [151]

### 6.2.24.3.2 AmsAddress.Equals Method

Equals
**Equals Method**

```
public override bool Equals(
    Object obj)
```

**Parameters**

- **obj**
  - Type: `System.Object`
  - The object to compare with the current object.

**Return Value**

- Type: `Boolean`
  - `true` if the specified `Object` is equal to this instance; otherwise, `false`.

**Reference**

- `AmsAddress Class [648]`
- `TwinCAT.Ads Namespace [151]`

### 6.2.24.3.3 AmsAddress.GetHashCode Method

**Gets the HashCode of the Address**

```
public override int GetHashCode()
```

**Return Value**

- Type: `Int32`
  - A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

**Reference**

- `AmsAddress Class [648]`
- `TwinCAT.Ads Namespace [151]`

### 6.2.24.3.4 AmsAddress.Parse Method

**Parses a string to an AmsAddress object.**
**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public static AmsAddress Parse(
    string str
)
```

#### Parameters

- **str**
  - Type: `System.String`
  - The string.

#### Return Value

Type: `AmsAddress` [648]

### Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>FormatException</td>
<td></td>
</tr>
</tbody>
</table>

#### Reference

- AmsAddress Class [648]
- TwinCAT.Ads Namespace [151]

### 6.2.24.3.5 AmsAddress.SetNetId Method

Sets the net identifier.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected void SetNetId(
    AmsNetId netId
)
```

#### Parameters

- **netId**
  - Type: `TwinCAT.Ads.AmsNetId` [665]
  - The net identifier.

#### Reference

- AmsAddress Class [648]
- TwinCAT.Ads Namespace [151]
6.2.24.3.6 AmsAddress.SetPort Method

Sets the port.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected void SetPort(
    int port
)

Parameters

port Type: System.Int32
The port.

Reference

AmsAddress Class
TwinCAT.Ads Namespace

6.2.24.3.7 AmsAddress.ToString Method

Converts the Address to String 'NetId:Port'

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public override string ToString()

Return Value

Type: String
A String that represents this instance.

Reference

AmsAddress Class
TwinCAT.Ads Namespace

6.2.24.3.8 AmsAddress.TryParse Method

Tries to parse the AmsAddress from string.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public static bool TryParse(
    string str,
    out AmsAddress address
)
```

**Parameters**

- **str**
  - Type: `System.String`
  - The STR.

- **address**
  - Type: `TwinCAT.Ads.AmsAddress` [648]
  - The address.

**Return Value**

Type: `Boolean`

true if XXXX, false otherwise.

**Reference**

AmsAddress Class [648]

TwinCAT.Ads Namespace [151]

### 6.2.24.4 AmsAddress Operators

The `AmsAddress` [648] type exposes the following members.

#### Operators

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>==</code></td>
<td>Equality [663] Operator==</td>
</tr>
<tr>
<td><code>!=</code></td>
<td>Inequality [664] Implements the <code>!=</code> operator.</td>
</tr>
</tbody>
</table>

**Reference**

AmsAddress Class [648]

TwinCAT.Ads Namespace [151]

### 6.2.24.4.1 AmsAddress.Equality Operator

Operator==

**Namespace**: TwinCAT.Ads [151]

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static bool operator ==(
    AmsAddress o1,
    AmsAddress o2
)
```

Parameters

- **o1**
  Type: `TwinCAT.Ads.AmsAddress` [648]
  The o1.

- **o2**
  Type: `TwinCAT.Ads.AmsAddress` [648]
  The o2.

Return Value

Type: `Boolean`
The result of the operator.

Reference

- AmsAddress Class [648]
- TwinCAT.Ads Namespace [151]

### 6.2.24.4.2 AmsAddress.Inequality Operator

Implements the `!=` operator.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static bool operator !=(
    AmsAddress o1,
    AmsAddress o2
)
```

Parameters

- **o1**
  Type: `TwinCAT.Ads.AmsAddress` [648]
  The o1.

- **o2**
  Type: `TwinCAT.Ads.AmsAddress` [648]
  The o2.

Return Value

Type: `Boolean`
The result of the operator.

Reference

- AmsAddress Class [648]
- TwinCAT.Ads Namespace [151]
6.2.25  AmsNetId Class

AMS/ADS Net ID

Inheritance Hierarchy

System.Object
   TwinCAT.Ads.AmsNetId

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

[SerializableAttribute]
public class AmsNetId : IComparable<AmsNetId>, IComparable

The AmsNetId type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AmsNetId(Byte.)</td>
<td>Constructor</td>
</tr>
<tr>
<td>AmsNetId(ReadOnly Span)</td>
<td></td>
</tr>
<tr>
<td>AmsNetId(String)</td>
<td>Constructor</td>
</tr>
<tr>
<td>AmsNetId(AmsNetId)</td>
<td>Copy Constructor</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Broadcast</td>
<td>Gets the broadcast address (255.255.255.255)</td>
</tr>
<tr>
<td>Empty</td>
<td>Creates an empty NetId (&quot;0.0.0.0.0&quot;)</td>
</tr>
<tr>
<td>IsBroadcast</td>
<td>Gets a value indicating whether this AmsNetId is the broadcast address (255.255.255.255)</td>
</tr>
<tr>
<td>IsEmpty</td>
<td>Gets a value indicating whether this instance is empty / Uninitialized (AmsNetId: 0.0.0.0.0.0)</td>
</tr>
<tr>
<td>IsLocal</td>
<td>Determines, whether the AmsNetId is local.</td>
</tr>
<tr>
<td>IsLoopback</td>
<td>Indicates, that this AmsNetId indicates a Loopback (ID: 127.0.0.1.1)</td>
</tr>
<tr>
<td>IsSubAddress</td>
<td>Gets a value indicating whether this AmsNetId indicates a SubNet.</td>
</tr>
</tbody>
</table>
## TwinCAT.Ads Namespaces

### Item [674]
- **Description**: Gets or sets the Byte with the specified index.

### Local [674]
- **Description**: Gets the Local Net ID (System service must be running)

### LocalHost [675]
- **Description**: Creates the local NetId ("127.0.0.1.1.1")

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AsSpan [676]</td>
<td>Returns the AmsNetId as byte Span.</td>
</tr>
<tr>
<td>Clone [677]</td>
<td>Clones the NetId</td>
</tr>
<tr>
<td>CompareTo(Object) [678]</td>
<td>Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object.</td>
</tr>
<tr>
<td>CompareTo(AmsNetId) [678]</td>
<td>Compares the current object with another object of the same type.</td>
</tr>
<tr>
<td>Equals(Object) [679]</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Equals(AmsNetId, AmsNetId) [680]</td>
<td>Determines whether the specified AmsNetIds are equal.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>FromBinHexString [681]</td>
<td>Creates the AmsNetId from bin hex string.</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>IsSameTarget(AmsNetId, AmsNetId) [682]</td>
<td>Determines whether the AmsNetIds refer to the same target.</td>
</tr>
<tr>
<td>IsSameTarget(AmsNetId, AmsNetId, Boolean) [683]</td>
<td>Determines whether the AmsNetIds refer to the same target.</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>NetIdsEqual(Byte.) [684]</td>
<td>Compares the netIds</td>
</tr>
<tr>
<td>NetIdsEqual(Byte, Byte) [685]</td>
<td>Compares the NetIds</td>
</tr>
</tbody>
</table>

</tr>
</tbody>
</table>

Reference

AmsNetId Class [665]
TwinCAT.Ads Namespace [151]

6.2.25.2.1 AmsNetId.Broadcast Property

Gets the broadcast address (255.255.255.255.255)
**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public static AmsNetId Broadcast { get; }
```

### Property Value

**Type:** AmsNetId

The broadcast.

**Reference**

AmsNetId Class

TwinCAT.Ads Namespace

---

### 6.2.25.2.2 AmsNetId.Empty Property

Creates an empty NetId ("0.0.0.0.0.0")

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public static AmsNetId Empty { get; }
```

### Property Value

**Type:** AmsNetId

The empty.

**Reference**

AmsNetId Class

TwinCAT.Ads Namespace

---

### 6.2.25.2.3 AmsNetId.IsBroadcast Property

Gets a value indicating whether this AmsNetId is the broadcast address (255.255.255.255.255)

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public bool IsBroadcast { get; }
```
Property Value
Type: Boolean
true if this instance is broadcast; otherwise, false.

Reference
AmsNetId Class [665]
TwinCAT.Ads Namespace [151]

6.2.25.2.4 AmsNetId.IsEmpty Property
Gets a value indicating whether this instance is empty / Uninitialized (AmsNetId: 0.0.0.0.0.0)

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public bool IsEmpty { get; }

Property Value
Type: Boolean
true if this instance is empty; otherwise, false.

Reference
AmsNetId Class [665]
TwinCAT.Ads Namespace [151]

6.2.25.2.5 AmsNetId.IsLocal Property
Determines, whether the AmsNetId [665] is local.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public bool IsLocal { get; }

Property Value
Type: Boolean
true if this instance is local; otherwise, false.

Remarks
Doesn't check for LocalHost [675].
6.2.25.2.6  AmsNetId.IsLoopback Property

Indicates, that this AmsNetId [665] indicates a Loopback (ID: 127.0.0.1.1)

**Namespace:**  TwinCAT.Ads [151]

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsLoopback { get; }
```

**Property Value**

Type:  Boolean  
true if this instance is loop back; otherwise, false.

**Remarks**

A Subnet is indicated, when the AmsNetId [665] doesn't end with X.X.X.X.1.1

**Reference**

AmsNetId Class [665]

TwinCAT.Ads Namespace [151]

6.2.25.2.7  AmsNetId.IsSubAddress Property

Gets a value indicating whether this AmsNetId [665] indicates a SubNet.

**Namespace:**  TwinCAT.Ads [151]

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public bool IsSubAddress { get; }
```

**Property Value**

Type:  Boolean  
true if this instance indicates a subnet; otherwise, false.
### 6.2.25.2.8 AmsNetId.Item Property

Gets or sets the `Byte` with the specified index.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```
public byte this[int i] { get; set; }
```

**Parameters**

- `i`  
  Type: `System.Int32`  
  The index.

**Return Value**

Type: `Byte`  
`System.Byte`.

**Reference**

- AmsNetId Class [665]
- TwinCAT.Ads Namespace [151]

### 6.2.25.2.9 AmsNetId.Local Property

Gets the Local Net ID (System service must be running)

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```
public static AmsNetId Local { get; }
```

**Property Value**

Type: `AmsNetId` [665]  
The local.

**Remarks**

The system service must be running

**Reference**

- AmsNetId Class [665]
- TwinCAT.Ads Namespace [151]
### 6.2.25.2.10 AmsNetId.LocalHost Property

Creates the local NetId ("127.0.0.1.1")

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

C#  
```csharp
public static AmsNetId LocalHost { get; }
```

#### Property Value

Type: AmsNetId

The local host.

#### Reference

AmsNetId Class

TwinCAT.Ads Namespace

---

### 6.2.25.3 AmsNetId Methods

The AmsNetId type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="hex" alt="AsSpan" /></td>
<td>Returns the AmsNetId as byte Span.</td>
</tr>
<tr>
<td><img src="hex" alt="Clone" /></td>
<td>Clones the NetId</td>
</tr>
<tr>
<td><img src="hex" alt="CompareTo(Object)" /></td>
<td>Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object.</td>
</tr>
<tr>
<td><img src="hex" alt="CompareTo(AmsNetId)" /></td>
<td>Compares the current object with another object of the same type.</td>
</tr>
<tr>
<td><img src="hex" alt="Equals(Object)" /></td>
<td>equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td><img src="hex" alt="Equals(AmsNetId, AmsNetId)" /></td>
<td>Determines whether the specified AmsNetId is equal.</td>
</tr>
<tr>
<td><img src="hex" alt="Finalize" /></td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td><img src="hex" alt="FromBinHexString" /></td>
<td>Creates the AmsNetId from bin hex string.</td>
</tr>
<tr>
<td><img src="hex" alt="GetHashCode" /></td>
<td>Gets the HashCode of the Address (Overrides Object.GetHashCode.)</td>
</tr>
<tr>
<td><img src="hex" alt="GetType" /></td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td><code>IsSameTarget(AmsNetId, AmsNetId)</code></td>
<td>Determines whether the AmsNetId's refer to the same target.</td>
</tr>
<tr>
<td><code>IsSameTarget(AmsNetId, AmsNetId, Boolean)</code></td>
<td>Determines whether the AmsNetId's refer to the same target.</td>
</tr>
<tr>
<td><code>MemberwiseClone</code></td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td><code>NetIdsEqual(.Byte.)</code></td>
<td>Compares the netIds</td>
</tr>
<tr>
<td><code>NetIdsEqual(.Byte., .Byte., Boolean)</code></td>
<td></td>
</tr>
<tr>
<td><code>Parse</code></td>
<td>Converts the string representation of the address to AmsNetId.</td>
</tr>
<tr>
<td><code>ToBinHex</code></td>
<td>Converts the AmsNetId to a BinHex string.</td>
</tr>
<tr>
<td><code>ToBinHex(AmsNetId)</code></td>
<td>Converts the specified AmsNetId to a BinHex string.</td>
</tr>
<tr>
<td><code>ToBytes</code></td>
<td>Converts the NetId object to byte array</td>
</tr>
<tr>
<td><code>ToString</code></td>
<td>Converts the netId to string (Overrides Object.ToString.)</td>
</tr>
<tr>
<td><code>ToString(String, IFormatProvider)</code></td>
<td>Returns a String that represents this instance.</td>
</tr>
<tr>
<td><code>TryParse</code></td>
<td>Converts the string representation of the address to AmsNetId.</td>
</tr>
<tr>
<td><code>TryWriteBytes</code></td>
<td></td>
</tr>
</tbody>
</table>

### 6.2.25.3.1 AmsNetId.AsSpan Method

Returns the AmsNetId as byte Span.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public ReadOnlySpan AsSpan()
```

Return Value

Type: `ReadOnlySpan`<br>`ReadOnlySpan<System.Byte>`.

Reference

AmsNetId Class [665]<br>TwinCAT.Ads Namespace [151]

6.2.25.3.2 AmsNetId.Clone Method

Clones the NetId

Namespace: TwinCAT.Ads [151]<br>Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public AmsNetId Clone()
```

Return Value

Type: `AmsNetId` [665]<br>The cloned `AmsNetId` [665]

Reference

AmsNetId Class [665]<br>TwinCAT.Ads Namespace [151]

6.2.25.3.3 AmsNetId.CompareTo Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CompareTo(Object)</td>
<td></td>
</tr>
</tbody>
</table>
[678] | Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object. |

| CompareTo(AmsNetId) |
[678] | Compares the current object with another object of the same type. |

Reference

AmsNetId Class [665]
**AmsNetId.CompareTo Method (Object)**

Compares the current instance with another object of the same type and returns an integer that indicates whether the current instance precedes, follows, or occurs in the same position in the sort order as the other object.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public int CompareTo(
    Object obj
)
```

**Parameters**

- `obj` Type: `System.Object`
  An object to compare with this instance.

**Return Value**

Type: `Int32`
A value that indicates the relative order of the objects being compared. The return value has these meanings: Value Meaning Less than zero This instance precedes obj in the sort order. Zero This instance occurs in the same position in the sort order as obj. Greater than zero This instance follows obj in the sort order.

**Implements**

`IComparable.CompareTo(Object)`

**Reference**

- AmsNetId Class [› 665]
- CompareTo Overload [› 677]
- TwinCAT.Ads Namespace [› 151]

**AmsNetId.CompareTo Method (AmsNetId)**

Compares the current object with another object of the same type.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public int CompareTo(
    AmsNetId other
)
```

Parameters

other Type: TwinCAT.Ads.AmsNetId
An object to compare with this object.

Return Value

Type: Int32
A value that indicates the relative order of the objects being compared. The return value has the following meanings: Value Meaning Less than zero This object is less than the other parameter. Zero This object is equal to other. Greater than zero This object is greater than other.

Implements

IComparable.T..CompareTo(T)

Reference

6.2.25.3.4 AmsNetId.Equals Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals(Object)</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Equals(AmsNetId, AmsNetId)</td>
<td>Determines whether the specified AmsNetId is equal.</td>
</tr>
</tbody>
</table>

Reference

AmsNetId Class
TwinCAT.Ads Namespace

AmsNetId.Equals Method (Object)

Equals

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```csharp
public override bool Equals(
    Object obj
)
```

Parameters

- **obj**
  *Type: System.Object*
  The object to compare with the current object.

Return Value

- **Type: Boolean**
  *true if the specified Object is equal to this instance; otherwise, false.*

Reference

- AmsNetId Class [665]
- Equals Overload [679]
- TwinCAT.Ads Namespace [151]

### AmsNetId.Equals Method (AmsNetId, AmsNetId)

Determines whether the specified AmsNetId[s] are equal.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static bool Equals(
    AmsNetId netIDA,
    AmsNetId netIDB
)
```

Parameters

- **netIDA**
  *Type: TwinCAT.Ads.AmsNetId [665]*
  The net IDA.

- **netIDB**
  *Type: TwinCAT.Ads.AmsNetId [665]*
  The net IDB.

Return Value

- **Type: Boolean**
  *true if the specified net IDA is equal; otherwise, false.*

Reference

- AmsNetId Class [665]
- Equals Overload [679]
6.2.25.3.5 AmsNetId.FromBinHexString Method

Creates the AmsNetId from bin hex string.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static AmsNetId FromBinHexString(
    string str
)
```

Parameters

- `str`: Type: System.String
  The BinHex string.

Return Value

- Type: AmsNetId
  AmsNetId.

Reference

AmsNetId Class
TwinCAT.Ads Namespace

6.2.25.3.6 AmsNetId.GetHashCode Method

Gets the HashCode of the Address

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override int GetHashCode()
```

Return Value

- Type: Int32
  A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

Reference

AmsNetId Class
TwinCAT.Ads Namespace
6.2.25.3.7 AmsNetId.IsSameTarget Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>IsSameTarget(AmsNetId, AmsNetId)</td>
</tr>
<tr>
<td>S</td>
<td>IsSameTarget(AmsNetId, AmsNetId, Boolean)</td>
</tr>
</tbody>
</table>

Determines whether the AmsNetId\[665\]s refer to the same target.

Reference

AmsNetId Class [665]

AmsNetId.IsSameTarget Method (AmsNetId, AmsNetId)

Determines whether the AmsNetId\[665\]s refer to the same target.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static bool IsSameTarget(
    AmsNetId netIDA,
    AmsNetId netIDB
)
```

Parameters

- **netIDA**
  - Type: TwinCAT.Ads.AmsNetId [665]
  - NetID of target system A

- **netIDB**
  - Type: TwinCAT.Ads.AmsNetId [665]
  - NetID of target system B

Return Value

- Type: Boolean
  - true if the target systems are the same, otherwise false.

Remarks

In comparison to the Equals(Object) [679] or Equals(AmsNetId, AmsNetId) [680] methods, this Method also checks against the LocalHost ID, which means that LocalHost [675] is the same target as Local [674]

Reference

AmsNetId Class [665]
IsSameTarget Overload [682]

TwinCAT.Ads Namespace [151]

AmsNetId.Equals(Object) [679]

AmsNetId.Equals(AmsNetId, AmsNetId) [680]

AmsNetId.IsSameTarget Method (AmsNetId, AmsNetId, Boolean)

Determines whether the AmsNetId [665]s refer to the same target.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

**C#**

```csharp
public static bool IsSameTarget(
    AmsNetId netIDA,
    AmsNetId netIDB,
    bool ignoreSubId
)
```

Parameters

- **netIDA**
  Type: TwinCAT.Ads.AmsNetId [665]
  NetID of target system A

- **netIDB**
  Type: TwinCAT.Ads.AmsNetId [665]
  NetID of target system B

- **ignoreSubId**
  Type: System.Boolean
  Indicates only to check the 4 parts of the address (for SubId check).

Return Value

Type: Boolean
true if the target systems are the same, otherwise false.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentNullException</td>
<td>netIDA</td>
</tr>
<tr>
<td>ArgumentNullException</td>
<td>netIDB</td>
</tr>
</tbody>
</table>

Remarks

In comparison to the Equals(Object) [679] or Equals(AmsNetId, AmsNetId) [680] methods, this Method also checks against the LocalHost ID, which means that LocalHost [675] is the same target as Local [674].

TwinCAT.Ads Namespace

Compares the NetIds for SubID equality.

Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public static bool NetIdsEqual(
    byte[] netId1,
    byte[] netId2,
    bool ignoreSubID
)
Parameters

netId1  
Type: System.Byte
NetID1

netId2  
Type: System.Byte
NetId2

ignoreSubID  
Type: System.Boolean
Ignores the SubId part of the NetId (last 2 numbers/bytes).

Return Value

Type: Boolean
true if the SubIds are equal, false otherwise.

Remarks

The first 4 numbers indicate the global ID of the AmsNetId. The last 2 numbers indicate the (local) submodule.

TwinCAT.Ads Namespace [151]

6.2.25.3.13 AmsNetId.TryParse Method

Converts the string representation of the address to AmsNetId [665].

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static bool TryParse(
    string str,
    out AmsNetId netId
)
```

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>str</td>
<td>System.String</td>
<td>The string to parse.</td>
</tr>
<tr>
<td>netId</td>
<td>TwinCAT.Ads.AmsNetId [665]</td>
<td>The parsed AmsNetId [665].</td>
</tr>
</tbody>
</table>

Return Value

Type: Boolean
true if parsed, false otherwise.

### 6.2.25.3.14 AmsNetId.TryWriteBytes Method

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public bool TryWriteBytes(Span span)
```

**Parameters**

| span | Type: Span |

**Return Value**

Type: Boolean

6.2.25.4.1  AmsNetId.Equality Operator

Operator==

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static bool operator ==(AmsNetId o1, AmsNetId o2)
```

**Parameters**

- **o1**
  - Type: TwinCAT.Ads.AmsNetId
  - The o1.

- **o2**
  - Type: TwinCAT.Ads.AmsNetId
  - The o2.

**Return Value**

Type: Boolean
The result of the operator.

**Reference**

AmsNetId Class
TwinCAT.Ads Namespace

6.2.25.4.2  AmsNetId.Inequality Operator

Implements the != operator.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static bool operator !=(AmsNetId o1, AmsNetId o2)
```

**Parameters**

- **o1**
  - Type: TwinCAT.Ads.AmsNetId
  - The o1.

- **o2**
  - Type: TwinCAT.Ads.AmsNetId
  - The o2.
Return Value

Type: Boolean
The result of the operator.

6.2.27.1 AmsRouterNotificationEventArgs Constructor

Initializes a new instance of the AmsRouterNotificationEventArgs class.
### Syntax

**C#**

```csharp
public AmsRouterNotificationEventArgs(AmsRouterState value)
```

### Parameters

- **value**
  - **Type:** TwinCAT.Ads.AmsRouterState
  - Value of the ADS variable.

### Reference

- **AmsRouterNotificationEventArgs Class [6.95]**
- **TwinCAT.Ads Namespace [6.151]**

### 6.2.27.2 AmsRouterNotificationEventArgs Properties

The `AmsRouterNotificationEventArgs` type exposes the following members.

### IAdsAnyAccess.ReadAny.T. Method (UInt32)

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads [➤ 151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
TwinCAT.Ads Namespaces

Syntax

C#

```c#
T ReadAny<T>(
    uint variableHandle
)
```

Parameters

variableHandle Type: `System.UInt32`
Handle of the ADS variable.

Type Parameters

T The type of the value to read.

Return Value

Type: `T`
The value of the read symbol.

Reference

IAdsAnyAccess Interface [702]

ReadAny Overload [707]

TwinCAT.Ads Namespace [151]

IAdsAnyAccess.ReadAny.T. Method (UInt32, Int32.)

Reads data synchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```c#
T ReadAny<T>(
    uint variableHandle,
    int[] args
)
```

Parameters

variableHandle Type: `System.UInt32`
Handle of the ADS variable.

args Type: `System.Int32`
Additional arguments.

Type Parameters

T The type of the value to read.
Return Value

Type: T
The value of the read symbol.

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

#### IAdsAnyAccess.ReadAny Method (UInt32, Type, .Int32.)

Reads data synchronously from an ADS device and writes it to an object.

**Namespace:** TwinCAT.Ads [› 151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```
Object ReadAny(
    uint variableHandle,
    Type type,
    int[] args
)
```
Parameters

variableHandle  
Type: System.UInt32  
Handle of the ADS variable.

type  
Type: System.Type  
Type of the object to be read.

args  
Type: System.Int32  
Additional arguments.

Return Value

Type: Object  
The read value.

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

</tbody>
</table>
IAdsAnyAccess.ReadAnyAsync<T> Method (UInt32, CancellationToken)

Reads data synchronously from an ADS device.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

Task<ResultValue<T>> ReadAnyAsync<T>(
    uint variableHandle,
    CancellationToken cancel
)

Parameters

variableHandle Type: System.UInt32
The variable/symbol handle.

cancel Type: System.Threading.CancellationToken
The cancellation token.

Type Parameters

T The Type of the value to be read.

Return Value

Type: Task<ResultValue[T]>
A task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read value (Value) and the ErrorCode parameter after execution.

Remarks

As object types only primitive types are supported.

Reference

IAdsAnyAccess Interface [702]
ReadAnyAsync Overload [714]
TwinCAT.Ads Namespace [151]

IAdsAnyAccess.ReadAnyAsync<T>. Method (UInt32, .Int32., CancellationToken)

Reads data asynchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
Task<ResultValue<T>> ReadAnyAsync<T>(
    uint variableHandle,
    int[] args,
    CancellationToken cancel
)
```

Parameters

- **variableHandle**
  - Type: `System.UInt32`
  - The variable handle.

- **args**
  - Type: `System.Int32`
  - Additional arguments.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

Type Parameters

- **T**
  - Type of the object to be read

Return Value

Type: `Task<ResultValue<T>>`.

A task that represents the asynchronous read operation. The `ResultValue.TValue` parameter contains the read value (`Value`) and the `ErrorCode` after execution.

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter `args` specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter `args`.

IAdsAnyAccess Interface
ReadAnyAsync Overload
TwinCAT.Ads Namespace

IAdsAnyAccess.ReadAnyAsync.T. Method (UInt32, UInt32, int[], CancellationToken)

Reads data asynchronously from an ADS device and writes it to an object.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Task<ResultValue<T>> ReadAnyAsync<T>(
    uint indexGroup,
    uint indexOffset,
    int[] args,
    CancellationToken cancel
)
```

Parameters

- **indexGroup**
  Type: System.UInt32
  Index group of the ADS variable.

- **indexOffset**
  Type: System.UInt32
  Index offset of the ADS variable.

- **args**
  Type: System.Int32.
  Additional arguments.

- **cancel**
  Type: System.Threading.CancellationToken
  The cancellation token.
Type Parameters

T
  The type of the result value.

Return Value

Type: `Task<ResultAnyValue>`

A task that represents the asynchronous read operation. The `ResultValue.TValue` parameter contains the read value (`Value`) and the `ErrorCode` after execution.

Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
Task<ResultAnyValue> ReadAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[] args,
    CancellationToken cancel
)

Parameters
indexGroup
Type: System.UInt32
Index group of the ADS variable.

indexOffset
Type: System.UInt32
Index offset of the ADS variable.

type
Type: System.Type
Type of the object to be read.

args
Type: .System.Int32.
Additional arguments.

cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value
Type: Task<ResultAnyValue [998]].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the
read value (Value [1000]) and the ErrorCode [992] after execution.
Remarks
As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

IAdsAnyAccess.ReadAnyString Method (UInt32, Int32, Encoding)

Reads a string from the specified symbol/variable.

Namespace: TwinCAT.Ads [\ref{151}]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
string ReadAnyString(
    uint variableHandle,
    int len,
    Encoding encoding
)
```
Parameters

variableHandle Type: System.UInt32
The variable handle.

len Type: System.Int32
The length.

encoding Type: System.Text.Encoding
The encoding.

Return Value

Type: String
The string value.

---

### IAdsAnyAccess.WriteAny Method (UInt32, Object)

Writes an object synchronously to an ADS device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
void WriteAny(
    uint variableHandle,
    Object value
)
```

**Parameters**

- **variableHandle**
  - Type: `System.UInt32`
  - Handle of the ADS variable.

- **value**
  - Type: `System.Object`
  - Object to write to the ADS device.
IAdsAnyAccess.WriteAny Method (UInt32, Object, .Int32.)

Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#:
```csharp
void WriteAny(
    uint variableHandle,
    Object value,
    int[] args
)
```

**Parameters**

- `variableHandle` Type: `System.UInt32`
  Handle of the ADS variable.

- `value` Type: `System.Object`
  Object to write to the ADS device.

- `args` Type: `System.Int32`.
  Additional arguments.

**Remarks**

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args.

IAdsAnyAccess.WriteAnyAsync Method (UInt32, UInt32, Object, .Int32., CancellationToken)

Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string.

**Namespace:** TwinCAT.Ads  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
### Syntax

**C#**

```csharp
Task<ResultWrite> WriteAnyAsync(
    uint indexGroup,
    uint indexOffset,
    Object value,
    int[] args,
    CancellationToken cancel
)
```

### Parameters

- **indexGroup**
  - Type: `System.UInt32`
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: `System.UInt32`
  - Contains the index offset number of the requested ADS service.

- **value**
  - Type: `System.Object`
  - Object to write to the ADS device.

- **args**
  - Type: `System.Int32`
  - Additional arguments.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

### Return Value

Type: `Task<ResultWrite>`

A task that represents the asynchronous task operation. The result parameter `ResultWrite` of the write operation contains the `ErrorCode`.

### Remarks

As object types only primitive types are supported. If the Type of the object to be read is a string type, the first element of the parameter `args` specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter `args`.

#### 6.2.31 **IAdsConnectAddress Interface**

Interface for method to connect the ADS client via AMS Address.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public interface IAdsConnectAddress : IAdsConnection,
    IAdsNotifications, IAdsSymbolicAccess, IAdsAnyAccess,
    IAdsHandle, IAdsReadWrite2, IAdsReadWrite, IAdsStateProvider, IAdsStateControl,
    IAdsSymbolChangedProvider, IAdsRpcInvoke
```

The `IAdsConnectAddress` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [781]</td>
<td>Gets the <code>AmsAddress [648]</code> of the ADS server. (Inherited from <code>IAdsConnection [765].</code>)</td>
</tr>
<tr>
<td>ClientAddress [781]</td>
<td>Get the <code>AmsAddress [648]</code> of the ADS client. (Inherited from <code>IAdsConnection [765].</code>)</td>
</tr>
<tr>
<td>ConnectionState [85]</td>
<td>Gets the current Connection state of the <code>IConnectionStateProvider [84]</code> (Inherited from <code>IConnectionStateProvider [84].</code>)</td>
</tr>
<tr>
<td>DefaultValueEncoding [76]</td>
<td>Gets the default value encoding. (Inherited from <code>IConnection [74].</code>)</td>
</tr>
<tr>
<td>Id [76]</td>
<td>Gets the Connection Identifier. (Inherited from <code>IConnection [74].</code>)</td>
</tr>
<tr>
<td>IsConnected [76]</td>
<td>Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from <code>IConnection [74].</code>)</td>
</tr>
<tr>
<td>IsLocal [782]</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from <code>IAdsConnection [765].</code>)</td>
</tr>
<tr>
<td>Session [77]</td>
<td>Gets the session that initiated this <code>IConnection [74]</code> (Inherited from <code>IConnection [74].</code>)</td>
</tr>
<tr>
<td>Timeout [77]</td>

### 6.2.31.1 IAdsConnectAddress Properties

The IAdsConnectAddress [733] type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [781]</td>
<td>Gets the AmsAddress [648] of the ADS server. (Inherited from IAdsConnection [765].)</td>
</tr>
<tr>
<td>ClientAddress [781]</td>
<td>Get the AmsAddress [648] of the ADS client. (Inherited from IAdsConnection [765].)</td>
</tr>
<tr>
<td>ConnectionState [85]</td>
<td>Gets the current Connection state of the IConnectionStateProvider [84]. (Inherited from IConnectionStateProvider [84].)</td>
</tr>
<tr>
<td>DefaultValueEncoding [76]</td>
<td>Gets the default value encoding. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Id [76]</td>
<td>Gets the Connection Identifier . (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>IsConnected</td>
<td>Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>IsLocal</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from IAdsConnection.)</td>
</tr>
<tr>
<td>Session</td>
<td>Gets the session that initiated this IConnection (Inherited from IConnection.)</td>
</tr>
<tr>
<td>Timeout</td>
<td>Gets the timeout (in milliseconds) (Inherited from IConnection.)</td>
</tr>
</tbody>
</table>

### 6.2.31.2  IAdsConnectAddress Methods

The IAdsConnectAddress type exposes the following members.

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotification(String, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications[839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type, _Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications[839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications[839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, _Int32, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications[839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, _Int32, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications[839].)</td>
</tr>
<tr>
<td>CleanupSymbolTable</td>
<td>Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess[937].)</td>
</tr>
<tr>
<td>Close</td>
<td>Closes this IConnection[74] (Inherited from IConnection[74].)</td>
</tr>
<tr>
<td>Connect</td>
<td>(Re)Connects the IConnection[74] when disconnected. (Inherited from IConnection[74].)</td>
</tr>
<tr>
<td>Connect(UInt32)</td>
<td>Connects to the local target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsAddress)</td>
<td>Connects the target ADS Device.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>Connect(String, Int32)</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>Connect(AmsNetId, Int32)</td>
<td>Connects to the target ADS Device.</td>
</tr>
<tr>
<td>CreateVariableHandle</td>
<td>Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle.)</td>
</tr>
<tr>
<td>CreateVariableHandleAsync</td>
<td>Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle.)</td>
</tr>
<tr>
<td>DeleteDeviceNotification</td>
<td>Deletes a registered notification. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>DeleteDeviceNotificationAsync</td>
<td>Deletes a registered notification asynchronously. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>DeleteVariableHandle</td>
<td>Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle.)</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync</td>
<td>Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle.)</td>
</tr>
<tr>
<td>Disconnect</td>
<td>Disconnects this IConnection. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object)</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke.)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object, Object)</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke.)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object, Any TypeSpecifier, AnyTypeSpecifier, Object)</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke.)</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, String, Object, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(String, String, Object, Any TypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from AdsRpcInvoke)</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from AdsRpcInvoke)</td>
</tr>
<tr>
<td>Read(UInt32, Memory)</td>
<td>(Inherited from AdsHandle)</td>
</tr>
<tr>
<td>Read(UInt32, UInt32, Memory)</td>
<td>(Inherited from AdsReadWrite2)</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type)</td>
<td>Reads data synchronously from an ADS device and writes it to an object. (Inherited from AdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type, Int32)</td>
<td>Reads data synchronously from an ADS device and writes it to an object. (Inherited from AdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32)</td>
<td>Reads data synchronously from an ADS device and writes it to an object. (Inherited from AdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32, Int32)</td>
<td>Reads data synchronously from an ADS device and writes it to an object. (Inherited from AdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, CancellationToken)</td>
<td>Reads data synchronously from an ADS device and writes it to an object. (Inherited from AdsAnyAccess)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, .Int32., CancellationToken)</td>
<td>Reads data synchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, Type, .Int32., CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, .Int32., CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, .Int32., CancellationToken)</td>
<td>Reads data synchronously from an ADS device. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, UInt32, .Int32., CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, .Int32., .Int32., CancellationToken)</td>
<td>Reads data asynchronously from an ADS device and writes it to an object. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Int32, Encoding)</td>
<td>Reads a string from the specified symbol/variable. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyString(UInt32, UInt32, Int32, Encoding)</td>
<td>Reads a string from a specified address. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>ReadAnyStringAsync(UInt32, Int32, Encoding, CancellationToken)</td>
<td>Reads a string asynchronously from the specified symbol/variable. (Inherited from IAdsAnyAccess)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ReadAnyStringAsyn&lt;br /&gt;(UInt32, UInt32, Int32, Encoding, CancellationToken)</td>
<td>Reads a string from a specified address asynchronously. (Inherited from AdsAnyAccess [702].)</td>
</tr>
<tr>
<td>ReadAsync&lt;br /&gt;(UInt32, Memory, Void)</td>
<td>(Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>ReadAsync&lt;br /&gt;(UInt32, UInt32, Memory, Void)</td>
<td>(Inherited from IAdsReadWrite [870].)</td>
</tr>
<tr>
<td>ReadDataType</td>
<td>Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadDataTypeAsync</td>
<td>Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadDeviceInfo</td>
<td>Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [765].)</td>
</tr>
<tr>
<td>ReadDeviceInfoAsync</td>
<td>Reads the identification and version number of an ADS server. (Inherited from IAdsConnection [765].)</td>
</tr>
<tr>
<td>ReadState</td>
<td>Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [929].)</td>
</tr>
<tr>
<td>ReadStateAsync</td>
<td>Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider [929].)</td>
</tr>
<tr>
<td>ReadSymbol</td>
<td>Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadSymbolAsync</td>
<td>Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadValue(ISymbol)</td>
<td>Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadValue(String, Type)</td>
<td>Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadValue.T.(String)</td>
<td>Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadValueAsync(ISymbol, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadValueAsync(String, Type, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>ReadValueAsync.T.(String, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>

<td>Registers for AdsStateChanged [934] events as an asynchronous operation. (Inherited from IAdsStateProvider [929].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>UnregisterSymbolVersionChangedAsync</td>
<td>Unregisters the symbol version changed asynchronous. (Inherited from IAdsSymbolChangedProvider [934].)</td>
</tr>
<tr>
<td>Write(UInt32, ReadOnlyMemory)</td>
<td>(Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>Write(UInt32, UInt32, ReadOnlyMemory)</td>
<td>Triggers a 'Write' call to the ADS device at the specified address. (Inherited from IAdsReadWrite2 [875].)</td>
</tr>
<tr>
<td>WriteAny(UInt32, Object)</td>
<td>Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [702].)</td>
</tr>
<tr>
<td>WriteAny(UInt32, Object, Int32)</td>
<td>Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [702].)</td>
</tr>
<tr>
<td>WriteAny(UInt32, UInt32, Object)</td>
<td>Writes an object synchronously to an ADS device. (Inherited from IAdsAnyAccess [702].)</td>
</tr>
<tr>
<td>WriteAnyAsync(UInt32, Object, CancellationToken)</td>
<td>Writes an object synchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [702].)</td>
</tr>
<tr>
<td>WriteAnyAsync(UInt32, Object, Int32, CancellationToken)</td>
<td>Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [702].)</td>
</tr>
<tr>
<td>WriteAnyAsync(UInt32, UInt32, Object, CancellationToken)</td>
<td>Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [702].)</td>
</tr>
<tr>
<td>WriteAnyAsync(UInt32, UInt32, Object, Int32, CancellationToken)</td>
<td>Writes an object asynchronously to an ADS device. If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. (Inherited from IAdsAnyAccess [702].)</td>
</tr>
<tr>
<td>WriteAsync(UInt32, ReadOnlyMemory, Void)</td>
<td>(Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>WriteAsync(UInt32, UInt32, ReadOnlyMemory, Void)</td>
<td>(Inherited from IAdsReadWrite [870].)</td>
</tr>
<tr>
<td>WriteControl(StateI nfo)</td>
<td>Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [915].)</td>
</tr>
<tr>
<td>WriteControl(StateI nfo, ReadOnlyMemory)</td>
<td>(Inherited from IAdsStateControl [915].)</td>
</tr>
<tr>
<td>WriteControlAsync(AdsState, UInt16, CancellationToken)</td>
<td>Changes the ADS status and device status of the ADS server asynchronously. (Inherited from IAdsStateControl [915].)</td>
</tr>
<tr>
<td>WriteControlAsync(AdsState, UInt16, ReadOnlyMemory, Void)</td>
<td>(Inherited from IAdsStateControl [915].)</td>
</tr>
<tr>
<td>WriteValue(String, Object)</td>
<td>Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>WriteValue(Symbol, Object)</td>
<td>Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>WriteValue.T.(String, T)</td>
<td>Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>WriteValue.T.(ISymbol, T)</td>
<td>Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>WriteValueAsync(ISymbol, Object, CancellationToken)</td>
<td>Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [937].)</td>

IAdsConnectAddress Interface [733]

TwinCAT.Ads Namespace [151]

**IAdsConnectAddress.Connect Method (Int32)**

Connects to the local target ADS Device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fredca3e72bc0e15da1c14

**Syntax**

**C#**

```csharp
void Connect(
    int port
)
```

**Parameters**

- **port**
  - Type: System.Int32
  - The port number of the local ADS target device to connect to.

**Reference**

IAdsConnectAddress Interface [733]

Connect Overload [762]

TwinCAT.Ads Namespace [151]

**IAdsConnectAddress.Connect Method (AmsAddress)**

Connects the target ADS Device.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fredca3e72bc0e15da1c14

**Syntax**

**C#**

```csharp
void Connect(
    AmsAddress address
)
```

**Parameters**

- **address**
  - Type: TwinCAT.Ads.AmsAddress [648]
  - The address of the target device.
IAdsConnectAddress.Connect Method (String, Int32)

Connects to the target ADS Device.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
void Connect(
    string netId,
    int port
)
```

Parameters

**netId**
Type: `System.String`
The `AmsNetId` of the ADS target device specified as string.

**port**
Type: `System.Int32`
The port number of the ADS target device.

IAdsConnectAddress.Connect Method (AmsNetId, Int32)

Connects to the target ADS Device.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
void Connect(
    AmsNetId netId,
    int port
)
```

Parameters

**netId**
Type: `TwinCAT.Ads.AmsNetId`
The `AmsNetId` of the target device.
port Type: System.Int32
The Ams Port number on the target device to connect to.

6.2.31.3 IAdsConnectAddress Events
The IAdsConnectAddress [733] type exposes the following members.

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsNotification ❯ 866</td>
<td>Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AdsNotificationError ❯ 867</td>
<td>Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AdsNotificationEx ❯ 868</td>
<td>Occurs when the ADS devices sends a notification to the client. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AdsStateChanged ❯ 934</td>
<td>Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider [929].)</td>
</tr>
<tr>
<td>AdsSumNotification ❯ 868</td>
<td>Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AdsSymbolVersionChanged ❯ 937</td>
<td>Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider [934].)</td>
</tr>
<tr>
<td>ConnectionStateChanged ❯ 86</td>
<td>Occurs when connection status of the IConnectionStateProvider [84] has been changed. (Inherited from IConnectionStateProvider [84].)</td>
</tr>
</tbody>
</table>

TwinCAT.Ads Namespace [151]

6.2.32 IAdsConnection Interface
ADS Connection interface

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
The IAdsConnection type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [781]</td>
<td>Gets the AmsAddress [648] of the ADS server.</td>
</tr>
<tr>
<td>ClientAddress [781]</td>
<td>Get the AmsAddress [648] of the ADS client.</td>
</tr>
<tr>
<td>ConnectionState [85]</td>
<td>Gets the current Connection state of the IConnectionStateProvider [84]</td>
</tr>
<tr>
<td></td>
<td>(Inherited from IConnectionStateProvider [84].)</td>
</tr>
<tr>
<td>DefaultValueEncoding [76]</td>
<td>Gets the default value encoding. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Id [76]</td>
<td>Gets the Connection Identifier. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>IsConnected [76]</td>
<td>Gets a value indicating whether the local ADS port was opened successfully.</td>
</tr>
<tr>
<td></td>
<td>It does not indicate if the target port is available. Use the method</td>
</tr>
<tr>
<td></td>
<td>ReadState to determine if the target port is available. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>IConnection [74].)</td>
</tr>
<tr>
<td>IsLocal [782]</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server</td>
</tr>
<tr>
<td></td>
<td>on the local computer.</td>
</tr>
<tr>
<td>Session [77]</td>
<td>Gets the session that initiated this IConnection [74]</td>
</tr>
<tr>
<td></td>
<td>(Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Timeout [77]</td>
<td>Gets the timeout (in milliseconds) (Inherited from IConnection [74].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotification(String, Int32, NotificationSettings, Object) [844]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [866] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [845]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken) [856]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>CleanupSymbolTable [942]</td>
<td>Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>Close [78]</td>
<td>Closes this IConnection [74] (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Connect [78]</td>
<td>(Re)Connects the IConnection [74] when disconnected. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>CreateVariableHandle [829]</td>
<td>Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>CreateVariableHandleAsync [830]</td>
<td>Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>DeleteDeviceNotification [857]</td>
<td>Deletes a registered notification. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>DeleteDeviceNotificationAsync [858]</td>
<td>Deletes a registered notification asynchronously. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>DeleteVariableHandle [830]</td>
<td>Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync [831]</td>
<td>Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>Disconnect [79]</td>
<td>Disconnects this IConnection [74]. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, .Object.) [890]</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [886].)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object...) [891]</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [886].)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Any TypeSpecifier, Any TypeSpecifier, Object...) [893]</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke [886].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(String, String, Object, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from AdsRpcInvoke [886].)</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(String, String, Object, Any TypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from AdsRpcInvoke [886].)</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from AdsRpcInvoke [886].)</td>
</tr>

#### Remarks

The ADS connection interface represents the logical point-to-point exception between Client and Server within an ADS Session.

#### Reference

- TwinCAT.Ads Namespace [151]
- TwinCAT.IConnection [74]
- TwinCAT.Ads.IAdsNotifications [839]
- TwinCAT.Ads.IAdsAnyAccess [702]

#### 6.2.32.1 IAdsConnection Properties

The IAdsConnection [765] type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [781]</td>
<td>Gets the AmsAddress [648] of the ADS server.</td>
</tr>
<tr>
<td>ClientAddress [781]</td>
<td>Get the AmsAddress [648] of the ADS client.</td>
</tr>
<tr>
<td>ConnectionState [85]</td>
<td>Gets the current Connection state of the IConnectionStateProvider [84] (Inherited from IConnectionStateProvider [84].)</td>
</tr>
<tr>
<td>DefaultValueEncoding [76]</td>
<td>Gets the default value encoding. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Id [76]</td>
<td>Gets the Connection Identifier. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>IsConnected [76]</td>
<td>Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>IsLocal [782]</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.</td>
</tr>
<tr>
<td>Session [77]</td>
<td>Gets the session that initiated this IConnection [74] (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Timeout</td>
<td>Gets the timeout (in milliseconds) (Inherited from IConnection).</td>
</tr>
</tbody>
</table>

IAdsConnection Interface [765]

TwinCAT.Ads Namespace [151]

### 6.2.32.1.1 IAdsConnection.Address Property

Gets the `AmsAddress` of the ADS server.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
AmsAddress Address { get; }
```

**Property Value**

Type: `AmsAddress` [648]

**Reference**

IAdsConnection Interface [765]

TwinCAT.Ads Namespace [151]

### 6.2.32.1.2 IAdsConnection.ClientAddress Property

Get the `AmsAddress` of the ADS client.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
AmsAddress ClientAddress { get; }
```

**Property Value**

Type: `AmsAddress` [648]

**Reference**

IAdsConnection Interface [765]

TwinCAT.Ads Namespace [151]
6.2.32.1.3  IAdsConnection.IsLocal Property

Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer.

**Namespace:**  TwinCAT.Ads

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
bool IsLocal { get; }
```

**Property Value**

Type:  Boolean

**Reference**

Reference

IAdsConnection Interface [765]
TwinCAT.Ads Namespace [151]

6.2.32.2.1  IAdsConnection.ReadDeviceInfo Method

Reads the identification and version number of an ADS server.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
DeviceInfo ReadDeviceInfo()
```

Return Value

Type: DeviceInfo [698]
DeviceInfo struct containing the name of the device and the version information.
TwinCAT.Ads Namespaces

Reference

IAdsConnection Interface [765]
TwinCAT.Ads Namespace [151]

6.2.32.2 IAdsConnection.ReadDeviceInfoAsync Method

Reads the identification and version number of an ADS server.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultDeviceInfo> ReadDeviceInfoAsync(
    CancellationToken cancel
)

Parameters

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultDeviceInfo> [1001].
A task that represents the asynchronous 'ReadDeviceState' operation. The ResultDeviceInfo [1001] parameter contains the value DeviceInfo [1003] and the ErrorCode [992] of the ADS communication after execution.

6.2.32.3 IAdsConnection Events

The IAdsConnection [765] type exposes the following members.

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsNotification [866]</td>
<td>Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AdsNotificationError [867]</td>
<td>Occurs when a exception has occurred during notification management. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AdsNotificationEx [868]</td>
<td>Occurs when the ADS device sends a notification to the client. (Inherited from IAdsNotifications [839].)</td>
</tr>
</tbody>
</table>
TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsStateChanged</td>
<td>Occurs when the AdsState of the target system has been changed. (Inherited from IAdsStateProvider.)</td>
</tr>
<tr>
<td>AdsSumNotification</td>
<td>Occurs when Notifications are send (bundled notifications) (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AdsSymbolVersionChanged</td>
<td>Occurs when the ADS Symbol Version changed. (Inherited from IAdsSymbolChangedProvider.)</td>
</tr>
<tr>
<td>ConnectionStateChanged</td>
<td>Occurs when connection status of the IConnectionStateProvider has been changed. (Inherited from IConnectionStateProvider.)</td>
</tr>
</tbody>
</table>

Reference

IAdsConnection Interface [765]

6.2.33 IAdsDisposableConnection Interface

Interface IAdsDisposableConnection Implements the IAdsConnectAddress [733] Implements the IRouterNotificationProvider [973] Implements the IAdsAnyAccess, IAdsHandle, IAdsReadWrite2, IAdsReadWrite, IAdsStateControl, IAdsSymbolChangedProvider, IAdsRpcInvoke, IRouterNotificationProvider, IDisposable

Syntax

C#

```csharp
public interface IAdsDisposableConnection : IAdsConnectAddress,
    IAdsConnection, IConnection, IConnectionStateProvider, IAdsNotifications, IAdsSymbolicAccess,
    IAdsAnyAccess, IAdsHandle, IAdsReadWrite2, IAdsReadWrite, IAdsStateProvider,
    IAdsStateControl, IAdsSymbolChangedProvider, IAdsRpcInvoke, IRouterNotificationProvider, IDisposable
```

The IAdsDisposableConnection type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [781]</td>
<td>Gets the AmsAddress [648] of the ADS server. (Inherited from IAdsConnection [765].)</td>
</tr>
<tr>
<td>ClientAddress [781]</td>
<td>Get the AmsAddress [648] of the ADS client. (Inherited from IAdsConnection [765].)</td>
</tr>
<tr>
<td>ConnectionState [85]</td>
<td>Gets the current Connection state of the IConnectionStateProvider [84] (Inherited from IConnectionStateProvider [84].)</td>
</tr>
<tr>
<td>DefaultValueEncoding [76]</td>
<td>Gets the default value encoding. (Inherited from IConnection [74].)</td>
</tr>
</tbody>
</table>

<tr>
<td>IsConnected [76]</td>
<td>Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>IsDisposed [812]</td>
<td>Gets a value indicating whether this instance is disposed.</td>
</tr>
<tr>
<td>IsLocal [782]</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from IAdsConnection [765].)</td>
</tr>
<tr>
<td>Session [77]</td>
<td>Gets the session that initiated this IConnection [74] (Inherited from IConnection [74].)</td>
</tr>
<tr>
<td>Timeout [77]</td>
<td>Gets the timeout (in milliseconds) (Inherited from IConnection [74].)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotification(String, Int32, NotificationSettings, Object) [844]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification [866] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object) [845]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) [847]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [866] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) [848]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification [866] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type) [850]</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type, .Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, .Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event. (Inherited from IAdsNotifications [839].)</td>
</tr>
<tr>
<td>CleanupSymbolTable</td>
<td>Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>Close</td>
<td>Closes this [Connection [74]. (Inherited from [Connection [74].)</td>
</tr>
<tr>
<td>Connect(Int32)</td>
<td>(Re)Connects the [Connection [74] when disconnected. (Inherited from [Connection [74].)</td>
</tr>
<tr>
<td>Connect(AmsAddress)</td>
<td>Connects to the local target ADS Device. (Inherited from [AdsConnectAddress [733].)</td>
</tr>
<tr>
<td>Connect(AmsNetId, Int32)</td>
<td>Connects the target ADS Device. (Inherited from [AdsConnectAddress [733].)</td>
</tr>
<tr>
<td>Connect(String, Int32)</td>
<td>Connects to the target ADS Device. (Inherited from [AdsConnectAddress [733].)</td>

</table>
6.2.33.1 IAdsDisposableConnection Properties

The IAdsDisposableConnection type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address [781]</td>
<td>Gets the AmsAddress of the ADS server. (Inherited from IAdsConnection.)</td>
</tr>
<tr>
<td>ClientAddress [781]</td>
<td>Gets the AmsAddress of the ADS client. (Inherited from IAdsConnection.)</td>
</tr>
<tr>
<td>ConnectionState [85]</td>
<td>Gets the current Connection state of the IConnectionStateProvider. (Inherited from IConnectionStateProvider.)</td>
</tr>
<tr>
<td>DefaultValueEncoding [76]</td>
<td>Gets the default value encoding. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>Id [76]</td>
<td>Gets the Connection Identifier. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>IsConnected [76]</td>
<td>Gets a value indicating whether the local ADS port was opened successfully. It does not indicate if the target port is available. Use the method ReadState to determine if the target port is available. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>IsDisposed [812]</td>
<td>Gets a value indicating whether this instance is disposed.</td>
</tr>
<tr>
<td>IsLocal [782]</td>
<td>Gets a value indicating whether the ADS client is connected to a ADS Server on the local computer. (Inherited from IAdsConnection.)</td>
</tr>
<tr>
<td>Session [77]</td>
<td>Gets the session that initiated this IConnection. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>Timeout [77]</td>
<td>Gets the timeout (in milliseconds) (Inherited from IConnection.)</td>
</tr>
</tbody>
</table>

Reference

IAdsDisposableConnection Interface [797]
TwinCAT.Ads Namespace [151]
Syntax

C#

```csharp
bool IsDisposed { get; }
```

**Property Value**

Type: Boolean
true if this instance is disposed; otherwise, false.

**Reference**

[IAdsDisposableConnection Interface](#797)
[TwinCAT.Ads Namespace](#151)

### 6.2.33.2 IAdsDisposableConnection Methods

The [IAdsDisposableConnection](#797) type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotification(String, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from <a href="#839">IAdsNotifications</a>.)</td>
</tr>
<tr>
<td>AddDeviceNotification(UInt32, UInt32, Int32, NotificationSettings, Object)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. (Inherited from <a href="#839">IAdsNotifications</a>.)</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event. (Inherited from <a href="#839">IAdsNotifications</a>.)</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification event. (Inherited from <a href="#839">IAdsNotifications</a>.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(String, NotificationSettings, Object, Type, Int32.)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type)</td>
<td>Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive ('AnyType') types are allowed for the parameter type. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationEx(UInt32, UInt32, NotificationSettings, Object, Type, Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx event. (Inherited from IAdsNotifications.)</td>
</tr>
<tr>
<td>CleanupSymbolTable</td>
<td>Clears the internal symbol / DataTypes cache. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>Close</td>
<td>Closes this IConnection. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>Connect</td>
<td>(Re)Connects the IConnection when disconnected. (Inherited from IConnection.)</td>
</tr>
<tr>
<td>Connect(Int32)</td>
<td>Connects to the local target ADS Device. (Inherited from IAdsConnectAddress.)</td>
</tr>
<tr>
<td>Connect(AmsAddress)</td>
<td>Connects the target ADS Device. (Inherited from IAdsConnectAddress.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>Connect(String, Int32)</td>
<td>Connects to the target ADS Device. (Inherited from IAdsConnectAddress)</td>
</tr>
<tr>
<td>Connect(AmsNetId, Int32)</td>
<td>Connects to the target ADS Device. (Inherited from IAdsConnectAddress)</td>
</tr>
<tr>
<td>CreateVariableHandle</td>
<td>Determines the Symbol handle by its instance path synchronously. (Inherited from IAdsHandle)</td>
</tr>
<tr>
<td>CreateVariableHandleAsync</td>
<td>Determines the Symbol handle by its instance path asynchronously. (Inherited from IAdsHandle)</td>
</tr>
<tr>
<td>DeleteDeviceNotification</td>
<td>Deletes a registered notification. (Inherited from IAdsNotifications)</td>
</tr>
<tr>
<td>DeleteDeviceNotificationAsync</td>
<td>Deletes a registered notification asynchronously. (Inherited from IAdsNotifications)</td>
</tr>
<tr>
<td>DeleteVariableHandle</td>
<td>Releases the specified symbol/variable handle synchronously. (Inherited from IAdsHandle)</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync</td>
<td>Releases the specified symbol/variable handle asynchronously. (Inherited from IAdsHandle)</td>
</tr>
<tr>
<td>Disconnect</td>
<td>Disconnects this IConnection. (Inherited from IConnection)</td>
</tr>
<tr>
<td>Dispose</td>
<td>Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources. (Inherited from IDisposable)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object)</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object, Object)</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke)</td>
</tr>
<tr>
<td>InvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object)</td>
<td>Invokes the specified RPC Method (Inherited from IAdsRpcInvoke)</td>
</tr>
<tr>
<td>InvokeRpcMethodAsync(String, String, Object, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from IAdsRpcInvoke)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(String, String, Object, Any TypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from AdsRpcInvoke.)</td>
</tr>
<tr>
<td>InvokeRpcMethodA sync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken)</td>
<td>Invokes the specified RPC Method asynchronously (Inherited from AdsRpcInvoke.)</td>
</tr>
<tr>
<td>Read(UInt32, Memory)</td>
<td>(Inherited from IAdsHandle.)</td>
</tr>
<tr>
<td>Read(UInt32, UInt32, Memory)</td>
<td>(Inherited from IAdsReadWrite2.)</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, Type, Int32.)</td>
<td>(Inherited from IAdsAnyAccess.)</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32, Type)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAny(UInt32, UInt32, Type, Int32.)</td>
<td>(Inherited from IAdsAnyAccess.)</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, CancellationToken)</td>
<td>Reads data synchronously from an ADS device and writes it to an object.</td>
</tr>
<tr>
<td>ReadAnyAsync(UInt32, Type, CancellationToken)</td>
<td>(Inherited from IAdsAnyAccess.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>

<td>Reads data synchronously from an ADS device. (Inherited from <code>IAdsAnyAccess</code>.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ReadAnyStringAsynct(UInt32, UInt32, Int32, Encoding, CancellationToken)</td>
<td>Reads a string from a specified address asynchronously. (Inherited from IAdsAnyAccess.)</td>
</tr>
<tr>
<td>ReadAsync(UInt32, Memory, Void)</td>
<td>(Inherited from IAdsHandle.)</td>
</tr>
<tr>
<td>ReadAsync(UInt32, UInt32, Memory, Void)</td>
<td>(Inherited from IAdsReadWrite.)</td>
</tr>
<tr>
<td>ReadDataType</td>
<td>Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadDataTypeAsync</td>
<td>Call this method to obtain information about the specified data type. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadDeviceInfo</td>
<td>Reads the identification and version number of an ADS server. (Inherited from IAdsConnection.)</td>
</tr>
<tr>
<td>ReadDeviceInfoAsync</td>
<td>Reads the identification and version number of an ADS server. (Inherited from IAdsConnection.)</td>
</tr>
<tr>
<td>ReadState</td>
<td>Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider.)</td>
</tr>
<tr>
<td>ReadStateAsync</td>
<td>Reads the ADS status and the device status from an ADS server. (Inherited from IAdsStateProvider.)</td>
</tr>
<tr>
<td>ReadSymbol</td>
<td>Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadSymbolAsync</td>
<td>Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadValue(ISymbol)</td>
<td>Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadValue(String, Type)</td>
<td>Reads the value of a symbol and returns the value as object. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadValueT(String)</td>
<td>Reads the value of a symbol and returns the value. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadValueAsync(ISymbol, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously and returns it as an object. (Inherited from IAdsSymbolicAccess.)</td>
</tr>
<tr>
<td>ReadValueAsync(String, Type, CancellationToken)</td>
<td>Reads the value of a symbol asynchronously. (Inherited from IAdsSymbolicAccess.)</td>

<tr>
<td>TryRead(UInt32, Memory, Void)</td>
<td>(Inherited from <code>IAdsHandle</code>[827].)</td>
</tr>
<tr>
<td>TryRead(UInt32, UInt32, Memory, Void)</td>
<td>(Inherited from <code>IAdsReadWrite</code>[870].)</td>
</tr>
<tr>
<td>TryReadDataType</td>
<td>Call this method to obtain information about the specified data type. (Inherited from <code>IAdsSymbolicAccess</code>[937].)</td>
</tr>
<tr>
<td>TryReadState</td>
<td>Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorcode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful. (Inherited from <code>IAdsStateProvider</code>[929].)</td>
</tr>
<tr>
<td>TryReadSymbol</td>
<td>Call this method to obtain information about the individual symbols (variables) in ADS devices. (Inherited from <code>IAdsSymbolicAccess</code>[937].)</td>
</tr>
<tr>
<td>TryReadValue(ISymbol, Object)</td>
<td>Reads the value of a symbol and returns it as an object. (Inherited from <code>IAdsSymbolicAccess</code>[937].)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>TryReadValue(String, Type, Object)</td>
<td>Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>TryReadValue.T.(String, T.) [954]</td>
<td>Reads the value of a symbol and returns the value as object. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>TryReadValue.T.(ISymbol, T.) [955]</td>
<td>Reads the value of a symbol and returns it as an object. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>TryReadWrite(UInt32, Memory, Void, Byte)</td>
<td>(Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>TryReadWrite(UInt32, UInt32, Memory, Void, Byte)</td>
<td>(Inherited from IAdsReadWrite [870].)</td>
</tr>
<tr>
<td>TryWrite(UInt32, ReadOnlyMemory)</td>
<td>(Inherited from IAdsHandle [827].)</td>
</tr>
<tr>
<td>TryWrite(UInt32, UInt32, ReadOnlyMemory)</td>
<td>(Inherited from IAdsReadWrite [870].)</td>
</tr>
<tr>
<td>TryWriteControl(StateInfo)</td>
<td>Changes the ADS status and the device status of an ADS server. (Inherited from IAdsStateControl [915].)</td>
</tr>
<tr>
<td>TryWriteControl(StateInfo, ReadOnlyMemory)</td>
<td>(Inherited from IAdsStateControl [915].)</td>
</tr>
<tr>
<td>TryWriteValue(String, Object)</td>
<td>Writes the passed object value to the specified ADS symbol. The parameter type must have the same layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>TryWriteValue(ISymbol, Object)</td>
<td>Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>TryWriteValue.T.(String, T) [958]</td>
<td>Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol. (Inherited from IAdsSymbolicAccess [937].)</td>
</tr>
<tr>
<td>TryWriteValue.T.(ISymbol, T) [960]</td>
<td>Writes a value to the symbol. Strings and all primitive data types(UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol. (Inherited from IAdsSymbolicAccess [937].)</td>

### 6.2.34 IAdsHandle Interface

Interface for ADS access via variable handle

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public interface IAdsHandle
```

The IAdsHandle type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CreateVariableHandle</td>
<td>Determines the Symbol handle by its instance path synchronously.</td>
</tr>
<tr>
<td>CreateVariableHandleAsync</td>
<td>Determines the Symbol handle by its instance path asynchronously.</td>
</tr>
<tr>
<td>DeleteVariableHandle</td>
<td>Releases the specified symbol/variable handle synchronously.</td>
</tr>
<tr>
<td>DeleteVariableHandleAsync</td>
<td>Releases the specified symbol/variable handle asynchronously.</td>
</tr>
<tr>
<td>Read</td>
<td></td>
</tr>

</tbody>
</table>

**Reference**

IAdsHandle Interface [827]

TwinCAT.Ads Namespace [151]

### 6.2.34.1.1 IAdsHandle.CreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
uint CreateVariableHandle(
    string symbolPath
)
```

**Parameters**

- `symbolPath` Type: `System.String` SymbolName / InstancePath.

**Return Value**

Type: `UInt32` The symbols/variable handle

**Remarks**

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this CreateVariableHandle(String) is the `DeleteVariableHandle(UInt32)` [830]

**Reference**

IAdsHandle Interface [827]
TwinCAT.Ads Namespace [151]

IAdsHandle.CreateVariableHandleAsync(String, CancellationToken) [830]

IAdsHandle.TryCreateVariableHandle(String, UInt32.) [834]

6.2.34.1.2 IAdsHandle.CreateVariableHandleAsync Method

Determines the Symbol handle by its instance path asynchronously.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Task<ResultHandle> CreateVariableHandleAsync(
    string symbolPath,
    CancellationToken cancel
)
```

Parameters

- **symbolPath**: Type: System.String
  SymbolName / InstancePath.
- **cancel**: Type: System.Threading.CancellationToken
  The cancellation token.

Return Value

Type: Task<ResultHandle> [1005].
A task that represents the asynchronous 'CreateVariableHandle' operation. The ResultHandle [1005] parameter contains the variable handle (Handle [1007]) and the ErrorCode [992] after execution.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this CreateVariableHandleAsync(String, CancellationToken) is the DeleteVariableHandleAsync(UInt32, CancellationToken) [831]

Reference

IAdsHandle Interface [827]

TwinCAT.Ads Namespace [151]

IAdsHandle.DeleteVariableHandleAsync(UInt32, CancellationToken) [831]

IAdsHandle.TryCreateVariableHandle(String, UInt32.) [834]

IAdsHandle.CreateVariableHandle(String) [829]

6.2.34.1.3 IAdsHandle.DeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.
### Namespace: TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
void DeleteVariableHandle(
    uint variableHandle
)
```

### Parameters

- **variableHandle**
  - Type: System.UInt32
  - Handle of the ADS variable

### Return Value

- Type: The ADS error code.

### Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this `TryDeleteVariableHandle(UInt32)` is the `TryCreateVariableHandle(String, UInt32.)`

### Reference

- IAdsHandle Interface

- IAdsHandle.TryDeleteVariableHandle(UInt32)
- IAdsHandle.DeleteVariableHandleAsync(UInt32, CancellationToken)

### 6.2.34.1.4 IAdsHandle.DeleteVariableHandleAsync Method

Releases the specified symbol/variable handle asynchronously.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
Task<ResultAds> DeleteVariableHandleAsync(
    uint variableHandle,
    CancellationToken cancel
)
```

### Parameters

- **variableHandle**
  - Type: System.UInt32
  - Handle of the ADS variable
cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value
Type: Task<ResultAds>
A task that represents the asynchronous 'DeleteVariableHandle' operation. The ResultAds parameter contains the ErrorCode after execution.

Remarks
It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this DeleteVariableHandleAsync(UInt32, CancellationToken) is the CreateVariableHandleAsync(String, CancellationToken)

Reference

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#

```
int Read(
    uint variableHandle,
    Memory readBuffer
)
```

Parameters
variableHandle Type: System.UInt32
readBuffer Type: Memory

Return Value
Type: Int32

Reference
IAdsHandle Interface
TwinCAT.Ads Namespace
6.2.34.1.6   IAdsHandle.ReadAsync Method

Namespace:   TwinCAT.Ads [151]
Assembly:   TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultRead> ReadAsync(
    uint variableHandle,
    Memory readBuffer,
    void cancel
)

Parameters

variableHandle     Type: System.UInt32
readBuffer         Type: Memory
cancel             Type: System.Void

Return Value

Type: Task<ResultRead> [1008].

Reference

IAdsHandle Interface [827]
TwinCAT.Ads Namespace [151]

6.2.34.1.7   IAdsHandle.ReadWrite Method

Namespace:   TwinCAT.Ads [151]

Syntax

C#

int ReadWrite(
    uint variableHandle,
    Memory readBuffer,
    void writeBuffer
)

Parameters

variableHandle     Type: System.UInt32
readBuffer         Type: Memory
writeBuffer        Type: System.Void
Return Value
Type: Int32

Reference
IAdsHandle Interface [827]
TwinCAT.Ads Namespace [151]

6.2.34.1.8 IAdsHandle.ReadWriteAsync Method

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstracts (in TwinCAT.Ads.Abstracts.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax
C#

```csharp
Task<ResultReadWrite> ReadWriteAsync(
    uint variableHandle,
    Memory readBuffer,
    void writeBuffer,
    byte cancel
)
```

Parameters

- `variableHandle` Type: System.UInt32
- `readBuffer` Type: Memory
- `writeBuffer` Type: System.Void
- `cancel` Type: System.Byte

Return Value
Type: Task<ResultReadWrite> [1019].

Reference
IAdsHandle Interface [827]
TwinCAT.Ads Namespace [151]

6.2.34.1.9 IAdsHandle.TryCreateVariableHandle Method

Determines the Symbol handle by its instance path synchronously.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstracts (in TwinCAT.Ads.Abstracts.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
AdsErrorCode TryCreateVariableHandle(
    string symbolPath,
    out uint variableHandle
)
```

Parameters

<table>
<thead>
<tr>
<th>symbolPath</th>
<th>Type: System.String</th>
<th>SymbolName / InstancePath.</th>
</tr>
</thead>
<tbody>
<tr>
<td>variableHandle</td>
<td>Type: System.UInt32</td>
<td>The symbols handle.</td>
</tr>
</tbody>
</table>

Return Value

Type: AdsErrorCode [575]
The ADS error code.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this TryCreateVariableHandle(String, UInt32.) is the TryDeleteVariableHandle(UInt32) [835]

Reference

IAdsHandle.CreateVariableHandle(String) [829]

6.2.34.1.10 IAdsHandle.TryDeleteVariableHandle Method

Releases the specified symbol/variable handle synchronously.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
AdsErrorCode TryDeleteVariableHandle(
    uint variableHandle
)
```

Parameters

| variableHandle | Type: System.UInt32 | Handle of the ADS variable |
Return Value

Type: AdsErrorCode [575]
The ADS error code.

Remarks

It is a good practice to release all variable handles after use to regain internal resources in the TwinCAT subsystem. The composite method to this TryDeleteVariableHandle(UInt32) is the TryCreateVariableHandle(String, UInt32.) [834]

Reference

IAdsHandle.DeleteVariableHandle(UInt32) [830]

6.2.34.1.11 IAdsHandle.TryRead Method

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstracts (in TwinCAT.Ads.Abstracts.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
AdsErrorCode TryRead(
    uint variableHandle,
    Memory readBuffer,
    void readBytes
)
```

Parameters

| variableHandle | Type: System.UInt32 |
| readBuffer     | Type: Memory       |
| readBytes      | Type: System.Void  |

Return Value

Type: AdsErrorCode [575]

Reference

</table>

Reference

IAdsNotifications Interface [839]
TwinCAT.Ads Namespace [151]

IAdsNotifications.AddDeviceNotification Method (String, Int32, NotificationSettings, Object)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
uint AddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object userData)
```

Parameters

- **symbolPath**
  - Type: `System.String`
  - Symbol / Instance path of the ADS variable.

- **dataSize**
  - Type: `System.Int32`
  - Maximum amount of data in bytes to receive with this ADS Notification

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings`
  - The settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data (tag data)

Return Value

- Type: `UInt32`
  - The notification handle.

Remarks

The `dataSize` Parameter defines the amount of bytes, that will be attached to the `AdsNotification` as value. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)` should always called when the notification is not used anymore.

Reference

**IAdsNotifications.AddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object)**

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event.
Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
uint AddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData)
```

Parameters

- **indexGroup**
  - Type: System.UInt32
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: System.UInt32
  - Contains the index offset number of the requested ADS service.

- **dataSize**
  - Type: System.Int32
  - Maximum amount of data in bytes to receive with this ADS Notification

- **settings**
  - Type: TwinCAT.Ads.NotificationSettings [979]
  - The Notification settings.

- **userData**
  - Type: System.Object
  - This object can be used to store user specific data (tag data)

Return Value

- Type: UInt32
  - The notification handle.

Remarks

The `dataSize` Parameter defines the amount of bytes, that will be attached to the `AdsNotification` [866] as value. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)` [857] should always called when the notification is not used anymore.

### 6.2.35.1.2 IAdsNotifications.AddDeviceNotificationAsync Method

#### Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotificationAsync(String, Int32, NotificationSettings, Object, CancellationToken) ![847]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification ![866] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationAsync(UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken) ![848]</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotification ![866] event.</td>
</tr>
</tbody>
</table>

#### Reference

- [IAdsNotifications Interface](#) ![839]
- [TwinCAT.Ads Namespace](#) ![151]

### IAdsNotifications.AddDeviceNotificationAsync Method (String, Int32, NotificationSettings, Object, CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the [AdsNotification ![866]](# event.

**Namespace:** TwinCAT.Ads ![151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
Task<ResultHandle> AddDeviceNotificationAsync(  
    string symbolPath,  
    int dataSize,  
    NotificationSettings settings,  
    Object userData,  
    CancellationToken cancel)
```

#### Parameters

- **symbolPath**: Type: `System.String`
  The symbol/instance path of the ADS variable.
TwinCAT.Ads Namespaces

### dataSize
Type: System.Int32
Maximum amount of data in bytes to receive with this ADS Notification

### settings
Type: TwinCAT.Ads.NotificationSettings
The notification settings.

### userData
Type: System.Object
This object can be used to store user specific data (tag data)

### cancel
Type: System.Threading.CancellationToken
The Cancellation token.

## Return Value
Type: Task<
A task that represents the asynchronous 'AddDeviceNotification' operation. The ResultHandle type parameter contains the created handle (Handle) and the ErrorCode after execution.

## Remarks
The `dataSize` Parameter defines the amount of bytes, that will be attached to the `AdsNotification` as value. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always be called when the notification is not used anymore.

### IAdsNotifications.AddDeviceNotificationAsync Method (UInt32, UInt32, Int32, NotificationSettings, Object, CancellationToken)
Connects a variable to the ADS client asynchronously. The ADS client will be notified by the `AdsNotification` event.

**Namespace:** TwinCAT.Ads
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
Task<ResultHandle> AddDeviceNotificationAsync(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    CancellationToken cancel
)
```

Parameters

- **indexGroup**: Type: `System.UInt32`  
  The index group number of the requested ADS service.

- **indexOffset**: Type: `System.UInt32`  
  The index offset number of the requested ADS service.

- **dataSize**: Type: `System.Int32`  
  Maximum amount of data in bytes to receive with this ADS Notification

- **settings**: Type: `TwinCAT.Ads.NotificationSettings`  
  The notification settings.

- **userData**: Type: `System.Object`  
  This object can be used to store user specific data (tag data)

- **cancel**: Type: `System.Threading.CancellationToken`  
  The Cancellation token.

Return Value

Type: `Task<ResultHandle>`  
A task that represents the asynchronous 'AddDeviceNotification' operation. The `ResultHandle` type parameter contains the created handle (`Handle`) and the `ErrorCode` after execution.

Remarks

Parameter `dataSize` defines the amount of bytes, that will be attached to the `AdsNotification` as value. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always be called when the notification is not used anymore.

IAdsNotifications.AddDeviceNotificationEx Method (String, NotificationSettings, Object, Type)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ddca3e72bc0ea15da1c14

Syntax

C#

```csharp
uint AddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type
)
```
Parameters

symbolPath  
Type: System.String  
Symbol/Instance path of the ADS variable.

settings  
Type: TwinCAT.Ads.NotificationSettings  
The Notification settings.

userData  
Type: System.Object  
This object can be used to store user specific data (tag data)

type  
Type: System.Type  
Type of the object stored in the event argument ('AnyType')

Return Value

Type: UInt32  
The notification handle.

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to  
DeleteDeviceNotification(UInt32) should always called when the notification is not used anymore.

Because notifications allocate TwinCAT system resources, a complementary call to  
DeleteDeviceNotification(UInt32) should always called when the notification is not used anymore.  
AddDeviceNotificationEx Overload

Reference

IAdsNotifications Interface

AddDeviceNotificationEx Overload

TwinCAT.Ads Namespace

IAdsNotifications.DeleteDeviceNotification(UInt32)  
IAdsNotifications.AdsNotificationEx  
IAdsNotifications.AdsNotificationError  
AddDeviceNotificationEx Overload  
TryAddDeviceNotificationEx Overload  
AddDeviceNotificationExAsync Overload

IAdsNotifications.AddDeviceNotificationEx Method (UInt32, UInt32, NotificationSettings, Object, Type, .Int32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification event. If type is a  
string type, the first element of the parameter args specifies the number of characters of the string. If type is  
an array type, the number of elements for each dimension has to be specified in the parameter args. Only  
primitive ('AnyType') types are allowed for the parameter type.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
uint AddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args
)
```

Parameters

- **indexGroup**
  - Type: System.UInt32
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: System.UInt32
  - Contains the index offset number of the requested ADS service.

- **settings**
  - Type: TwinCAT.Ads.NotificationSettings
  - The Notification settings.

- **userData**
  - Type: System.Object
  - This object can be used to store user specific data.

- **type**
  - Type: System.Type
  - Type of the object stored in the event argument.

- **args**
  - Type: System.Int32
  - Additional arguments for 'AnyType' types.

Return Value

- Type: UInt32
  - The notification handle.

Remarks

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotification(UInt32)` should always be called when the notification is not used anymore.

6.2.35.1.4 IAdsNotifications.AddDeviceNotificationExAsync Method

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotificationExAsync(String, NotificationSettings, Object, Type, .Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event.</td>
</tr>
<tr>
<td>AddDeviceNotificationExAsync(UInt32, UInt32, NotificationSettings, Object, Type, .Int32., CancellationToken)</td>
<td>Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event.</td>
</tr>
</tbody>
</table>

Reference

IAdsNotifications Interface [839]
TwinCAT.Ads Namespace [151]

IAdsNotifications.AddDeviceNotificationExAsync Method (String, NotificationSettings, Object, Type, .Int32., CancellationToken)

Connects a variable to the ADS client asynchronously. The ADS client will be notified by the AdsNotificationEx [868] event.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0e0a15da1c14

Syntax

C#

```csharp
Task<ResultHandle> AddDeviceNotificationExAsync(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    CancellationToken cancel
)
```

Parameters

- **symbolPath**: Type: `System.String`
The symbol/instance path of the ADS variable.
- **settings**: Type: `TwinCAT.Ads.NotificationSettings [979]`
The notification settings.
- **userData**: Type: `System.Object`
  This object can be used to store user specific data (tag data)
**TwinCAT.Ads Namespaces**

**AddDeviceNotificationExAsync**

```
Task<ResultHandle> AddDeviceNotificationExAsync(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    CancellationToken cancel
)
```

**Version:** 1.1

**Remarks**

Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always be called when the notification is not used anymore.

**Return Value**

Type: `Task<ResultHandle>`

A task that represents the asynchronous 'AddDeviceNotification' operation. The `ResultHandle` type parameter contains the created handle (`Handle`) after execution.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Parameters

- **indexGroup**
  Type: `System.UInt32`
  Contains the index group number of the requested ADS service.

- **indexOffset**
  Type: `System.UInt32`
  Contains the index offset number of the requested ADS service.

- **settings**
  Type: `TwinCAT.Ads.NotificationSettings`
  The settings.

- **userData**
  Type: `System.Object`
  This object can be used to store user specific data.

- **type**
  Type: `System.Type`
  Type of the object stored in the event argument, only Primitive 'AnyTypes' allowed.

- **args**
  Type: `System.Int32`
  Additional arguments (for 'AnyType')

- **cancel**
  Type: `System.Threading.CancellationToken`
  The Cancellation token.

Return Value

Type: `Task.ResultHandle`
A task that represents the asynchronous 'AddDeviceNotification' operation. The `ResultHandle` type parameter contains the created handle (`Handle`) and the `ErrorCode` after execution.

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to `DeleteDeviceNotificationAsync(UInt32, CancellationToken)` should always called when the notification is not used anymore.

6.2.35.1.5 `IAdsNotifications.DeleteDeviceNotification Method`

Deletes a registered notification.

Namespace: `TwinCAT.Ads`
Assembly: `TwinCAT.Ads.Abstractions` (in `TwinCAT.Ads.Abstractions.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
void DeleteDeviceNotification(
    uint notificationHandle
)
```

Parameters

- **notificationHandle**
  - Type: `System.UInt32`
  - Notification handle.

Remarks

This is the complementary method to `AddDeviceNotification Overload [844]` overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

Reference

### 6.2.35.1.6 IAdsNotifications.DeleteDeviceNotificationAsync Method

Deletes a registered notification asynchronously.

**Namespace:** `TwinCAT.Ads [151]`

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdac3e72bc0ea15da1c14

Syntax

C#

```csharp
Task<ResultAds> DeleteDeviceNotificationAsync(
    uint notificationHandle,
    CancellationToken cancel
)
```

Parameters

- **notificationHandle**
  - Type: `System.UInt32`
  - Notification handle.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

Return Value

Type: `Task<ResultAds>[989]`.

A task that represents the asynchronous 'DeleteDeviceNotification' operation. The `ErrorCode [992]` property contains the ADS error code after execution.
Remarks

This is the complementary method to AddDeviceNotificationAsync Overload \(847\) overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

</tr>
</tbody>
</table>

Reference

IAdsNotifications Interface \(839\)

TwinCAT.Ads Namespace \(151\)

IAdsNotifications.TryAddDeviceNotification Method (String, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification \(866\) event.

Namespace: TwinCAT.Ads \(151\)

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
AdsErrorCode TryAddDeviceNotification(
    string symbolPath,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    out uint handle
)
```

Parameters

- **symbolPath**
  - Type: `System.String`
  - The symbol/instance path of the ADS variable.

- **dataSize**
  - Type: `System.Int32`
  - Maximum amount of data in bytes to receive with this ADS Notification

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings` [979]
  - The notification settings.

- **userData**
  - Type: `System.Object`
  - This object can be used to store user specific data.

- **handle**
  - Type: `System.UInt32`
  - The notification handle.

Return Value

- Type: `AdsErrorCode` [575]
  - The ADS ErrorCode.

Remarks

The `dataSize` Parameter defines the amount of bytes, that will be attached to the `AdsNotification` [866] as value. Because notifications allocate TwinCAT system resources, a complementary call to `TryDeleteDeviceNotification(UInt32)` [864] should always be called when the notification is not used anymore.

IAdsNotifications.TryAddDeviceNotification Method (UInt32, UInt32, Int32, NotificationSettings, Object, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotification[866] event.

Namespace: TwinCAT.Ads[151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6096934fddca3e72bc0ea15da1c14

Syntax

C#

AdsErrorCode TryAddDeviceNotification(
    uint indexGroup,
    uint indexOffset,
    int dataSize,
    NotificationSettings settings,
    Object userData,
    out uint handle
)

Parameters

indexGroup Type: System.UInt32
The index group number of the requested ADS service.

indexOffset Type: System.UInt32
The index offset number of the requested ADS service.

dataSize Type: System.Int32
Maximum amount of data in bytes to receive with this ADS Notification.

settings Type: TwinCAT.Ads.NotificationSettings[979]
The Notification settings.

userData Type: System.Object
This object can be used to store user specific data (tag data)

handle Type: System.UInt32
The notification handle.

Return Value

Type: AdsErrorCode[575]
The ADS error code.

Remarks

The dataSize Parameter defines the amount of bytes, that will be attached to the AdsNotification[866] as value. Because notifications allocate TwinCAT system resources, a complementary call to TryDeleteDeviceNotification(UInt32)[864] should always called when the notification is not used anymore.

### IAdsNotifications.TryAddDeviceNotificationEx Method (String, NotificationSettings, Object, Type, Int32, UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx [868] event.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
AdsErrorCode TryAddDeviceNotificationEx(
    string symbolPath,
    NotificationSettings settings,
    Object userData,
    Type type,
    int[] args,
    out uint handle
)
```
Parameters
symbolPath Type: System.String
Symbol/Instance path of the ADS variable.
settings Type: TwinCAT.Ads.NotificationSettings
The Notification settings.
userData Type: System.Object
This object can be used to store user specific data (tag data)
type Type: System.Type
Type of the object stored in the event argument ('AnyType')
args Type: System.Int32
Additional arguments (for 'AnyType')
handle Type: System.UInt32
The notification handle

Return Value
Type: AdsErrorCode
The ADS error code.

Remarks
Because notifications allocate TwinCAT system resources, a complementary call to
TryDeleteDeviceNotification(UInt32) should always called when the notification is not used anymore.

AddDeviceNotificationExAsync Overload
TryAddDeviceNotificationEx Overload

IAdsNotifications.TryAddDeviceNotificationEx Method (UInt32, UInt32,
NotificationSettings, Object, Type, .Int32., UInt32.)

Connects a variable to the ADS client. The ADS client will be notified by the AdsNotificationEx event.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
AdsErrorCode TryAddDeviceNotificationEx(
    uint indexGroup,
    uint indexOffset,
    NotificationSettings settings,
Object userData,
    Type type,
    int[] args,
    out uint handle
)

Parameters

indexGroup Type: System.UInt32
Contains the index group number of the requested ADS service.

indexOffset Type: System.UInt32
Contains the index offset number of the requested ADS service.

settings Type: TwinCAT.Ads.NotificationSettings
The Notification settings.

userData Type: System.Object
This object can be used to store user specific data (tag data)

type Type: System.Type
Type of the object stored in the event argument ('AnyType')

args Type: System.Int32
The 'AnyType' arguments.

handle Type: System.UInt32
The notification handle.

Return Value

Type: AdsErrorCode
The ADS Error code.

Remarks

If type is a string type, the first element of the parameter args specifies the number of characters of the string. If type is an array type, the number of elements for each dimension has to be specified in the parameter args. Only primitive types (AnyType) are supported by this method. Because notifications allocate TwinCAT system resources, a complementary call to DeleteDeviceNotification(UInt32) should always called when the notification is not used anymore.

6.2.35.1.9 IAdsNotifications.TryDeleteDeviceNotification Method

Deletes a registered notification.
Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
AdsErrorCode TryDeleteDeviceNotification(uint notificationHandle)
```

Parameters

- `notificationHandle`  
  Type: System.UInt32  
  Notification handle.

Return Value

Type: AdsErrorCode

The ADS error code.

Remarks

This is the complementary method to TryAddDeviceNotification Overload overloads and should be called when the notification is not needed anymore the free TwinCAT realtime resources.

6.2.35.2 IAdsNotifications Events

The IAdsNotifications type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsNotification</td>
<td>Occurs when the ADS device sends a notification to the client.</td>
</tr>
<tr>
<td>AdsNotificationError</td>
<td>Occurs when a exception has occurred during notification management.</td>
</tr>
<tr>
<td>AdsNotificationEx</td>
<td>Occurs when the ADS devices sends a notification to the client.</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsSumNotification</td>
<td>Occurs when Notifications are send (bundled notifications)</td>
</tr>
</tbody>
</table>

### Reference

- [IAdsNotifications Interface](#)
- [TwinCAT.Ads Namespace](#)

### 6.2.35.2.1 IAdsNotifications.AdsNotification Event

Occurs when the ADS device sends a notification to the client.

**Namespace**: TwinCAT.Ads [151]

**Assembly**: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
event EventHandler<AdsNotificationEventArgs> AdsNotification
```

**Value**

Type: System.EventHandler<AdsNotificationEventArgs> [597].

**Remarks**

The Event Argument contains the raw data value of the notification, not marshalled to .NET types.

**Examples**

Example of receiving AdsNotification events.

**Trigger on changed values by ADS Notifications**

```csharp
private async Task RegisterNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;

    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsNotification += Client_AdsNotification2;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        int size = sizeof(UInt32);
        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", size, new NotificationSettings(AdsTransModeOnChange, 200, 0), null, cancel);
        if (result.Succeeded)
        {
            notificationHandle = result.Handle;
            await Task.Delay(5000); // Wait asynchronously without blocking the UI Thread.
            // Unregister the Event / Handle
        }
    }
}
```
```csharp
ResultAds result2 = await client.DeleteDeviceNotificationAsync(notificationHandle, cancel);
}
client.AdsNotification -= Client_AdsNotification2;
}

private void Client_AdsNotification2(object sender, AdsNotificationEventArgs e)
{
    // Or here we know about UDINT type --> can be marshalled as UINT32
    uint nCounter = BinaryPrimitives.ReadUInt32LittleEndian(e.Data.Span);
    // If Synchronization is needed (e.g. in Windows.Forms or WPF applications)
    // we could synchronize via SynchronizationContext into the UI Thread
    /*SynchronizationContext syncContext = SynchronizationContext.Current;
     _context.Post(status => someLabel.Text = nCounter.ToString(), null); // Non-blocking post */
}
```

### Reference

**IAdsNotifications Interface [839]**

**TwinCAT.Ads Namespace [151]**

#### 6.2.35.2.2 IAdsNotifications.AdsNotificationError Event

Occurs when a exception has occurred during notification management.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#:

```csharp
event EventHandler<AdsNotificationErrorEventArgs> AdsNotificationError
```

**Value**

Type: `System.EventHandle<AdsNotificationErrorEventArgs> AdsNotificationError [595].`

**Remarks**

The occurrence of this event can have two different reasons:

1. Indicates an internal error occurred during Notification management.
2. The registered notification becomes invalid on the server, e.g. after a PLC Download / Online Change.
   
   If the ADS Server detects that the (still registered) Notification Sender is getting invalid, it sends an error notification so that the client will be informed about detached notifications. The event arguments contains the 'AdsInvalidNotificationException' which describes the invalid notification handle by its 'AdsInvalidNotificationException.Handle' property.
### 6.2.35.2.3 IAdsNotifications.AdsNotificationEx Event

Occurs when the ADS devices sends a notification to the client.

**Namespace:** TwinCAT.Ads namespace

**Assembly:** TwinCAT.Ads.Abstractions.dll (version 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14)

**Syntax**

C#  
```csharp
event EventHandler<AdsNotificationExEventArgs> AdsNotificationEx
```

**Value**

Type: `System.EventHandler<AdsNotificationExEventArgs>`

**Remarks**

The Notification event arguments marshals the data value automatically to the specified .NET Type with ANY_TYPE marshalers.

**Examples**

Example of receiving AdsNotificationEx events.

**Trigger on changed values by ADS Notifications**

```csharp
CancellationToken cancel = CancellationToken.None;

using (AdsClient client = new AdsClient())
{
   client.AdsNotificationEx += Client_AdsNotificationEx;
   client.Connect(AmsNetId.Local, 851);
   // Add UDINT
   ResultHandle resultHandle = await client.AddDeviceNotificationExAsync("MAIN.udint", new NotificationSettings(AdsTransMode.OnChange, 200, 200), null, typeof(uint),null, cancel);
   await Task.Delay(5000, cancel); // Wait ....
   ResultAds resultHandleDelete = await client.DeleteDeviceNotificationAsync(resultHandle.Handle,cancel); // Unregister Event
}
```

**Reference**

IAdsNotifications Interface

TwinCAT.Ads Namespace

### 6.2.35.2.4 IAdsNotifications.AdsSumNotification Event

Occurs when Notifications are send (bundled notifications)

**Namespace:** TwinCAT.Ads namespace

**Assembly:** TwinCAT.Ads.Abstractions.dll (version 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14)

**Syntax**

C#  
```csharp
event EventHandler<AdsSumNotificationEventArgs> AdsSumNotification
```
Value

Type: `System.EventHandler<AdsSumNotificationEventArgs>`.

Remarks

As an optimization, this event receives all ADS Notifications that occurred at one point in time together. As a consequence, the overhead of handler code is reduced, what can be important if notifications are triggered in a high frequency and the event has to be synchronized to the UI thread context. Because multiple notifications are bound together, less thread synchronization is necessary. The `AdsNotification` and `AdsNotificationEx` events shouldn't be used when SumNotifications are registered, because they have an performance side effect to this AdsSumNotification event. The full performance is reached only, when all notifications are handled on this event.

Examples

Example of receiving AdsSumNotification events.

Trigger on changed values by ADS Notifications

```csharp
private async Task RegisterSumNotificationsAsync()
{
    CancellationToken cancel = CancellationToken.None;
    using (AdsClient client = new AdsClient())
    {
        // Add the Notification event handler
        client.AdsSumNotification += Client_SumNotification;

        // Connect to target
        client.Connect(AmsNetId.Local, 851);
        uint notificationHandle = 0;

        // Notification to a DINT Type (UINT32)
        // Check for change every 200 ms
        byte[] notificationBuffer = new byte[sizeof(UInt32)];
        ResultHandle result = await client.AddDeviceNotificationAsync("MAIN.nCounter", sizeof(UInt32), new NotificationSettings(AdsTransModeOnChange, 200, 0), null, cancel);

    uint indexGroup,
    uint indexOffset,
    Memory readBuffer,
    void timeout
)
```

**Parameters**

- `indexGroup` Type: `System.UInt32`
- `indexOffset` Type: `System.UInt32`
- `readBuffer` Type: `Memory`
- `timeout` Type: `System.Void`

**Return Value**

Type: `Int32`

**Reference**

IAdsReadWriteTimeoutAccess Interface [879]

TwinCAT.Ads Namespace [151]

### 6.2.38.1.2 IAdsReadWriteTimeoutAccess.ReadAny Method

Reads data synchronously from an ADS device and writes it to an object.
Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
Object ReadAny(
    uint indexGroup,
    uint indexOffset,
    Type type,
    int[] args,
    int timeout
)
```

Parameters

- **indexGroup**
  - Type: System.UInt32
  - Index group of the ADS variable.

- **indexOffset**
  - Type: System.UInt32
  - Index offset of the ADS variable.

- **type**
  - Type: System.Type
  - Type of the object to be read.

- **args**
  - Type: System.Int32
  - Additional arguments.

- **timeout**
  - Type: System.Int32
  - The timeout.

Return Value

- Type: Object
  - The Value of the data marshalled to the specified type.

Remarks

If the Type of the object to be read is a string type, the first element of the parameter args specifies the number of characters of the string. If the Type of the object to be read is an array type, the number of elements for each dimension has to be specified in the parameter args. The type is limited to Primitive types ("AnyType").

Syntax

C#

void Write(
    uint indexGroup,
    uint indexOffset,
    ReadOnlyMemory writeBuffer,
    void timeout
)

Parameters

indexGroup Type: System.UInt32
indexOffset Type: System.UInt32
writeBuffer Type: ReadOnlyMemory
timeout Type: System.Void
6.2.38.1.8  IAdsReadWriteTimeoutAccess.WriteAny Method

Writes an object synchronously to an ADS device.

**Namespace:**  TwinCAT.Ads [151]

**Assembly:**  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
void WriteAny(
    uint indexGroup,
    uint indexOffset,
    Object value,
    int[] args,
    int timeout
)
```

**Parameters**

- **indexGroup**
  - Type: `System.UInt32`
  - Contains the index group number of the requested ADS service.

- **indexOffset**
  - Type: `System.UInt32`
  - Contains the index offset number of the requested ADS service.

- **value**
  - Type: `System.Object`
  - Object to write to the ADS device (Primitive type, 'AnyType')

- **args**
  - Type: `System.Int32`
  - Additional arguments.

- **timeout**
  - Type: `System.Int32`
  - The timeout.

**Return Value**

Type: `System.Int32`.

**Remarks**

If the Type of the object to be written is a string type, the first element of parameter args specifies the number of characters of the string. If the Type of the object to be written is an array type, the number of elements for each dimension has to be specified in the parameter args. The value is limited to Primitive types ('AnyType').

</table>
| InvokeRpcMethodA  

sync(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, CancellationToken) | Invokes the specified RPC Method asynchronously |
| TryInvokeRpcMethod(String, String, Object, Object) | Invokes the specified RPC Method |
| TryInvokeRpcMethod(String, String, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object) | Invokes the rpc method. |
| TryInvokeRpcMethod(IRpcCallableInstance, IRpcMethod, Object, AnyTypeSpecifier, AnyTypeSpecifier, Object, Object) | Invokes the rpc method. |

**Remarks**

This interface is used to invoke ADS RPC Method calls. This can be done 'symbolic' via the Method name or the MethodID of the method on the specified symbol. To activate the RPC Access within the PLC environment, its dataType (Structure, FB) must be marked with the PlcAttribute 'TcRpcEnable' to enable RpcMethods.

IAdsRpcInvoke.InvokeRpcMethod Method (String, String, .Object.)

Invokes the specified RPC Method

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters
)
```

Parameters

- **symbolPath**
  - Type: `System.String`
  - The symbol path.

- **methodName**
  - Type: `System.String`
  - The method name.

- **inParameters**
  - Type: `System.Object`
  - The input parameters or NULL

Return Value

Type: `Object`
The return value of the Method (as object).

Remarks

This method only supports primitive data types as inParameters. Any available outparameters will be ignored. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            // Connect to the target device
client.Connect(address);

SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

// Get the Symbols (Dynamic Symbols)

IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

// Call a Method that has the following signature (within MAIN Program)
/*
   {attribute 'TcRpcEnable'}
   METHOD PUBLIC M_Add : INT
   VAR_INPUT
   i1 : INT := 0;
   i2 : INT := 0;
   END_VAR
   */
short result = (short)main.InvokeRpcMethod("M_Add", new object[]{(short)3, (short)4});

// Call a Method that has no parameter and returns VOID
main.InvokeRpcMethod("M_Method1", new object[]{});

// Browsing RpcMethods
foreach(IRpcMethod method in main.RpcMethods)
{
    string methodName = method.Name;
    foreach(IRpcMethodParameter parameter in method.Parameters)
    {
        string parameterName = parameter.Name;
        string parameterType = parameter.TypeName;
    }
}

Reference

IAdsRpcInvoke Interface [886]
InvokeRpcMethod Overload [889]
TwinCAT.Ads Namespace [151]

IAdsRpcInvoke.InvokeRpcMethod Method (String, String, .Object., .Object..)

Invokes the specified RPC Method

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object[] outParameters
)

Parameters

symbolPath Type: System.String
The symbol path.
methodName

Type: System.String

The method name.

inParameters

Type: System.Object

The input parameters or NULL

outParameters

Type: System.Object

The output parameters.

Return Value

Type: Object

The return value of the Method (as object).

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* (attribute 'TcRpcEnable')
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
                i1 : INT := 0;
                i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] { (short)3, (short)4 });

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] { });

            // Browsing RpcMethods
            foreach (IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;

                foreach (IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}

InvokeRpcMethod Overload [» 889]
TwinCAT.Ads Namespace [» 151]

IAdsRpcInvoke.InvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object..)

Invokes the specified RPC Method

Namespace: TwinCAT.Ads [» 151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Object InvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters
)

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>symbolPath</td>
<td>System.String</td>
<td>The symbol path.</td>
</tr>
<tr>
<td>methodName</td>
<td>System.String</td>
<td>The method name.</td>
</tr>
<tr>
<td>inParameters</td>
<td>System.Object</td>
<td>The parameters.</td>
</tr>
<tr>
<td>outSpecifiers</td>
<td>TwinCAT.TypeSystem.AnyTypeSpecifier[]</td>
<td>The out specifiers (specifying the out types) or NULL.</td>
</tr>
<tr>
<td>retSpecifier</td>
<td>TwinCAT.TypeSystem.AnyTypeSpecifier[]</td>
<td>The ret specifier (specifying the return value) or NULL.</td>
</tr>
<tr>
<td>outParameters</td>
<td>System.Object</td>
<td>The out parameters.</td>
</tr>
</tbody>
</table>

Return Value

Type: Object
The return value of the Method (as object).
Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.

Reference

IAdsRpcInvoke Interface [886]

TwinCAT.Ads Namespace [151]

IAdsRpcInvoke.InvokeRpcMethodAsync Method (String, String, .Object., CancellationToken)

Invokes the specified RPC Method asynchronously

Namespace:  TwinCAT.Ads [151]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultRpcMethod> InvokeRpcMethodAsync(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    CancellationToken cancel
)
Parameters

- **symbolPath**
  - **Type:** System.String
  - The symbol/Instance path of the symbol.

- **methodName**
  - **Type:** System.String
  - The method name.

- **inParameters**
  - **Type:** System.Object
  - The parameters.

- **cancel**
  - **Type:** System.Threading.CancellationToken
  - The cancellation token

Return Value

- **Type:** Task<ResultRpcMethod>{1025}
  - A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethod{1025} results contain the return value together with the output parameters.

Remarks

Because this overload doesn't provide any AnyTypeSpecifier{1633} specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

IAdsRpcInvoke Interface  
InvokeRpcMethodAsync Overload

**TwinCAT.Ads Namespace**

IAdsRpcInvoke.InvokeRpcMethodAsync Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, CancellationToken)

Invokes the specified RPC Method asynchronously

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934ffdc3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
Task<ResultRpcMethod> InvokeRpcMethodAsync(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    CancellationToken cancel
)
```

**Parameters**

- **symbolPath**
  - Type: System.String
  - The symbol/Instance path of the symbol.

- **methodName**
  - Type: System.String
  - The method name.

- **inParameters**
  - The parameters.

- **outSpecifiers**
  - Type: .TwinCAT.TypeSystem.AnyTypeSpecifier
  - The out specifiers (specifying the out types) or NULL.

- **retSpecifier**
  - Type: .TwinCAT.TypeSystem.AnyTypeSpecifier
  - The ret specifier (specifying the return value) or NULL.

- **cancel**
  - Type: .System.Threading.CancellationToken
  - The cancellation token

**Return Value**

Type: .Task<ResultRpcMethod>

A task that represents the asynchronous ‘InvokeRpcMethod’ operation. The ResultRpcMethod results contains the return value together with the output parameters.
Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.ReturnValue [1028] and the ErrorCode [992] of the ADS communication after execution.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>

</tbody>
</table>

Return Value

Type: Task<ResultRpcMethod> [► 1025].
A task that represents the asynchronous 'InvokeRpcMethod' operation. The ResultRpcMethod [► 1025] results contains the return value together with the output parameters.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set. The ReturnValue [► 1028] and the ErrorCode [► 992] of the ADS communication after execution.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.
Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);
            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);
            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program
            // Call a Method that has the following signature (within MAIN Program)
            /*
               * (attribute 'TcRpcEnable')
               METHOD PUBLIC M_Add : INT
               VAR_INPUT
               i1 : INT := 0;
               i2 : INT := 0;
               END_VAR
               */
            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});
            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});
            //Browsing RpcMethods
            foreach (IRpcMethod method in main.RpcMethods)
            {
                string methodName = method.Name;
                foreach (IRpcMethodParameter parameter in method.Parameters)
                {
                    string parameterName = parameter.Name;
                    string parameterType = parameter.TypeName;
                }
            }
        }
    }
}

## Reference

- `IAdsRpcInvoke` Interface ![886]
- `TwinCAT.Ads Namespace` ![151]

## IAdsRpcInvoke.TryInvokeRpcMethod Method (String, String, Object, Object.)

Invokes the specified RPC Method

**Namespace:** `TwinCAT.Ads` ![151]

**Assembly:** `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    string parameter1,
    ...
)
```
Parameters

symbolPath  Type: System.String
The symbol path.

methodName  Type: System.String
The method name.

inParameters  Type: .System.Object.
The parameters.

retValue  Type: System.Object.
The return value of the RPC method as object.

Return Value

Type: AdsErrorCode [575]
The ADS Error Code.

Remarks

Because this overload doesn't provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);
        using (AdsClient client = new AdsClient())
        {
            //client.Synchronize = false;
            // Connect to the target device
            client.Connect(address);

            SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
            ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

            // Get the Symbols (Dynamic Symbols)
            IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"]; // Gets the MAIN Instance of the PLC Program

            // Call a Method that has the following signature (within MAIN Program)
            /* {attribute 'TcRpcEnable'}
            METHOD PUBLIC M_Add : INT
            VAR_INPUT
            i1 : INT := 0;
            i2 : INT := 0;
            END_VAR
            */

            short result = (short)main.InvokeRpcMethod("M_Add", new object[] {(short) 3, (short) 4});

            // Call a Method that has no parameter and returns VOID
            main.InvokeRpcMethod("M_Method1", new object[] {});
        }
    }
}
```csharp
// Browsing RpcMethods
foreach (IRpcMethod method in main.RpcMethods)
{
    string methodName = method.Name;
    foreach (IRpcMethodParameter parameter in method.Parameters)
    {
        string parameterName = parameter.Name;
        string parameterType = parameter.TypeName;
    }
}
}
}
```

### IAdsRpcInvoke.TryInvokeRpcMethod Method (String, String, Object, Object, Object)

Invokes the specified RPC Method

**Namespace:** [TwinCAT.Ads](#)  
**Assembly:** [TwinCAT.Ads.Abstractions](#) (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```
AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    out Object[] outParameters,
    out Object retValue
)
```

**Parameters**

- **symbolPath**  
  Type: `System.String`  
  The symbol path.

- **methodName**  
  Type: `System.String`  
  The method name.

- **inParameters**  
  Type: `System.Object`  
  The parameters.

- **outParameters**  
  Type: `System.Object`  
  The out parameters.

- **retValue**  
  Type: `System.Object`  
  The return value of the RPC method as object.

**Return Value**

Type: `AdsErrorCode`  
The ADS Error Code.
Remarks

Because this overload doesn’t provide any AnyTypeSpecifier [1633] specifications, only primitive datatypes will be correctly marshalled by this method. Complex types will fall back to byte[] arrays.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

Dynamic Tree Mode

class RpcCall1VirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
    /// <param name="args">The arguments.</param>
    static void Main(string[] args)
    {
        // Get the AdsAddress from command-line arguments
        AmsAddress address = ArgParser.Parse(args);

        using (AdsClient client = new AdsClient())
        {

            }
        }
    }
}

Reference

IAdsRpcInvoke Interface [886]
TryInvokeRpcMethod Overload [901]
TwinCAT.Ads Namespace [151]
IAdsRpcInvoke.TryInvokeRpcMethod Method (String, String, .Object., .AnyTypeSpecifier., AnyTypeSpecifier, .Object.., Object.)

Invokes the rpc method.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
AdsErrorCode TryInvokeRpcMethod(
    string symbolPath,
    string methodName,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters,
    out Object retValue
)
```

Parameters

- **symbolPath**
  Type: System.String
  The symbol.

- **methodName**
  Type: System.String
  Name of the method.

- **inParameters**
  Type: .System.Object
  The parameters.

- **outSpecifiers**
  Type: .TwinCAT.TypeSystem.AnyTypeSpecifier
  The out specifiers (specifying the out types) or NULL.

- **retSpecifier**
  Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  The ret specifier (specifying the return value) or NULL.

- **outParameters**
  Type: .System.Object
  The out parameters.

- **retValue**
  Type: System.Object
  The return value of the RPC method.

Return Value

Type: AdsErrorCode [575]
AdsErrorCode.

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

Examples

The following sample shows how to call (Remote Procedures / Methods) within the PLC.

**Dynamic Tree Mode**

```csharp
class RpcCallVirtualProgram
{
    /// <summary>
    /// Defines the entry point of the application.
    /// </summary>
```
/// </summary>
/// <param name="args">The arguments.</param>
static void Main(string[] args)
{
    // Get the AdsAddress from command-line arguments
    AmsAddress address = ArgParser.Parse(args);

    using (AdsClient client = new AdsClient())
    {
        // Connect to the target device
        client.Connect(address);

        SymbolLoaderSettings settings = new SymbolLoaderSettings(SymbolsLoadMode.VirtualTree);
        ISymbolLoader loader = SymbolLoaderFactory.Create(client, settings);

        // Get the Symbols (Dynamic Symbols)
        IRpcStructInstance main = (IRpcStructInstance)loader.Symbols["MAIN"];
        // Gets the MAIN Instance of the PLC Program

        // Call a Method that has the following signature (within MAIN Program)
        /* {attribute 'TcRpcEnable'}
        METHOD PUBLIC M_Add : INT
        VAR_INPUT
            i1 : INT := 0;
            i2 : INT := 0;
        END_VAR
        */

            }
        }
    }
}

Reference

IAdsRpcInvoke Interface [886]
TryInvokeRpcMethod Overload [901]
TwinCAT.Ads Namespace [151]

Invokes the rpc method.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
AdsErrorCode TryInvokeRpcMethod(
    IRpcCallableInstance symbol,
    IRpcMethod method,
    Object[] inParameters,
    AnyTypeSpecifier[] outSpecifiers,
    AnyTypeSpecifier retSpecifier,
    out Object[] outParameters,
    out Object retValue
)
```

Parameters

- **symbol**
  - Type: TwinCAT.TypeSystem.IRpcCallableInstance
  - The RPC callable symbol

- **method**
  - Type: TwinCAT.TypeSystem.IRpcMethod
  - The method.

- **inParameters**
  - Type: System.Object
  - The parameters.

- **outSpecifiers**
  - Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  - The out specifiers (specifying the out types) or NULL.

- **retSpecifier**
  - Type: TwinCAT.TypeSystem.AnyTypeSpecifier
  - The ret specifier (specifying the return value) or NULL.

- **outParameters**
  - Type: System.Object
  - The out parameters.

- **retValue**
  - Type: System.Object
  - The return value of the RPC method.

Return Value

Type: AdsErrorCode

Remarks

The RpcMethod optionally support In-Parameters, Out-Parameters and Return values. Therefore the parameters inParameters, outParameters, outSpecifiers, retSpecifier are allowed to be empty or NULL. In case of using primitive datatypes, the type specifier parameters (outSpecifiers and retSpecifier) are not necessary and should not be set.

### 6.2.41.1.1 IAdsSessionSettings.ResurrectionTime Property

Gets or sets the resurrection time.
Syntax

C#

```csharp
TimeSpan ResurrectionTime { get; set; }
```

Property Value

Type: `TimeSpan`

The resurrection time.

Reference

`IAdsSessionSettings Interface [913]`

`TwinCAT.Ads Namespace [151]`

### 6.2.41.1.2 `IAdsSessionSettings.SymbolLoader` Property

Gets or sets the symbol loader settings

**Namespace:** `TwinCAT.Ads [151]`

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

Syntax

C#

```csharp
SymbolLoaderSettings SymbolLoader { get; set; }
```

Property Value

Type: `SymbolLoaderSettings [140]`

The symbol loader.

Reference

`IAdsSessionSettings Interface [913]`

`TwinCAT.Ads Namespace [151]`

### 6.2.41.1.3 `IAdsSessionSettings.Timeout` Property

Gets the ADS timeout in milliseconds.

**Namespace:** `TwinCAT.Ads [151]`

**Assembly:** `TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14`

Syntax

C#

```csharp
int Timeout { get; }
```
Property Value

Type: Int32
The timeout.

Reference

<td></td>
</tr>
</tbody>
</table>

#### Reference

IAdsStateControl Interface [915]

TwinCAT.Ads Namespace [151]

### IAdsStateControl.WriteControlAsync Method (AdsState, UInt16, CancellationToken)

Changes the ADS status and device status of the ADS server asynchronously.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
Task<ResultAds> WriteControlAsync(
    AdsState state,
    ushort deviceState,
    CancellationToken cancel
)
```

#### Parameters

- **state**
  - Type: TwinCAT.Ads.AdsState [626]
  - The ADS state.

- **deviceState**
  - Type: System.UInt16
  - The device state.

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

#### Return Value

Type: Task<ResultAds> [989].

A task that represents the asynchronous 'WriteControl' operation. The ResultAds [989] parameter contains the state the ErrorCode [992] of the ADS communication after execution.

#### Reference

---

### 6.2.43.1.1 IAdsStateControlTimeout.ReadState Method

Reads the ADS status and the device status from an ADS server.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

**Syntax**

```csharp
StateInfo ReadState(int timeout)
```

**Parameters**

- `timeout` : Type: System.Int32
  - The timeout.

**Return Value**

- Type: StateInfo [1041]
  - The ADS statue and device status.

---

#### Reference

IAdsStateControlTimeout Interface [921]

TwinCAT.Ads Namespace [151]
6.2.43.1.2 IAdsStateControlTimeout.TryReadState Method

Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsErrorCode.NoError the call was successful.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294*Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
AdsErrorCode TryReadState(
    int timeout,
    out StateInfo stateInfo
)
```

**Parameters**

- **timeout**
  - Type: `System.Int32`
  - The timeout.

- **stateInfo**
  - Type: `TwinCAT.Ads.StateInfo` [1041].
  - The ADS statue and device status.

**Return Value**

- Type: `AdsErrorCode` [575]
  - AdsErrorCode of the ADS read state call. Check for AdsErrorCode.NoError to see if call was successful.

Reference

`IAdsStateProvider Interface` [929]
6.2.45.1.1 IAdsStateProvider.ReadState Method

 Reads the ADS status and the device status from an ADS server.

 **Namespace:** TwinCAT.Ads

 **Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

 **Syntax**

 **C#**

```csharp
StateInfo ReadState()
```

 **Return Value**

Type: [StateInfo](#)

The ADS statue and device status.

 **Reference**

IAdsStateProvider Interface

TwinCAT.Ads Namespace

6.2.45.1.2 IAdsStateProvider.ReadStateAsync Method

 Reads the ADS status and the device status from an ADS server.

 **Namespace:** TwinCAT.Ads

 **Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

 **Syntax**

 **C#**

```csharp
Task<ResultReadDeviceState> ReadStateAsync(
    CancellationToken cancel
)
```

 **Parameters**

`cancel`  
Type: System.Threading.CancellationToken  
The cancellation token

 **Return Value**

Type: [Task<ResultReadDeviceState>](#)

A task that represents the asynchronous ‘ReadState’ operation. The [ResultReadDeviceState](#) parameter contains the state ([State](#)) as long as the [ErrorCode](#) of the ADS communication after execution.

 **Reference**

IAdsStateProvider Interface
6.2.45.1.3 IAdsStateProvider/RegisterAdsStateChangedAsync Method

Registers for AdsStateChanged events as an asynchronous operation.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
Task<ResultAds> RegisterAdsStateChangedAsync(
    EventHandler<AdsStateChangedEventArgs> handler,
    CancellationToken cancel
)
```

**Parameters**

- **handler**
  - Type: `System.EventHandler<AdsStateChangedEventArgs>`
  - The handler function to be registered for AdsStateChanged calls.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

**Return Value**

Type: `Task<ResultAds>`

A task that represents the asynchronous 'RegisterAdsStateChanged' operation. The `ResultAds` parameter contains the state the `ErrorCode` of the ADS communication after execution.

**Reference**

- IAdsStateProvider Interface
- TwinCAT.Ads Namespace

6.2.45.1.4 IAdsStateProvider.TryReadState Method

Reads the ADS status and the device status from an ADS server. Unlike the ReadState method this method does not call an exception on failure. Instead an AdsErrorCode is returned. If the return value is equal to AdsError.NoError the call was successful.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
AdsErrorCode TryReadState(
    out StateInfo stateInfo
)
```
Parameters

stateInfo

Type: TwinCAT.Ads.StateInfo [1041].
The ADS statue and device status.

Return Value

Type: AdsErrorCode [575]
AdsErrorCode [575] of the ADS read state call. Check for NoError [575] to see if call was successful.

Reference

IAdsStateProvider Interface [929]
TwinCAT.Ads Namespace [151]

6.2.45.1.5 IAdsStateProvider.UnregisterAdsStateChangedAsync Method

Registers for AdsStateChanged [934] events as an asynchronous operation.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultAds> UnregisterAdsStateChangedAsync(
   EventHandler<AdsStateChangedEventArgs> handler,
   CancellationToken cancel
)

Parameters

handler

Type: System.EventHandler<AdsChangedEventArgs> [627].
The handler function to be unregistered.

cancel

Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task.ResultAds [989].
A task that represents the asynchronous 'UnregisterAdsStateChanged' operation. The ResultAds [989] parameter contains the state the ErrorCode [992] of the ADS communication after execution.

Reference

IAdsStateProvider Interface [929]

6.2.45.2 IAdsStateProvider Events

The IAdsStateProvider [929] type exposes the following members.
Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsStateChanged</td>
<td>Occurs when the AdsState of the target system has been changed.</td>
</tr>
</tbody>
</table>

Reference

IAdsStateProvider Interface [929]

TwinCAT.Ads Namespace [151]

6.2.45.2.1 IAdsStateProvider.AdsStateChanged Event

Occurs when the AdsState of the target system has been changed.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
    event EventHandler<AdsStateChangedEventArgs> AdsStateChanged
```

Value

Type: System.EventHandler<AdsStateChangedEventArgs>[627].

Remarks

This event occurs asynchronously if the synchronized flag is not set.

</tr>
</tbody>
</table>

Reference

IAdsSymbolChangedProvider Interface [934]

TwinCAT.Ads Namespace [151]

6.2.46.1.1 IAdsSymbolChangedProvider/RegisterSymbolVersionChangedAsync Method

Registers the symbol version changed asynchronously.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Task<ResultAds> RegisterSymbolVersionChangedAsync(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler,
    CancellationToken cancel
)

Parameters

handler Type: System.EventHandler<AdsSymbolVersionChangedEventArgs>
The handler function to register.
cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultAds>
A task that represents the asynchronous 'RegisterSymbolVersionChanged' operation. The ResultAds parameter contains the value ErrorCode of the ADS communication after execution.

Reference

IAdsSymbolChangedProvider Interface
TwinCAT.Ads Namespace

6.2.46.1.2 IAdsSymbolChangedProvider.UnregisterSymbolVersionChangedAsync Method

Unregisters the symbol version changed asynchronous.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultAds> UnregisterSymbolVersionChangedAsync(
    EventHandler<AdsSymbolVersionChangedEventArgs> handler,
    CancellationToken cancel
)

Parameters

handler Type: System.EventHandler<AdsSymbolVersionChangedEventArgs>
The handler function to unregister.
cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<ResultAds>
A task that represents the asynchronous 'UnregisterSymbolVersionChangedAsync' operation. The ResultAds parameter contains the value ErrorCode of the ADS communication after execution.
### IAdsSymbolChangedProvider Events

The `IAdsSymbolChangedProvider` type exposes the following members.

#### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="937" alt=" AdsSymbolVersionChanged " /></td>
<td>Occurs when the ADS Symbol Version changed.</td>
</tr>
</tbody>
</table>

#### IAdsSymbolChangedProvider.AdsSymbolVersionChanged Event

Occurs when the ADS Symbol Version changed.

**Namespace:** TwinCAT.Ads

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```
C#

event EventHandler<AdsSymbolVersionChangedEventArgs> AdsSymbolVersionChanged
```

**Value**

Type: `System.EventHandler<AdsSymbolVersionChangedEventArgs>`

**Reference**

<td>Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.</td>
</tr>
</tbody>
</table>

**Reference**

IAdsSymbolicAccess Interface [937]

TwinCAT.Ads Namespace [151]
### 6.2.47.1.1  IAdsSymbolicAccess.CleanupSymbolTable Method

Clears the internal symbol / DataTypes cache.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
void CleanupSymbolTable()
```

**Remarks**

Previously stored symbol information is cleared. As a consequence the symbol information must be obtained from the ADS server again if accessed, which which needs an extra ADS round trip.

**Reference**

IAdsSymbolicAccess Interface [937]

TwinCAT.Ads Namespace [151]

### 6.2.47.1.2  IAdsSymbolicAccess.ReadDataType Method

Call this method to obtain information about the specified data type.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
IDataType ReadDataType(
    string typeName
)
```

**Parameters**

**typeName**  
Type: System.String  
Name of the data type (without namespace)

**Return Value**

Type: IDataType [1986]  
An containing the requested type.

**Reference**

IAdsSymbolicAccess Interface [937]

TwinCAT.Ads Namespace [151]

IAdsSymbolicAccess.TryReadDataType(String, IDataType.) [952]

IAdsSymbolicAccess.ReadDataTypeAsync(String, CancellationToken) [943]
6.2.47.1.3 IAdsSymbolicAccess.ReadDataTypeAsync Method

Call this method to obtain information about the specified data type.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
Task<ResultValue<IDataType>> ReadDataTypeAsync(
    string typeName,
    CancellationToken cancel
)
```

**Parameters**

- **typeName**
  - Type: `System.String`
  - Name of the data type.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancel token.

**Return Value**

Type: `TaskForResultValue<IDataType>`

A task that represents the asynchronous 'ReadDataType' operation. The `ResultValue.TValue` parameter contains the read value (`Value`) and the `ErrorCode` after execution.

**Reference**

- `IAdsSymbolicAccess Interface` [937]
- TwinCAT.Ads Namespace [151]
- `IAdsSymbolicAccess.ReadDataType(String)` [942]
- `IAdsSymbolicAccess.TryReadDataType(String, IDataType)` [952]

6.2.47.1.4 IAdsSymbolicAccess.ReadSymbol Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
IAdsSymbol ReadSymbol(
    string symbolPath
)
```

**Parameters**

- **symbolPath**
  - Type: `System.String`
  - Name of the symbol.
Return Value

Type: IAdsSymbol

An IAdsSymbol containing the requested symbol information or null if symbol could not be found.

Reference

IAdsSymbolicAccess Interface

TwinCAT.Ads Namespace

IAdsSymbolicAccess.TryReadSymbol(String, IAdsSymbol)

IAdsSymbolicAccess.ReadSymbolAsync(String, CancellationToken)

6.2.47.1.5 IAdsSymbolicAccess.ReadSymbolAsync Method

Call this method to obtain information about the individual symbols (variables) in ADS devices.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

Task<ResultValue<IAdsSymbol>> ReadSymbolAsync(
    string symbolPath,
    CancellationToken cancel
)

Parameters

symbolPath Type: System.String
Name of the symbol.

cancel Type: System.Threading.CancellationToken
The cancel token.

Return Value

Type: Task<ResultValue[IAdsSymbol]].

A task that represents the asynchronous ‘ReadSymbolInfo’ operation. The ResultValue.TValue parameter contains the read value (Value) and the ErrorCode after execution.

### IAdsSymbolicAccess.ReadValueAsync<T> Method (String, CancellationToken)

Reads the value of a symbol asynchronously.
### Syntax

C#

```csharp
Task<ResultValue<T>> ReadValueAsync<T>(
    string symbolPath,
    CancellationToken cancel
)
```

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>symbolPath</td>
<td><code>System.String</code></td>
<td>Name of the ADS symbol.</td>
</tr>
<tr>
<td>cancel</td>
<td><code>System.Threading.CancellationToken</code></td>
<td>The cancel token.</td>
</tr>
</tbody>
</table>

### Type Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td><code>T</code></td>
<td>The value type.</td>
</tr>
</tbody>
</table>

### Return Value

Type: `Task<ResultValue<T>>`  
A task that represents the asynchronous read operation. The `ResultAnyValue` parameter contains the read value (`Value`) and the `ErrorCode` after execution.

### Remarks

The parameter type must have the same binary layout as the ADS symbol.

### Reference

- `IAdsSymbolicAccess Interface`
- `ReadValueAsync Overload`
- `TwinCAT.Ads Namespace`
- `IAdsSymbolicAccess.ReadValue.T.(String)`  
- `IAdsSymbolicAccess.TryReadValue.T.(String, T.)`

### `IAdsSymbolicAccess.ReadValueAsync Method` (ISymbol, CancellationToken)

Reads the value of a symbol asynchronously and returns it as an object.

**Namespace:** TwinCAT.Ads  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

Task<ResultAnyValue> ReadValueAsync(
    ISymbol symbol,
    CancellationToken cancel
)

Parameters

symbol  
Type: TwinCAT.TypeSystem.ISymbol
The symbol that should be read.

cancel  
Type: System.Threading.CancellationToken
The cancel token.

Return Value

Type: Task<ResultAnyValue>
A task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read value (Value) and the ErrorCode after execution.

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

Syntax

C#

Task<ResultValue<T>> ReadValueAsync<T>(
    ISymbol symbol,
    CancellationToken cancel
)
Parameters

symbol

Type: TwinCAT.TypeSystem.ISymbol
The symbol that should be read.

cancel

Type: System.Threading.CancellationToken
The cancel token.

Type Parameters

T
The value type.

Return Value

Type: Task<ResultAnyValue>
A task that represents the asynchronous read operation. The ResultAnyValue parameter contains the read value (Value) and the ErrorCode after execution.

Remarks

Supported types are limited to 'AnyTypes', what includes all primitive types (UInt32, Int32, Bool etc.), strings, and Arrays that are compositions of 'AnyTypes'.

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

Task<ResultAnyValue> ReadValueAsync(
    string symbolPath,
    Type type,
    CancellationToken cancel
)

Parameters

symbolPath

Type: System.String
Name of the ADS symbol.

type

Type: System.Type
Managed type of the ADS symbol

cancel

Type: System.Threading.CancellationToken
The cancel token.
Return Value

Type: Task.ResultAnyValue [998].
A task that represents the asynchronous read operation. The ResultAnyValue [998] parameter contains the read value (Value [1000]) and the ErrorCode [992] after execution.

Remarks

The parameter type must have the same binary layout as the ADS symbol.

Syntax

C#

AdsErrorCode TryReadDataType(
    string typeName,
    out IDataType dataType
)

Parameters

typeName Type: System.String
Name of the symbol.

dataType Type: TwinCAT.TypeSystem.IDataType [1986].
The symbol.

Return Value

Type: AdsErrorCode [575]
A IDataType [1986] containing the requested symbol information or null if symbol could not be found.

Reference

IAdsSymbolicAccess Interface [937]

TwinCAT.Ads Namespace [151]

**IAdsSymbolicAccess.WriteValue Method (String, Object)**

Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
void WriteValue(  
    string symbolPath,  
    Object value  
)

**Parameters**

- **symbolPath**  
  Type: System.String  
  Name of the ADS symbol.

- **value**  
  Type: System.Object  
  Object holding the value to be written to the ADS symbol.

IAdsSymbolicAccess.TryWriteValue(String, Object) [957]  
IAdsSymbolicAccess.WriteValueAsync.T(String, T, CancellationToken) [964]

**IAdsSymbolicAccess.WriteValue.T Method (String, T)**

Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.
**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
void WriteValue<T>(
    string symbolPath,
    T value
)
```

**Parameters**

- **symbolPath**
  - Type: System.String
  - Name of the ADS symbol.

- **value**
  - Type: T
  - Object holding the value to be written to the ADS symbol

**Type Parameters**

- **T**
  - the value type.

**IAdsSymbolicAccess.WriteValue Method (ISymbol, Object)**

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
void WriteValue(
    ISymbol symbol,
    Object val
)
```

**Parameters**

- **symbol**
  - Type: TwinCAT.TypeSystem.ISymbol [2176]
  - The symbol the value is written to.

- **val**
  - Type: System.Object
  - The value to write.
IAdsSymbolicAccess.WriteValue.T. Method (ISymbol, T)

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
void WriteValue<T>(
    ISymbol symbol,
    T val
)
```

Parameters

- **symbol**
  Type: TwinCAT.TypeSystem.ISymbol
  The symbol the value is written to.

- **val**
  Type: T
  The value to write.

Type Parameters

- **T**
  The value type.

Reference

IAdsSymbolicAccess Interface [937]

TwinCAT.Ads Namespace [151]

IAdsSymbolicAccess.WriteValueAsync<T>. Method (String, T, CancellationToken)

Writes the passed object value to the specified ADS symbol. The parameter type must have the same binary layout as the ADS symbol.

Namespace:  TwinCAT.Ads Namespace [151]

Syntax

C#

```csharp
Task<ResultWrite> WriteValueAsync<T>(
    string symbolPath,
    T value,
    CancellationToken cancel
)
```

Parameters

- **symbolPath**
  - Type: `System.String`
  - Name of the ADS symbol.
- **value**
  - Type: `T`
  - Object holding the value to be written to the ADS symbol
- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancel token.

Type Parameters

- **T**
  - The value type.
Return Value

Type: Task.ResultWrite [1032].
A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite [1032] parameter contains the ErrorCode [992] after execution.

IAdsSymbolicAccess.WriteValueAsync Method (ISymbol, Object, CancellationToken)

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Task<ResultWrite> WriteValueAsync(
    ISymbol symbol,
    Object val,
    CancellationToken cancel
)
```

Parameters

symbol Type: TwinCAT.TypeSystem.ISymbol [2176]
The symbol the value is written to.

val Type: System.Object
The value to write.

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task.ResultWrite [1032].
A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite [1032] parameter contains the ErrorCode [992] after execution.

Reference

IAdsSymbolicAccess Interface [937]
WriteValueAsync Overload [964]
IAdsSymbolicAccess.WriteValueAsync<T>. Method (ISymbol, T, CancellationToken)

Writes a value to the symbol. Strings and all primitive data types (UInt32, Int32, Bool etc.) are supported. If a string is passed as parameter, the method attempts to parse the string according to the ADS data type of the symbol.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
Task<ResultWrite> WriteValueAsync<T>(
    ISymbol symbol,
    T val,
    CancellationToken cancel
)
```

**Parameters**

- `symbol`  
  Type: TwinCAT.TypeSystem.ISymbol [2176]
  The symbol the value is written to.

- `val`  
  Type: T
  The value to write.

- `cancel`  
  Type: System.Threading.CancellationToken
  The cancellation token.

**Type Parameters**

- `T`  
  The value type.

**Return Value**

Type: Task<ResultWrite> [1032].

A task that represents the asynchronous 'WriteSymbol' operation. The ResultWrite [1032] parameter contains the ErrorCode [992] after execution.

6.2.48 IAdsSymbolTableProvider Interface

Interface IAdsSymbolTableProvider

Namespace:  TwinCAT.Ads [151]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public interface IAdsSymbolTableProvider

The IAdsSymbolTableProvider type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetSymbolTableAsync</td>
<td>Gets the symbol table asynchronously</td>
</tr>
<tr>
<td>SetSymbolEncoding</td>
<td>Sets the default encoding.</td>
</tr>
<tr>
<td>TryGetSymbolTable</td>
<td>Get the symbol table.</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.Ads Namespace [151]

6.2.48.1 IAdsSymbolTableProvider Methods

The IAdsSymbolTableProvider [967] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetSymbolTableAsync</td>
<td>Gets the symbol table asynchronously</td>
</tr>
<tr>
<td>SetSymbolEncoding</td>
<td>Sets the default encoding.</td>
</tr>
<tr>

<td>Get the symbol table.</td>
</tr>
</tbody>
</table>

Reference

IAdsSymbolTableProvider Interface [967]
TwinCAT.Ads Namespace [151]

6.2.48.1.1 IAdsSymbolTableProvider.GetSymbolTableAsync Method

Gets the symbol table asynchronously
Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
Task<ResultValue<ISymbolInfoTable>> GetSymbolTableAsync(
    CancellationToken cancel
)
```

Parameters

cancel Type: System.Threading.CancellationToken

The cancellation token.

Return Value

Type: Task<ResultValue<ISymbolInfoTable>>

A task that represents the asynchronous 'RegisterSymbolVersionChanged' operation. The ResultValue.TValue parameter contains the value Value and the return code ErrorCode of the ADS communication after execution.

Reference

IAdsSymbolTableProvider Interface

TwinCAT.Ads Namespace

6.2.48.1.2 IAdsSymbolTableProvider.SetSymbolEncoding Method

Sets the default encoding.

Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
void SetSymbolEncoding(
    Encoding encoding
)
```

Parameters

coding Type: System.Text.Encoding

The encoding.

Reference

IAdsSymbolTableProvider Interface

TwinCAT.Ads Namespace

6.2.48.1.3 IAdsSymbolTableProvider.TryGetSymbolTable Method

Get the symbol table.
Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
AdsErrorCode TryGetSymbolTable(out ISymbolInfoTable table)
```

Parameters

table Type: ISymbolInfoTable.
The symbol table.

Return Value

Type: AdsErrorCode
The ADS Error Code.

Reference

The notification handle

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)  
**Version:** 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
6.2.52.2.3 NotificationTimeStamp Property

Gets the time stamp of the INotification

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public DateTimeOffset TimeStamp { get; }

Property Value

Type: DateTimeOffset
The time stamp.

Implements

INotification.TimeStamp

Reference

Notification Class
TwinCAT.Ads Namespace

6.2.52.2.4 NotificationUserData Property

Attached UserData/Tag at the INotification

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
public uint Handle { get; }

Property Value

Type: UInt32
The handle.

Implements

INotification.Handle

Reference

Notification Class
TwinCAT.Ads Namespace

TwinCAT.Ads Namespaces
Syntax

C#

```csharp
public Object UserData { get; }
```

Property Value

Type: Object
The user data.

Implements

INotification.UserData [971]

Reference

TwinCAT.Ads Namespace [151]

6.2.52.3 Notification Methods

The Notification [974] type exposes the following members.

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

Reference

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fd3ca3e72bc0ea15da1c14

Syntax

C#

public class NotificationSettings : INotificationSettings, IComparable<INotificationSettings>

The NotificationSettings type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotificationSettings(AdsTransMode, Int32, Int32)</td>
<td>Initializes a new instance of the NotificationSettings class.</td>
</tr>
<tr>
<td>NotificationSettings(AdsTransMode, TimeSpan, TimeSpan)</td>
<td>Initializes a new instance of the NotificationSettings class.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CycleTime</td>
<td>Gets or sets the cycle time (in milliseconds) for AdsNotifications.</td>
</tr>
<tr>
<td>Default</td>
<td>Gets the default Settings (AdsTransMode.OnChange, CycleTime 200 ms, MaxDelay: off)</td>
</tr>
<tr>
<td>ImmediatelyOnChange</td>
<td>Gets the settings for a 'Immediate on change' notification.</td>
</tr>
<tr>
<td>MaxDelay</td>
<td>Gets or sets the Maximum Delay Time (in milliseconds) for AdsNotifications.</td>
</tr>
<tr>
<td>NotificationMode</td>
<td>Gets or sets the ADS Transmission mode.</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CompareTo</td>
<td>Compares this NotificationSettings in term of priorities to the other NotificationSettings.</td>
</tr>
<tr>
<td>Equals</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>

### Reference

NotificationSettings Class [979]

TwinCAT.Ads Namespace [151]
6.2.53.1.1 NotificationSettings Constructor (AdsTransMode, Int32, Int32)

Initializes a new instance of the NotificationSettings [979] class.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public NotificationSettings(
    AdsTransMode mode,
    int cycleTime,
    int maxDelay
)
```

**Parameters**

- **mode**
  - Type: TwinCAT.Ads.AdsTransMode [639]
  - The ADS Transmission mode.

- **cycleTime**
  - Type: System.Int32
  - The cycle time in ms.

- **maxDelay**
  - Type: System.Int32
  - The maximum delay in ms

**Reference**

- NotificationSettings Class [979]
- NotificationSettings Overload [981]

---

6.2.53.1.2 NotificationSettings Constructor (AdsTransMode, TimeSpan, TimeSpan)

Initializes a new instance of the NotificationSettings [979] class.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public NotificationSettings(
    AdsTransMode mode,
    TimeSpan cycleTime,
    TimeSpan maxDelay
)
```

**Parameters**

- **mode**
  - Type: TwinCAT.Ads.AdsTransMode [639]
  - The ADS Transmission mode.

- **cycleTime**
  - Type: System.TimeSpan
  - The cycle time in ms.
maxDelay

Type: System.TimeSpan
The maximum delay in ms

6.2.53.2 NotificationSettings Properties

The NotificationSettings [979] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CycleTime [983]</td>
<td>Gets or sets the cycle time (in milliseconds) for AdsNotifications.</td>
</tr>
<tr>
<td>Default [984]</td>
<td>Gets the default Settings (AdsTransMode.OnChange, CycleTime 200 ms, MaxDelay: off)</td>
</tr>
<tr>
<td>ImmediatelyOnChange</td>
<td>Gets the settings for a 'Immediate on change' notification.</td>
</tr>
<tr>
<td>MaxDelay [985]</td>
<td>Gets or sets the Maximum Delay Time (in milliseconds) for AdsNotifications.</td>
</tr>
<tr>
<td>NotificationMode [985]</td>
<td>Gets or sets the ADS Transmission mode.</td>
</tr>
</tbody>
</table>

Reference

NotificationSettings Class [979]

TwinCAT.Ads Namespace [151]

6.2.53.2.1 NotificationSettings.CycleTime Property

Gets or sets the cycle time (in milliseconds) for AdsNotifications.

Namespace: TwinCAT.Ads [151]

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

class

cpublic int CycleTime { get; }

Property Value

Type: Int32
The cycle time.
Remarks
The ADS server checks if the value changes in this time slice. The unit is 1ms

Reference
NotificationSettings Class [979]
TwinCAT.Ads Namespace [151]

6.2.53.2.2 NotificationSettings.Default Property

Gets the default Settings (AdsTransMode.OnChange, CycleTime 200 ms, MaxDelay: off)

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public static NotificationSettings Default { get; }

Property Value

Type: NotificationSettings [979]
The default.

Reference
NotificationSettings Class [979]
TwinCAT.Ads Namespace [151]

6.2.53.2.3 NotificationSettings.ImmediatelyOnChange Property

Gets the settings for a 'Immediate on change' notification.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public static NotificationSettings ImmediatelyOnChange { get; }

Property Value

Type: NotificationSettings [979]
The immediately on change.

Remarks
AdsTransMode.OnChange, CycleTime: 0 ms, MaxDelay: off)
6.2.53.2.4 NotificationSettings.MaxDelay Property

Gets or sets the Maximum Delay Time (in milliseconds) for AdsNotifications.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public int MaxDelay { get; }
```

**Property Value**

Type: `Int32`
The maximum Delay time for ADS Notifications.

---

6.2.53.2.5 NotificationSettings.NotificationMode Property

Gets or sets the ADS Transmission mode.

**Namespace:** TwinCAT.Ads [151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public AdsTransMode NotificationMode { get; }
```

**Property Value**

Type: `AdsTransMode` [639]
The Transmission mode.

---

6.2.53.3 NotificationSettings Methods

The NotificationSettings [979] type exposes the following members.
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CompareTo [986]</td>
<td>Compares this NotificationSettings [979] in term of priorities to the other NotificationSettings [979].</td>
</tr>
<tr>
<td>Equals [987]</td>
<td>Equals (Overrides Object.Equals(Object).)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

Reference

NotificationSettings Class [979]

TwinCAT.Ads Namespace [151]

6.2.53.3.1 NotificationSettings.CompareTo Method

Compares this NotificationSettings [979] in term of priorities to the other NotificationSettings [979].

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public int CompareTo(
    INotificationSettings other
)
```

Parameters

other                  Type: TwinCAT.Ads.INotificationSettings [972]
The other.

Return Value

Type: Int32
1: this has higher priority (shorter times), 0: Equal, 1: Lower priority

Implements

IComparable<T.CompareTo(T)

Reference

NotificationSettings Class [979]
6.2.53.3.2  NotificationSettings.Equals Method

Equals

Namespace:  TwinCAT.Ads [151]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public override bool Equals(
    Object obj
)

Parameters

obj  Type:  System.Object
The object to compare with the current object.

Return Value

Type:  Boolean
ture if the specified Object is equal to this instance; otherwise, false.

Reference

NotificationSettings Class [979]
TwinCAT.Ads Namespace [151]

6.2.53.3.3  NotificationSettings.GetHashCode Method

Gets the HashCode of the Address

Namespace:  TwinCAT.Ads [151]
Assembly:  TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public override int GetHashCode()

Return Value

Type:  Int32
A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

Reference

NotificationSettings Class [979]
TwinCAT.Ads Namespace [151]
6.2.53.4 NotificationSettings Operators

The NotificationSettings [979] type exposes the following members.

Operators

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equality</td>
<td>Operator==</td>
</tr>
<tr>
<td>Inequality</td>
<td>Implements the != operator.</td>
</tr>
</tbody>
</table>

Reference

6.2.53.4.1 NotificationSettings.Equality Operator

Operator==

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# public static bool operator ==(
    NotificationSettings o1,
    NotificationSettings o2
)

Parameters

Return Value

Type: Boolean The result of the operator.

Reference

NotificationSettings Class [979]
TwinCAT.Ads Namespace [151]
6.2.53.4.2 NotificationSettings.Inequality Operator

Implements the != operator.

**Namespace:** TwinCAT.Ads [➤ 151]
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  

```csharp
public static bool operator !=(  
  NotificationSettings o1,
  NotificationSettings o2
)
```

**Parameters**

- **o1**  
  Type: TwinCAT.Ads.NotificationSettings [➤ 979]
  The o1.

- **o2**  
  Type: TwinCAT.Ads.NotificationSettings [➤ 979]
  The o2.

**Return Value**

Type: Boolean  
The result of the operator.

**Reference**

<td>Creates an Error Result.</td>
</tr>
</tbody>
</table>

Reference

ResultAds Class [989]
ResultAds.CreateError Method (AdsErrorCode)

Creates an Error Result.

Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static ResultAds CreateError(
    AdsErrorCode errorCode
)
```

Parameters

- `errorCode` Type: TwinCAT.Ads.AdsErrorCode
  The error code.

Return Value

Type: ResultAds

ResultValue<T>.

Reference

CreateError Overload

TwinCAT.Ads Namespace

ResultAds.CreateError.TValue. Method (AdsErrorCode, TValue)

Creates an Error Result.

Namespace: TwinCAT.Ads

Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static ResultValue<TValue> CreateError<TValue>(
    AdsErrorCode errorCode,
    TValue defaultValue
)
```

Parameters

- `errorCode` Type: TwinCAT.Ads.AdsErrorCode
  The error code.

- `defaultValue` Type: TValue
  The default value.
### Type Parameters

**TValue**
The type of the t value.

### Return Value

Type: `ResultValue<T>.TValue`

Syntax

C#

public class ResultAnyValue : ResultAds

The ResultAnyValue type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ResultAnyValue</td>
<td>Initializes a new instance of the ResultAnyValue struct.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Gets the empty ResultAnyValue object.</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result object. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds state is failed. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds state is succeeded. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td>Value</td>
<td>Gets the read value.</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>

ResultRead Class [1008]

TwinCAT.Ads Namespace [151]

### 6.2.59 ResultReadAdsState Class

Result object for asynchronous reading AdsStates via tasks.
Inheritance Hierarchy

System.Object
  TwinCAT.Ads.ResultAds [989]
    TwinCAT.Ads.ResultReadAdsState

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public class ResultReadAdsState : ResultAds

The ResultReadAdsState type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Gets the empty ResultReadAdsState object.</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>State</td>
<td>Gets the ADS state.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>SetError [997]</td>
<td>Sets the error state of this ResultAds [989] (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

Reference

### 6.2.59.1 ResultReadAdsState Properties

The **ResultReadAdsState** type exposes the following members.

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Gets the empty <strong>ResultReadAdsState</strong> object.</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this <strong>Result</strong> object. (Inherited from <strong>ResultAds</strong>.)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the <strong>ResultAds</strong> state is failed. (Inherited from <strong>ResultAds</strong>.)</td>
</tr>
<tr>
<td>State</td>
<td>Gets the ADS state.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the <strong>ResultAds</strong> state is succeeded. (Inherited from <strong>ResultAds</strong>.)</td>
</tr>
</tbody>
</table>

Syntax

C#

```csharp
public class ResultReadBytes : ResultRead
```

The ResultReadBytes type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data [1015]</td>
<td>The read bytes as continuous region of memory.</td>
</tr>
<tr>
<td>Empty [1016]</td>
<td>Gets the empty ResultReadBytes object.</td>
</tr>
<tr>
<td>ErrorCode [992]</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed [993]</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>ReadBytes [1010]</td>
<td>Gets the number of Read bytes. (Inherited from ResultRead [1008].)</td>
</tr>
<tr>
<td>Succeeded [993]</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>

ResultReadWriteBytes Class [1022]

TwinCAT.Ads Namespace [151]
TwinCAT.Ads Namespaces

6.2.64 ResultRpcMethod Class

Class representing a result of an asynchronous RpcMethod call. Implements the ResultAds

Inheritance Hierarchy

System.Object
  TwinCAT.Ads.ResultAds
    TwinCAT.Ads.ResultRpcMethod

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public class ResultRpcMethod : ResultAds

The ResultRpcMethod type exposes the following members.

Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ResultRpcMethod</td>
<td>Initializes a new instance of the ResultRpcMethod struct.</td>
</tr>
</tbody>
</table>

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Gets the Empty Result (initialized to None and default ReturnValue (NULL).</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result object. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds state is failed. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td>OutValues</td>
<td>Gets the output parameter values.</td>
</tr>
<tr>
<td>ReturnValue</td>
<td>The (optional) return value of the RPC Method.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds state is succeeded. (Inherited from ResultAds.)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GetType</td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current <code>Object</code>. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td>SetError [997]</td>
<td>Sets the error state of this <code>ResultAds [989]</code> (Inherited from <code>ResultAds [989]</code>.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>

#### Remarks
Optionally this Result holds an `ReturnValue [1028]` if the RpcCall is not void.

#### Reference

- TwinCAT.Ads.ResultAds [989]

### 6.2.64.1 ResultRpcMethod Constructor

**Namespace:** TwinCAT.Ads [151]  
**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public ResultRpcMethod(
    AdsErrorCode errorCode,
    Object returnValue,
    Object[] outParameters
)
```

#### Parameters

- **errorCode**
  - Type: TwinCAT.Ads.AdsErrorCode [575]  
    The error code.

- **returnValue**
  - Type: System.Object  
    The value.

- **outParameters**
  - Type: System.Object  
    The out parameters.

#### Reference

- ResultRpcMethod Class [1025]
- TwinCAT.Ads Namespace [151]

### 6.2.64.2 ResultRpcMethod Properties

The `ResultRpcMethod [1025]` type exposes the following members.
Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty [1027]</td>
<td>Gets the Empty Result (initialized to None [575] and default ReturnValue [1028] (NULL)).</td>
</tr>
<tr>
<td>ErrorCode [992]</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed [993]</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>OutValues [1027]</td>
<td>Gets the output parameter values.</td>
</tr>
<tr>
<td>ReturnValue [1028]</td>
<td>The (optional) return value of the RPC Method.</td>
</tr>
<tr>
<td>Succeeded [993]</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>
</tr>
</tbody>
</table>

Reference

ResultRpcMethod Class [1025]
TwinCAT.Ads Namespace [151]

6.2.64.2.1 ResultRpcMethod.Empty Property

Gets the Empty Result (initialized to None [575] and default ReturnValue [1028] (NULL)).

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Extensions (in TwinCAT.Ads.Extensions.dll) Version:

### 6.2.65 ResultValue.TValue. Class

ADS Result object returning a generic value result (TValue) (asynchronous read). Implements the ResultAds [989].

#### Inheritance Hierarchy

- System.Object
  - TwinCAT.Ads.ResultAds [989]
    - TwinCAT.Ads.ResultValue.TValue.
      - TwinCAT.TypeSystem.ResultDataTypes [2347]
      - TwinCAT.TypeSystem.ResultSymbols.T. [2356]

#### Namespace: TwinCAT.Ads [151]

- Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public class ResultValue<TValue> : ResultAds
```

#### Type Parameters

- TValue: The type of the result value.

The ResultValue.TValue. type exposes the following members.

#### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="ResultValue.TValue." /></td>
<td>Initializes a new instance of the ResultValue class.</td>
</tr>
</tbody>
</table>

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Empty" /></td>
<td>Gets the Empty result initialized to NoError [575] and the default of TValue.</td>
</tr>
<tr>
<td><img src="image" alt="ErrorCode" /></td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td><img src="image" alt="Failed" /></td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
</tbody>
</table>
### TwinCAT.Ads Namespaces

#### TwinCAT.Ads ResultAds [989]

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Succeeded [993]</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Value [1032]</td>
<td>The value object.</td>
</tr>
</tbody>
</table>

#### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>

</tr>
<tr>
<td>SetError [997]</td>
<td>Sets the error state of this ResultAds [989] (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

#### Remarks

The ResultValue.TValue. type is used in generic ADS read operations, where a value is returned.

#### Reference

- TwinCAT.Ads Namespace [151]
- TwinCAT.Ads.ResultAds [989]

### 6.2.65.1 ResultValue.TValue. Constructor

Initializes a new instance of the ResultValue class.

- **Namespace:** TwinCAT.Ads [151]
- **Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public ResultValue(
    AdsErrorCode errorCode,
    TValue value
)
```

#### Parameters

- **errorCode**
  - Type: TwinCAT.Ads.AdsErrorCode [575]
  - The error code.

- **value**
  - Type: TValue [1029]
  - The value.
6.2.65.2 ResultValue.TValue. Properties

The ResultValue.TValue. generic type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty [1031]</td>
<td>Gets the Empty result initialized to NoError [575] and the default of TValue.</td>
</tr>
<tr>
<td>ErrorCode [992]</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed [993]</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Succeeded [993]</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Value [1032]</td>
<td>The value object.</td>
</tr>
</tbody>
</table>

6.2.67.1.4 SessionSettings.FastWriteThrough Property

Gets a Settings object that configures the AdsSession for FastWriteThrough

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#
```csharp
public static SessionSettings FastWriteThrough { get; }
```

Property Value

Type: SessionSettings

Session settings for a fast write through (with 200 ms Timeout).

Remarks

The settings typically can be used for polling clients, where the "FailFast" feature will be bypassed. That means, that communication fails doesn't trigger the FailFast interceptor and every Request will go out via ADS. This has the Drawback that communication Timeouts are longer and subsequent timeouts block the ADS mailbox (with the danger of overflows). So use this setting with care for specific purposes and should not be used for standard communication.
• No Resurrection time and therefore:
• No FailFastHandler active.
• Default communication timeout 200ms.
• Not synchronized Notifications.

Reference

SessionSettings Class [1035]
TwinCAT.Ads Namespace [151]

6.2.67.1.5 SessionSettings.ResurrectionTime Property

Gets or sets the resurrection time (Default: DefaultResurrectionTime [1038])

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public TimeSpan ResurrectionTime { get; set; }

Property Value

Type: TimeSpan
The resurrection time.

Implements

IAdsSessionSettings.ResurrectionTime [913]

Remarks

The resurrection time is the time after a lost connection Lost [67] can be 'resurrected'. This time is set to 21 Seconds by default (a value greater than the standard Ethernet connection timeout of 20s). The reason for this timeout is not to flood the ADS mailbox with requests that cannot be handled by the ethernet infrastructure. As long this Timespan is not expired after a recognized Lost [67], no further data communication is done, and requests are immediately ('FailFast') answered by communication exceptions. Change this value only for edge cases.

6.2.67.1.6 SessionSettings.SymbolLoader Property

Gets or sets the symbol loader settings

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version:
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#
public SymbolLoaderSettings SymbolLoader { get; set; }

Property Value

Type: SymbolLoaderSettings [140]
The symbol loader.

Implements

IAdsSessionSettings.SymbolLoader [914]

Reference

SessionSettings Class [1035]
TwinCAT.Ads Namespace [151]

6.2.67.1.7 SessionSettings.Timeout Property

Gets the ADS timeout in milliseconds.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public int Timeout { get; }

Property Value

Type: Int32
The timeout.

Implements

IAdsSessionSettings.Timeout [914]

Reference

SessionSettings Class [1035]

Gets or sets the ADS state of this StateInfo object.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public AdsState AdsState { get; set; }
```

**Property Value**

Type: AdsState [626]

**Reference**

StateInfo Structure [1041]

TwinCAT.Ads Namespace [151]

#### 6.2.68.2.2 StateInfo.DeviceState Property

Gets or sets the device state of this StateInfo object.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public short DeviceState { get; set; }
```

**Property Value**

Type: Int16
6.2.68.2.3 StateInfo.Empty Property

Empty / Invalid / Uninitialized state.

Namespace: TwinCAT.Ads
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public static StateInfo Empty { get; }
```

Property Value

Type: StateInfo
The empty.

Methods

The StateInfo type exposes the following members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals(Object)</td>
<td>Determines whether the specified Object is equal to this instance. (Overrides ValueType.Equals(Object).)</td>

<td>Determines whether the specified StateInfo is equal to this instance.</td>
</tr>
</tbody>
</table>

#### Reference

StateInfo Structure [1041]

TwinCAT.Ads Namespace [151]

### StatInfo.Equals Method (Object)

Determines whether the specified Object is equal to this instance.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

#### Syntax

**C#**

```csharp
public override bool Equals(
    Object ob
)
```

**Parameters**

- **ob**
  
  Type: System.Object
  
  The Object to compare with this instance.

**Return Value**

Type: Boolean

true if the specified Object is equal to this instance; otherwise, false.

#### Reference

StateInfo Structure [1041]

Equals Overload [1046]

TwinCAT.Ads Namespace [151]

### StatInfo.Equals Method (StateInfo)

Determines whether the specified StateInfo is equal to this instance.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public bool Equals(
    StateInfo info
)
```

Parameters

- **info**: Type: `TwinCAT.Ads.StateInfo` [1041]
  - The `StateInfo` [1041] to compare with this instance.

Return Value

Type: `Boolean`
- true if the specified `StateInfo` [1041] is equal to this instance; otherwise, false.

Implements

`IEquatable<T>.Equals(T)`

Reference

- `StateInfo Structure` [1041]
- `Equals Overload` [1046]
- `TwinCAT.Ads Namespace` [151]

### 6.2.68.3.2 StateInfo.GetHashCode Method

Returns a hash code for this instance.

**Namespace**: `TwinCAT.Ads` [151]
**Assembly**: `TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll)` Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public override int GetHashCode()
```

Return Value

Type: `Int32`
- A hash code for this instance, suitable for use in hashing algorithms and data structures like a hash table.

Reference

- `StateInfo Structure` [1041]
- `TwinCAT.Ads Namespace` [151]

### 6.2.68.4 StateInfo Operators

The `StateInfo` [1041] type exposes the following members.
Operators

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equality [1048]</td>
<td>Implements the ==.</td>
</tr>
<tr>
<td>Inequality [1048]</td>
<td>Implements the !=.</td>
</tr>
</tbody>
</table>

Reference

StateInfo Structure [1041]
TwinCAT.Ads Namespace [151]

6.2.68.4.1 StateInfo.Equality Operator

Implements the ==.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static bool operator ==(StateInfo a, StateInfo b)
```

Parameters

- a of Type: TwinCAT.Ads.StateInfo [1041]
- b of Type: TwinCAT.Ads.StateInfo [1041]

Return Value

Type: Boolean
The result of the operator.

Reference

StateInfo Structure [1041]
TwinCAT.Ads Namespace [151]

6.2.68.4.2 StateInfo.Inequality Operator

Implements the !=.

Namespace: TwinCAT.Ads [151]
Assembly: TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
**Syntax**

**C#**

```csharp
public static bool operator !=(
    StateInfo a,
    StateInfo b
)
```

**Parameters**

- `a`: Type: `TwinCAT.Ads.StateInfo [1041]`
- `b`: Type: `TwinCAT.Ads.StateInfo [1041]`

**Return Value**

Type: `Boolean`
The result of the operator.

**Reference**

- `StateInfo Structure [1041]`
- `TwinCAT.Ads Namespace [151]`

### 6.2.69 TaskExtensions Class

TaskExtensions for Task Cancellation and Timeout

**Inheritance Hierarchy**

- `System.Object`
  - `TwinCAT.Ads.TaskExtensions`

**Namespace:** `TwinCAT.Ads` [151]

**Assembly:** `TwinCAT.Ads.Abstractions` (in `TwinCAT.Ads.Abstractions.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static class TaskExtensions
```

The `TaskExtensions` type exposes the following members.

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![ ] WithCancellationAndTimeout [1051]</td>
<td>Extends a worker task with timeout and Cancellation</td>
</tr>
</tbody>
</table>
6.2.69.1 TaskExtensions Methods

The TaskExtensions type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>WithCancellation.T.</td>
<td>Extends a worker Task with cancellation.</td>
</tr>
<tr>
<td>WithCancellationAndTimeout</td>
<td>Extends a worker task with timeout and Cancellation</td>
</tr>
<tr>
<td>WithTimeout</td>
<td>Extends a worker task with a timeout.</td>
</tr>
</tbody>
</table>

### Reference

TaskExtensions Class [1049]

TwinCAT.Ads Namespace [151]

#### 6.2.69.1.1 TaskExtensions.WithCancellation.T. Method

Extends a worker Task with cancellation.

**Namespace:** TwinCAT.Ads [151]

**Assembly:** TwinCAT.Ads.Abstractions (in TwinCAT.Ads.Abstractions.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static Task<T> WithCancellation<T>(
    this Task<T> worker,
    CancellationToken cancellationToken
)
```

**Parameters**

- **worker**
  - Type: System.Threading.Tasks.Task<T>
  - The worker task.

- **cancellationToken**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Type Parameters**

- **T**
  - The Task Result
Return Value

Type: Task<T>. Task<AdsErrorCode>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type Task<T>. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>OperationCanceledException</td>
<td></td>
</tr>
</tbody>
</table>

TwinCAT.Ads Namespaces
Remarks
Reactive Extensions (Rx) are a library for composing asynchronous and event-based programs using
observable sequences and LINQ-style query operators. Using Rx, developers represent asynchronous data
streams with Observables, query asynchronous data streams using LINQ operators, and parameterize the
concurrency in the asynchronous data streams using Schedulers. Simply put, Rx = Observables + LINQ +
Schedulers. The ADS reactive extensions are build on top of this library to enable ADS Symbol and State
Observables, seamlessly bound to the reactive extensions. To use the ADS reactive extensions the
TwinCAT.Ads.Reactive Nuget package (or the included TwinCAT.Ads.Reactive.dll) must be referenced.
(Beckhoff.TwinCAT.Ads.Reactive package on Nuget).
Examples
The following sample shows how observe Value changed Notifications with the reactive AdsClientExtensions
Observe changing ADS Symbols with reactive extensions.
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
// Connect to target
client.Connect(new AmsAddress(AmsNetId.Local, 851));
// Create Symbol information
var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
int eventCount = 1;
// Reactive Notification Handler
var valueObserver = Observer.Create<SymbolValueNotification>(not =>
{
Console.WriteLine(string.Format("{0} {1:u} {2} = '{3}' ({4})", eventCount+
+, not.TimeStamp, not.Symbol.InstancePath, not.Value, not.Symbol.DataType));
}
);
// Collect the symbols that are registered as Notification sources for their changed values.
SymbolCollection notificationSymbols = new SymbolCollection();
IArrayInstance taskInfo = (IArrayInstance)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskI
nfo"];
foreach(ISymbol element in taskInfo.Elements)
{
ISymbol cycleCount = element.SubSymbols["CycleCount"];
ISymbol lastExecTime = element.SubSymbols["LastExecTime"];
notificationSymbols.Add(cycleCount);
notificationSymbols.Add(lastExecTime);
}
// Create a subscription for the first 200 Notifications on Symbol Value changes.
IDisposable subscription = client.WhenNotification(notificationSymbols,NotificationSettings.Defa
ult).Take(200).Subscribe(valueObserver);
Console.ReadKey(); // Wait for Key press
subscription.Dispose(); // Dispose the Subscription
}

Examples
The following sample shows how observe AdsState [} 626] changed Notifications with the reactive
AdsClientExtensions
Observe changing ADS states with reactive extensions.
// To Test the observer, Start/Stop the local PLC
using (AdsClient client = new AdsClient())
{
// Connect to target
client.Connect(new AmsAddress(AmsNetId.Local, 851));

**Reference**

AdsClientExtensions Class [1056]

TwinCAT.Ads.Reactive Namespace [1056]

**AdsClientExtensions.PollAdsState Method (IAdsConnection, IObservable.Unit.)**

Gets an observable sequence of AdsState}s via Polling.

**Namespace:** TwinCAT.Ads.Reactive [1056]
**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static IObservable<AdsState> PollAdsState(
    this IAdsConnection client,
    IObservable<Unit> trigger
)
```

**Parameters**

- **client**
  - Type: TwinCAT.Ads.IAdsConnection [765]
  - The client.

- **trigger**
  - Type: System.IObservable.Unit
  - The polling trigger

**Return Value**

Type: IObservable<AdsState> [626].

**Usage Note**

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection [765]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

**Examples**

The following sample shows how observe AdsState}s via polling with the reactive AdsClientExtensions [1056].

```
Observe changing ADS States with reactive extensions.

// To Test the observer, Start/Stop the local PLC
using (AdsClient client = new AdsClient())
{
    // Connect to target
```
```csharp
client.Connect(new AmsAddress(AmsNetId.Local, 851));

// Create Symbol information
var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

// Reactive Change Handler
var valueObserver = Observer.Create<IList<AdsState>>(not =>
{
    AdsState oldValue = not[0];
    AdsState newValue = not[1];

    Console.WriteLine(string.Format("Changed ADSState from '{0}' --> '{1}!'", oldValue, newValue));
});

// Create a subscription for the AdsState change and buffering 2 Values (for oldValue --> newValue output).
IDisposable subscription = client.PollAdsState(TimeSpan.FromMilliseconds(200)).Buffer(2, 1).Subscribe(valueObserver);

Console.ReadKey(); // Wait for Key press
subscription.Dispose(); // Dispose the Subscription
```

TwinCAT.Ads.Reactive Namespace [› 1056]

AdsClientExtensions.WhenAdsStateChanges(IAdsConnection) [› 1066]

---

### AdsClientExtensions.PollAdsState Method (IAdsConnection, TimeSpan)

 Gets an observable sequence of AdsState via Polling.

**Namespace:** TwinCAT.Ads.Reactive [› 1056]

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static IObservable<AdsState> PollAdsState(
    this IAdsConnection client,
    TimeSpan period
)
```

**Parameters**

- **client**
  
  Type: TwinCAT.Ads.IAdsConnection [› 765]

  The client.

- **period**

  Type: System.TimeSpan

  The period.

**Return Value**

Type: IObservable<AdsState> [› 626].

IObservable<AdsState>. 
Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Examples

The following sample shows how observe AdsState via polling with the reactive AdsClientExtensions.

Observe changing ADS States with reactive extensions.

```csharp
// To Test the observer, Start/Stop the local PLC
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.DefaultDynamic);

    // Reactive Change Handler
    var valueObserver = Observer.Create<IList<AdsState>>(not =>
    {
        AdsState oldValue = not[0];
        AdsState newValue = not[1];

        Console.WriteLine(string.Format("Changed ADSState from '{0}' --> '{1}'!", oldValue, newValue));
    });

    // Create a subscription for the AdsState change and buffering 2 Values (for oldValue --> newValue output).
    IDisposable subscription = client.PollAdsState(TimeSpan.FromMilliseconds(200)).Buffer(2, 1).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press

    subscription.Dispose(); // Dispose the Subscription
}
```

#### Syntax

**C#**

```csharp
public static IObservable<AdsState> PollAdsStateAsync(
    this IAdsConnection client,
    IObservable<Unit> trigger,
    CancellationToken cancel
)
```

**Parameters**

- **client**
  - Type: TwinCAT.Ads.IAdsConnection [765]
  - The client.

- **trigger**
  - Type: System.IObservable.Unit.
  - The polling trigger

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Return Value**

Type: IObservable<AdsState> [626].

- IObservable<AdsState>.

**Usage Note**

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection [765]. When you use instance method syntax to call this method, omit the first parameter. **AdsClientExtensions.PollAdsStateAsync Method (IAdsConnection, TimeSpan, CancellationToken)**

Gets an observable sequence of `AdsState` s via Polling.

**Namespace:** TwinCAT.Ads.Reactive [1056]

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static IObservable<AdsState> PollAdsStateAsync(
    this IAdsConnection client,
    TimeSpan interval,
    CancellationToken cancellationToken
)
```

**Parameters**

- **client**
  - Type: `TwinCAT.Ads.IAdsConnection` [765]
  - The client.

- **interval**
  - Type: `System.TimeSpan`
  - The interval.
cancel

Return Value

Type: System.Threading.CancellationToken
The cancellation token.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type AdsConnection. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Examples

The following sample shows how observe AdsState via polling with the reactive AdsClientExtensions.

```csharp
using (AdsClient client = new AdsClient())
{

### AdsClientExtensions.WhenNotification Method (IAdsConnection, ISymbol)

Gets an observable sequence of `Notification` objects.

**Namespace:** TwinCAT.Ads.Reactive [1056]

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

```csharp
public static IObservable<Notification> WhenNotification(IAdsConnection client, ISymbol symbol)
```
Parameters

client
Type: TwinCAT.Ads.IAdsConnection
The client.

symbol
Type: TwinCAT.TypeSystem.ISymbol
The symbol.

Return Value

Type: IObservable.Notification
IObservable<NotificationValue>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

- WhenNotification Overload

- TwinCAT.Ads.Reactive Namespace

- AdsClientExtensions.WhenNotification(IAdsConnection, ISymbolCollection, NotificationSettings)

**AdsClientExtensions.WhenNotification Method (IAdsConnection, ISymbolCollection, NotificationSettings)**

Gets an observable sequence of Notification objects.
TwinCAT.Ads Namespaces
Namespace: TwinCAT.Ads.Reactive [} 1056]
5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax
C#
public static IObservable<SymbolValueNotification> WhenNotification(
this IAdsConnection client,
ISymbolCollection symbols,
NotificationSettings settings
)

Parameters
client

Type: TwinCAT.Ads.IAdsConnection [} 765]
The client.

symbols

Type: TwinCAT.TypeSystem.ISymbolCollection [} 2182]
The symbols to observe.

settings

Type: TwinCAT.Ads.NotificationSettings [} 979]
The Notification settings.

Return Value
Type: IObservable.SymbolValueNotification [} 1104].
IObservable<NotificationValue>.
Usage Note
In Visual Basic and C#, you can call this method as an instance method on any object of type
IAdsConnection [} 765]. When you use instance method syntax to call this method, omit the first parameter.
For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).
Examples
The following sample shows how observe Value changed Notifications with the reactive AdsClientExtensions
[} 1056]
Observe changing ADS Symbols with reactive extensions.
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
// Connect to target
client.Connect(new AmsAddress(AmsNetId.Local, 851));
// Create Symbol information
var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
int eventCount = 1;
// Reactive Notification Handler
var valueObserver = Observer.Create<SymbolValueNotification>(not =>
{
Console.WriteLine(string.Format("{0} {1:u} {2} = '{3}' ({4})", eventCount+
+, not.TimeStamp, not.Symbol.InstancePath, not.Value, not.Symbol.DataType));
}
);
// Collect the symbols that are registered as Notification sources for their changed values.
SymbolCollection notificationSymbols = new SymbolCollection();
IArrayInstance taskInfo = (IArrayInstance)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskI
nfo"];

1072

Version: 1.1

TC1000


foreach(ISymbol element in taskInfo.Elements)
{
    ISymbol cycleCount = element.SubSymbols["CycleCount"];
    ISymbol lastExecTime = element.SubSymbols["LastExecTime"];

    notificationSymbols.Add(cycleCount);
    notificationSymbols.Add(lastExecTime);
}

// Create a subscription for the first 200 Notifications on Symbol Value changes.
IDisposable subscription = client.WhenNotification(notificationSymbols,NotificationSettings.Default).Take(200).Subscribe(valueObserver);

Console.ReadKey(); // Wait for Key press
subscription.Dispose(); // Dispose the Subscription

AdsClientExtensions Class [1056]
TwinCAT.Ads.Reactive Namespace [1056]

AdsClientExtensions.WhenSymbolVersionChanges Method (IAdsConnection)

Gets an observable sequence of SymbolVersion changed counts.

Namespace: TwinCAT.Ads.Reactive [1056]
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static IObservable<int> WhenSymbolVersionChanges(
    this IAdsConnection connection
)
```
AdsClientExtensions.WhenSymbolVersionChanges Method (IAdsConnection, IScheduler)

Gets an observable sequence of SymbolVersion changed counts.

**Namespace:** TwinCAT.Ads.Reactive

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
public static IObservable<int> WhenSymbolVersionChanges(IAdsConnection connection, IScheduler scheduler)
```

**Parameters**

- **connection**  
  Type: **TwinCAT.Ads.IAdsConnection**  
  The client.

- **scheduler**  
  Type: **IScheduler**  
  The scheduler.

**Return Value**

Type: **IObservable.Int32**  
Counter, unique only within the WhenSymbolVersionChanges(IAdsConnection, IScheduler) observable.

**Usage Note**

In Visual Basic and C#, you can call this method as an instance method on any object of type **IAdsConnection**. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).
6.3.2 AnyTypeExtensions Class

Extension class for IAdsConnection to provide reactive ADS extensions (accessing symbol value sequences with the ANY_TYPE concept)

Inheritance Hierarchy

System.Object
    TwinCAT.Ads.Reactive.AnyTypeExtensions

Namespace: TwinCAT.Ads.Reactive
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public static class AnyTypeExtensions

</tbody>
</table>

**Remarks**

Reactive Extensions (Rx) are a library for composing asynchronous and event-based programs using observable sequences and LINQ-style query operators. Using Rx, developers represent asynchronous data streams with Observables, query asynchronous data streams using LINQ operators, and parameterize the concurrency in the asynchronous data streams using Schedulers. Simply put, Rx = Observables + LINQ + Schedulers. The ADS reactive extensions are build on top of this library to enable ADS Symbol and State Observables, seamlessly bound to the reactive extensions. To use the ADS reactive extensions the TwinCAT.Ads.Reactive Nuget package (or the included TwinCAT.Ads.Reactive.dll) must be referenced. (Beckhoff.TwinCAT.Ads.Reactive package on Nuget).

**Examples**

Example1: Observe Value changed Notifications with the reactive AnyTypeExtensions

**Observe a single changing ADS Symbols (Extended AdsNotifications, ANY_TYPE)**

```csharp
// To Test the Observer run a project on the local PLC System (Port 851) using (AdsClient client = new AdsClient())
{...
```
// Connect to target
client.Connect(new AmsAddress(AmsNetId.Local, 851));

// Reactive Notification Handler
var valueObserver = Observer.Create<ushort>(val => {
    Console.WriteLine(string.Format("Value: {0}", val.ToString()));
});

// Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
// and subscribe to them.
IDisposable subscription = client.WhenNotification<ushort>("TwinCAT_SystemInfoVarList._TaskInfo.
CycleCount", NotificationSettings.Default).Take(20).Subscribe(valueObserver);

Console.ReadKey(); // Wait for Key press
subscription.Dispose(); // Dispose the Subscription

Examples

Example2: Polling ANY_TYPE values.

Observe changing ADS Symbols by polling (Read Polling) (ANY_TYPE)

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo.
CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val => {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    // Take 20 Values in an Interval of 500ms
    IDisposable subscription = cycleCount.PollValues(TimeSpan.FromMilliseconds(500)).Take(20).Subscr
    ipe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

Examples

Write values sequentially.

Write sequences of values to the target (ANY_TYPE)

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol gvlIntSymbol = (IValueSymbol)symbolLoader.Symbols["GVL.i"];

    // Produces object (short) Values 0,1,2,3 ... in seconds period
    IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i => (object)(short)i);

    // Take 10 Values (0..9) and write them to GVL.i
    IDisposable dispose = gvlIntSymbol.WriteValues(timerObservable.Take(10));
```csharp
Console.ReadKey(); // Wait for Key press
dispose.Dispose(); // Dispose the Subscription
```

*AnyTypeExtensions Class* [1075]

*TwinCAT.Ads.Reactive Namespace* [1056]

**AnyTypeExtensions.PollValues.T Method (IAdsConnection, String, IObservable.Unit)**

Polls the symbol values on timepoints where the polling observable streams data / triggers

**Namespace:** TwinCAT.Ads.Reactive [1056]

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static IObservable<T> PollValues<T>(
    this IAdsConnection connection,
    string instancePath,
    IObservable<Unit> trigger
)
```

**Parameters**

- **connection**
  Type: TwinCAT.Ads.IAdsConnection [765]
  The connection.

- **instancePath**
  Type: System.String
  The instance path.

- **trigger**
  Type: System.IObservable.Unit
  The Polling trigger
Type Parameters

T

The ANY_TYPE compatible .NET Type.

Return Value

Type: IObservable<T>. IObservable<System.Object>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

```

#### Parameters

- **connection**
  
  Type: `TwinCAT.Ads.IAdsConnection`
  
  The connection.

- **instancePath**
  
  Type: `System.String`
  
  The instance path.

- **period**
  
  Type: `System.TimeSpan`
  
  The period.

- **errorHandler**
  
  Type: `System.Func<Exception, T>`
  
  The error handler.

### Type Parameters

**T**

The ANY_TYPE compatible .NET Type.
Return Value
Type: `IObservable<T>`. `IObservable<System.Object>`.

Usage Note
In Visual Basic and C#, you can call this method as an instance method on any object of type `IAdsConnection`. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Reference
AnyTypeExtensions class
PollValues Overload
TwinCAT.Ads.Reactive Namespace

AnyTypeExtensions.PollValues Method (IAdsConnection, String, Type, I Observable.Unit.)
Polls the symbol values on timepoints where the polling observable streams data / triggers

Syntax
C#
```csharp
public static IObservable<Object> PollValues(
    this IAdsConnection connection,
    string instancePath,
    Type type,
    IObservable<Unit> trigger)
```

Parameters
- `connection`: Type: `TwinCAT.Ads.IAdsConnection`. The connection.
- `instancePath`: Type: `System.String`. The instance path.
- `type`: Type: `System.Type`. The data type of the symbol (ANY_TYPE)
- `trigger`: Type: `System.IObservable<Unit>`. The Polling trigger

Return Value
Type: `IObservable<Object>`. `IObservable<System.Object>`.

Usage Note
In Visual Basic and C#, you can call this method as an instance method on any object of type `IAdsConnection`. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).
AnyTypeExtensions.PollValues Method (IAdsConnection, String, Type, TimeSpan)

Polls the symbol as value sequence of object values with a specified period time.

**Namespace:** TwinCAT.Ads.Reactive

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static IObservable<Object> PollValues(
    this IAdsConnection connection,
    string instancePath,
    Type type,
    TimeSpan period
)
```

**Parameters**

- **connection**
  - Type: TwinCAT.Ads.IAdsConnection
  - The connection.

- **instancePath**
  - Type: System.String
  - The instance path.

- **type**
  - Type: System.Type
  - The data type of the symbol (ANY_TYPE)

- **period**
  - Type: System.TimeSpan
  - The period.

**Return Value**

Type: IObservable<Object>, IObservable<System.Object>.

**Usage Note**

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

**Reference**

- AnyTypeExtensions Class [1075]
- PollValues Overload [1081]
- TwinCAT.Ads.Reactive Namespace [1056]

Polls the symbol values on timepoints where the polling observable streams data / triggers

Namespace: TwinCAT.Ads.Reactive {1056}
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static IObserverable<T> PollValues<T>(
    this IAdsConnection connection,
    string instancePath,
    int[] args,
    IObserverable<Unit> trigger,
    Func<Exception, T> errorHandler
)
```

Parameters

- connection
  - Type: TwinCAT.Ads.IAdsConnection {765}
  - The connection.
- instancePath
  - Type: System.String
  - The instance path.
- args
  - Type: System.Int32
  - ANY_TYPE arguments
- trigger
  - Type: System.IObservable.Unit
  - The Polling trigger
- errorHandler
  - Type: System.Func<Exception, T>
  - The error handler.

Type Parameters

- T
  - The ANY_TYPE compatible .NET Type.

Return Value

Type: IObserverable<T>, IObserverable<System.Object>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection {765}. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Reference

- AnyTypeExtensions Class {1075}
- PollValues Overload {1081}
- TwinCAT.Ads.Reactive Namespace {1056}

Polls the symbol as value sequence of object values with a specified period time.

**Namespace:** TwinCAT.Ads.Reactive [1056]
**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public static IObservable<T> PollValues<T>(
    this IAdsConnection connection,
    string instancePath,
    int[] args,
    TimeSpan period,
    Func<Exception, T> errorHandler
)
```

### Parameters

- **connection**
  - Type: TwinCAT.Ads.IAdsConnection [765]
  - The connection.
- **instancePath**
  - Type: System.String
  - The instance path.
- **args**
  - Type: System.Int32
  - ANY_TYPE arguments.
- **period**
  - Type: System.TimeSpan
  - The period.
- **errorHandler**
  - Type: System.Func<Exception, T>
  - The error handler.

### Type Parameters

- **T**
  - The ANY_TYPE compatible .NET Type.

### Return Value

- Type: IObservable<T>
  - IObservable<System.Object>.

### Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection [765]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

### Examples

Polling ANY_TYPE values.

**Observe changing ADS Symbols by polling (Read Polling) (ANY_TYPE)**

```csharp
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));
    // Create Symbol information
```

var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
var valueObserver = Observer.Create<object>(val =>
{
    Console.WriteLine(string.Format("Instance: {0}, Value: {1}"), cycleCount.InstancePath, val.ToString()));
});

// Take 20 Values in an Interval of 500ms
IDisposable subscription = cycleCount.PollValues(TimeSpan.FromMilliseconds(500)).Take(20).Subscribe(valueObserver);
Console.ReadKey(); // Wait for Key press
subscription.Dispose(); // Dispose the Subscription

Overload List

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>WhenNotification.T.</td>
<td>Creates an observable sequence of values that are created by ADS Notifications.</td>
</tr>
<tr>
<td>(IAdsConnection, String, NotificationSettings)</td>
<td></td>
</tr>
<tr>
<td>WhenNotification(IAdsConnection, String, Type, NotificationSettings)</td>
<td>Creates an observable sequence of values that are created by ADS Notifications.</td>
</tr>
</tbody>
</table>

Reference

AnyTypeExtensions Class [1075]
TwinCAT.Ads.Reactive Namespace [1056]

AnyTypeExtensions.WhenNotification.T. Method (IAdsConnection, String, NotificationSettings)

Creates an observable sequence of values that are created by ADS Notifications.

**Namespace:** TwinCAT.Ads.Reactive [1056]
**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static IObservable<T> WhenNotification<T>(
    this IAdsConnection connection,
    string instancePath,
    NotificationSettings settings
)
```

**Parameters**

- **connection**
  Type: TwinCAT.Ads.IAdsConnection [765]
  The connection.

- **instancePath**
  Type: System.String
  The instance path.

- **settings**
  Type: TwinCAT.Ads(NotificationSettings) [979]
  The settings.

**Type Parameters**

- **T**
  The .NET Type representation of the specified symbols type.
Return Value

Type: IObservable<T>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Remarks

The values will be cast to the specified type. The .NET type must fit the Symbol type like all ANYTYPES.

Examples

The following sample shows how to observe Value changed Notifications with the reactive 
AnyTypeExtensions

Observe changing ADS Symbols with reactive extensions (Extended AdsNotification, ANY_TYPE)

// To Test the Observer run a project on the local PLC System (Port 851) 
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));
    // Reactive Notification Handler
    var valueObserver = Observer.Create<ushort>(val =>
    {
        Console.WriteLine(string.Format("Value: {0}", val.ToString()));
    });
    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values) 
    // and subscribe to them.
    IDisposable subscription = client.WhenNotification<ushort>("TwinCAT_SystemInfoVarList._TaskInfo.
        CycleCount", NotificationSettings.Default).Take(20).Subscribe(valueObserver);
    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

Reference

AnyTypeExtensions Class [1075]
WhenNotification Overload [1098]
TwinCAT.Ads.Reactive Namespace [1056]

AnyTypeExtensions.WhenNotification Method (IAdsConnection, String, Type, NotificationSettings)

Creates an observable sequence of values that are created by ADS Notifications.

Namespace: TwinCAT.Ads.Reactive [1056]
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static IObservable<Object> WhenNotification(
    this IAdsConnection connection,
    string instancePath,
    Type type,
    NotificationSettings settings
)
```

Parameters

- **connection**
  - Type: `TwinCAT.Ads.IAdsConnection` [765]
  - The connection.
- **instancePath**
  - Type: `System.String`
  - The instance path.
- **type**
  - Type: `System.Type`
  - The type.
- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings` [979]
  - The settings.

Return Value

- Type: `IObservable<Object>`
- `IObservable<T>`.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type `IAdsConnection` [765]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Remarks

The values will be cast to the specified type. The .NET type must fit be one of the compatible 'ANYTYPES'.

Examples

The following sample shows how to observe Value changed Notifications with the reactive `AnyTypeExtensions` [1075]

```
Observe changing ADS Symbols with reactive extensions (Extended AdsNotifications, ANY_TYPE)

// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Reactive Notification Handler
    var valueObserver = Observer.Create<ushort>(val =>
    {
        Console.WriteLine(string.Format("Value: {0}", val.ToString()));
    });

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = client.WhenNotification<ushort>("TwinCAT_SystemInfoVarList._TaskInfo.
CycleCount", NotificationSettings.Default).Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```
### AnyTypeExtensions.WriteValues Method

<td>Writes the sequence of values to the symbol specified by the instance path.</td>
</tr>
</tbody>
</table>

**Reference**

- **AnyTypeExtensions Class [1075]**
- **TwinCAT.Ads.Reactive Namespace [1056]**

#### AnyTypeExtensions.WriteValues.T. Method (IAdsConnection, String, IObservable.T.)

Writes the sequence of values to the symbol specified by the instance path.

**Namespace:** TwinCAT.Ads.Reactive [1056]

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static IDisposable WriteValues<T>(
    this IAdsConnection connection,
    string instancePath,
    IObservable<T> valueSequence
)
```

**Parameters**

- **connection**
  - Type: TwinCAT.Ads.IAdsConnection [765]
  - The connection.

- **instancePath**
  - Type: System.String
  - The instance path.
valueSequence

Type: System.IObserverable<T>
Value sequence (Any type).

Type Parameters

T

Return Value

Type: IDisposable
IDisposable.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection [765]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Examples

Write sequences of values to the target (ANY_TYPE)

```csharp
using {AdsClient client = new AdsClient();}
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol gvlIntSymbol = (IValueSymbol)symbolLoader.Symbols["GVL.i"];

    // Produces object (short) Values 0,1,2,3 ... in seconds period
    IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i => (object)(short)i);

    // Take 10 Values (0..9) and write them to GVL.i
    IDisposable dispose = gvlIntSymbol.WriteValues(timerObservable.Take(10));

    Console.ReadKey(); // Wait for Key press
    dispose.Dispose(); // Dispose the Subscription
}
```

Reference

AnyTypeExtensions Class [1075]

WriteValues Overload [1101]

TwinCAT.Ads.Reactive Namespace [1056]

AnyTypeExtensions.WriteValues.T. Method (IAdsConnection, String, IObserverable.T., Action.Exception.)

Writes the sequence of values to the symbol specified by the instance path.

Namespace: TwinCAT.Ads.Reactive [1056]
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static IDisposable WriteValues<T>(
    this IAdsConnection connection,
    string instancePath,
    IObservable<T> valueSequence,
    Action<Exception> errorHandler
)
```

Parameters

- **connection**
  - Type: `TwinCAT.Ads.IAdsConnection` [765]
  - The connection.

- **instancePath**
  - Type: `System.String`
  - The instance path.

- **valueSequence**
  - Type: `System.IObservable<T>`
  - Value sequence (Any type).

- **errorHandler**
  - Type: `System.Action<Exception>`
  - The error handler.

Type Parameters

- **T**

Return Value

- Type: `IDisposable`
  - `IDisposable`.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type `IAdsConnection` [765]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Examples

Write values sequentially.

Write sequences of values to the target (ANY_TYPE)

```csharp
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    IValueSymbol gvlIntSymbol = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    // Produces object (short) Values 0,1,2,3 ... in seconds period
    IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i =>
        (object)(short)i);

    // Take 10 Values (0..9) and write them to GVL.i
    IDisposable dispose = gvlIntSymbol.WriteValues(timerObservable.Take(10));

    Console.ReadKey(); // Wait for Key press
    dispose.Dispose(); // Dispose the Subscription
}
```
6.3.3 SymbolValueNotification Class

Symbol Notification class

Inheritance Hierarchy

System.Object
  TwinCAT.Ads.Notification [974]
    ValueNotification
      TwinCAT.Ads.Reactive.SymbolValueNotification

Namespace: TwinCAT.Ads.Reactive [1056]
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public sealed class SymbolValueNotification : ValueNotification

The SymbolValueNotification type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data [977]</td>
<td>The notification Data. (Inherited from Notification [974].)</td>
</tr>
<tr>
<td>Handle [977]</td>
<td>The notification handle (Inherited from Notification [974].)</td>
</tr>
<tr>
<td>Symbol [1105]</td>
<td>Gets the symbol of the SymbolValueNotification.</td>
</tr>
<tr>
<td>TimeStamp [978]</td>
<td>Gets the time stamp of the INotification [969] (Inherited from Notification [974].)</td>
</tr>
<tr>
<td>UserData [978]</td>
<td>Attached UserData/Tag at the INotification [969] (Inherited from Notification [974].)</td>
</tr>
</tbody>
</table>

Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

Remarks

Extends the ValueNotification class by symbol specific information.
6.3.3.1 SymbolValueNotification Properties

The SymbolValueNotification [1104] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data [977]</td>
<td>The notification Data. (Inherited from Notification [974].)</td>
</tr>
<tr>
<td>Handle [977]</td>
<td>The notification handle (Inherited from Notification [974].)</td>
</tr>
<tr>
<td>Symbol [1105]</td>
<td>Gets the symbol of the SymbolValueNotification [1104].</td>
</tr>
<tr>
<td>TimeStamp [978]</td>
<td>Gets the time stamp of the INotification [969] (Inherited from Notification [974].)</td>
</tr>
<tr>
<td>UserData [978]</td>

6.3.3.2 SymbolValueNotification Methods

The SymbolValueNotification [1104] type exposes the following members.
### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

### Reference

SymbolValueNotification Class [1104]

TwinCAT.Ads.Reactive Namespace [1056]

### 6.3.4 ValueSymbolExtensions Class

Extension class for IAdsConnection [765] to provide reactive ADS extensions for accessing symbols that are loaded by the IAdsSymbolLoaderFactory

### Inheritance Hierarchy

System.Object
   TwinCAT.Ads.Reactive.ValueSymbolExtensions

Namespace: TwinCAT.Ads.Reactive [1056]

Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

C#

```csharp
public static class ValueSymbolExtensions
```

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PollValuesAnnotateValueChangedEventArgs(T)</td>

</tr>
<tr>
<td>PollValuesAnnotateValueChangedEventArgs(T, TimeSpan)</td>
<td>Polls the values as ValueChangedEventArgs [2439] sequence with a specified period time.</td>
</tr>
<tr>
<td>WhenValueChanged(IValueSymbol)</td>
<td>Gets an observable sequence when the value of the IValueSymbol [2254] has changed.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>WhenValueChanged(IAdsConnection, IEnumerable.ISymbol.)</td>
<td>Observable sequence of Values driven by ADS Notifications on the specified symbol.</td>
</tr>
<tr>
<td>WriteValues(IValueSymbol, IObservable.Object.)</td>
<td>Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol.</td>
</tr>
<tr>
<td>WriteValues(IValueSymbol, IObservable.Object, Action.Exception.)</td>
<td>Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol.</td>
</tr>
<tr>
<td>WriteValues(IValueSymbol, IObservable.Object, CancellationToken)</td>
<td>Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol.</td>
</tr>
<tr>
<td>WriteValues(IValueSymbol, IObservable.Object, Action.Exception, CancellationToken)</td>
<td>Subscribes the IValueSymbol to an observable sequence of values and writes them to the IValueSymbol.</td>
</tr>
</tbody>
</table>

**Remarks**

Reactive Extensions (Rx) are a library for composing asynchronous and event-based programs using observable sequences and LINQ-style query operators. Using Rx, developers represent asynchronous data streams with Observables, query asynchronous data streams using LINQ operators, and parameterize the concurrency in the asynchronous data streams using Schedulers. Simply put, Rx = Observables + LINQ + Schedulers. The ADS reactive extensions are build on top of this library to enable ADS Symbol and State Observables, seamlessly bound to the reactive extensions. To use the ADS reactive extensions the TwinCAT.Ads.Reactive Nuget package (or the included TwinCAT.Ads.Reactive.dll) must be referenced from All types within are contained in the ADS companion package "Beckhoff.TwinCAT.Ads.Reactive" which must be referenced separately. (Beckhoff.TwinCAT.Ads.Reactive package on Nuget).

**Examples**

The following sample shows how to observe Value changed Notifications with the reactive ValueSymbolExtensions from an IValueSymbol.

**Observe a single changing ADS Symbol (ADS Notifications)**

```csharp
// To Test the Observer run a project on the local PLC System (Port 851) using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInf
```
Examples

The following sample shows how to observe Value changed Notifications with the reactive ValueSymbolExtensions from an DynamicSymbol.

Observe a single changing ADS Symbol (ADS Notifications) with the dynamic language runtime (.NET DLR)

```csharp
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

Examples

The same for more than one IValueSymbol ▶ 2254.

Observe changing ADS Symbols (ADS Notifications)

```csharp
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```
Examples

Here, the values are polled in a specific time period and sequential Reads are triggered (in opposite to ADS Notification in the latter example)

Observe changing ADS Symbols by polling (Read Polling)

// To Test the Observer run a project on the local PLC System (Port 851) using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.PollValues(TimeSpan.FromMilliseconds(500)).Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}

Examples

In the following example it is demonstrated how to write Values sequentially to a IValueSymbol with the help of the reactive extensions.

Write sequences of values to the target

using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["GVL.i"];
// Produces object Values 0,1,2,3 ... in seconds period
IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i => (object)(short)i);

// Take 10 Values (0..9) and write them to GVL.i
IDisposable dispose = cycleCount.WriteValues(timerObservable.Take(10));

Console.ReadKey(); // Wait for Key press
dispose.Dispose(); // Dispose the Subscription

ValueSymbolExtensions Class [1106]
TwinCAT.Ads.Reactive Namespace [1056]

ValueSymbolExtensions.PollValuesAnnotated Method (IValueSymbol, IObservable.Unit.)

Polls the values as ValueChangedEventArgs sequence annotated value on trigger sequence

Namespace: TwinCAT.Ads.Reactive [1056]
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public static IObservable<ValueChangedEventArgs> PollValuesAnnotated(
    this IValueSymbol symbol,
    IObservable<Unit> trigger
)
```

Parameters

- **symbol**: Type: `TwinCAT.TypeSystem.IValueSymbol` [2254]
The symbol.

- **trigger**: Type: `System.IObservable<Unit>`
The polling Trigger.

Return Value

Type: `IObservable<ValueChangedEventArgs>` [2439].

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type `IValueSymbol` [2254]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Reference

### ValueSymbolExtensions.PollValuesAnnotated Method (IValueSymbol, TimeSpan)

Polls the values as `ValueChangedEventArgs` [2439] sequence with a specified period time.

**Namespace:** `TwinCAT.Ads.Reactive` [1056]

**Assembly:** `TwinCAT.Ads.Reactive` (in `TwinCAT.Ads.Reactive.dll`) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static IObservable<ValueChangedEventArgs> PollValuesAnnotated(
    this IValueSymbol symbol,
    TimeSpan period
)
```

Parameters

- **symbol**: Type: `TwinCAT.TypeSystem.IValueSymbol` [2254]
The symbol.

- **period**: Type: `System.TimeSpan`
The polling period/interval.
Return Value

Type: IObservable_ValueChangedEventArgs |2439 |
IObservable_ValueChangedArgs>.  

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IValueSymbol |2254 |. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

ValueSymbolExtensions.WhenValueChanged Method (IValueSymbol)

Gets an observable sequence when the value of the IValueSymbol |2254 | has changed.  

Namespace: TwinCAT.Ads.Reactive |1056 |  
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14  

Syntax

C#  

```csharp
public static IObservable<Object> WhenValueChanged(
    this IValueSymbol symbol
)
```
Parameters

symbol Type: TwinCAT>TypeSystem.IValueSymbol
The symbol.

Return Value

Type: IObservable<Object, IObservable<System.Object>>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IValueSymbol. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Examples

The following sample shows how to observe Value changed Notifications with the reactive ValueSymbolExtensions from an IValueSymbol.

Observe a single changing ADS Symbols (ADS Notifications)

```csharp
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

ValueSymbolExtensions Class

WhenValueChanged Overload

TwinCAT.Ads Reactive Namespace

ValueSymbolExtensions.WhenValueChanged Method (IAdsConnection, IEnumerable.ISymbol.)

Observable sequence of Values driven by ADS Notifications on the specified symbol.
Namespace: TwinCAT.Ads.Reactive [1056]
Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
public static IObserver<Object> WhenValueChanged(
    this IAdsConnection connection,
    IEnumerable<ISymbol> symbols
)
```

Parameters

- **connection**
  - Type: TwinCAT.Ads.IAdsConnection [765]
  - The ADS connection / ADS Client
- **symbols**
  - Type: System.Collections.Generic.IEnumerable.ISymbol [2176]
  - The symbols to observe.

Return Value

- Type: IObserver Object.
  - IObserver<ValueChangedEventArgs>.

Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type IAdsConnection [765]. When you use instance method syntax to call this method, omit the first parameter.

For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Examples

The same for more than one IValueSymbol [2254].

Observe changing ADS Symbols (ADS Notifications)

```csharp
// To Test the Observer run a project on the local PLC System (Port 851)
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo.CycleCount"];// UShort Type
    IValueSymbol lastExecTime = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInfo.LastExecTime"];// UInt Type

    SymbolCollection symbols = new SymbolCollection();
    symbols.Add(cycleCount);
    symbols.Add(lastExecTime);

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    { Console.WriteLine(string.Format("Instance: {0}, Value: {1}"), cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = client.WhenValueChanged(symbols).Take(20).Subscribe(valueObserver);
```
Examples

The following sample shows how to observe Value changed Notifications with the reactive ValueSymbolExtensions [1106] from an DynamicSymbol.

Observe a single changing ADS Symbol (ADS Notifications) with the dynamic language runtime (.NET DLR)

```csharp
using (AdsClient client = new AdsClient())
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["TwinCAT_SystemInfoVarList._TaskInf o[1].CycleCount"];

    // Reactive Notification Handler
    var valueObserver = Observer.Create<object>(val =>
    {
        Console.WriteLine(string.Format("Instance: {0}, Value: {1}", cycleCount.InstancePath, val.ToString()));
    });

    cycleCount.NotificationSettings = new NotificationSettings(AdsTransModeOnChange, 500, 5000); // optional: Change NotificationSettings on Symbol

    // Turning ADS Notifications into sequences of Value Objects (Taking 20 Values)
    // and subscribe to them.
    IDisposable subscription = cycleCount.WhenValueChanged().Take(20).Subscribe(valueObserver);

    Console.ReadKey(); // Wait for Key press
    subscription.Dispose(); // Dispose the Subscription
}
```

**Reference**

ValueSymbolExtensions Class [1106]

TwinCAT.Ads.Reactive Namespace [1056]

**ValueSymbolExtensions.WriteValues Method (IValueSymbol, IObservable.Object.)**

Subscribes the IValueSymbol [2254] to an observable sequence of values and writes them to the IValueSymbol [2254].

**Namespace:** TwinCAT.Ads.Reactive [1056]

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public static IDisposable WriteValues(
    this IValueSymbol symbol,
    IObservable<Object> valueObservable
)
```

**Parameters**

- **symbol**
  
  Type: TwinCAT.TypeSystem.IValueSymbol [2254]
  
  The symbol.

- **valueObservable**
  
  Type: System.IObservable<Object>
  
  Observable of Values.

**Return Value**

Type: IDisposable

IDisposable.
Usage Note

In Visual Basic and C#, you can call this method as an instance method on any object of type `IValueSymbol` [2254]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Examples

In the following example it is demonstrated how to write Values sequentially to a `IValueSymbol` [2254] with the help of the reactive extensions.

Write sequences of values to the target

```
using {AdClient client = new AdClient()}
{
    // Connect to target
    client.Connect(new AmsAddress(AmsNetId.Local, 851));

    // Create Symbol information (Symbol 'i : INT' in PLC Global Variables list.
    var symbolLoader = SymbolLoaderFactory.Create(client, SymbolLoaderSettings.Default);
    IValueSymbol cycleCount = (IValueSymbol)symbolLoader.Symbols["GVL.i"];

    // Produces object Values 0,1,2,3 ... in seconds period
    IObservable<object> timerObservable = Observable.Interval(TimeSpan.FromSeconds(1.0)).Select(i => (object)(short)i);

    // Take 10 Values (0..9) and write them to GVL.i
    IDisposable dispose = cycleCount.WriteValues(timerObservable.Take(10));

    Console.ReadKey(); // Wait for Key press
    dispose.Dispose(); // Dispose the Subscription
}
```

WriteValues Overload [1116]

TwinCAT.Ads.Reactive Namespace [1056]

Subscribes the `IValueSymbol` [2254] to an observable sequence of values and writes them to the `IValueSymbol` [2254].

Namespace: TwinCAT.Ads.Reactive [1056]

Assembly: TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```
public static IDisposable WriteValues(
    this IValueSymbol symbol,
    IObservable<object> valueObservable,
    Action<Exception> errorHandler
)
```

Parameters

- **symbol**
  - Type: TwinCAT.TypeSystem.IValueSymbol [2254]
  - The symbol.
valueObservable  Type: System.IObservable<Object>
Observable of Values.

errorHandler  Type: System.Action<Exception>
The error handler or NULL.

Return Value
Type: IDisposable
IDisposable.

Usage Note
In Visual Basic and C#, you can call this method as an instance method on any object of type IValueSymbol
[2254]. When you use instance method syntax to call this method, omit the first parameter. For more
information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

Subscribes the `IValueSymbol` [\ref{2254}] to an observable sequence of values and writes them to the `IValueSymbol` [\ref{2254}].

**Namespace:** TwinCAT.Ads.Reactive [\ref{1056}]

**Assembly:** TwinCAT.Ads.Reactive (in TwinCAT.Ads.Reactive.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public static void WriteValues(
    this IValueSymbol symbol,
    IObservable<Object> valueObservable,
    Action<Exception> errorHandler,
    CancellationToken cancel
)
```

**Parameters**

- `symbol` Type: `TwinCAT.TypeSystem.IValueSymbol` [\ref{2254}]
The symbol.

- `valueObservable` Type: `System.IObservable` Object.
  Observable of Values.

- `errorHandler` Type: `System.Action` Exception.
  The error handler.

- `cancel` Type: `System.Threading.CancellationToken`
  The cancellation token.

**Return Value**

Type: `IDisposable`.

**Usage Note**

In Visual Basic and C#, you can call this method as an instance method on any object of type `IValueSymbol` [\ref{2254}]. When you use instance method syntax to call this method, omit the first parameter. For more information, see Extension Methods (Visual Basic) or Extension Methods (C# Programming Guide).

6.4.1 AdsServer Class

Base implementation for an ADS Server.
Inheritance Hierarchy

- System.Object
  - TwinCAT.Ads.Server.AdsServer

**Namespace:** TwinCAT.Ads.Server [1121]

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

**C#**

```csharp
public abstract class AdsServer : IDisposable
```

The AdsServer type exposes the following members.

## Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IsConnected [1136]</td>
<td>Gets a value indicating whether AdsServer is connected.</td>
</tr>
<tr>
<td>IsDisconnecting</td>
<td>Indicates, that the AdsServer is actually disconnecting.</td>
</tr>
<tr>
<td>IsDisposed [1137]</td>
<td>Gets a value indicating whether this instance is disposed.</td>
</tr>
<tr>
<td>Logger [1137]</td>
<td>Gets the logger object.</td>
</tr>
<tr>
<td>ServerAddress</td>
<td>The AMS address of this server.</td>
</tr>
</tbody>
</table>

## Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AddDeviceNotificationConfirmationAsync [1142]</td>
<td>Called when an ADS Add Device Notification confirmation is received.</td>
</tr>
<tr>
<td>AddDeviceNotificationIndicationAsync [1143]</td>
<td>Called when an ADS Add Device Notification indication is received.</td>
</tr>
<tr>
<td>AddDeviceNotificationRequest [1144]</td>
<td>Sends an ADS Add Device Notification request (synchronous).</td>
</tr>
<tr>
<td>AddDeviceNotificationRequestAsync [1144]</td>
<td>Sends an ADS Add Device Notification request (async)</td>
</tr>
<tr>
<td>ConnectServer [1146]</td>
<td>Connect this ADS server to the local ADS router.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td><strong>ConnectServerAnd</strong>&lt;br&gt;<strong>WaitAsync</strong> [1147]</td>
<td>Registers the AdsServer at the router asynchronously.</td>
</tr>
<tr>
<td><strong>DeleteDeviceNotificationConfirmationAsync</strong> [1147]</td>
<td>Called when an ADS Delete Device Notification confirmation is received.</td>
</tr>
<tr>
<td><strong>DeleteDeviceNotificationIndicationAsync</strong> [1148]</td>
<td>Called when an ADS Delete Device Notification indication is received.</td>
</tr>
<tr>
<td><strong>DeleteDeviceNotificationRequest</strong> [1149]</td>
<td>Sends an ADS Delete Device Notification request (synchronous).</td>
</tr>
<tr>
<td><strong>DeleteDeviceNotificationRequestAsync</strong> [1149]</td>
<td>Sends an ADS Delete Device Notification request (async).</td>
</tr>
<tr>
<td><strong>DeleteDeviceNotificationResponseAsync</strong> [1150]</td>
<td>Sends an ADS Delete Device Notification response.</td>
</tr>
<tr>
<td><strong>DeviceNotificationRequestAsync</strong> [1151]</td>
<td>Sends an ADS Device Notification request asynchronously</td>
</tr>
<tr>
<td><strong>DeviceNotificationRequestSync</strong> [1152]</td>
<td>Sends an ADS Device Notification request (sync)</td>
</tr>
<tr>
<td><strong>Disconnect</strong> [1152]</td>
<td>Disconnects this ADS server from the local ADS router.</td>
</tr>
<tr>
<td><strong>Dispose</strong> [1153]</td>
<td>Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.</td>
</tr>
<tr>
<td><strong>Dispose(Boolean)</strong> [1154]</td>
<td>Releases unmanaged and - optionally - managed resources.</td>
</tr>
<tr>
<td><strong>Equals</strong></td>
<td>Determines whether the specified object is equal to the current object. (Inherited from <strong>Object</strong>)</td>
</tr>
<tr>
<td><strong>Finalize</strong> [1154]</td>
<td>Finalizes an instance of the AdsServer class. (Overrides <strong>Object.Finalize</strong>)</td>
</tr>
<tr>
<td><strong>GetHashCode</strong></td>
<td>Serves as the default hash function. (Inherited from <strong>Object</strong>)</td>
</tr>
<tr>
<td><strong>GetType</strong></td>
<td>Gets the Type of the current instance. (Inherited from <strong>Object</strong>)</td>
</tr>
<tr>
<td><strong>MemberwiseClone</strong></td>
<td>Creates a shallow copy of the current <strong>Object</strong>. (Inherited from <strong>Object</strong>)</td>
</tr>
<tr>
<td><strong>OnAddDeviceNotificationConfirmationAsync</strong> [1155]</td>
<td>Called when Add device Notification Confirmation is send.</td>
</tr>
<tr>
<td><strong>OnConnected</strong> [1155]</td>
<td>Handler function that is called, when the AdsServer is connected.</td>
</tr>
<tr>
<td><strong>OnDisconnect</strong> [1156]</td>
<td>Called when the AdsServer is about to be disconnected.</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>OnRouterNotification</td>
<td>Handler Function for a Router Notification.</td>
</tr>
<tr>
<td>OnServerConnectionStateChanged</td>
<td>Handles the ServerConnectionStateChanged [¶ 1181] event.</td>
</tr>
<tr>
<td>ReadConfirmationAsync</td>
<td>Called when an ADS Read Device Info confirmation is received.</td>
</tr>
<tr>
<td>ReadDeviceInfoConfirmationAsync</td>
<td>Called when an ADS Read Device Info indication is received.</td>
</tr>
<tr>
<td>ReadDeviceInfoIndicationAsync</td>
<td>Sends an ADS Read Device Info request asynchronously.</td>
</tr>
<tr>
<td>ReadDeviceInfoRequestAsync</td>
<td>Sends an ADS Read Device Info request synchronously.</td>
</tr>
<tr>
<td>ReadDeviceInfoResponseStatusAsync</td>
<td>Sends an ADS Read Device Info response.</td>
</tr>
<tr>
<td>ReadDeviceStateConfirmationAsync</td>
<td>Called when an ADS Read State confirmation is received.</td>
</tr>
<tr>
<td>ReadDeviceStateIndicationAsync</td>
<td>Called when an ADS Read State indication is received.</td>
</tr>
<tr>
<td>ReadDeviceStateRequestAsync</td>
<td>Sends an ADS Read State request (asynchronous)</td>

Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ServerConnectionState Changed</td>
<td>The connection status has changed</td>
</tr>
</tbody>
</table>

Remarks

Derived classes should overwrite the indication methods to react on incoming requests. The confirmation methods should be overwritten to receive replies on asynchronous requests sent by this ADS server.

Examples

The following sample shows how to derive from the AdsServer class and create your own Customized ADS Server.

AdsSampleServer

C# class Program
{
    public static void Main(string[] args)
    {
        CreateHostBuilder(args).Build().Run();
    }

    public static IHostBuilder CreateHostBuilder(string[] args) =>
        Host.CreateDefaultBuilder(args)
            .ConfigureServices((hostContext, services) =>
            {
                services.AddHostedService<ServerWorker>();
            });
}

C# public class ServerWorker : BackgroundService
{
    private readonly ILogger<ServerWorker> _logger;

    public ServerWorker(ILogger<ServerWorker> logger)
    {
        _logger = logger;
    }

    protected override async Task ExecuteAsync(CancellationToken cancel)
    {
        // Instantiate the server
        AdsSampleServer server = new AdsSampleServer(_logger);
        // Connect the server and wait for cancel
        await server.ConnectServerAndWaitAsync(cancel);
    }
}

C# /*
 * Extend the AdsServer class to implement your own ADS server.
 */
public class AdsSampleServer : AdsServer
{
    /// <summary>
    /// Fixed ADS Port (to be changed ...)
    /// </summary>
    const ushort ADS_PORT = 42;

    /// <summary>
    /// Fixed Name for the ADS Port (change this ...)
    /// </summary>
}
const string ADS_PORT_NAME = "AdsSampleServer_Port42";

AdsServer Class [1121]

TwinCAT.Ads.Server Namespace [1121]

6.4.1.1 AdsServer.AmsServer Property

 Gets the the internal AmsServer object.
Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected AmsServer AmsServer { get; }

Property Value

Type: AmsServer
The ams server.

Reference

AdsServer Class
TwinCAT.Ads.Server Namespace

6.4.1.1.2 AdsServer.IsConnected Property

Gets a value indicating whether AdsServer is connected.

Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
public bool IsConnected { get; }

Property Value

Type: Boolean
true if this instance is connected; otherwise, false.

Reference

AdsServer Class
TwinCAT.Ads.Server Namespace

6.4.1.1.3 AdsServer.IsDisconnecting Property

Indicates, that the AdsServer is actually disconnecting.

Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected bool IsDisconnecting { get; }
Property Value
Type: Boolean

Reference
AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]

6.4.1.1.4 AdsServer.IsDisposed Property
Gets a value indicating whether this instance is disposed.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
public bool IsDisposed { get; }

Property Value
Type: Boolean
true if this instance is disposed; otherwise, false.

Reference

6.4.1.1.5 AdsServer.Logger Property
Gets the logger object.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
protected ILogger Logger { get; }

Property Value
Type: ILogger
The logger.

Reference
AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]
6.4.1.6 AdsServer.ServerAddress Property

The AMS address of this server.

**Namespace:** TwinCAT.Ads.Server [1121]
**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
public virtual AmsAddress ServerAddress { get; }
```

**Property Value**

Type: AmsAddress [648]

**Remarks**

The Address consists of AmsNetId [665] and AmsPort [693]. While the AmsNetId [665] is defined by the System, where the AmsTcpIPRouter is running, the AmsPort [693] is specified by the AdsServer [1121] constructor. By default, the router is running on the same system, but can be configured by RouterEndPoint [1546].

AdsServer Class [1121]

TwinCAT.Ads.Server Namespace [1121]

### 6.4.1.2.1 AdsServer.AddDeviceNotificationConfirmationAsync Method

Called when an ADS Add Device Notification confirmation is received.

**Namespace:** TwinCAT.Ads.Server [1121]

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected virtual Task<AdsErrorCode> AddDeviceNotificationConfirmationAsync(
    AmsAddress sender,
    uint invokeId,
    AdsErrorCode result,
    uint notificationHandle,
    CancellationToken cancel)
```

**Parameters**

- **sender**
  - Type: TwinCAT.Ads.AmsAddress [648]
  - The sender's AMS address

- **invokeId**
  - Type: System.UInt32
  - The invoke id provided by this server during the corresponding request

- **result**
  - Type: TwinCAT.Ads.AdsErrorCode [575]
  - The ADS error code provided by the sender

- **notificationHandle**
  - Type: System.UInt32
  - The notification handle provided by the sender

- **cancel**
  - Type: System.Threading.CancellationToken
  - The cancellation token.

**Return Value**

Type: Task<AdsErrorCode> [575].
A task that represents the asynchronous AddDeviceNotificationConfirmationAsync(AmsAddress, UInt32, AdsErrorCode, UInt32, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode [575] as Result.

**Remarks**

Overwrite this method in derived classes to react on ADS Add Device Notification confirmations.
6.4.1.2.2 AdsServer.AddDeviceNotificationIndicationAsync Method

Called when an ADS Add Device Notification indication is received.

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```c#
protected virtual Task<AdsErrorCode> AddDeviceNotificationIndicationAsync(
    AmsAddress sender,
    uint invokeId,
    uint indexGroup,
    uint indexOffset,
    int dataLength,
    NotificationSettings settings,
    CancellationToken cancel
)
```

**Parameters**

- **sender**
  - Type: `TwinCAT.Ads.AmsAddress`
  - The sender's AMS address

- **invokeId**
  - Type: `System.UInt32`
  - The invokeId provided by the sender

- **indexGroup**
  - Type: `System.UInt32`
  - The index group of the requested ADS service

- **indexOffset**
  - Type: `System.UInt32`
  - The index offset of the requested ADS service

- **dataLength**
  - Type: `System.Int32`
  - Number of bytes to be transmitted

- **settings**
  - Type: `TwinCAT.Ads.NotificationSettings`
  - The Notification settings.

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

**Return Value**

Type: `Task<AdsErrorCode>`

A task that represents the asynchronous 'AddDeviceNotificationIndication' operation. The `Task<TResult>` parameter contains the `AdsErrorCode` as `Result`.

**Remarks**

Overwrite this method in derived classes to react on ADS Add Device Notification indications. The default implementation replies with an ADS ServiceNotSupported error code (0x701).

**Reference**

AdsServer Class [1121]
**6.4.1.2.3 AdsServer.AddDeviceNotificationRequest Method**

Sends an ADS Add Device Notification request (synchronous).

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#  
```csharp
protected AdsErrorCode AddDeviceNotificationRequest(
    AmsAddress target,
    uint invokeId,
    uint indexGroup,
    uint indexOffset,
    int dataLength,
    NotificationSettings settings
)
```

**Parameters**

- **target**  
  Type: TwinCAT.Ads.AmsAddress
  The receiver's AMS address

- **invokeId**  
  Type: System.UInt32
  The invokeId for this call. Used to find the matching ADS Confirmation

- **indexGroup**  
  Type: System.UInt32
  The index group of the requested ADS service

- **indexOffset**  
  Type: System.UInt32
  The index group of the requested ADS service

- **dataLength**  
  Type: System.Int32
  The number of bytes to be transmitted

- **settings**  
  Type: TwinCAT.Ads.NotificationSettings
  The notification settings.

**Return Value**

Type: AdsErrorCode
The ADS error code for this call.

**Reference**

- AdsServer Class
- TwinCAT.Ads.Server Namespace

**6.4.1.2.4 AdsServer.AddDeviceNotificationRequestAsync Method**

Sends an ADS Add Device Notification request (async)

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
protected Task<AdsErrorCode> AddDeviceNotificationRequestAsync(
    AmsAddress target,
    uint invokeId,
    uint indexGroup,
    uint indexOffset,
    int dataLength,
    NotificationSettings settings,
    CancellationToken cancel
)
```

Parameters

target
Type: TwinCAT.Ads.AmsAddress
The receiver's AMS address

invokeId
Type: System.UInt32
The invokeId for this call. Used to find the matching ADS Confirmation

indexGroup
Type: System.UInt32
The index group of the requested ADS service

indexOffset
Type: System.UInt32
The index group of the requested ADS service

dataLength
Type: System.Int32
The number of bytes to be transmitted

settings
Type: TwinCAT.Ads.NotificationSettings
The notification settings.

cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode>
A task that represents the asynchronous AddDeviceNotificationRequestAsync(AmsAddress, UInt32, UInt32, UInt32, Int32, NotificationSettings, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode as Result.

Reference

AdsServer Class
TwinCAT.Ads.Server Namespace

6.4.1.2.5 AdsServer.AddDeviceNotificationResponseAsync Method

 Sends an ADS Add Device Notification response.

Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected Task<AdsErrorCode> AddDeviceNotificationResponseAsync(
    AmsAddress target,
    uint invokeId,
    AdsErrorCode result,
)
```
uint handle,
CancellationToken cancel
)

Parameters

target Type: TwinCAT.Ads.AmsAddress
The receiver’s AMS address

invokeld Type: System.UInt32
The invoke ID provided by the receiver

result Type: TwinCAT.Ads.AdsErrorCode
The ADS error code for the response

handle Type: System.UInt32
The notification handle for the added notification

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task.TwinCAT.Ads.AdsErrorCode
A task that represents the asynchronous AddDeviceNotificationResponseAsync(AmsAddress, UInt32, AdsErrorCode, UInt32, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode as Result.

Reference

AdsServer Class
TwinCAT.Ads.Server Namespace

6.4.1.2.6 AdsServer.ConnectServer Method

Connect this ADS server to the local ADS router.

Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

public virtual uint ConnectServer()

Return Value

Type: UInt32
The AmsServer Port.

Exceptions

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>AdsServerException</td>
<td>The connect call has failed!</td>
</tr>
</tbody>
</table>

Reference

AdsServer Class
6.4.1.2.7 AdsServer.ConnectServerAndWaitAsync Method

Registers the AdsServer at the router asynchronously.

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public Task<AdsErrorCode> ConnectServerAndWaitAsync(
    CancellationToken cancel)
```

**Parameters**

`cancel` Type: `System.Threading.CancellationToken`

**Return Value**

Type: `Task<AdsErrorCode>`

Returns a task object that represents the ConnectServerAndWaitAsync(CancellationToken) operation which returns an AdsErrorCode as result.

**Remarks**

The connection is hold until a cancel is requested, that means this method will wait until disconnect.

**Reference**

AdsServer Class

TwinCAT.Ads.Server Namespace

6.4.1.2.8 AdsServer.DeleteDeviceNotificationConfirmationAsync Method

Called when an ADS Delete Device Notification confirmation is received.

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected virtual Task<AdsErrorCode> DeleteDeviceNotificationConfirmationAsync(
    AmsAddress sender,
    uint invokeId,
    AdsErrorCode result,
    CancellationToken cancel)
```
Parameters

sender Type: TwinCAT.Ads.AmsAddress [648]
The sender’s AMS address

invokeId Type: System.UInt32
The invoke id provided by this server during the corresponding request

result Type: TwinCAT.Ads.AdsErrorCode [575]
The ADS error code provided by the sender

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode [575]>
A task that represents the asynchronous DeleteDeviceNotificationConfirmationAsync(AmsAddress, UInt32, AdsErrorCode, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode [575] as Result.

Remarks

Overwrite this method in derived classes to react on ADS Delete Device Notification confirmations.

Reference

AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]

6.4.1.2.9 AdsServer.DeleteDeviceNotificationIndicationAsync Method

Called when an ADS Delete Device Notification indication is received.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected virtual Task<AdsErrorCode> DeleteDeviceNotificationIndicationAsync(
    AmsAddress sender,
    uint invokeId,
    uint hNotification,
    CancellationToken cancel
)

Parameters

sender Type: TwinCAT.Ads.AmsAddress [648]
The sender’s AMS address

invokeId Type: System.UInt32
The invoke id provided by this server during the corresponding request

hNotification Type: System.UInt32
The notification handle to be deleted

cancel Type: System.Threading.CancellationToken
The cancellation token.
Return Value

Type: Task.AdsErrorCode [575].
A task that represents the asynchronous DeleteDeviceNotificationIndicationAsync(AmsAddress, UInt32, UInt32, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode [575] as Result.

Remarks

Overwrite this method in derived classes to react on ADS Delete Device Notification indications. The default implementation replies with an ADS ServiceNotSupported error code (0x701).

Reference

AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]

6.4.1.2.10 AdsServer.DeleteDeviceNotificationRequest Method

Sends an ADS Delete Device Notification request (synchronous).

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

protected AdsErrorCode DeleteDeviceNotificationRequest(
    AmsAddress target,
    uint invokeId,
    uint hNotification)

Parameters

target Type: TwinCAT.Ads.AmsAddress [648]
The receiver's AMS address

invokeId Type: System.UInt32
The invokeId for this call. Used to find the matching ADS Confirmation

hNotification Type: System.UInt32
The notification ID to be deleted

Return Value

Type: AdsErrorCode [575]
The ADS error code for this call.

Syntax

C#

```csharp
protected Task<AdsErrorCode> DeleteDeviceNotificationRequestAsync(
    AmsAddress target,
    uint invokeId,
    uint hNotification,
    CancellationToken cancel)
```

Parameters

target Type: TwinCAT.Ads.AmsAddress [648]
The receiver's AMS address
invokeId Type: System.UInt32
The invokeId for this call. Used to find the matching ADS Confirmation
hNotification Type: System.UInt32
The notification ID to be deleted
cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode> [575]
A task that represents the asynchronous DeleteDeviceNotificationRequestAsync(AmsAddress, UInt32, UInt32, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode [575] as Result.

### 6.4.1.2.14 AdsServer.DeviceNotificationRequestSync Method

Sends an ADS Device Notification request (sync)

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected AdsErrorCode DeviceNotificationRequestSync(
    AmsAddress target,
    uint invokeId,
    uint numStampHeaders,
    NotificationSamplesStamp[] notificationHeaders
)
```

**Parameters**

- **target**
  
  Type: TwinCAT.Ads.AmsAddress
  
  The receiver's AMS address

- **invokeId**
  
  Type: System.UInt32
  
  The invokeId for this call. Used to find the matching ADS Confirmation

- **numStampHeaders**
  
  Type: System.UInt32
  
  The number of ADS Stamp Headers to be sent

- **notificationHeaders**
  
  Type: TwinCAT.Ads.Server.NotificationSamplesStamp
  
  The array of ADS Stamp Headers to be sent

**Return Value**

Type: AdsErrorCode

The ADS error code for this call.

Reference

### 6.4.1.2.15 AdsServer.Disconnect Method

Disconnects this ADS server from the local ADS router.

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
public virtual bool Disconnect()
```

Return Value

Type: Boolean
true if disconnected, false if the AdsServer was disconnected before.

Exceptions

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsServerException</td>
<td>Thrown if the disconnect call fails.</td>
</tr>
</tbody>
</table>

<td>Releases unmanaged and - optionally - managed resources.</td>
</tr>
</tbody>
</table>

Reference

AdsServer Class

TwinCAT.Ads.Server Namespace

AdsServer.Dispose Method

Performs application-defined tasks associated with freeing, releasing, or resetting unmanaged resources.

Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public void Dispose()
```

Implements

IDisposable Dispose.
AdsServer.Dispose Method (Boolean)

Releases unmanaged and - optionally - managed resources.

**Namespace:** TwinCAT.Ads.Server [1121]

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected virtual void Dispose(
    bool disposing
)
```

**Parameters**

- **disposing**
  - Type: System.Boolean
  - true to release both managed and unmanaged resources; false to release only unmanaged resources.

**Reference**

- AdsServer Class [1121]
- Dispose Overload [1153]

6.4.1.2.17 AdsServer.Finalize Method

Finalizes an instance of the AdsServer class.

**Namespace:** TwinCAT.Ads.Server [1121]

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected override void Finalize()
```

**Implements**

Object.Finalize.

**Reference**

- AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]

6.4.1.2.18 AdsServer.OnAddDeviceNotificationConfirmationAsync Method

Called when Add device Notification Confirmation is send.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

```csharp
protected Task<AdsErrorCode> OnAddDeviceNotificationConfirmationAsync(
    AmsAddress target,
    uint invokeId,
    AdsErrorCode result,
    uint notificationHandle,
    CancellationToken cancel
)
```

Parameters

target
Type: TwinCAT.Ads.AmsAddress [648]
The r addr.

invokeId
Type: System.UInt32
The invoke identifier.

result
Type: TwinCAT.Ads.AdsErrorCode [575]
The result.

notificationHandle
Type: System.UInt32
The notification handle.

cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode> [575]
A task that represents the asynchronous OnAddDeviceNotificationConfirmationAsync(AmsAddress, UInt32, AdsErrorCode, UInt32, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode as Result.

Reference

AdsServer Class [1121]

6.4.1.2.22 AdsServer.OnServerConnectionStateChanged Method

Handles the ServerConnectionStateChanged [1181] event.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#
protected virtual void OnServerConnectionStateChanged(
    Object sender,
    ServerConnectionStateChangedEventArgs e
)

Parameters

sender Type: System.Object
The sender.

e Type: TwinCAT.Ads.Server.ServerConnectionStateChangedEventArgs [1199]
The ServerConnectionStateChangedEventArgs [1199] instance containing the event data.

Reference

AdsServer Class [1121]

6.4.1.2.24 AdsServer.ReadDeviceInfoConfirmationAsync Method

Called when an ADS Read Device Info confirmation is received.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C# protected virtual Task<TwinCAT.Ads.AdsErrorCode> ReadDeviceInfoConfirmationAsync(
    AmsAddress sender,
    uint invokeId,
    TwinCAT.Ads.AdsErrorCode result,
    string name,
    TwinCAT.Ads.AdsVersion version,
    CancellationToken cancel
)

Parameters

- `sender` Type: TwinCAT.Ads.AmsAddress [648]
The sender's AMS address
- `invokeId` Type: System.UInt32
  The invoke id provided by this server during the corresponding request
- `result` Type: TwinCAT.Ads.AdsErrorCode [575]
The ADS error code provided by the sender
- `name` Type: System.String
  The sender's name
version Type: TwinCAT.Ads.AdsVersion [642]
The sender's version

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode [575]>
A task that represents the asynchronous ReadDeviceInfoConfirmationAsync(AmsAddress, UInt32, AdsErrorCode, String, AdsVersion, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode [575] as Result.

Remarks

Overwrite this method in derived classes to react on ADS Read Device Info confirmations.

Reference

AdsServer Class [1121]

TwinCAT.Ads Server Namespace [1121]

6.4.1.2.25 AdsServer.ReadDeviceInfoIndicationAsync Method

Called when an ADS Read Device Info indication is received.

Namespace: TwinCAT.Ads.Server [1121]

Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

protected virtual Task<AdsErrorCode> ReadDeviceInfoIndicationAsync(
    AmsAddress sender,
    uint invokeId,
    CancellationToken cancel
)

Parameters

sender Type: TwinCAT.Ads.AmsAddress [648]
The sender's / requester's AMS address

invokeId Type: System.UInt32
The invokeId provided by the sender

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode [575]>
A task that represents the asynchronous OnReadDeviceInfoIndicationAsync(AmsAddress, UInt32, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode [575] as Result.

Remarks

Overwrite this method in derived classes to react on ADS Read Device Info indications. The default implementation replies with an ADS ServiceNotSupported error code (0x701).
6.4.1.2.26  AdsServer.ReadDeviceInfoRequestAsync Method

Sends an ADS Read Device Info request asynchronously

**Namespace:**  
TwinCAT.Ads.Server

**Assembly:**  
TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected Task<AdsErrorCode> ReadDeviceInfoRequestAsync(
    AmsAddress target,
    uint invokeId,
    CancellationToken cancel
)
```

**Parameters**

- **target**  
  Type: TwinCAT.Ads.AmsAddress
  The receiver’s AMS address

- **invokeId**  
  Type: System.UInt32
  The invokeId for this call. Used to find the matching ADS Confirmation

- **cancel**  
  Type: System.Threading.CancellationToken
  The cancellation token.

**Return Value**

Type: Task<AdsErrorCode>
A task that represents the asynchronous ReadDeviceInfoRequestAsync(AmsAddress, UInt32, CancellationToken) operation. The `Task<TResult>` parameter contains the `AdsErrorCode` as `Result`.

**Reference**

AdsServer Class
TwinCAT.Ads.Server Namespace

6.4.1.2.27  AdsServer.ReadDeviceInfoRequestSync Method

Sends an ADS Read Device Info request synchronously.

**Namespace:**  
TwinCAT.Ads.Server

**Assembly:**  
TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
### Syntax

**C#**

```csharp
protected AdsErrorCode ReadDeviceInfoRequestSync(
    AmsAddress target,
    uint invokeId
)
```

#### Parameters

- **target**
  - Type: `TwinCAT.Ads.AmsAddress` (648)
  - The receiver's AMS address

- **invokeId**
  - Type: `System.UInt32`
  - The invokeId for this call. Used to find the matching ADS Confirmation

#### Return Value

- Type: `AdsErrorCode` (575)
  - The ADS error code for this call.

### Reference

- **AdsServer Class** (1121)

#### 6.4.1.2.28 AdsServer.ReadDeviceInfoResponseAsync Method

Sends an ADS Read Device Info response.

**Namespace:** TwinCAT.Ads.Server (1121)

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
protected Task<AdsErrorCode> ReadDeviceInfoResponseAsync(
    AmsAddress target,
    uint invokeId,
    AdsErrorCode result,
    string name,
    AdsVersion version,
    CancellationToken cancel
)
```

#### Parameters

- **target**
  - Type: `TwinCAT.Ads.AmsAddress` (648)
  - The receiver's AMS address

- **invokeId**
  - Type: `System.UInt32`
  - The invoke ID provided by the receiver

- **result**
  - Type: `TwinCAT.Ads.AdsErrorCode` (575)
  - The ADS error code for the response

- **name**
  - Type: `System.String`
  - The name of this ADS server

- **version**
  - Type: `TwinCAT.Ads.AdsVersion` (642)
  - The version of this ADS server
cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value
Type: Task<TwinCAT.Ads.AdsErrorCode>
A task that represents the asynchronous ReadDeviceInfoResponseAsync(AmsAddress, UInt32, AdsErrorCode, String, AdsVersion, CancellationToken) operation. The Task<TResult> parameter contains the AdsErrorCode as Result.

Reference
AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]

6.4.1.2.29 AdsServer.ReadDeviceStateConfirmationAsync Method
Called when an ADS Read State confirmation is received.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
protected virtual Task<TwinCAT.Ads.AdsErrorCode> ReadDeviceStateConfirmationAsync(
    AmsAddress sender,
    uint invokeId,
    TwinCAT.Ads.AdsErrorCode result,
    TwinCAT.Ads.AdsState adsState,
    ushort deviceState,
    CancellationToken cancel)

Parameters
sender
Type: TwinCAT.Ads.AmsAddress [648]
The sender's AMS address

invokeId
Type: System.UInt32
The invoke id provided by this server during the corresponding request

result
Type: TwinCAT.Ads.AdsErrorCode [575]
The ADS error code provided by the sender

adsState
Type: TwinCAT.Ads.AdsState [626]
The ADS state of the sender

deviceState
Type: System.UInt16
The device state of the sender

cancel
Type: System.Threading.CancellationToken
The cancellation token.

Return Value
Type: Task<TwinCAT.Ads.AdsErrorCode>
A task that represents the asynchronous ReadDeviceStateConfirmationAsync(AmsAddress, UInt32, AdsErrorCode, AdsState, UInt16, CancellationToken) operation. The Task<TResult> parameter contains the AdsErrorCode as Result.
Remarks
Overwrite this method in derived classes to react on ADS Read State confirmations.

Reference

5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax
C#
protected virtual Task<AdsErrorCode> ReadDeviceStateIndicationAsync(
    AmsAddress sender,
    uint invokeId,
    CancellationToken cancel
)

Parameters
sender Type: TwinCAT.Ads.AmsAddress [648]
The sender's AMS address
invokeId Type: System.UInt32
The invokeId provided by the sender
cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value
Type: Task<AdsErrorCode> [575].
A task that represents the asynchronous ReadDeviceStateIndicationAsync(AmsAddress, UInt32,

Remarks
Overwrite this method in derived classes to react on ADS Read State indications. The default
implementation replies with an ADS ServiceNotSupported error code (0x701).

TwinCAT.Ads Namespaces

Namespace:  TwinCAT.Ads.Server  [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected Task<AdsErrorCode> ReadDeviceStateRequestAsync(
    AmsAddress target,
    uint invokeId,
    CancellationToken cancel
)
```

Parameters

target Type: TwinCAT.Ads.AmsAddress [648]
The receiver's AMS address

invokeId Type: System.UInt32
The invokeId for this call. Used to find the matching ADS Confirmation

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode> [575].
A task that represents the asynchronous ReadDeviceStateRequestAsync(AmsAddress, UInt32, CancellationToken) operation. The Task.TResult parameter contains the AdsErrorCode [575] as Result.

Reference

AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]

6.4.1.2.32 AdsServer.ReadDeviceStateRequestSync Method

Sends an ADS Read State request (synchronous)

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected AdsErrorCode ReadDeviceStateRequestSync(
    AmsAddress target,
    uint invokeId
)
```

Parameters

target Type: TwinCAT.Ads.AmsAddress [648]
The receiver's AMS address

invokeId Type: System.UInt32
The invokeId for this call. Used to find the matching ADS Confirmation
Return Value

Type: AdsErrorCode [575]
The ADS error code for this call.

Reference

AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]

6.4.1.2.33 AdsServer.ReadDeviceStateResponseAsync Method

Sends an ADS Read State response.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected Task<AdsErrorCode> ReadDeviceStateResponseAsync(
    AmsAddress target,
    uint invokeId,
    AdsErrorCode result,
    AdsState adsState,
    ushort deviceState,
    CancellationToken cancel
)
```

Parameters

- **target** Type: TwinCAT.Ads.AmsAddress [648]
The receiver's AMS address
- **invokeId** Type: System.UInt32
The invoke ID provided by the receiver
- **result** Type: TwinCAT.Ads.AdsErrorCode [575]
The ADS error code for the response
- **adsState** Type: TwinCAT.Ads.AdsState [626]
The current ADS state of this ADS server
- **deviceState** Type: System.UInt16
The device state of this ADS server
- **cancel** Type: System.Threading.CancellationToken
The cancellation token.

Return Value

Type: Task<AdsErrorCode [575]>
A task that represents the asynchronous ReadDeviceStateResponseAsync(AmsAddress, UInt32, AdsErrorCode, AdsState, UInt16, CancellationToken) operation. The Task<TResult> parameter contains the AdsErrorCode [575] as Result.

Reference

AdsServer Class [1121]
TwinCAT.Ads.Server Namespace [1121]
6.4.1.2.34   AdsServer.ReadIndicationAsync Method

Called when an ADS Read indication is received.

**Namespace:** TwinCAT.Ads.Server 
**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

```csharp
protected virtual Task<AdsErrorCode> ReadIndicationAsync(
    AmsAddress sender,
    uint invokeId,
    uint indexGroup,
    uint indexOffset,
    int readLength,
    CancellationToken cancel
)
```

**Parameters**

- **sender**  
  Type: TwinCAT.Ads.AmsAddress  
  The sender’s AMS address

- **invokeId**  
  Type: System.UInt32  
  The invokeId provided by the sender

- **indexGroup**  
  Type: System.UInt32  
  The index group of the requested ADS service

- **indexOffset**  
  Type: System.UInt32  
  The index offset of the requested ADS service

- **readLength**  
  Type: System.Int32  
  The number of bytes to be read

- **cancel**  
  Type: System.Threading.CancellationToken  
  The cancellation token.

**Return Value**

Type: Task<AdsErrorCode>  
A task that represents the asynchronous ReadIndicationAsync(AmsAddress, UInt32, UInt32, UInt32, Int32, CancellationToken) operation. The **Task TResult** parameter contains the AdsErrorCode as Result.

**Remarks**

Overwrite this method in derived classes to react on ADS Read indications. The default implementation replies with an ADS ServiceNotSupported error code (0x701).

**Reference**

6.4.1.2.35   AdsServer.ReadRequest Method

Sends an ADS Read Request.

**Namespace:** TwinCAT.Ads.Server  
**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14
Syntax

C#

```csharp
protected AdsErrorCode ReadRequest(
    AmsAddress target,
    uint invokeId,
    uint indexGroup,
    uint indexOffset,
    int readLength
)
```

Parameters

target Type: `TwinCAT.Ads.AmsAddress`  
The receiver's AMS address

invokeId Type: `System.UInt32`  
The invokeId for this call. Used to find the matching ADS Confirmation

indexGroup Type: `System.UInt32`  
The index group of the requested ADS service

indexOffset Type: `System.UInt32`  
The index group of the requested ADS service

readLength Type: `System.Int32`  
The number of bytes to be read

Return Value

Type: `AdsErrorCode`  
The ADS error code for this call.

Reference

6.4.1.2.36 AdsServer.ReadRequestAsync Method

Sends an ADS Read Request asynchronously.

Namespace: `TwinCAT.Ads.Server`  
Assembly: `TwinCAT.Ads.Server`  
Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected Task<AdsErrorCode> ReadRequestAsync(
    AmsAddress target,
    uint invokeId,
    uint indexId,
    uint indexOffset,
    int readLength,
    CancellationToken cancel
)
```

Parameters

target Type: `TwinCAT.Ads.AmsAddress`  
The receiver's AMS address
invokeId Type: System.UInt32
The invokeId for this call. Used to find the matching ADS Confirmation

indexGroup Type: System.UInt32
The index group of the requested ADS service

indexOffset Type: System.UInt32
The index group of the requested ADS service

readLength Type: System.Int32
The number of bytes to be read

cancel Type: System.Threading.CancellationToken
The cancellation token.

Return Value
Type: Task<AdsErrorCode>
A task that represents the asynchronous ReadRequestAsync(AmsAddress, UInt32, UInt32, UInt32, Int32, CancellationToken) operation. The Task<TResult> parameter contains the AdsErrorCode as Result.

6.4.1.2.43 AdsServer.WriteConfirmationAsync Method

Called when an ADS Write confirmation is received. Overwrite this method in derived classes to react on ADS Write confirmations.
Syntax

C#

```csharp
protected virtual Task<AdsErrorCode> WriteConfirmationAsync(
    AmsAddress sender,
    uint invokeId,
    AdsErrorCode result,
    CancellationToken cancel
)
```

Parameters

- **sender**
  - Type: `TwinCAT.Ads.AmsAddress` (648)
  - The sender's AMS address

- **invokeId**
  - Type: `System.UInt32`
  - The invoke id provided by this server during the corresponding request

- **result**
  - Type: `TwinCAT.Ads.AdsErrorCode` (575)
  - The ADS error code provided by the sender

- **cancel**
  - Type: `System.Threading.CancellationToken`
  - The cancellation token.

Return Value

- **Type:** `Task<AdsErrorCode>` (575)
  - A task that represents the asynchronous `WriteConfirmationAsync(AmsAddress, UInt32, AdsErrorCode, CancellationToken)` operation. The `Task.TResult` parameter contains the `AdsErrorCode` (575) as `Result`.

### 6.4.1.2.44 AdsServer.WriteControlConfirmationAsync Method

Called when an ADS Write Control confirmation is received.

Syntax

C#

```csharp
protected virtual Task<AdsErrorCode> WriteControlConfirmationAsync(
    AmsAddress sender,
    uint invokeId,
    AdsErrorCode result,
    CancellationToken cancel
)
```

Parameters

- **sender**
  - Type: `TwinCAT.Ads.AmsAddress` (648)
  - The sender's AMS address
invokeId Type: System.UInt32
The invoke id provided by this server during the corresponding request

result Type: TwinCAT.Ads.AdsErrorCode [575]
The ADS error code provided by the sender

cancel Type: System.Threading.CancellationToken
The cancellation token.

**Return Value**

Type: Task<AdsErrorCode [575]>
A task that represents the asynchronous WriteControlConfirmationAsync(AmsAddress, UInt32, AdsErrorCode, CancellationToken) operation. The Task<TResult> parameter contains the AdsErrorCode [575] as Result.

**Remarks**

Overwrite this method in derived classes to react on ADS Write Control confirmations.

TwinCAT.Ads.Server Namespace

6.4.2 AdsServerException Class

An AdsServerException is thrown on communication errors in the AdsServer class.

Inheritance Hierarchy

System.Object
  System.Exception
    TwinCAT.Ads.Server.AdsServerException
      TwinCAT.Ads.Server.LoopbackNotRegisteredException
      TwinCAT.Ads.Server.ServerNotConnectedException

Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fdca3e72bc0ea15da1c14

Syntax

C#

```csharp
[SerializableAttribute]
public class AdsServerException : Exception
```
The AdsServerException type exposes the following members.

### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AdsServerException</td>
<td>Initializes a new instance of the AdsServerException class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data</td>
<td>Gets a collection of key/value pairs that provide additional user-defined information about the exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>ErrorCode</td>
<td>Gets or sets the error code.</td>
</tr>
<tr>
<td>HelpLink</td>
<td>Gets or sets a link to the help file associated with this exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>HResult</td>
<td>Gets or sets HRESULT, a coded numerical value that is assigned to a specific exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>InnerException</td>
<td>Gets the Exception instance that caused the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Message</td>
<td>Gets a message that describes the current exception. (Inherited from Exception.)</td>
</tr>
<tr>
<td>Source</td>
<td>Gets or sets the name of the application or the object that causes the error. (Inherited from Exception.)</td>
</tr>
<tr>
<td>StackTrace</td>
<td>Gets a string representation of the immediate frames on the call stack. (Inherited from Exception.)</td>
</tr>
<tr>
<td>TargetSite</td>
<td>Gets the method that throws the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetBaseException</td>
<td>When overridden in a derived class, returns the Exception that is the root cause of one or more subsequent exceptions. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetObjectData</td>
<td>When overridden in a derived class, sets the SerializationInfo with information about the exception. (Overrides Exception.GetObjectData(SerializationInfo, StreamingContext).)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the runtime type of the current instance. (Inherited from Exception.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Creates and returns a string representation of the current exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>
Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SerializeObjectState</td>
<td>Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

Reference

TwinCAT.Ads.Server Namespace [1121]

6.4.2.1 AdsServerException Constructor

Initializes a new instance of the AdsServerException [1181] class.

Namespace: TwinCAT.Ads.Server [1121]  
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
protected AdsServerException(  
    SerializationInfo serializationInfo,  
    StreamingContext streamingContext
)
```

Parameters

- serializationInfo  
  Type: System.Runtime.Serialization.SerializationInfo  
  The serialization information.
- streamingContext  
  Type: System.Runtime.Serialization.StreamingContext  
  The streaming context.

#### Reference

AdsWithException Class [1181]

TwinCAT.Ads.Server Namespace [1121]

#### 6.4.2.3.1 AdsServerException.GetObjectData Method

When overridden in a derived class, sets the SerializationInfo with information about the exception.

**Namespace:** TwinCAT.Ads.Server [1121]

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

**C#**

```csharp
public override void GetObjectData(
    SerializationInfo info,
    StreamingContext context
)
```

**Parameters**

- **info**
  
  Type: System.Runtime.Serialization.SerializationInfo
  
  The SerializationInfo that holds the serialized object data about the exception being thrown.

- **context**
  
  Type: System.Runtime.Serialization.StreamingContext
  
  The StreamingContext that contains contextual information about the source or destination.

**Implements**

- ISerializable.GetObjectData(SerializationInfo, StreamingContext)
- Exception.GetObjectData(SerializationInfo, StreamingContext)

**Exceptions**

<table>
<thead>
<tr>
<th>Exception</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>ArgumentException</td>
<td></td>
</tr>
<tr>
<td>ArgumentNullException</td>
<td></td>
</tr>
</tbody>
</table>

TC1000 Version: 1.1
6.4.2.4 AdsServerException Events

The AdsServerException type exposes the following members.

### Events

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SerializeObjectState</td>
<td>Occurs when an exception is serialized to create an exception state object that contains serialized data about the exception. (Inherited from Exception.)</td>
</tr>
</tbody>
</table>

6.4.3 ErrorEventArgs Class

This class implements the event arguments passed by the TcAdsServerExEvent.

**Inheritance Hierarchy**

- System.Object
  - System.EventArgs
    - TwinCAT.Ads.Server.ErrorEventArgs

**Namespace:** TwinCAT.Ads.Server

**Assembly:** TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

**Syntax**

C#

```csharp
public class ErrorEventArgs : EventArgs
```

The ErrorEventArgs type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exception</td>
<td>Returns the exception that caused the event.</td>
</tr>
<tr>
<td>Message</td>
<td>Returns the exception message.</td>
</tr>
</tbody>
</table>

**Methods**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

6.4.3.1 ErrorEventArgs Properties

The ErrorEventArgs [1186] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exception</td>
<td>Returns the exception that caused the event.</td>
</tr>
<tr>
<td>Message</td>
<td>Returns the exception message.</td>
</tr>
</tbody>
</table>

Reference

ErrorEventArgs Class [1186]

TwinCAT.Ads.Server Namespace [1121]

6.4.3.1.1 ErrorEventArgs.Exception Property

Returns the exception that caused the event.

Namespace:  TwinCAT.Ads.Server [1121]
Assembly:  TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public Exception Exception { get; }
```

Return Value

Type: Exception
The Exception that caused the event.

Reference

ErrorEventArgs Class [1186]

TwinCAT.Ads.Server Namespace [1121]
6.4.3.1.2 ErrorEventArgs.Message Property

Returns the exception message.

Namespace: TwinCAT.Ads.Server
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public string Message { get; }
```

Return Value

Type: String
The Exception message.

TwinCAT.Ads.Server Namespace [1121]

6.4.6.1 NotificationSamplesStamp Constructor

Initializes a new instance of the NotificationSamplesStamp [1195] class.

Namespace: TwinCAT.Ads.Server [1121]
Assembly: TwinCAT.Ads.Server (in TwinCAT.Ads.Server.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

C#

```csharp
public NotificationSamplesStamp(
    long timestamp,
    NotificationDataSample[] samples
)
```

Parameters

timestamp
  Type: System.Int64
  The timestamp.
samples
  Type: .TwinCAT.Ads.Server.NotificationDataSample [1191]
  The notification samples.

Reference

NotificationSamplesStamp Class [1195]

### TwinCAT.Ads.SumCommand Namespace

ADS offers powerful and fast communication to exchange any kind of information. It's possible to read single variables or complete arrays and structures with each one single ADS-API call. ADS Sum-Commands offer to read/write with one single ADS call multiple variables which are not structured within a linear memory, effectively reducing roundtrips.

## 6.5.1 ISumCommand Interface

Interface for SumCommands (Combined commands)

**Namespace:** TwinCAT.Ads.SumCommand

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

**C#**

```csharp
public interface ISumCommand
```

The `ISumCommand` type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Executed</td>
<td>Gets a value indicating whether this <code>ISumCommand</code> was already executed.</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether this <code>ISumCommand</code> failed.</td>
</tr>
<tr>
<td>Result</td>
<td>Gets the <code>AdsErrorCode</code> of the main <code>SumCommandBase</code> ADS Request</td>
</tr>
<tr>
<td>SubResults</td>
<td>Gets the sub results of the single Sub Requests.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether this <code>ISumCommand</code> is succeeded.</td>
</tr>
</tbody>
</table>

### Remarks

ADS offers powerful and fast communication to exchange any kind of information. It's possible to read single variables or complete arrays and structures with each one single ADS-API call. The ADS Sum Command command offers to read with one single ADS call multiple variables which are not structured within a linear memory. As a result the ADS caller application (like scada Systems etc.) can extremely speed up cyclic polling: Sample:

- Until now: Polling 4000 single variables which are not in a linear area (like array / structure / fixed PLC address) would cause 4000 single Ads-ReadReq with each 1-2 ms protocol time. As a result the scanning of these variables take 4000ms-8000ms.
• New Ads-Command allows to read multiple variables with one single ADS-ReadReq: 4000 single variables are handled with e.g. 8 single Ads-ReadReq (each call requesting 500 variables) with each 1-2 ms protocol time. As a result the scanning of these variables take just few 10ms.

REQUIREMENTS AND IMPORTANT LIMITATIONS: Note that ADS is just a transport layer, but there could be important side effects. So read this requirements and take care on limitations:

• **Version of target ADS Device** - ADS itself is just the transport layer, but the requested ADS device has to support the ADS-Command.

• **Bytes length of requested data** - Requesting a large list of values from variables is fine, but the requested data of the Ads-response (the data-byte-length) have to pass the AMS Router (size by default a 2048kb) So the caller has to limit the requested variables based on calculation of requested data-byte-length.

• **Number of Sub-ADS calls**: Highly recommended to max. 500! - If the PLC is processing one ADS request, it will completely work on this single ADS request BEFORE starting next PLC cycle. As a result one single ADS request with 200.000 sub-Ads-requests would cause that PLC would collect and copy 200.000 variables into one single ADS response, before starting next PLC. So this large number of ads-sub-commands will jitter the PLC execution! **We highly recommend to not request more than 500 Ads-Sub commands**

TwinCAT.Ads.SumCommand Namespace
6.5.2.1 ResultSumCommand Properties

The ResultSumCommand [1210] type exposes the following members.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed. (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>SubErrors</td>
<td>Gets the Error codes [575] for the single SumCommands.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded. (Inherited from ResultAds [989].)</td>
</tr>
</tbody>
</table>

### Reference

ResultSumCommand Class [1210]
TwinCAT.Ads.SumCommand Namespace [1205]

6.5.2.1.1 ResultSumCommand/SubErrors Property

Gets the Error codes [575] for the single SumCommands.

Namespace: TwinCAT.Ads.SumCommand [1205]
Assembly: TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

### Syntax

C#

```csharp
public AdsErrorCode[] SubErrors { get; protected set; }
```

### Property Value

Type: AdsErrorCode [575].

6.5.2.2 ResultSumCommand Methods

The ResultSumCommand [1210] type exposes the following members.

### Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>
TwinCAT.Ads Namespaces

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>Finalize</code></td>
<td>Allows an object to try to free resources and perform other cleanup operations before it is reclaimed by garbage collection. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>GetHashCode</code></td>
<td>Serves as the default hash function. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>GetType</code></td>
<td>Gets the <code>Type</code> of the current instance. (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>MemberwiseClone</code></td>
<td>Creates a shallow copy of the current <code>Object</code> (Inherited from <code>Object</code>.)</td>
</tr>
<tr>
<td><code>SetError</code></td>
<td>Sets the error state of this <code>ResultAds</code> (Inherited from <code>ResultAds</code>).</td>
</tr>
<tr>
<td><code>ToString</code></td>
<td>Returns a string that represents the current object. (Inherited from <code>Object</code>.)</td>
</tr>
</tbody>
</table>

### 6.5.3 ResultSumHandles Class

Result class for an asynchronous `SumCreateHandles [1222]`.

Inheritance Hierarchy

```
System.Object
  TwinCAT.Ads.ResultAds [989]
    TwinCAT.Ads.SumCommand.ResultSumCommand [1210]
    TwinCAT.Ads.SumCommand.ResultSumHandles [1211]
    TwinCAT.Ads.SumCommand.ResultSumHandles2 [1214]
```

**Namespace:** TwinCAT.Ads.SumCommand [1205]

**Assembly:** TwinCAT.Ads (in TwinCAT.Ads.dll) Version: 5.0.294+Branch.releases-5.0.Sha.90bb9a1b43b6095934fddca3e72bc0ea15da1c14

Syntax

**C#**

```csharp
public class ResultSumHandles : ResultSumCommand
```

The `ResultSumHandles` type exposes the following members.

**Properties**

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ErrorCode</code></td>
<td>Gets the ADS Error code bound to this <code>Result</code> object. (Inherited from <code>ResultAds</code>.)</td>
</tr>
<tr>
<td><code>Failed</code></td>
<td>Gets a value indicating whether the <code>ResultAds</code> state is failed. (Inherited from <code>ResultAds</code>.)</td>
</tr>
<tr>
<td><code>Handles</code></td>
<td>The registered Symbol handles.</td>
</tr>
<tr>
<td><code>SubErrors</code></td>
<td>Gets the <code>Error codes</code> for the single <code>SumCommands</code>. (Inherited from <code>ResultCommand</code>.)</td>
</tr>
<tr>
<td><code>Succeeded</code></td>
<td>Gets a value indicating whether the <code>ResultAds</code> state is succeeded. (Inherited from <code>ResultAds</code>.)</td>
</tr>
</tbody>
</table>
Methods

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equals</td>
<td>Determines whether the specified object is equal to the current object.</td>
</tr>
<tr>
<td>Finalize</td>
<td>Allows an object to try to free resources and perform other cleanup</td>
</tr>
<tr>
<td></td>
<td>operations before it is reclaimed by garbage collection. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>Object.)</td>
</tr>
<tr>
<td>GetHashCode</td>
<td>Serves as the default hash function. (Inherited from Object.)</td>
</tr>
<tr>
<td>GetType</td>
<td>Gets the Type of the current instance. (Inherited from Object.)</td>
</tr>
<tr>
<td>MemberwiseClone</td>
<td>Creates a shallow copy of the current Object. (Inherited from Object.)</td>
</tr>
<tr>
<td>SetError</td>
<td>Sets the error state of this ResultAds [989] (Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>ToString</td>
<td>Returns a string that represents the current object. (Inherited from Object.)</td>
</tr>
</tbody>
</table>

6.5.3.1 ResultSumHandles Properties

The ResultSumHandles [1212] type exposes the following members.

Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result [989] object. (Inherited</td>
</tr>
<tr>
<td></td>
<td>from ResultAds [989].)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds [989] state is failed.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from ResultAds [989].)</td>
</tr>
<tr>
<td>Handles</td>
<td>The registered Symbol handles.</td>
</tr>
<tr>
<td>SubErrors</td>
<td>Gets the Error codes [575] for the single SumCommands. (Inherited from</td>
</tr>
<tr>
<td></td>
<td>ResultSumCommand [1210].)</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds [989] state is succeeded.</td>
</tr>
<tr>
<td></td>
<td>(Inherited from ResultAds [989].)</td>
</tr>

Syntax

C#

```csharp
public class ResultSumHandles2 : ResultSumHandles
```

The ResultSumHandles2 type exposes the following members.

### Constructors

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ResultSumHandles2</td>
<td>Initializes a new instance of the ResultSumHandles2 class.</td>
</tr>
</tbody>
</table>

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ErrorCode</td>
<td>Gets the ADS Error code bound to this Result object. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td>Failed</td>
<td>Gets a value indicating whether the ResultAds state is failed. (Inherited from ResultAds.)</td>
</tr>
<tr>
<td>Handles</td>
<td>The registered Symbol handles. (Inherited from ResultSumHandles.)</td>
</tr>
<tr>
<td>InstancePaths</td>
<td>The symbol/instance paths belonging to the handles and the subErrors.</td>
</tr>
<tr>
<td>SubErrors</td>
<td>Gets the Error codes for the single SumCommands. (Inherited from ResultSumCommand.)</td>
</tr>
<tr>
<td>Succeeded</td>
<td>Gets a value indicating whether the ResultAds state is succeeded. (Inherited from ResultAds.)</td>
</tr>
</tbody>
</table>
